THE CENTURY MAGAZINE.

VOL. XXIV.

MAY, 1882.

NO. I.

THE CANADIAN MECCA.

HAD you been a pagan Iroquois on the war-path from Onondaga* in the summer of 1661, standing on the Isle of Orleans, below Quebec, with the scalps of your Huron and French foes at your belt, you would have seen the remnant of the hated Christian Indians paddling in their bark canoes across the St. Lawrence to the northern shore. From the bluff of land where the picturesque church of St. François has stood for over a century and a half, you would have seen your enemies who had sold their ancient birthright for a mess of French rum and trinkets, steering for havens of refuge amid a rich panorama of forest and mountain—some of them up stream, where they found shelter under the guns of Quebec; most of them toward a great peak of the Laurentian chain of hills, where, close to the shore, a small stone chapel and a few houses marked the site of Petit Cap,—one of the oldest settlements on one of the oldest roads in Canada. Had you stolen before day-break at low tide across the water, and paddled through the marsh, you might have listened until you heard the bell for morning vespers, and then gliding ashore, you might have crept behind the brush and watched a procession of French and their Huron allies, headed by the priests, slowly marching to the chapel, and repeating the invocation: "*Jésus, Marie, Joseph, Joachim, et Anne, secourez-nous,*" while your blood boiled with hate, and your fingers tingled to get at their hair. About a century later, had you been a loyal English colonist of New York, you might have followed the Highlanders in their attack on the French and Hurons along this same road, and in this same little village, then named Sainte Anne. And if tradition be true,—and a possible fable

is as good for a *gobemouche* as a positive fact,—you might have seen the same little chapel delivered by the mysterious interposition of the saint herself, when the troops tried three times in succession to set it on fire, after the rest of the village had been burned. And now, one hundred and twenty-two years later, you may quietly run down on a holiday trip from Donnacona's ancient throne, the peaceful citadel of Quebec, to this same little village, now called "Ste. Anne de Beaupré," or more affectionately, "La Bonne Ste. Anne," and known as the most venerated shrine of the Roman Catholic Church in Canada—the soul and center of reputed miracles as wonderful as any that stirred the heart of mediæval Europe. Though not accepted without reserve by the more educated classes, they are as sacred to the superstitious habitant along the St. Lawrence as is the mother-shrine of Ste. Anne d'Auray, in Brittany, to the credulous sailors in the Morbihan.

The heathen red-skin of Onondaga has long since been Christianized, and is passing away. The English colonies, which had a sworn foe in the New France at the north, have become a great and independent nation. The old French colony, with its brilliant story, has disappeared in the Dominion of Canada, and Richelieu's grand scheme of a French transatlantic empire has its mockery in the small fishing-islands of Miquelon and St. Pierre, off the south coast of Newfoundland. Little did Richelieu imagine, when he excluded the Huguenots from France and her colonies, that he was doing as much as possible to add to the wealth of the Protestants of Europe and to the prosperity of the Puritans of New England, and that one of the results of his policy was to be the perpetuation of the very heresy he hated. Persecution often makes a

*As New York was then called.

A PILGRIMAGE TWO HUNDRED YEARS AGO.

barren cause prolific. It has been the mother of great men and great nations. Little did Champlain imagine, when he prohibited the psalms of the Huguenots on the St. Lawrence, that a few more years would see the *fleur-de-lis* lowered forever from the city he founded; and France, once the mistress of the whole American continent north of Mexico, reduced to a few fishing-islands, equal to a

square of fifteen miles! There that little remnant of French-American territory lies, as if to remind us of the past glory of a noble nation. Amid all these vicissitudes, our little Canadian shrine has slept its Rip van Winkle sleep; until to-day, with the revival in Europe of the mediæval trust in miracles, and in the efficacy of pilgrimages, an effort is here being made to waken the Canadian mind to the belief that La Bonne

VILLAGE OF LA BONNE STE. ANNE.

Ste. Anne is as advantageous to faith as Michael Angelo believed the climate of Arezzo was favorable to genius. There was no obstacle at any time in Canada to the full development of the Gallican church of France; and it is no wonder that pilgrimages should become an institution of the old French province, and that it should be claimed that more miracles have been wrought through the relics of a dead saint than are known to have been per-

PILGRIMS ON THE CÔTE DE BEAUPRÉ.

formed by Christ. Though Quebec city, with its sixty dioceses, is mentioned in a bull of Pius IX. as the metropolis of the church in America, you will need to rub your eyes to make sure that you are not in Belgium. Under the French *régime* it was the heart of the colony, and was a spiritual as well as a material fortress. Ste. Anne de Beaupré was one of its outposts.

But who was this saint so revered long ago by the Canadian *voyageur* and habitant, and whose intercession, all the world over, now seems to be supplanting that of all other saints? It might be enough to know that, in 1876, the Pope declared Ste. Anne to be patroness of the Province of Quebec, though it is not stated how this affects the claim of St. Joseph, who has long been the patron of all Canada. But who was Ste. Anne? Tradition says she was the mother of the Virgin Mary, born of one of the family of David, and that her mother had predicted the birth through her of the Saviour. Having died at Jerusalem, she was buried in the family vault. When you are at our Canadian shrine you may see, in a little glass case, a confused mass of dried, broken bones, which you are told are those of the saint. You will naturally be curious to know how they got out of the family vault in Jerusalem into a little hamlet in Canada. In the time of Marcus Aurelius, the infidels destroyed all the monuments in the Holy Land, but, "according to tradition," one coffin could be

neither burned nor opened, and being thrown into the sea, floated off to the town of Apt, in Provence, where it lay for a long time buried in the sand. One day some fishermen caught in their net an enormous fish, which clearly by its actions showed that fishes have instinct and reason, and that St. Anthony knew more than we give him credit for, when he preached to them. This fish struggled so hard that it made a deep hole in the sand on the shore, and when the fishermen dragged it out, the coffin of Ste. Anne appeared in the hole. No one in Apt could open the coffin. The bishop Aurelius placed it in a crypt, put

its associations with our Canadian shrine made the visit one of much interest. I must say, however, that the Canadian pilgrimages are never the scene of such debauchery as those in Brittany, for the devil seemed to have made it his holiday at the two Old-World pilgrimages witnessed by me. Religious ceremonies clashed with vulgar open-air dancing, and peasants who had just kissed the saintly relics, came out of church and boastfully swallowed brandy, glass after glass, in a deliberate effort to make themselves drunk.

Our Canadian Mecca has an authentic date

A YOUNG PILGRIM IN AN OLD CRADLE.

a burning lamp before it, and had it hermetically walled up. Seven hundred years later, Charlemagne, moved by the appeal of a deaf and dumb boy, caused a certain wall to be destroyed, in which the coffin was found.

I remember visiting a beautiful cathedral in Apt, on the bank of the Calavon, said to have been erected on the exact spot where the fish leaped and the coffin was found. A short journey from the Celtic monuments of Carnac, in Brittany, is the little hamlet of Ste. Anne d'Auray, the most famous shrine of the saint in the world. On a fête-day, a few years ago, I saw the special pilgrimage, and

back to 1658. A habitant of Petit Cap gave the parish priest of Quebec a portion of land, upon condition that in that year a church should be begun on the spot. The site was accepted, duly consecrated, and dedicated to Ste. Anne, the patroness of sailors. The foundation-stone was laid by the French governor. It is said that a peasant of Beupré, who had "pains in his loins," went, out of devotion, to lay three stones of the foundation, and was suddenly cured; and that a woman who had been bent double for eight months by some affliction began to invoke the saint as soon as she heard of the miracle, and was "instantly

PILGRIMS AND STRANGERS.

able to stand on her feet, and as well able to move all her limbs as she had ever been." Miracle after miracle followed, until the sleepy little hollow was the talk of all New France. Soldiers, as they paced their beat on the fort, looked down the river as if they expected to see a vision. The peasantry grouped together in large family circles, just as they love to do to-day, and as the big logs crackled in the great fire-place, some one who had been to the shrine recounted his experience and gave reins to his imagination, and all piously crossed themselves when he had concluded. Pilgrims flocked to the New-World wonder on the St. Lawrence, and during the seventeenth century there were never less than a thousand on

imagine the thrill of wonder which would run through the minds of the simple peasantry, and the superstitious *voyageurs*, when the miracles were told.

It was not with the touching and simple spirit which led many to flock to the holy place in Jerusalem, in the time of the old Jewish law, that I went to La Bonne Ste. Anne. Nor was it with the unquestioning devotion of the Canadian peasant. I was simply a holiday loungeur in search of the picturesque, with no more faith in La Bonne Ste. Anne than in the dozens of other shrines I had seen in Europe, and with a strong belief in the statements that, after the Crusades, innumerable relics were sold to the Latins by the

A CANADIAN INTERIOR.

the feast-day of Ste. Anne. At all seasons of the year, individual pilgrims were seen going afoot along the Côte de Beaupré, and in winter in their sleighs on the frozen river. The Micmac Indians came regularly from New Brunswick for trade, and before feast-days their canoes were seen coming up stream to the shrine, where they built birch-bark huts to shelter the pilgrims. In fact, the whole country was excited by the mystery, and many churches were built in honor of the saint. It was a regular custom of vessels ascending the St. Lawrence to fire a broadside salute when passing the place. We who live in this age of electricity, and who affect to be beyond astonishment, but gape at every new sensation as if the world was yet in its teens, may

cunning Greeks and Syrians, and that several skulls of the same saint were found within a hundred miles of each other. What I had seen of the pilgrimages in Brittany and Belgium did not raise them in my estimation. The picturesque in Brittany could not conceal the dirt and mental degradation. I remembered, too, an incident upon the arrival of our train, when little Breton boys and girls met us with offers, for a sou, to say prayers for us. One who is familiar with the many genial and admirable traits of the French-Canadian peasantry, the superior moral and spiritual tone, and the respectability, cleanliness, and sobriety which put them above the same class of Continental people, would have no thought of seeing here the vice and licentiousness

common to the Breton gatherings. The French-Canadian peasant may not know how to read; he may fear the spiritual threats of his priest more than the punishment of the civil law; but as a rule he is a peaceful Christian according to his light. Ste. Anne, to many of them, is as sacred as was Jerusalem to the Jews, and no doubt our good countryman pities and prays for me and my heresy; and, had he been born a Mohammedan, would no doubt have believed that he who died without making a pilgrimage to Mecca might as well die a Jew or a Christian.

Almost any morning in summer you may get the early boat just below Dufferin Terrace, and see dozens of quiet people muttering their devotions to themselves, each carrying his or her burden of trouble to Ste. Anne. The crowded pilgrimages which are undertaken by whole parishes *en masse* have much the appearance of an ordinary picnic, and most of the pilgrims suggest the idea that they come "more for the green way than for devotion." But you cannot mistake the sincerity and superstition of those individual pilgrims who go down to the shrine without ostentation. They are mostly women, many widows, and nearly all dressed in the conventional black dress, with black bonnet and long crape veil. You may go down by steamer or by road. If you go by water you can study these people better; but when you see the rich landscape you will wish you had taken the road; from the Côte de Beaupré you see the lovely water-scape, and then you will wish you had gone by steamer; so I will indulge you in both. We need no scrip, staff, or scallop-shell; no unshod feet—though once I saw a barefooted pilgrimage below Cacouna; no gray gabardine girt with cincture; no asceticism, but a comfortable steamer or a double carriage, with every modern comfort cheek-by-jowl with much mediæval usage.

The river was alive with boats, steamers, barges. Half a dozen steam-yachts, used as tugs, were puffing consequentially, and scudding between Quebec and Pointe Levi. One little David had steamed up to a Goliath of a ship which had just crossed the Atlantic, and had taken the conceit out of the monster by lashing itself in some way to its side and puffing up the river with it, like a dwarf arresting a giant. After the usual jargon we were off, and had time to look about among our passengers. They were mostly pilgrims, and all French of the poorer class. But, no matter how poor, the French-Canadian is a model of tidiness. Like a sunflower amid ivy, there was the traditional young man from the country, arrayed, on a hot day, in black kid gloves, a flower in his coat, and a feather in

his cap. Beside him—very much beside him—his "own sweet Genevieve," blushing in colors enough to make the rainbow pale, and every part of her jacket and the white veil over her face covered with little bits of red glass balls; a poor mother, holding a sick child in her arms, walking up and down the deck in a sort of penitential agony, and refusing any help, though many of the kind-hearted women proffered their aid; several very desolate-looking widows. I had been told that few, if any, ever went to Ste. Anne's to return thanks for blessings received, but the uncharitable statement was here refuted, for several poor women were *en route* especially to express gratitude for the recovery of personal health. One dear old lady, rheumatic and almost blind, was led about tenderly by her son. As I saw her thin gray hair and bended frame, and watched the affection of her boy, my heretical spirit found a feeling that made us kin, and, while refusing to believe in Ste. Anne, I prayed inwardly for her recovery. I would have sung my pæans of praise had the dear old soul found the fountain of youth in the waters of Ste. Anne, and had she been able to leave her crutch among those on the pyramid in the church. Alas! I saw her returning in the afternoon more feeble than when she came. One pale, thin girl had fasted for five days, having read that, like Moses and Elias, Ste. Anne and her husband fasted entirely for forty days, "and wept perpetually." A girl with inflamed and bandaged eyes was going with her father to perform a *novena*, or nine days' religious exercise. Two nuns were chatting together; a solemn servant of some convent held in one hand a five-minute sand-glass, which she turned as the sand ran out, saying her prayers at the same time. Two rubicund priests promenaded the deck. The rest of the pilgrims were fair types of the ordinary peasant, and were either ignorant or weak-minded.

Look at the splendid scenery before, behind, on either side. The Isle of Orleans, with its broad brow, is in front. The ships for England sail off to the southern channel. One fancies he can smell the sea here, and it may not be mere fancy, for the tide rises ninety miles above Quebec, and the water is brackish. It is out this morning, and there along the shore and up among the shiny rocks, the *bateaux* and wood-boats lie waiting for the flow. Just below us, as we keep to the left of Orleans, we meet two steamers tugging two great rafts, and the hardy Indian and French *voyageurs* wave their hats to us. There lies the Church of St. Pierre, upon the hill of Minigo, as the Indians called Orleans, built one hundred and twelve years

MOUNT STE. ANNE.

ago, on the site of a chapel erected in 1651. Looking to the left now, we see Montmorenci Falls, shining in the morning sun like a broad ribbon of molten silver, the dark shadows of the right bank casting long lines of gloom into the glen. As we pass the falls, we are wedging in between Orleans on the right, and gaps and grooves on the main-land to the left, eaten by ice and rains. Zigzag foot-paths run up to the hill-tops from the river and road-side; narrow strips of land, fenced into all sorts of geometrical figures, straggle up over the hills into the horizon; clumps of pines are seen along the shore; and above and about the trees are the picturesque white farm-houses, with their gray, brown, and red

roofs—a perfect chain, long drawn out, of quaint hamlets set in frames of mountain and river; peeps of the blue Laurentian Mountains far behind; the white houses of Château Richer hugging the shore; and behind them the hills rolling up into waves of land, until they run to a peak of two thousand six hundred and eighty-seven feet to form Mount Ste. Anne, then droop into the valleys, and again run up against the blue sky to form the home of the bear and the blue-berry—Cape Tourmente. Here and there you see the stone churches and bright spires, both on the main-land and on the island. Look back now from the stern. I once heard a world-wide traveler say he had

never anywhere seen such a picture as this view back at the city. Quebec and Pointe Levi seem to be blended in one semicircular bay of bright water, lapping a dazzling array of glittering gems. The citadel looks clear cut, as if its masonry had been run into a mold. We see barges, with loads of hay or wood, and with only two hands on board, trusting to a rough sail and a stout oar to get to their destination; fresh-water sailors in heavy boats, pushing their oars before them as they face the bow, as one sees so often on Continental rivers and as often elsewhere on the St. Lawrence, about Quebec. The Isle of Orleans reposes like an emerald in the water at the point where the fate of a continent was decided. There on its bosom St. François sleeps, as if the dread Iroquois had never yelled their war-whoop on its hills; and if history has no echoes to stir you, come with me from that quiet little hamlet some autumn, with gun and rod, on the broad meadows of Argenteau, or among the marshes of the Château Richer, and I will promise you as fine a bag of snipe and duck as you can get anywhere within sight of civilization on this side of New Brunswick. What feasts of wild fowl, what epicurean relishes with Parisian cookery, they must have had in the way of game when peace reigned in the old château of St. Louis on the rock, the castle of the French governor, and life in this part of New France, brilliant with the wit and song of the nobility of Louis XIV., was more feasting than fasting; when Orleans was called the Isle of Bacchus, because of its great grape-vines, and of the fish, honey, and melons with which the red-skins regaled Jacques Cartier. I wonder Parisian wit did not try upon the Indian the civilizing influence of Parisian cookery; for it is related of a convert who lay at the point of death that he anxiously inquired if, in the pale-face heaven to which he was going, he would get pies to equal those which the French had given him. All about here—on mountain, in valley, on island, on river—you can trace the richest pages of Canadian and much of American history. Memories of Jacques Cartier, Sir William Phipps, Champlain, Frontenac, Wolfe, Montcalm, Carleton, Arnold, Montgomery, Murray, rise from the surroundings. And then you may come down from your imagining and see Huron and Iroquois merging into French and English, and the queer jumble of Indian, Norman, Breton, English, in name, in face, in speech, in religion, slowly but surely blending, as the centuries roll away, to form one people. Is it not a bit of early British history—the story of the Norman, Dane, and Saxon—being repeated in the New World?

But now we see the sun playing on the convent-spire of Ste. Anne; Cape Tourmente and Orleans seem to meet, and the river has the appearance of a great bay. Long ribbons of the characteristic Canadian fence run crookedly up to the crest of pines; a fringe of houses lies along the shore. And now the main-land and the island divide; the open river shows the line of the hazy shore downstream, and we are approaching the long wharf and the toll-gatherer of our Mecca. But come back with me to Quebec, and drive through the romantic hamlets of the Côte de Beauré, with its endless interest in life, char-

BY THE ROAD-SIDE.

acter, and scenery. This is by far the most charming way to visit Ste. Anne's, especially if you have good company, if you like walking, and can talk the *patois*. If, too, you ever have walked through Normandy and Brittany, you can find no more fascinating trip for its associations than this Côte de Beaupré. If you are fresh from the story of "Evangeline," you will enjoy it doubly, for though the people are losing a good deal of their picturesque character, and you will rarely see the *toque bleu* of the habitant, yet in the same room you may often see grandmother at her spinning-wheel and granddaughter at her sewing-machine; you may cut into by-ways, and even get peeps into the low-roofed and high-peaked houses as you pass, that will bring back the poet's words and carry you into the eighteenth century. There are old men and old women, old houses and old habits, old agricultural and domestic implements and furniture, and old china enough to gladden the heart of any antiquarian. I fear, though, that the province is being stripped of its old clocks.

This trip by land is delightful. Early one morning we left the St. Louis Hotel in Quebec. If you are going ten miles into the country here, you are sure to receive "*bon voyage!*" as often as if you were going to Hong-Kong. Passing through St. Roche's and crossing the bridge over the St. Charles River, we were soon out in the open country. We were at once struck with the fondness of the people for flowers. Little squares and bits of land are devoted to their culture. They hang from gallery and window, around wall and well, and grow in wooden boxes, old jars, and miniature birch-bark canoes. Big and beautiful dahlias of ail colors nod their full heads to us; the marigold, whose seeds were brought from France by the early explorers; the hollyhock, fox-glove, China-aster, and Normandy's flaming favorite, the sunflower, and other old-fashioned flowers of old-fashioned people, beautify and brighten the surroundings. Little houses, like stables, often just big enough to shelter a cow or a horse, and little gardens, are characteristic of this truly Canadian road. Springs of crystal water run down the hill into troughs for the horses, as in Swiss villages. All along for miles from Beaupré, the hill-side is luxuriant with wild plums, which are gathered and sent to the city market.

Along this road you will see some of the choicest specimens of the early French farm-houses, built of rough stone and mortar, with high-peaked roof and big chimney, often built out beyond the level of the gable, and with projecting eaves and dormer-windows. Some of these old houses are contemporaneous with the conquest of Canada. Most of them are

close to the road, and the fences on each side are as a rule very ragged, except among the best farmers. Little picket-fences, some of them over a century old, are characteristic—many of them so tattered that they remind you of the broken hedges of Tipperary, where, when a pig goes through a hole, he finds he is still on the same side of the hedge. The tall Lombardy poplar is an old-time favorite of the Canadian farmer. Some of the stables and barns have thatched roofs and a peculiar projection, at the gable or at the sides, several feet beyond the line of the foundation. At the same time you can see here as fine modern farm-houses and barns as in any other part of the province.

Montmorenci Falls is the first rest. Then you have a charming drive over the hills until you come to the quaint hamlet of Ange Gardien, where there is a small oratory at the entrance and another at the exit, and in the middle of the village the old church. As our carriage rolls on, little boys and girls with bare head and feet chase beside us, holding out bouquets in the hope that we will buy. They do not turn hand-springs like the waifs who follow the traveler's carriage in England. Sometimes children offer you a glass of spring-water, or raspberries or strawberries in cones of birch-bark. They are an improvement upon the way-side beggars of Savoy in Switzerland; for our Canadians have not arrived at the high art of mendicancy—singing songs in groups, chanting ballads in honor of Ste. Anne, or blowing Laurentian horns in lieu of Alpine. The children one meets on this road are most interesting. The Côte de Beaupré is historically prolific in babies, and you may see many charming children, such as one diminutive artist in mud-pies, or the little vagabond who roosts on the fence and sings out his "*Bon jour, Monsieur,*" as you pass; or the three little graces whom we meet coming out of school, in their pretty Canadian hats and aprons. And here are two genuine rustic boys from the hill-tops, going to Ste. Anne's to sell bottles at the holy fountain. You will never forget the native courtesy of these little men and women, as they doff their hats or courtesy to you. The grace, the look of the eye, and the movement of the body—surely it is nature's own, and *la belle France* can show none lovelier.

One of the institutions of this road is the healthy beggar, who is usually a good pedestrian, and with no such show of feigned affliction as the fraternity of the south and west of Ireland. Generally they are masterpieces of patchwork. Invariably they are as dirty as Bretons. Every village has its tolerated staff of these creatures, who go about as if they

had some sort of succession from the beggars of scriptural times. If the apostles had lived in our day and traveled on the road to Ste. Anne, they would not have had to go out into the lanes to bring in the beggars. The beggars would have swarmed on the road to welcome the apostles.

If you have seen the dogs used in small carts in Belgium by the market-peddlers, either tandem or abreast, you will recognize their lineal descendants along the Côte de Beaupré. Even the women who drive them will remind you of Ghent and Bruges. These dogs are to the peasant here what the pig is to the peasant of Munster. They lie on the galleries or sun themselves undisturbed at the door, and are allowed the run of the house. They are large black mastiffs, patient beasts of burden, without enterprise enough to bark. They do a great deal of hard work, are more domesticated than the coolie, and a sort of aid-de-camp to the horse at whose heels, or under whose cart, they trot. Near them sits an old lady on a bench knitting socks, wearing a cap the fashion of which her great-grandmother brought from St. Malo.

In a few moments we trot into the heart of our Mecca and pull up at "The Retreat," a cozy and clean hotel, kept by an English family who are as intelligent as they are hospitable. Mine host has a telegraphic instrument in the house. It was regarded with superstition by the habitant, whereas it is one of superstition's worst foes. We had arrived several hours before an expected grand pilgrimage coming down the river in chartered steamers, like the *trains de piété* at Lourdes. The village consists of one long street, and, were it paved with stone, would bear a strong resemblance to village streets in Switzerland, with the projecting signs, gables, and galleries of the many little *auberges*. Every house is an improvised inn, and all the fishermen are amateur inn-keepers. The street lies at the foot of the hill, and, as you go through it, you will see faces and figures that constantly remind you of the coarse women seen in similar streets in Swiss villages. Most French-Canadian country-women become stout and wrinkled in middle life, owing to the excessive heat of the houses in winter, badly cooked food, and hard work; but those who have to go up and down these steep hills become especially clumsy. It is wonderful to see these heavy women going up the zigzag hill-roads, swinging their arms at right angles from their shoulders, and climbing fences like a man.

One of the characters of Ste. Anne is our jolly harness and shoe maker—a woman on the shady side of sixty. If her deportment has

been neglected, she is thoroughly honest and happy, as she smokes her clay pipe and shoves her spectacles up on her forehead to take a better look at her visitors. You may laugh at her ancient cap, but if you could find out why she laughs at you, you would learn that she laughs at your modern bonnet. Just over the way we saw, through an open window, a real live Evangeline, in her pretty Norman cap, at a spinning-wheel.

Let us walk down to the other end of the village: what has become of the ancient church built in 1660? To the right of the road stands a large structure a few years old, disagreeable in its ostentatious modernness. What right had they ruthlessly to destroy the old one? We are told that the walls were cracking. So much the better. To the left stands a small chapel, also modern, yet wearing a genial aged look. This was built out of the stones of the ancient chapel. The picturesque double bell-tower of the old building surmounts this chapel, and a part of the old interior was utilized, but one misses the plain façade, with its rose-window and its Norman doors; gone altogether is the atmosphere of antiquity which hovered about the old interior.

Look down the road toward "The Retreat." Is it not as if you were transported to a Swiss village? Painted on the gable-end of one house, you read: "ICI BONNE MAISON DE PENSION." And there, fastened to a stable, is the sign: "BUREU DE POSTE OFCIE," in very unclassical French. And what is this huge sign projecting out into the street? "E. LACHANCE, EPOUX DE DLLE. MERCIER. MAISON DE PENSION" (E. Lachance, husband of Miss Mercier. Boarding-house). And next door has another, surmounted by a fish: "MAISON DE PENSION. DLLE. MERCIER." Thereby hangs a tale: The house of Mercier had two daughters, one of them "fair, fat, and forty," who was the belle of the parish. Many a pilgrim from Quebec went to Ste. Anne more to see this maiden than to pray. An enterprising rival, who kept the hotel next door, cast sheep's-eyes upon the goddess; she succumbed, and became his wife, and transferred her interest in the hotel business to her liege lord. The old house still kept up the old sign of "Miss Mercier," and the ingenious benedict took down his old one and had it repainted, so as to announce to the world that he had married, and was in possession of the great attraction of the rival house.

But there the steamers come, and soon two thousand pilgrims land on the wharf. A brass band leads the way, and the people file up in long procession, dusty but devoted, many, no doubt, with mingled hopes and fears. Over

THE OLD CHURCH.

forty cripples limp along on crutches, or supported by friends, and a pitiable sight it is. The procession enters the new church, where, at the high altar and at the sides, a number of priests preside. As you enter, you see a large money-box, of ancient date and curious construction, fastened to a pillar by iron stanchions. The quaint padlock is opened by an old-fashioned bed-key. Over the side doors are rude *ex voto* paintings, representing wonderful rescues from peril by water through intercession to Ste. Anne. Over the altar is a picture of the saint by Le Brun, the eminent French artist, and the side altars contain

paintings by the Franciscan monk Lefrançois, who died in 1685. Hung upon a decorated pedestal is a handsome oval frame or reliquary like a large locket, surrounded with garnets, and having in its center a rich cross of pearls. Besides this, you see the collection of bones said to be the relics of the saint, consisting of a piece of one finger-bone, obtained in 1663, by Bishop Laval, from the chapter of Carcassonne, and which was first exposed to view on the 12th of March, 1670. In another case there is a piece of bone of the saint, obtained in 1877, but the Redemptorist Fathers, who have charge of the mission,

IN THE NEW CHURCH, ON THE SITE OF THE OLD.

out any such intercession is familiar to every student, and is no doubt an undeveloped branch of medical science. A coincidence is not a miracle, neither is this power of the will over the body a miracle. Among the long list of reputed miracles, the following from a manual of devotion will be sufficiently suggestive: "In the year 1664, a woman broke her leg. As the bone was fractured in four places, it was impossible to set it. For eight months she was unable to walk, and the doctors gave up all hope of a cure. She made a *novena*, in honor of the saint, and vowed that if she was cured she would visit the shrine every year. She was carried to the church, and during the communion she put aside her crutches and was cured at once." Sworn testimony is given as to instant recovery in diseases said by physicians to be incurable by ordinary means, and among the particular favors accorded to the parish, the temporal as well as spiritual is not forgotten. The Bishop of Montreal says that it is Ste. Anne who obtains for it "rain in the time of drought." "For it is a pious tradition among you," says he, "that a little picture representing Ste. Anne, with her august

do not know to what part of the body it belongs. The dry bones of the saint do not appear to differ in glory from those of a sinner. The church also claims to own a piece of the true cross upon which our Saviour died, and a piece of stone from the foundation of the house in which Ste. Anne lived, brought from France in 1879. Also there may be seen a superb chasuble, given by Anne of Austria, mother of Louis XIV., and some silver crucifixes.

Nothing, however, will excite more curiosity than the great pyramid of crutches, and aids to the sick and the crippled, twenty-two feet high, divided into six tiers, and crowned by a very old gilt statue of the saint. The collection is very curious and principally home-made, comprising plain walking-sticks, odd knobbed fancies of sexagenarians, queer handles, and padded arm and shoulder rests, made of pine, oak, birch, ash, hickory, rock-elm—of all common and many novel designs. A half-leg support testifies to a reputed removal of ankylosis of the knee-joint by intercession to the saint. I have no desire to sneer, but that there is some imposition and much imagination about these "miracles" no impartial mind can doubt. One may carry his charity to the verge of believing that implicit faith in intercession to a saint, with mingled hope and fear and a strong determination to force a cure, may in some cases really throw off disease; but the power of mind and will over the body with-

HOLY-WATER FOUNT AND POOR-BOX.

daughter, is the instrument of God's mercy towards you."

During the service in the church, the pilgrims crowd up to the altar and kneel in long rows in front of the balustrade. The officiating priests carry the relics in one hand and a handkerchief in the other, and touch the glass cover to the lips of the worshipers, wiping it after each kiss.

As you come out, you see pilgrims around the fountain, drinking its water and filling bottles to carry home. It is not the original well, which is said to have been the scene of cures as miraculous as those performed at Lourdes; but if it was justifiable to move the church, why not the well? As you turn to the left, you see a picturesque way-side oratory, built of rough stones and mortar, from which

which the pilgrims pin on their coats and dresses, like the shells worn by the pilgrims who have visited the shrine of Ste. Anne in Brittany. Heaps of little brass and plaster statues, photographs, beads, and other trinkets, attract the visitor. The air is full of babble from the crowds of tired yet talkative people sitting on the grass or the benches, eating their luncheon out of huge carpet-bags. Two girls, who had heard from me of the wonderful well in Brittany, were throwing pins into the fountain to find out their matrimonial prospects, and laughing heartily over their efforts. When the pins fell head foremost, hope grew sick; when the points first touched the water, the prospect of marriage within a year was certain. I noticed that, like the Chinese praying to his

EX VOTO PAINTING, 1754.

a stream of water comes from the hill. A walk along this road is very interesting. You may see the black cross against the wall of every house. The heraldic emblem of Berne is not more revered in that city than the statue of Ste. Anne here, and in every house you see it in plaster, brass, or picture. An old cemetery here has been used so much that the beadle told me he had himself laid three long rows of people, burying them indiscriminately side by side, and on top of each other—"first come, first served." Those who pay from twenty-five to a hundred dollars may be buried under the new church, the vaults of which are specially reserved for this purpose.

Little rustic booths do an active business in memorials of the saint, in the shape of medals,

favorite idol for "more money," they both persisted until the test turned the right way.

Coming back to our hospitable "Retreat," we saw a fascinating study of life and character. A tidy, handsome village girl had a boy seated on a stool on the sidewalk in front of her house, and was vigorously clipping his shaggy locks, catching the *débris* in her apron, which she had tucked around the lad's neck. "Surely some pilgrim to Ste. Anne will lose his heart if he risk his hair to the pretty barber," thought I. It turned out that some pilgrim had, and that she was a fisherman's wife.

Every house seems to share in the profits of the pilgrimages, for though the older habitants hardly ever spend a sou, youth and beauty must have its fling. You see barrels of root

THE COLLECTION OF CRUTCHES.

or spruce beer, huge slices of brown bread and butter, berries, gingerbread, boiled corn on the cob, and other Canadian luxuries, on the sills of the windows, or on rough deal tables at the doors. Inside you see long rows of solemn white cups and saucers, and piles of plates. In one little *auberge* there is a queer

character, with a monstrous hump on her back and another on her nose. She has been living at Ste. Anne's for seven years, interceding every day for the reduction of her deformity, but it increases with her age.

But what song is that stealing over the water, like a Canadian voyageur's refrain?

AT THE FOUNTAIN OF BLESSED WATER.

A boat laden with pilgrims from the Isle of Orleans is making for our shore, and the voices rise and fall with the dip of the oars in the true rhythm of the *canotier* :

Vers son sanctu - al - re, de-puis deux cents ans, La

Anne, en un si beau jour, de vos enfants a - gré-er l'a-mour !

W. George Beers.

ESTRANGEMENT.

THE path from me to you that led,
Untrodden long, with grass is grown,
Mute carpet that his lieges spread
Before the Prince Oblivion
When he goes visiting the dead.

And who are they but who forget ?
You, who my coming could surmise
Ere any hint of me as yet
Warned other ears and other eyes,
See the path blurred without regret.

But when I trace its windings sweet
With saddened steps, at every spot
That feels the memory in my feet,
Each grass-blade turns forget-me-not,
Where murmuring bees your name repeat.

James Russell Lowell.

CARLYLE IN IRELAND.

Chelsea, 4th Oct., 1849.—I will now, my long confused wayfarings of the summer being ended, endeavour to write down with all despatch what I can remember of them. After much sorting of paper-rubbish, reading over of all the Irish letters to my wife and kindred, and in some measure clearing the decks (not for "action" yet, alas, no, no!) set about this, which I partly consider a clearing of my own mind, as some kind of "preparation for action." *Faxit.*

REMINISCENCES OF MY IRISH JOURNEY.

Saturday, 30th June, 1849.—After endless "agonies of preparation," natural to a poor stationary, sedentary, biliary, and otherwise much bewildered mortal, about eight in the morning I got on board the Chelsea steamer here, at the Cadogan Pier; left my poor wife gazing sorrowfully after me, and, in a close, damp-sunny morning, was wafted swiftly down the river. Memory now is a blank nightmare till I reach the wooden platform swinging on the river just above London Bridge, north side, and call earnestly for some boatman to take my luggage and me "to the *Athlone*, at Alderman Stairs." Boatman comes, a ragged, lean greasy and sooty creature, with hurried toilsome eyes and shallow shelf chin—"a wholesome small nature, terribly beaten upon and stunted"—who cheerfully takes me in; zealously descends the river with me, tide against him; whisks his way like a needle thro' innumerable impediments of ships, rafts, barges; sweating, panting, eyes looking still more toilsome, jacket doffed, shelf-chin still more protruded; and at half-past nine, reaches the *Athlone*, a dingy dirty-looking Dublin steamer (but a steamer and mode of travel I had chosen *against* my lazy wishes, and in obedience to my insights and determinations); and, after rowing round (steward or third-mate at first refusing to let down the steps) puts me on board—takes 1s. 6d. with protest, the double his fare, and splashes away again about his business. There am I on board.

Steamer lying all, to an unexpected degree, as if in a kind of greasy sleep. £2 fare demanded by some landsman interested seems the liveliest fact. Canaille of various kinds, Irish by look, getting itself located in the fore-deck; one yellow-faced, roughish, very slight-made Irish figure in cap half-drunk

fixes my attention, by his endless talk to stewards etc., seemingly about nothing at all or next to nothing: a sorrowful phenomenon often confirmed afterwards. Half-pay Serjeant looking figure,—clean old Lancashire physiognomy of fifty (old Indian soldier, now at Falmouth, as I learned afterwards) is talking insipidities about the news from the papers, I forget what. Other figures—the more spectral in my memory, somewhat like spectral flies in a spectral gluepot! I was very sick in body, perhaps still more so in soul; and had, by no means, a lively mirror of attention to hold up to them. At ten o'clock, nevertheless, with unexpected precision, a bell rang, the steam mechanism began growling, and we jumbled forth on our way.

To the river-mouth I remember little with distinctness; the day had settled into grey; with more than enough of east-wind now that our own velocity was added to it. The brick-chaos and ship-and-boat-chaos of big London till after Greenwich lies across my remembrance like an ugly indistinct smear, full of noise and confusion, no figure distinct in it. Passengers, one after one, came on board; at Greenwich a great many soldiers "recruits and invalids" Irish both, the latter from India, and "bad subjects" mostly, as I learned afterwards,—these came on board at Gravesend in great number, drunk many of them, with or without officers (*without* it afterwards turned out); a nasty sight rather. Pilot-boats hooked themselves astern of us, and went shoving thro' the foam; sometimes as many as 4 boats at once: "pilots looking out for a job,"—favored by the steamers. A tall antelope or panther figure in red coat (about Gravesend, I think) misses the proper boarding-place from his boat; steps into one of these pilot-boats, cool he amid the tumult of noises and splashing of spray; and twists gallantly aloft over the stern; dashes the spray from self and papers, and with a brisk calmness which I could not but admire, stept smiling forwards to his place, the foredeck: a corporal of foot; commander he, as I found, of the broken military there. An exceedingly tall lank simple-looking Irish gentleman came on board thereabouts too, whom I afterwards named to myself the "Irish Toots" (see Dickens). A very short well-conditioned cockney-looking gentleman had likewise come. I took him for the captain of these Majesty's forces of ours; but found afterwards he was a tourist, "looking

at all the capital Cities," Paris last year, Dublin this; he had a small tear-store (from which I guessed a wife too); his big blue eyes, silly as he was, had at times a beautiful sorrow in them while he sat silent in the evening on deck for a while; a rough pug-face—tamed into perfect peaceable politeness, had in it an air of limited rationality, veracity and English wholesomeness, which pleased me. But I must get on! Somewhere on the river a big fat Englishman of fifty stept on board, burly, black, pock-marked, one eye shut (seemingly out, but it proved to be *in* too, on occasion): some trader (one would have hoped, in *bacon* and *edibles*) to the Plymouth region, I afterwards found. Our other cabin passenger, *where* entering I noticed not, was an elderly Lancashire or Cumberland man, you could not say of what quality below a gentn.; feeble-minded, good-humoured, his old wrinkly face grew quite blown-out at last, the eyes almost shut up, by inflammatory regimen of whiskey &c. and want of sleep before the voyage ended. I did not in the least hate, yet how little either, did I pity this poor old man. Alas, wrapt up in our own black cares (which we ought to conquer, and keep moderately conquered, if we stood to our post), shut up the soul of man from feeling for his brother,—surely an ignoble state! let this suffice for our ship's loading. I remember very vaguely Erith, much more so Southend or rather the *name* of "Southend and its long Pier" (a cockney bathing-place). I have a dim *tint* of grey-green country and spectral objects enough there rushing past me all that day and afternoon. Our Captain, an excellent, civil, able, old Welshman, kept aloft on the platform; very obliging when you spoke to him. I went twice there with a cigar, looked down into the sea of Irish rabble, and began to decipher type-faces of the Irish. The "light boats," we passed near to two or three of them; the dreariest objects I ever in this world saw; the *Girdler Tongue* &c. on their several shoals of those names; must keep a light burning at night; the two men have no function else whatever; I suppose they can *eat* terribly, and sleep nearly the whole day. Their boats were bobbing and capering in the wild surf; narrow was the share otherwise these poor fellows had of this Universe. It is a wild expanse of shoals and channels, this Thames mouth. I had never been on that side of it, at least never in daylight, having usually in former voyages passed by the Nore. Of Broadstairs and Ramsgate, nothing but a tremulous cloudy shadow remains: Ditto of Deal. I saw Walmer Castle, Duke of Wellington's, looking down on us with wings of planted wood; less memorably some big Hotel,

perhaps more than one, its windows glittering in the bleared windy sunset,—not beautiful to me they, or anything, in that sad mood. Dover (lived at twenty-four years before, one autumn) looked grim enough in the twilight; I could recognise almost nothing of my old localities, the new "entrance of the tunnel" was not recognisable except as a small blotch. How I took tea &c. and went to bed is quite *abolished* from recollection; too well can I recollect the *snoring* of my one-eyed provision friend,—whose *eating* at tea, whole chickens and plates of ham vanishing before him, I do now recollect! Also that I got up, probably about midnight; was *told* we were opposite Brighton, but could see no token of that or of anything but a dim flat coast with some kind of luminous gleam all along where sea met land; whereupon I had to smoke a pipe, and descend to my lair again. Cyclops snoring still more effectively now—seldom or never heard such snoring, which was not a *stream*, diastole and systole, but a *whirlpool* rather, or system of whirlpools, bottomless maelstroms and sandy systis conjoined (ah me!), for the man was nearly suffocated by cloud curtains and by vanished plates of ham. I have a dim but certain recollection of jumping out of my bed or drawer at last, indignantly dashing his curtains open, with some passionate demand to "*cease* that beastly gurgling and gluddering, in the name of all the devils!" Whereby at least my heavy provisional friend did awake; and I fell asleep and heard no more of him for that night. Poor fellow; not a bad creature, after all; there seemed a kind of healthy banter in him, a merry vivid eye; probably an *excellent* dealer in bacon, praiseworthy as a British citizen of 1849; but he did eat excessively, and his snoring was to me at once hateful and terrible,—poor fellow after all!

Sunday morning (1 July) at seven came on deck: beautifully sunny morning, Isle of Wight, Ventnor region lying close at hand, and the ship motionless waiting for the turn of the tide—wind had gone round from east to west in the night: we hung for about an hour with little, at first with next to no motion, opposite that southwest region of the little Island. The special localities, none of which were known to me beforehand, I did not get committed to memory. A straggling hamlet (perhaps about Dunnose, I can't now find on the map any name that fixes itself as the name then given me) with a kind of bay and clayey unbeautiful coasts, this stood distinct; less so other struggling human objects; and now only Ventnor itself figures as absorbing the whole vivid past of the scene. A steepish slope, very green but rather treeless; houses and little gardens

sprinkled over a good part of it, connected by oblique paths; grass-surface very beautiful everywhere, shrubberies apparently flourishing; a pleasant group of dwellings hung out there against the morning sun,—and one of them, I know not which, had been John Sterling's last dwelling! I looked intently, with many thoughts. Bonchurch not visible now—had it been? I knew also (what was curious to think of) that John Forster, little dreaming of my whereabouts, was in one White's at Bonchurch, down from London that very morning. Far elsewhither was I bound. With eye or with glass, looking never so intently I could discover no human or even living figure; which proves perhaps that our distance was greater than the short distance it appeared to be. "Toots" very loquacious when he could get a chance, came talking about Dr. McHale of Tuam ("Chuum" he called it) and Nangles of Achil Island; and how John had "cursed them all with bell, book, and candle" etc. which I shook off, not believing it at all literally in spite of Toots's evident *bona fides*, and wishing indeed to see Ventnor rather than *it*. After Ventnor, talk with the half-pay Serjt. Major; Wight now flitting faster by us, the ship being under full movement again. Of Indian soldiering; mainly about the economics, difficulties, etc., of locomotion for armies; but above all things the *prices* of articles in the various markets, allowances of grog—what you could *get*, and pocket or swallow, by your soldiering in India—this was the theme of my half-pay Serjt. A most healthy practical man; simplicity itself, and yet *savoir-faire* enough, tough as leather, and a *stroke* in him (I could see) like that of a quarter staff of *oak*. Man worth remembering, told me of his pensions, promotions, appointment now (to some military charge of a district, I think) at Falmouth: "as good as one hundred pounds in all, sir, which is very well, *you see*"; more total absence of *bragging*, nay of self-consciousness or of any unwholesome element it was impossible to see or figure. Soldiering like working, in such men; *strong* both ways, as native oak: the strongest kind of men. After Wight, Needles &c. (terribly worn, almost dilapidated and ruinous ugly-looking) had rapidly flowed past,—perhaps before ten o'clock,—the coast left us; Southampton &c. far in the distance, passed unnoticed, and I think I must have taken to read Quaker Pim's book on Ireland which else passed unnoticed. Or perhaps I went to sleep? Probably that *was* it? Yes, in my notebook (pencil) it is marked so "fell asleep on deck a little in the sun towards noon."

N. B. After three days more there is not

even a pencil scrap, nothing but the letters to help me to decipher what was the exact day of this or that occurrence still remembered by me.

It turned out now there had a man been *lost* last night. The good old Captain so reported it. On Saturday evening, most of the poor Irish wretches of "invalids" got more or less completely drunk; some of them even on entering, had needed no completing. One of them, a lean, angry, misguided, entirely worthless looking creature, age perhaps forty, came staggering upon the quarter-deck, and made a turn there: turn nearly completed, he came right upon the captain who of course ordered him off,—which order, tho' given mildly enough, the poor drunk wretch felt to be insulting to his honour, and swore fiercely not to comply with. A scuffle had ensued (Captain's hand got "twisted"): all of us started up to conjure the poor wretch &c.; he did then turn off, abashed, perhaps repentant, had taken more drink for consolation; was "last seen about midnight": it was now he that was never to be seen more! The Irish physiognomies I studied often from the upper platform: besides my yellow friend with the cap, I had made out some five or six type-physiognomies, which I could recognize as specimens of Irish *classes* of faces: there was the angry-bewildered, for instance the poor wretch that went overboard, or a still better yet left on board, a lean withered show of a creature with hanging brows, droop nose, mouth-corners drooping, chin narrow, narrow eyes full of sorrow and rage; "I have a right to be here, sir, I want my ration!" said he once. There was there a blonde big tiger-face (to whom I lent a light for his pipe); this is of mixed breed, I think a north-country face: noble possibility quite marred. Irish sailor at the helm in wig and storm hat; bulky, with aquiline face and closed mouth, wild cunning little eye: like Jock McDonald of my early years. Ah me! These faces are still very clear to me; and were I a painter, I could draw them; others, one or two, not thought of again till now, have got erased; I was struck in general with the air of faculty *misbred*, and gone to waste, or more or less "excellent possibility much marred," in almost all these faces. The man had found himself so enveloped in conditions which he deemed unfair, which he had revolted against, but had not been able to conquer, that he had so to speak, *lost his way*; a sorry sight, the *tragedy* of each of these poor men; but here too surely is a "possibility"; if the Irish faculty be good, you *can* breed it, put it among conditions which *are* fair or at least fairer.

"Portland Bill": it was on awakening from one of my deck sleeps, well on in the afternoon that this object: a muddy-beached little Island, I found,—perhaps an Island only at high tide:—shaped rather like a battle *bill*: was that the origin of the name? From this point the Coast continued our neighbour again; by degrees Dorsetshire passed, and then Devonshire with its gnarled rocks (as if they were whinstone or limestone, and Scotch rocks) winded rapidly off, as the evening sank—viewless now, damp, and rather windy, as we were running into the teeth of the breeze. Many caves, gnarled promontories, rock islets; trim houses and fields, no human creature visible; a silent English sabbath country,—like the dream of a sabbath. Mate, of whom anon, points out Plymouth light in the thickening dusk; past ten we make the light: Breakwater with its *red* lamp with its sudden calm of sea, and tumult of boats;—we were in some most dark, strait place, with rain beginning, and they called it Plymouth Harbour. Toots's talk to me, while the bustle went on, about an Irish lord (just dead?) and his brother, transcendent blackguards, beautiful once, dance or dinner of innumerable improper-females in London once—pity rather that I have forgotten that: but of Toots who could do anything but forget? Smooth-flowing shallow shameless river of talk; always in one or two minutes, when I could not bodily get away from him, my thoughts slid far away. These transcendent Irish lords were connected, somehow by marriage with the late Duke of Gordon. Of my night in this harbour there remains yet sad memorial; in a scrawl of a letter begun about midnight to my wife! Enough here to record the stages or chief epochs: 1. To bed very sleepy. Toots and the Lancashire Non-significant, talking serious jargon for about an hour in the cabin, wouldn't let me; I remember, the poor cockney tourist had been asking "for a pen," remembered Post Office *here*, and started up to *write*, by way of deliverance from that ear-torment:—2. Writing with ear-torment still *worn* near at hand, my Provisional friend (O Heaven I thought *he* had been gone, never to snore more) stepped in, evidently full of food and porter; at sight of him I start, can write no farther; lock up my writing case, wait impatiently that Toots and Non-significant would end. 3. Try bed again; can't at all. Toots and Non-significant stumble in, rain patters on the deck, Provisional friend takes to *snoring*—"blubber—gurgles—gludder!" I start up and don my clothes; find in the cabin too a poor under-steward snoring, loudly but humanly, and have not the heart

to awaken him. Uncertain what to do, fly on deck, smoke (under my umbrella), try *not* to despair; find at last a side cabin with nothing in it but rubbish of clothes, a sofa and an open window; fling myself down there, thanking Heaven, and fall sound asleep—till eight next morning.

Monday, 2d July.—All busy when I came on deck; sunny morning, boxes, bales, persons getting or got on board; soon sail; have seen nothing of Plymouth, see little even of the harbour except confusion of ropes and ships;—size of it guessable at less than I expected. Tract of town (Cutwater they called it?) stretching back on the right as we sailed *out*; buildings like public storehouses, or official houses farther down; two neat women step hurriedly on board there. *Misventurous* Irishwomen, giving up their plan of emigration to Australia, and cowering back to Ennis in Clare, as I afterwards learned; sisters, Misses Hewit by name. Breakwater a stone glacis, with light-tower (perhaps Cannon-tower too) and small esplanade at the end, some frigates scattered about; it was Plymouth Sound; pretty enough in the summer morning after such a night. Various new figures now on board; new prey to Toots. I spoke to none; hoped they would leave at Falmouth where we were to call. Sick gentleman in big wicker cradle lay on the deck; poor fellow!—"paralytic in the lower extremities," going to Dublin for surgery, attended only by a rough clown of a servant; his eyes look mild and patient, tho' sad; intelligent white face; age probably about thirty-five; they shifted him round out of the sun; not to embarrass him, we had to forbear looking at his cradle or him.

Cornish coast, as that of Devonshire had been, gnarled rocky; indented all along, harbour and sound (when once you had "opened" it) at the bottom of each little bay "Pol"—something or other, when you asked the name. An interesting event to me. Looe: "that is Looe," that strait hardly perceptible crack or notch in the rocks there.—Poor C. Buller, poor old years of his and mine! Fowey-harbour entrance was marked by white spots, a couple, *painted* on the rocks; not find it otherwise. Toots *preying* on the newcomers. "Hum-m-m. Drum-m-m!" with a strong Irish intonation in it. Many trim sloops of one pattern, with red sails and conspicuous label ("P. H. No. 1," etc.?) something like that) were nimbly cutting about: "Pilchard-boats, sir!" All busy here, crowded steamer crossed us on the left; pleasure-trip, Falmouth—to the Eddystone probably. Half-pay Serjeant did the honours of the Coast as we approached his new home; has liberty

seemingly of the quarter-deck, but feeds and sleeps in some region of his own. About noon or after, past St. Mawes and on the left past Pendennis,—Falmouth; and moor there "for about an hour"—which proved two hours and more.

I might, had I foreseen that latter fact, have gone ashore to see "Barclay Fox" and Co., if nothing better; nay, I was near going, had my foot on the ladder towards a boat, but in the scrambling tumult gave it up again, and decided to stay and look about me and pensively smoke and consider. John Sterling's house was there too; but nobody could tell me which; tho' one, a brisk young damsel did point out the warehouse of the Foxes, a big house near the sea. Falmouth might contain three or four thousand souls (as the look suggested to guess); it hung, pleasantly enough, tho' much too bare-looking, on the slope of the acclivity and down close to the Sea; reminded me a little of Kirkcaldy, except that this was squarish in shape, not "a long town" rather a "loose town," as I judged; one street near the sea, main street I suppose, on the *level*; the sloping thoroughfares I judged to be mostly lanes. The country looked bare; the harbour land-locked is beautiful, and if deep must be excellent. Assisted clown to screen the poor invalid gentleman in his cradle from the hot windless sun; fixed up my own umbrella over him, which the clown afterwards told me, in confidential gratitude, was "a graat support"—Sent a card ashore to Fox; admired the clean, sturdy, clear-looking boatmen; watched their long dangerous loading and disloading. Toots had gone, Provisional friend (O joy!) had gone; hoped we should now have a stiller time. About two the steam growled again, and we got under way, close to the little pleasant Castle of Pendennis this time, a trim castellated height with trim paths &c. (one company in it, Serjt. Halfpay had said); and so again out to the open deep.

Our 2 Irishwomen "from Ennis in Clare" with their clean summer bonnets (mere clean calico, folded full over paste board, with a tack or two; much admired by me) had come to the quarter-deck; wished evidently to be spoken to; were by me after others of us. Father had been a Lieutenant of foot with pension, mother too with pension; both being dead, resources were all out: parson had advised emigration, "free passage to Australia" was certain if we would deposit £12 in advance; deposited, sold off, came to Plymouth, found the "free passage" a passage among parish paupers, and shrank (of course) at the notion of it! Officers had been extremely helpful and

polite; got us back, with difficulty, our £12 and here we are, wending our sad way home again! A more distressing story I had not lately heard. For both the women, "ladies" you could not have hesitated even in the poor-house to call them, were clearly of superior faculty and quality: the elder some forty-five perhaps, a rugged brave-looking woman; the younger delicate, graceful, and even still beautiful, tho' verging towards middle-age also. The two unfortunates, was there nothing other for them by way of career in the world but this! The younger was quite pleasant company; but at "the Lizard" or earlier began to grow sick, grew ever sick, and I had to lead her to her place, a horrible den called "Second Cabin," and there leave her sister and her. Ill-nature of the stewardess, tiff between the good old captain and her because of these poor Miss Hewits. "Bring me our basket, pray sir! Stewardess will give it you!" were the last words of the elder from her dark den. Stewardess knew nothing of their basket, not she; old captain awoke from his after dinner nap, reproached the woman for her greedy hard character, ordered her to "know" the basket, which, with very angry tears, assisted by me and my soothing eloquence, the creature at last did. Base, in many cases, under certain aspects, is the mind of man!

The "Lizard point" we would pass before dinner; stormy place of cliffs, high cliffs, rough water; I found that in shape it did resemble somewhat the head of a lizard,—at least on the western sides it does. We were past the "southern" most land of Britain then; but the tossing of the water did *not* abate as promised; the evening light glared wild and sad upon the solitary sea, to the Land's-end, that was the word now. Coast still high and all rock; Land's-end stretching out black ahead; it was towards sunset when we actually reached it; passed it round the lighthouse at the distance perhaps of a mile. The wildest most impressive place I ever saw on the coasts of Britain. A lighthouse rises on a detached rock some considerable space ahead; many detached rocks, of a haggard skeleton character, worn haggard by the wild sea, are scattered about between the lighthouse and end of the firm cliff; that cluster, where the lighthouse is, had seemed to me like the ruins of a cathedral for some time. Very wild and grim, impressive in itself and as the notablest of British capes. A farmhouse called by sailors "First and last" stands very near to the extremity; farther round to the west are villages and many houses visible, "mining village" you are told; the promontory itself is among

the highest I have seen (much higher than St. Bees I thought); sheer and black. A boat or two, poor specks of piscatory human art, were seen rocking and paddling among the angry skeleton rocks in these ever-vexed waters; where they were to land, or how get up to "First and last" one didn't well see. But here at last is the spectre of the mixed cathedral,—a lighthouse among haggard sea-beat rocks, namely; and we are *round* the Land's-end, getting round towards the western side of it, and had better look well our *last*. The sunshine now went *out*, angry breeze blew colder from dark cloudy skies,—baddish night, probably? Some poor laboring ship, with patched sails and not otherwise of prosperous aspect met us just past the lighthouse, borne into the grim evening, it on its way, we on ours; and the Land's-end was among the things that had been; "standing for the Tuscar, sir!"—Tuscar light on the coast of Wexford, one hundred and thirty miles off. And so the evening and the morning had been a new day.

As there was nothing to be seen on deck but the dim tumult of sea and sky, I suppose I must have gone early to bed: I can remember shutting my little cabin door, (for the harsh stewardess, in hope probably of a shilling, had volunteered to make a bed for me in the place where I had found refuge the night before) with a satisfied feeling, and turning in with great hope: but, alas, it proved far otherwise. My first experience in the new bed was a jolt that nearly threw me out: the wind had risen, was still rising; the steamer pitched, rolled, tumbled, creaked and growled: doors banging, men's feet and voices sounding, and the big sea booming and roaring: not a wink of sleep could be had all night, hardly could one's place in bed be maintained. Some time, perhaps between three and four I went on deck to smoke; a wild wet stormy dimness everywhere; the mate dripping from every angle of his face and person—with thin wet shoes on, I remember—approached my shelter, talking sea stoicisms to me, admitting that it was a roughish night: noticeable fellow this; very civil, very good-humoured, sliding about (for he *trailed* his limbs and feet with thin shoes) to put this and that detail in order always; voice thin, creaky, querulous—hesitatory, and as if it couldn't be troubled to speak; a rocking, sliding, innocent-hearted "sea-pedant" (as such I had classed him); with lips drawn in, puckered brow, and good-humoured eyes *pretending* to be wearier than they were; came from the Medway, had been wrecked, traded to Aberdeen, was now puddling about in these seas;—may he prosper, poor fellow!

I flung myself next on the sofa, under miscellaneous wrappage, and did then get some stony sleep till the morning fairly broke.

Tuesday, 3rd July.—On deck between eight and nine, all hands looking out for "the Tuskar" when doing nothing else; old captain and a wretched passenger or two trying to *walk* the quarter-deck (impossible for any *two-footed* land animal); big sheets of spray dashing over them from time to time. A wild grey tumult; sight and sound everywhere of the rather dismal sort in sea and in sky. One ship or perhaps two at various times visible; elsewhere no Tuskar, no motion that was not of the *chaotic* powers. Sailors made a wave or motion or sound of some sort from the platform, captain too looked; Tuskar at last! In a few instants more I also could see it; white pillar or tower rising steady amid the tumult of the waters, strange and welcome; some twelve miles off, they said. We turned now gradually to the right: for Arklow head, for Wicklow do., then was Dublin itself to come. Wind, as we turned *from* it on our new course, grew softer somewhat and water smoother, but all day it was gusty, very uncomfortable and too cold. The poor sick gentleman had passed the night on deck, his cradle well screened under tarpaulins; and didn't seem much hurt by the rough weather. Lancashire Non-significant, who took a little punch perhaps too often, seemed greatly out of sorts; his poor face, red as vermillion in parts, and swollen as if you had blown up all its old wrinkles with wind;—poor devil; yet he ate again at breakfast, and made no complaint, took nothing amiss.

"Wexford Harbour," visible only as a blank on the line of coast, was a mere tradition to us. Wexford and Wicklow hills (I supposed about Eniscorthy and Ferns) many commonplace looking hills of moderate height and complex arrangement now visible. Vinegar Hill, a peaked flat cone, conspicuous enough among the others. Thought of the "Battle of Vinegar Hill," but not with interest, with sorrow rather and contempt; one of the ten times ten thousand futile fruitless "battles" this brawling unreasonable people has fought,—the saddest of distinctions to them among peoples! In heaven's name learn that "revolting" is not the trade which will profit you. The unprofitableness of all trades, if you *exceed* in it! In heaven's name either be at peace, or else try to fight with some chance of success! "Hill of Tarah" visible too, of conical shape; but not the historical-illustrious Tara,—that is in Meath, I think; tho' that too is but moderately "illustrious" to me.

Arklow Town I didn't see at all; understood there was next to no town, but remem-

bered "Wooden Ludlow's" adventure there, and could have liked to take some picture of the ground with me. Wicklow head, beautiful trim establishment of a light-house there, properly *three* towers (one or else two of them having proved wrong built), accurately white-washed, walled in, with paths &c., a pleasure to look at upon the brown way. These generally like that of Devonshire or the *lower* forms of Scotch coast; interior not ill-cultivated; houses trim enough from the distance, fields fenced and some small stragglings of plantation even. Behind Wicklow Head, in a broad shallow bay looking rather *bleared*, found Wicklow Town, kept looking at it as we sailed northward right away from it; lies in a hollow on the *southern* side of the bay screened by Wicklow head from the east winds—rather a feeblish kind of County Town; chapels, a steeple, slate roofs, thin cloud of smoke; perhaps 2 or towards 3 thousand inhabitants, as I judged. In all these seas we saw no ship. Absolutely none at all but one Wicklow Fishing-sloop, of the same form but quite rusty and out of repair as the Cornish Pilchard-sloops of yesterday;—alas one, & in this state of ineffectuality. A big steamer farther on, making from Dublin towards "Bristol" (I think our captain said); and a pilot boat *not* employed by us; except these three we saw no other ships at all in those Irish seas that day. Wonderful & lamentable! chorus all my Irish friends; and grope for their pikes to try and mend it! Bray Head I had seen before; and Bray, but couldn't make my recollections correspond. Beautiful suburban country by the shores there, on the Dublin side. Works of Wicklow Railway, hanging over the sea, I remember, probably about Bray Head. Afternoon sinking lower, wind cold, bleary, loud; no dinner till one got to Dublin: wish we were there. Dublin Bay at last; Kingstown with its small *exotic* rows of Villas hanging over the saltwater; Dalkey Islet, with ruined church, close on the other side of us; Kingstown Harbour, huge square basin within granite moles, few ships, small business in it, wild wind was tossing some filament of steam about (mail steamer, getting ready I suppose for Holyhead), and the rest was idle vacancy. Long lines of granite embankment, a noble channel with docks, *miles* of it (there seemed to me), and no ship in it, no human figure on it, the genius of vacancy alone possessing it! Will "be useful some day" I suppose? The look of it, in one's own cold wretched humour, was rather sad.—Dublin Harbour at last; a few ships actually moored here, along the keys nearest to the City. Tumult, as usual; our key was on the north bank. Miss

Hewits came up, specially begged me not to leave *their* luggage once on shore till they themselves came with the remainder of it: did so, tho' little able to wait; was hardly ever in a more *deplorable* state of body than even now. Despatched the Miss Hewits; got into a cab myself escaping from the unutterable hurlyburly. "Imperial Hotel, Sackville street!"—and was safely set down there, in wind and dust, myself a mass of dust and inflammatory ruin, about 6 or 7 in this evening of Tuesday, July 3.—What a pleasure to get fairly washed, and into clean linen and clothes, once more! small wholesome dinner in the ground storey; fine roomy well-ordered place: but, alas, at the Post Office there was no admittance, "all shut at seven." I had to take that disappointment, and instead of receiving letters write letters.

Imperial-Hotel people, warned I suppose by Fitzgerald (Miss Purcell the proprietress's nephew) had brightened up into enthusiastic smiles of welcome at sound of my name: all was done for me then that human waitage in the circumstances could do; I had a brisk-eyed deft Irish youth by way of special attendant, really a clever, active, punctual youth, who seemed as if he would have run to the world's end for me at lifting of my finger: he got me cloakpins (my little bed-room the "quietest" they had, wanted such); bath tubs, attended to my letters, clothes, messages, waited on me like a familiar fairy. Could they have got me into a room really "quiet," where I might have really slept, *all* had been well there. But that was not possible; not there, nor anywhere else in Inns. One's "powers of observation" act under sad conditions, if the nerves are to be continually in a shatter with want of sleep and what it brings! Under that sad condition, as of a gloomy pressure of waking nightmare, were all my Irish operations, of observation or other, transacted; no escape from it; take it silently therefore, *say* nothing more of it, but do the best you may under it as under a law of fate.

About 10 at night, still writing letters, I received "John O'Hagan's" visit; a note from Duffy, who was dining there, had lain waiting for me before—brisk innocent modest young barrister, this John O'Hagan; Duffy's sister-in-law did by no manner of means *let* rooms; so her offer of one, indicated in Duffy's note, had to be at once declined: Duffy himself "would be here in half an hour." Wrote on to my mother or to Jane: Duffy came soon after the time set. Drank a "glass of lemonade" from me, I a glass of punch; took my letters of introduction home with him to scheme out a route, gave me a road *series* "drive here first, then there, &c." for Dublin

introductions on the morrow; and after a silent pipe I tumbled into bed.

Wednesday, 4th July.—Breakfast in the Public room: considerable company; polite all, and less of noise among them than when I was formerly there: arrangements all perfect; "toasted bacon," coffee, toast, all right and well served—No letters for me at the Post-Office! strange, but no help. Car ("a shilling an hour") about noon (I think) to go and deliver my introductions; got a body of letters just as I was stepping out on this errand: all right, I hope, Postmaster mistaken before! M'Donnel of the National Schools, "engaged," very well; to Board of Works, Poor-law Power not come; Larcom just coming, read my *letters* in his room, go away then as he has not yet got his business done. In Merrion Square Doctor Stokes in: clever, energetic, but squinting, rather fierce, sinister-looking man,—at least some dash of that susceptible in him: to dine there, nevertheless, to-morrow evening—Doctor Kennedy not at home, Sir R. Kane do. (out of town); Sir Duncan Macgregor, found him, an excellent old Scotchman, soldierly, open, genial, sagacious: Friday night to dine with him; left my other military letters there, and drove to Mrs. Callan's (Duffy's sister-in-law);—had missed Pim the Quaker before; "in London"; left Forster's letter, declining to see the other members of the firm just now. Long talk with Mrs. Callan, Dr. C., and Mrs. Duffy; Duffy in his room ill of slight cold. Home to Imperial again; with a notice that I will go and *bathe* at Howth;—find Dr. Evory Kennedy at the door as I am inquiring about that; go in with him, talk; he carries me in his vehicle to the Howth Station, not possible for this night; *can* do it at Kingston, drives off for the station *thither*, with repeated invitations that I will dine with him,—finds on the road that Kingston also will not do, and renews his entreaties to dine, which seeing now no prospect for the evening, I comply with Ky.; drives me all about; streets beautiful, but idle, empty; charming little country house (*name* irrecoverable now), beyond some iron-foundry or forge-works, beyond "Rev. Dr. Todd's," on the Dundrum or Ranelagh side: wife and sisters all out to receive us: sisters, especially elder sister, expected to be charmed at sight of "Thomas Carloil!" tho' whether they adequately were or not, I cannot say.—Pleasant enough little dinner there; much talk of Pitt Kennedy, a brother now with Napier in India; vivid inventive patriotic man, it would appear, of whose pamphlets they promised me several (since read, not without some real esteem of the headlong Pitt

Kennedy); other brother is Lord Bath's agent in Monaghan,—*hence* chiefly those attentions to me. Ladies gone,—pale, elderly earnest-eyed lean couple of sisters, insipid-beautiful little wife.—"Dr. Cooke Taylor" is announced, a snuffy, babbling, baddish fellow, whom I had not wished at all specially to see.—Strange *dialect* of this man, a Youghal native, London had little altered that; immense lazy gurgling about the throat and palate regions, speech coming out at last not so much in *distinct* pieces and vocables, as in *continuous* erudition, semi-masticated speech. A peculiar smile too dwelt on the face of poor snuffy Taylor; I pitied, but could not love him—with his lazy gurgling, semi-masticated, semi-deceitful (and self-deceiving) speech, thought and action. Poor fellow, one of his books that I read "On the Manufacturing regions in 1843," was not so bad; Lord Clarendon, a great Patron of his, had got him a pension, brought him over to Ireland:—and now (about a fortnight ago, end of Sept.) I learn that he is dead of cholera, that, better or not so good, I shall never see him again! We drove home together that night, in Dr. Kennedy's car; I set him out at his house (in some modest clear street, near Merrion Square); two days after, I saw him at the Zoölogical breakfast; gurgles-snuffle, Cockney-and-Youghal wit again in semi-masticated dialect, with great *expressions* of regard for me, as well as with other half or whole untruths;—and so poor Taylor was to vanish, and the curtains rush down between us impenetrable for evermore. *Allah akbar, Allah Kerim!*

Thursday, 5th July.—What people called, what bustle there was of cards, and people, and appointments, and invitations in my little room, I have *quite* forgotten the details of (letters indicate more of it perhaps): what I can remember is mainly what I *did*, and not quite definitely (except with effort) all or the most of that.

Notes and visitors, hospitable messages and persons, Macdonnel, Colonel Foster, Dr. Kennedy—in real truth I have forgotten *all* the particulars; of Thursday I can remember only a dim hurly-burly, and whirlpool of assiduous hospitable calls and proposals, till about four o'clock when a "Sir Philip Crampton," by no means the most notable of my callers, yet now the most noted in my memory, an aged, rather vain and not very deep-looking Doctor of Physic, came personally to "drive me out,"—drive me to the Phoenix Park and Lord Lieutenant's, as it proved. *Vapid-inane* looking streets in this Dublin, along the quays and everywhere; sad defect of waggons, real *business* vehicles or even gentleman's car-

riages; nothing but an empty whirl of street cars, huckster carts and other such "trashery." Sir P's. talk, Twistleton mainly—Phoenix Park, gates, mostly in grass, monument, a pyramid, I really don't remember in "admonition" of what,—some victory perhaps? Frazer's "Guide-book" would tell. Hay going on, in pikes, coils, perhaps swaths too; patches of potatoes even: a rather dim-mish wearisome look. House with wings (at right angles to the body of the building) with esplanade, two sentries, and utter solitude, looked decidedly dull. Sir P., some business inside, tho' *Ldship. out.*, leaves me till that end; I write my name, with date merely, not with address, in his *Lordship's book* ("haven't the honor to know her *Ladyship*,") am conducted through empty galleries, into an empty room in the western (or is it *northern?*) wing, am there to wait. Tire soon of waiting; walk off leaving message. Sir P. overtakes me before we reach the gate; sets me down at my *hôtel* again, after much celebration of his place in the Wicklow Hills, etc., after saluting an elderly *roué* Prince or Graf something, a very unbeautiful old boiled-looking foreign dignitary (Swede, I think) married to somebody's sister;—and with salutations, takes himself away, muttering about "Zoölogical society breakfast on Saturday," and I, barely in time now for Stokes's dinner, behold no more.

Stokes's dinner was well replenished both with persons and other material, but it proved rather unsuccessful. Foolish Mrs. Stokes, a dim Glasgow lady, with her I made the reverse of progress,—owing chiefly to ill-luck. She did bore me to excess, but I did not give way to that; had difficulty however in resisting it; and at length once, when dinner was over, I answering somebody about something chanced to quote Johnson's, "Did I say anything that *you* understood, Sir?" the poor foolish lady took it to herself; bridled, tossed her head with some kind of indignant-polite ineptitude of a reply; and before long flounced out of the room (with her other ladies, not remembered now), and became, I fear, my enemy for ever! Petrie, a Painter of Landscapes, notable antiquarian, enthusiastic for Brian Boru and all that province of affairs; an excellent simple, affectionate lovable soul, "dear old Petrie," he was our chief figure for me: called for *punch* instead of wine, he, and was gradually imitated; a thin, wrinkly, half-ridiculous, yet mildly dignified man; old bachelor, you could see; speaks with a *painting* manner, difficult to find the word; shews real knowledge, tho' with sad credulity on Irish antiquarian matters; not knowledge that I saw on anything else. Burton, a young Por-

trait-Painter; thin-acquiline man, with long thin locks scattered about, with a look of real Painter-talent, but thin, proud-vain; not a pleasant "man of genius." Todd, antiquarian parson (Dean or something), whose house I had seen the night before: little round-faced, dark-complexioned, squat, good humored and knowing man; learned in Irish Antiquities he too; not without good instruction on other matters too.—These and a mute or two were the dinner; Stokes, who has a son that carves, sitting at the side; after dinner there came in many other *mutes* who remained such to me. Talk, in spite of my endeavours, took an Irish-versus-English character; wherein, as I really have no respect for Ireland as it now is and has been it was impossible for me to be popular! Good humor in general, tho' not without effort always, did maintain itself. But Stokes, "the son of a United-Irishman" as I heard, grew more and more gloomy, emphatic, contradictory: after eleven I was glad to get away. Petrie and others in kindly mood going with me so far as our roads coincided; and about twelve (I suppose) I got to bed,—and do *not* suppose, also, but *know*, that there was a wretched wakeful night appointed me: some neighbouring guest taken suddenly ill, as I afterwards heard. (I must get on *faster*, be infinitely *briefer* in regard to all this!

Friday, 6th July.—Still in the bath-tub, when my waiter knocked at the door, towards 9; and so soon as let in, gave me a letter with notice that some orderly, or heiduc, or I know not what the term is, was waiting in some vehicle for an answer. Invitation from Lord Clarendon to dine with him on Saturday: here was a *nodus*! For not having slept, I had resolved to be out of Dublin and the noise without delay; Kennedy had pressed me to his country-house for a dinner on Saturday, and that, tho' not yet in words I had resolved to do, his hospitality being really urgent and his place quiet;—and now has the Lord Lieutenant come, whose invitation *abolished* by law of etiquette all others! Out of the cold bath, on the spur of the moment, thou shalt decide, and the heiduc waits! Polite answer (well enough really) that I am to quit Dublin that evening, and cannot come. Well so far; so much is tolerably ended. New very polite note came from Lord Clarendon offering me introductions &c. an hour or two after; for which I wrote a 2nd note, "not needed, thousand thanks." This morning I had to breakfast with O'Hagan, where were two young "Fellows of Trinity" great admirers &c. and others to be.

Fellows of Trinity, breakfast and the rest of it accordingly took effect: Talbot Street—

I think they called the place,—lodgings, respectable young barrister's. Hancock the Political-Economy Professor, whom I had seen the day before; he and one Ingram, author of the Repeal Song "True man like you man," were the two Fellows; to whom as a mute brother one Hutton was added, with "invitation to me" from the parental circle, "beautiful place somewhere out near Howth,"—very well as it afterwards proved. "Dr. Murray," Theology-Professor of Maynooth, a big burly mass of Catholic Irishism; he and Duffy, with a certain vinaigrous pale shrill logician figure who came in after breakfast, made up the party—Talk again *England versus Ireland*; a sad unreasonable humour pervading all the Irish population on this matter—"England does not hate you at all, nor love you at all; merely values and will pay you according to the work you can do!" No teaching of that unhappy people to understand so much. Dr. Murray, head cropt like stubble, red-skinned face, harsh grey Irish eyes; full of fiery Irish zeal too, and rage, which however he had the art to keep down under buttery-vocables: man of considerable strength, man not to be "loved" by any manner of means! Hancock, and now Ingram too, were wholly English (that is to say, Irish-rational) in sentiment. Duffy very *plaintive* with a strain of rage audible in it. Vinaigrous logician, intolerable in that vein, drove me out to smoke. Not a pleasant breakfast in the humour I was then in!

University after, along with these two fellows: Library and busts; Museum, with big dark Curator Ball in it; many knick-nacks,—Skull of Swift's Stella, and plaster-cast of Swift: couldn't *write* my name, except all in a tremulous scratchy shiver, in such a state of nerves was I. Todd had, by appointment, been waiting for me; was gone again. Right glad I to get home, and smoke a pipe in peace, till Macdonnell (or somebody) should come for me!—Think it was this day I saw among others, Councillor Butt, brought up to me by Duffy: a terrible black burly son of earth: talent visible in him, but still more animalism; big bison-head, black, not *quite* unbrutal: glad when he went off "to the Galway Circuit" or whithersoever.

Sad reflexions upon Dublin, and the animosities that reign in its hungry existence—*Not* now the "Capital" of Ireland; has Ireland any Capital, or *where* is its future capital to be? Perhaps Glasgow or Liverpool is its real "capital city" just now! Here are no longer lords of any kind; not even the sham-lords with their land-revenues come hither now. The place has no manufactures to speak of; except of ale and whisky, and a little

poplin-work, none that I could hear of. All the "litigation" of Ireland, whatever the wretched Irish people will still pay for the voiding of their quarrels, comes hither; that and the sham of Government about the Castle and Phoenix Park,—which could as well go anywhere if it were so appointed. Where will the future capital of Ireland be! Alas, *when* will there any real aristocracy arise (here or elsewhere) to need a Capital for residing in!—

About four p. m. as appointed, Macdonnell with his car came. "Son of a United Irishman," he too. Florid handsome man of 45 with grey hair, keen hazel eyes, not of the *very* best expression: active, quick, intelligent, energetic, with something smelling of the Hypocrite in him, disagreeably limiting all other respect one might willingly pay him. *Talis qualis*, with him through the Streets. Glassnevin tollbar, woman has *not* her groat of change ready; streaks of irregularity, streaks of squalor noticeable in all streets and departments of things. Glassnevin Church; woody, with high enclosures, frail-looking old edifice, roof mainly visible:—at length Glassnevin model-farm—nearly the *best thing*, to appearance, I have yet seen in Ireland. Modest slated buildings, house, school and offices, for real use, and fit for that. Slow-spoken heavy-browed, school-master, croaks out sensible pertinent speech about his affairs: an Ulster man (from Larne, I think; name forgotten), has forty-five pupils, from seventeen to twenty-one years; they are working about, dibbling, sorting dungheaps, sweeping yards. Mac. speaks to several: coarse rough-haired lads, from all sides of Ireland, intelligent well-doing looks through them all. Schooling alternates with this husbandry work. Will become National Schoolmasters,—probably factors of estates, if they excel and have luck. Clearly, wherever they go they will be practical missionaries of good order and wise husbandry, these poor lads; *anti* chaos missionaries these: good luck go with them, more power to their elbow! Such were my reflections, expressed partly in some such words. Our heavy-browed croaking-voiced friend had some thirty Cows; immense pains to preserve all manure, it is upon this that his husbandry turns. A few pigs, first-rate health in their air. Some thirty acres of ground in all; wholly like a garden for cultivation: best hay, best barley; best everything. I left him and his rough boys, wishing there were 1000 such establishments in Ireland: alas, I saw no other in the least equal to it; doubt if there is another. Mac. talking confidentially and with good insight too of Archbishop Whately

& C., set me down at the Hôtel, to meet again at dinner. Hasty enough toilette, then Sir Dn. Mc Gregor's close Car, and I am whisked out to Drumcoudra where the brave Sir Dn. himself with wife and son, and a party including Larcom and two ancient Irish Gentlemen &c are waiting.

Pleasant old country-house; excellent quietly genial and hospitable landlord: dinner pleasant enough really. McDonnell sat by me, somewhat flashy; Larcom opposite, perhaps do. but it was in the English style. Ancient Irish gentn. were of really excellent breeding, yet Irish altogether: these names quite gone (if ever known, according to the *underbreath* method of introduction), their figures still perfectly distinct to me. In white neck cloth, opposite side, a lean figure of sixty; wrinkly, like a washed blacksmith in face, yet like a gentn. too,—elaborately washed and dressed, yet still dirty-looking; talks of ancient experiences, in hunting, claret drinking, experiences of others his acquaintances, all dead and gone now, which I have entirely forgotten; high Irish accent; clean dirty-face wrinkled into stereotype, of smile or of stoical frown you couldn't say which: that was one of the ancient Irishmen; who perhaps had a wife there? The other, a more florid man with face not only clean but clean-looking, and experiences somewhat similar; a truly polite man in the Irish style: he took me home in his car. Sir Dn. had handed me a general missive to the Police Stations "Be serviceable, if you ever can, to this traveller,"—which did avail me once. At home lies Kennedy's letter, enjoining me to *accept* the Lord Lieutenant's dinner, whither he too is going; which I have already refused! *What* to do to-morrow night? Duffy is to be off to Kilkenny; to lodge with "Dr. Cane the Mayor"; who invites me too (Duffy, on the road to O'Hagan's breakfast, shewed me that), which I accept.

Saturday, 7th July.—Wet morning; wait for Kennedy's promised Car,—to breakfast in the Zoölogical gardens. Smoking at the door, buy a newspaper, old hawker pockets my groat, then comes back saying "Yer Hanar has given me by mistake a three-penny!" Old knave, I gave him back his newspaper, ran upstairs for a penny,—discover that the three-penny has a hole drilled in it, that it is his,—and that I am done! He is off when I come down—Petrie under an umbrella, but no Kennedy still. We call a car, we two; I give him my "Note to Chambers Walker, Barrister," whom he knows, who will take me up at Sligo, when he (P) will join us, and we shall be happy. Well;—we

shall see—Muddy Street, rain about done; Carboy coming over one of the bridges, drives against the side of our car, seemed to me to see clearly for some instants that he *must* do such a thing, but to feel all the while that it would be so convenient to him *if* he didn't,—a reckless humour, *ignoring* of the inevitable, which I saw often enough in Ireland. Even the mild Petrie swore, and brandished his umbrella. "How could I help it?; could I stop, and I goin' so rapid!" At the gate of Zoölogical which is in Phoenix Park, were Hancock, Ball of the Museum, another Ball of the Poor-law, Cook Taylor (for the last time, poor soul!), and others strolling under the wet boscage: breakfast now got served in a dim very damp kind of place (like some small rotundo, for limited public-meetings),—unpleasant enough wholly; and we got out into the gardens, and walked smoking, with freer talk (of mine mainly) good for little. Animals &c.,—public subscription scanty—Government helps:—adieu to it. In Kennedy's car to Sackville Street; Poor-law Ball and a whole set of us; pause at Sackville street, part go on, part will take me to Royal Irish Academy, after I have got my letters of this morning's post. With Hancock I settle that *Hutton* this night shall lodge me at Howth; that he and Ingram shall escort me out thither, when I will bathe. Nerves and health—ach Gott, be *silent* of them!

Royal Irish Academy really has an interesting museum: Petrie does the honours with enthusiasm. Big old iron cross (Smith's name on it in Irish, and date about 1100 or so, ingenious old smith really); Second Book of Clogher (tremendously old, said Petrie), torques, copper razor, porridge-pots, bog butter (tastes like wax), bog-cheese (didn't taste that, or even see); stone mallets (with cattle-bones copious where they are found,— "old savage feasting-places"): really an interesting museum, for everything has a certain *authenticity*, as well as national or other significance, too often wanting in such places. Next to Petrie, my most assiduous expositor was the Secy., whom I had seen at Stokes's; a mute, but who spoke now and civilly and to the purpose. Bustle-bustle. Every Kennedy and others making up a route for me in the library room; at length, in a kind of paroxysm, I bid adieu to them all, and get away,—to the hotel to pack and settle.

Larcom next comes: for an hour and half in Board of Works with him. Sir W. Petty's *old* survey of Irish lands (in another office from L's); Larcom's new one,—very ingenious; coloured map, with dots, figures referring you to tables, where is a complete account of all estates, with their pauperisms, liabilities,

rents, resources: for behoof of the Poor-law Commsrs. and their "electoral divisions"; a really meritorious and as I fancy most valuable work. Kirwan a western squire accidentally there; astonished at me, poor fellow, but does not hate me, invites me even. Larcom to hotel door with me: adieu, adieu! to the hotel people too, who have done all things zealously for me, and even schemed me out a route for the morrow (*wrong*, as it proved, alas!) I bid affecting adieus; and Ingram and Hancock bowl me off to the Howth Railway. Second-class, say they, but gentn. tho' crowded: Dublin cockneys on a Saturday.

The Hutton house, that evening amid "Josinian" really well-conditioned people: much should not be said of it. Hospitality's self: tall silent-looking Father Hutton (for they live at Ballydoyle, this side of Howth) meets me with "hopes" &c. at the Station there: car is to follow us to Howth, where I am to bathe, whither we now roll on. Bathe, bad bathing-ground, tide being out, wound heel in the stones (slippers *were* in the Bathing Machine, but people *didn't tell me*); *Cornish* Pilchard-sloops fishing here; dirty village; big old Abbey over-grown with thistles, nettles, burdocks and the extremity of squalor, to which we get access thro' dark cabins by the *back windows*,—leaving a few coppers amid hallelujahs of thanks. Car, get wrapped, and drive to Lord Howth's gate: admittance there, to those of us on foot, not without difficulty: beautiful avenue, beautiful still house looking out over the still sea at eventide; among the beautifullest places I ever saw. Lord Howth a *racer*, away now, with all his turf-equipments; *Cornish* people obliged to come and fish his Bay,—his mainly for 500 years back, I believe. Call in by a Cousin Hutton (poor George Darley's class-fellow, a barrister, I afterwards find) who is to go with us; twilight getting darker and darker,—I still without dinner, and growing cold, reduced to tobacco merely! Arrive at last; succedaneum for dinner is readily provided, consumed along with coffee; night passes, not intolerably, tho' silence for me was none; alas, on reflecting, I had not come there for silence! Cousin Hutton and Ingram off; a clever indignant kind of little fellow the latter. Mrs. Hutton, big black eyes *struggling* to be in earnest; four young ladies sewing,—*schöne kinder* truly.—At last do get to bed; sleep sound till 6, bemoaned by the everlasting main. "No train (Sunday) at the hour given by Imperial Hotel people," so it appears! The good Huttons have decided to send me by their carriage. Excellent people; poor little streetkin of Ballydoyle fronting a wide waste of sea-sands (fisher

people, I suppose): peace and good be with you!

Sunday, 8th July.—Escorted by Hancock and young Hutton, am set down at Imperial Hotel, and thence my assiduous Familiar brings out luggage, in a Car to Kildare Railway Station, (in the extreme west,—King's or Temple-bridge, do they call it?): three-quarters of an hour too soon; rather wearisome the waiting. Fields all about have a weedy look, ditches rather dirty; houses in view, extensive some of them, have a patched dilapidated air—lime-pointing on *roofs* (as I gradually found) is uncommonly frequent in Ireland; do. white-washing to cover a multitude of sins: grey time-worn look in consequence—lime is everywhere abundant in Ireland; few bogs themselves but are close in the neighborhood of lime.

Start at last: second class but *not* quite Gentn. this time; plenty of *room* however. Irish traveller alone in my compartment; big *horse-faced* elderly; not a bad fellow (a Wexford?),—for Limerick I suppose. Two Irish *gents* (if not gentn.) in the next compartment (for we were all visible to one another); mixed rusticity or cockneity, not remembered, in the other. Gents had both of them their tickets stuck in hatband; good, and often seen since in Scotland and there: talked to one another, loud but empty: first gent beaming black animal eyes, florid, ostentatious, voracious-looking: a sensual gent; neighbour had his back towards me, and he is lost: both went out awhile before me.—Kildare Station between twelve and one (I think): indifferent *porterage*—Country with hay and crops, in spite of occasional bogs, had been good,—waving champaign with Wicklow Hills in the distance; railway well enough, tho' sometimes at Stations or the like some little thing was wrong.—Letter of the Inscription knocked off, or the like. This then is Kildare:—but alas I nowhere see the City; above all, see no Peter Fitzgerald, whom I expected here to receive me. In the open space, which lies behind the station, get a view of Kildare, round tower, black and high, with old ruin of cathedral, on a height half a mile off; poor enough "City" to all appearance! Ask for St. Bridget's "Fire Tower-house" that once was; nobody knows it; one young fellow pretends (and only pretends I think) to know it. Two gentlemen, fat fellows, out of the train seemingly had seen the label on my luggage; rush round to ask me eagerly, "Are you Mr. Thomas Carloil?" I thought they had been Fitzgerald, and joyfully answered and enquired: alas, no they were Mr. Something else altogether, and had to roll away again next instant. Seeing no Fitzger-

ald I had to bargain with a car-man (I think there was but one), and roll away towards Halverstown—up a steepish narrow road to Kildare first.

Kildare, as I entered it looked worse and worse: one of the wretchedest wild villages I ever saw; and full of ragged beggars this day (Sunday),—exotic altogether, “like a Village in Dahomey.” Man and Church both, knots of worshipping people hung about the streets, and every-where round them hovered a harpy-swarm of clamorous mendicants, men, women, children:—a village *winged*, as if a flight of harpies had alighted in it! In Dublin I had seen winged groups, but not *much* worse than some Irish groups in London that year: here for the first time was “Irish beggary” itself!—From the centre or top of the village I was speeding thro’, when the Cathedral and Round Tower disclose, or properly had disclosed, themselves on my right: I turn a little to survey them; and here Fitzgerald and lady, hospitable pair, turn up and make themselves known to me *à la bonne heure*.

Beggars, beggars; walk through the wretched streets, Nunneries here, big chapel here, my hosts are Catholics: I went smoking in their carriage till they make a call; won’t give beggars anything who depart, all but 2 young fellows, cowering nearly naked on opposite sides of me 20 yards off “Take this groat and divide it between you!” Explosion of thanks; exeunt round the corner—resented one: “Ach, yer honor! He won’t give me the two pence”—“Then why don’t you lick him, you blockhead, till he either die or give it you?” Two citizens, within hearing, burst into a laugh.—Home to Halverstown, pleasant rough-cultivated Country, ragged hedges, fertile weedy fields, one *good* farmstead or two: Mrs. Purcell welcomes us with genial smiles.

Monday, 9th July 1849.—Went from Halverstown to Glendalough, wonderful passage, especially after Holywood a desolate hamlet among the hills. Scarecrow figures all busy among their peats, ragged all, old straw hats, old grey loose coats in tatters, vernacular aspect all. Horse unwilling to perform uphill, at length down hill too; we mostly walk. Young shepherd, very young gossoon (had been herding with somebody for no wages), was now sent home to “the Churches,” where he had a brother (minor) and sister left,—fibbed to me (as I found in the begging line), otherwise good and pitiable, I made him mount downhill. Resemblance to Galloway, in the hills, or to the pass beyond Drevien; hills *all* black and boggy some very craggy too; cattle kylors, sheep mongrels: wild stony huts, patches of corn few yards in area.

[Woman near Kilcullen milking a goat in the morning—goats frequent enough here, pick living in the ditches] Wicklow Gap; Lead Mines; stones on the road. Guide (a sulky stupid creature) drives over it eyes open.—Like much here, like potatoe-culture. Cottages mostly cabins to the right hand under the road, and more frequent all the way down. Some mine-works (water wheel *going*), many mine shafts all the way down. At bottom inn, shop, swift river steps; beggars, churches, churchyard, wreck of *grey* antiquity grown *black*; round tower—“Cathedral,” small Church with arch roof still entire, and little round belfry (? windows in it) at one end. Third church there; then lower and upper lake opening. Strait cul-de-sac of a glen, a spoke (or radius) making an *angle* with Wicklow Gap Glen: fit *pot* among the black mountains for St. Kevin to macerate himself in. Scarecrow, boatman; big mouth, rags, hunger and good humour, has his “chance” (of this best with strangers) by way of wages. Woman squirrel clambering on the rocks to shew St. Kevin’s Bed; which needed no “shewing” at all; husband had deserted her, children all dead in workhouse but one; shed under a cliff; food as the ravens. New carman, rapid, good-humoured and loquacious; miner hurt among the hills; man galloping for doctor and priest; howl of woman’s lamentation heard among the twilight mountains; very miserable to hear. No whiskey at Twainer’s; handsome gift of milk by pretty daughter brought sixpence all the same. Home about ten; expense enormous, 30/ or more to me.

Tuesday 10th July.—Lane, the Scotch farmer; excellent farming; Gentn. (Burrowes) that wouldn’t allow draining. 800 people *took* the Common; priest had petitioned Peel 10 years ago, but took no notice; peasant vagaries did, and here their cabins and grottos all *are*. Fitz’s brother (a useful good servant) has a cabin and field there, with wife in it; good ground if it were drained. All Commons have been settled that way; once they were put away from, and the ditches levelled *twice* (so said our first Carman, a fine active-lad) the *third* time it held, and so they stay. O’Connor (Mrs. Purcell’s brother) a smart dandyish landlord, complained dreadfully of these “Commoners” now mostly *paupers*; nobody’s property once, now *his* (to bed). All creatures, Love among the rest, cling to the potatoe, as the one hope or possibility they have or ever dream of; look upon the chance of failure, as our Sulky did upon the stone “perhaps I’ll get over it.” In the afternoon Curragh of Kildare, best of race-courses, a sea of beautiful green land, with

fine cropt furze on it here and there, a fine race-stand (like the best parish church) at one end, saddling house, &c.; racing apparatus enough; and *work* for about 10,000 people if they were set to it instead of left to beg, (circle of 3 miles, 4,000 acres, look?) New-bridge village and big barrack; Liffey both at Kilcullen and it; *Monastery* Mrs. P. saluted priest; people all lounging, village idle, silent, many houses *down*.—Railway, whirl of dust, smoke and screaming uproar, past Kildare again, past Athy (*A-thigh*) old walls, now a village, Wexford hills on this hand, Q's County hills on that: good green waving country alternating with detestable bogs to Carlow—saw into the grey old hungry-looking stones as

we whirled past in the evening sun—Railway Station, broken windows there (done by mischievous boys), letters knocked off, &c., now and then all the way from Dublin. Car at Bagnalstown, eloquent beggar. "More power to you wherever you go! The Lord Almighty preserve your honor from all sickness and hurt and the dangers of the year!" &c., &c. Never saw such begging in this world; often get into a rage at it. On to Kilkenny (over the Barrow &c.); noisy vulgar fellow, talks, seems to know me. Castle Inn door; Dr. Cane's, where I now am [writing in dressing gown] 7 a. m. not having slept; morning the flower of summer; town old decayed and grey.

(To be continued.)

Thomas Carlyle.

THE DREAMER.

Oh, I have sailed
Where others failed;
Found polar seas and Happy Isles,
And gone a million million miles,
Through summer and through snowing!
And I have seen
Old Pan between
The oaken vistas, as I passed
Low banks Lycæus overcast,
His oaten pipe a-blowing.

Sometimes, on seas,
Sweet melodies
Of phantom voices fill the sky,
And fairy barges pass me by,
Bound out for El Dorado.
Through frozen noons
And torrid moons,
Toward stranger noons and moons I steer;
Through wood and waste I journey near,
The Valley of the Shadow.

In crowded throngs,
I hear strange songs,
And blare of trumpets sounding by
Old villages and castles high,
And pied and daisied hollows;
Or see, between
The spring's young green,
The gleaming shoulder, pearly white,
Of laughing dryad, in swift flight,
The gay faun hotly follows.

Sometimes the night
Is filled with light,
And all the sweet myrrh-thickets glow
With softened yellow, when below
Ten thousand lanterns quiver.
Through outer glooms,
And trailing blooms,
I sweep into enchanted lands,
Fast skimming o'er the golden sands
Of Bagdad's storied river.

And dancing girls,
In dreamy whirls,
By palace-doors that brightly gleam,
Float through like visions in a dream,
The sweet thought follows after.
And eyes meet eyes,
In love's surprise;
Hearts beat, and loud the wailing flute.
And murmur of the drowsy lute,
Do mimic happy laughter.

The grace that gleams
In poets' dreams
And lovers' thoughts I still pursue;
For me the sunlight paints the dew,
And lilies perfume-laden.
To me bird-song
And joy belong,
And poles come near, and stars draw nigh;
For me doth droop the laughing eye
Of arch and tender maiden.

L. Frank Tooker.

OPERA IN NEW YORK. III.

A SINGLE season brought the operatic adventurers in Astor Place to bankruptcy. Following upon two splendid performances (one of *Romeo* by the veteran prima-donna, Catarina Barili-Patti, in which, notwithstanding the lack of freshness in her voice, she delighted the most appreciative part of her audience by her splendid and truly imposing display of the grand style in the old Italian school of singing, and one by Truffi of the Jewess in Verdi's "Nabucco," in which, by her nobility of person and of action, and no less by her fine musical declamation, she made an impression never to be effaced from the memories of those who received it), the doors of the new and beautiful lyric theater were closed, with great uncertainty as to when and by whom they would be re-opened.

New York was not, however, left without Italian opera, and that of no mean order. The Havana company returned in the spring of 1848, and appeared at Niblo's Theater. Their visits to New York were regular for a few years, and were events of musical importance. Not only was the number of the principal artists large, and their merit great, but such a chorus, and an orchestra so well filled and so ably directed (always by Arditi), American audiences were not accustomed to; nor were operatic performances of such completeness common even in Europe, except in some two or three of the great capitals. And these performances were given at a very low price; the object of the manager, Señor Marty, of Havana, being less to make money by the visits of his company to America, than to keep them together and preserve their health, and diminish his expenses during the sickly season in Cuba. Their visit this season was made remarkable by the appearance of a tenor, Salvi, who, as a vocalist, among the eminent tenors who have been heard in New York, was second only to Mario, the greatest of his time, and since whose retirement the world has heard none worthy even to be called his successor. Although Salvi was past his youth when he first sang in New York, his voice was yet in perfect preservation. It lacked nothing that is to be expected in a tenor voice of the first class: and it had that mingling of manliness and tenderness, of human sympathy and seraphic loftiness, which, for lack of any other or better word, we call divine. As a vocalist, he was not in the first rank; but he

stood foremost in the second. His presence was manly and dignified, and he was a good actor. But it was as a vocalist pure and simple that he captivated and moved his audiences. He was heard in America at brief intervals during a few years, and his influence upon the taste of the general music-loving public was very considerable and wholly good. Singing at Niblo's, at Castle Garden, and other like places, at which the price of admission was never more than one dollar, and was generally fifty cents, he gave to multitudes who would otherwise have had no such opportunity, that education in art which is to be had only from the performances of a great artist. In purity of style he was unexceptionable. He lacked only a little higher finish, a little more brilliancy of voice and impressiveness of manner, to take a position among tenors of the very first rank. Of these, however, there are never two in the world at the same time, scarcely two in the same generation; and so Salvi prepared the public for the coming Mario. His forte was the cantabile, and his finest effects were those in *mezza voce*, expressive of intense suppressed feeling. More than once, when he sang "*Spirto gentil*," as he rose to the crescendo of the second phrase, and then let his cry pass suddenly away in a dying fall, I have heard a whole house draw suspended breath, as if in pain; so nearly alike in their outward manifestations are pain and fine, keen pleasure.

With the Havana company came also at this time Signora Steffanone, a soprano, without some mention of whom these sketches would be thought ungratefully imperfect by all those who remember her satisfying voice, her admirable style, and her pleasing although notably ample person. It seemed as if she might and should have been a great prima-donna; and, always pleasing to the most exacting hearers, at certain moments, on certain nights, she rose to grandeur, and aroused her audiences to enthusiasm. But as time went on she deteriorated rather than improved; and it was said—truly, I believe—that she was addicted to habits of self-indulgence, which in the end are ruinous to a man and are swiftly destructive to a woman.

In this year, 1848, Max Maretzek made his appearance in the New York musical world, in which he was destined to fill the place both of musical director and operatic manager, some-

times one, sometimes the other, sometimes both, for more than a decade, with distinction, and not without success. He was a clever and well-instructed musician, but was inclined to seek success by the art of management rather than by the management of his art. He cannot be said to have done anything to educate or to elevate the public taste; but it would be unjust not to say that he appears never to have done anything willingly to degrade it. Under his baton, sometimes under his management, there were unseasonable seasons and disjointed performances of many old operas and some new ones, by companies made up of a jumble of all or some of the materials—*disjecta membra*—of companies which had gone to pieces; most of this leading only to insolvency, and nothing of it being here worthy of special mention. But Maretzek himself always showed ability. He merely could not do what was impossible.

In the summer of 1850, Señor Marty's company came again from Havana to New York, and this time with an array of musical force that had in it something of grandeur. The chorus was large, and rich in well-trained voices; the orchestra was filled in like manner, Bottesini being the first contra-basso and Arditi the musical director and conductor; and the leading vocal artists were Tadesco, Steffanone, Salvi, Badiali, Marini, and others second only to them. The Park Theater had been burned to the ground in 1848, just half a century after it was first opened, and this noble opera company went almost perforce to Castle Garden, having gone first for a short time to Niblo's, and afterward to Astor Place. Castle Garden, which has been given over for many years to the invading hordes from Europe, was at one time (and to the present elder generation of New-Yorkers it must seem not long ago) the most widely known and generally frequented place of popular amusement in the city. It began to be so used in the days when the lower part of Broadway and Greenwich street were "fashionable," and when the Battery was the favorite promenade; the great walk being thronged, on fair afternoons, by elegant folk who took there their daily needed "constitutional" of air and gossip.* At Castle Garden were the

grand exhibitions of fire-works; from Castle Garden balloons went up in the days when that peril supplied the craving for excitement now afforded by the flying trapeze; at Castle Garden the American Institute had its first fairs; at Castle Garden there were concerts and theatrical performances and operas; and there Beethoven's Ninth Symphony was performed, and well performed, at a time whereof those who went with large eyes and long ears to hear it at Steinway Hall, big with a consciousness of first discovery of its greatness, have no memory. There, or at Niblo's, in the summer of 1850, this great company performed "Norma," Verdi's "Attila," "La Favorita," "Lucia," "L'Elisir d'Amore," "I Puritani," "Lucrezia Borgia," and, of course, "Ernani,"—no opera season then without "Ernani," if there were a soprano in the company equal to it, and generally, also, if there were not. And the Havana troupe had in Steffanone and Tadesco two admirable *Elviras*, the former always singing with intelligence and dramatic power, and the voice of the latter gushing out in great floods of limpid sound that drowned the ear in sensuous delight.

In the Havana company at this time, however, there was an artist who gave New York a fresh and fine sensation of musical pleasure, such as it had not had for years. This was Angiolina Bosio. She appeared without any heralding; and, indeed, she was then entirely without reputation. But it was one admirable trait in the management of this noble company that there was never any preliminary puffing, either of its individual members or of it as a whole. There was the company. It would perform "Norma," or "Ernani," or "Lucia" to the best of its ability; come and hear it. Bosio's name had never been heard or seen in New York, until it appeared on the play-bills. When she came upon the stage her audience saw a woman not very young, slender and not tall, with little beauty of feature, except a pair of luminous and expressive dark eyes,—a person, indeed, quite insignificant, except for those eyes and for a certain distinction and elegance of manner. When she sang she displayed a voice not remarkable for either power or compass; nor could her style be called either impressive or brilliant. But ere long,—in the course of a few evenings,—she was recognized as an artist of a very high grade of merit, and became—this entirely unknown and not beautiful woman—the prime favorite of the company. Angiolina Bosio, born at Turin, in 1824, and educated in music at Milan, had sung in Italy, in Spain, and in Denmark with some success, but not enough to attract any attention in London, or Paris, or St.

* Thus described by an already forgotten New York writer, Frederick Cozzens, in his exquisite imitation of Spenser, "Sir Clod his Undoing":
 "With Placket lin'd, with joyous heart he hies
 To where the Battery's Alleys, cool and greene,
 Amid parted Rivers daintie lies,
 With Fortresse brown and spacious Bridge betwene
 Two Baths, which there like panniers huge are seen:
 In shadie paths fair Dames and Maides there be
 With stalking Lovers basking in their eene,
 And solitary ones who scan the sea,
 Or list to vesper chimes of slumberous Trinity."

CASTLE GARDEN, 1850.

Petersburg, or at New York. She, however, appeared in Paris at the Théâtre Italien, in 1848, but obtained no recognition of her talent, "not even," as her biographer records, "a passing remark." Her immediate engagement for Havana by Marty brought her to

New York, where a different reception awaited her; and I believe that I myself had the pleasure of writing the first criticisms in which her vocal talent was recognized. I remember, too, that as I was writing one night (after her performance of *Lucrezia Borgia*, I believe), I thought of the charm that was in her face, notwithstanding its lack of beauty, and of her lustrous eyes, and I wrote her name Lady Beaux yeux; and she must have forgiven me for spelling it wrong, for she took the blunder with her to Europe, where she was known by it afterward. Like Malibran, and like Bottesini, Bosio, soon after her great success in New York, attained a great reputation in Europe. Soon; not immediately, however. She was engaged at the Royal Italian Opera, at London, where she appeared in June, 1852, as *Norina* in "L'Elisir d'Amore," one of the parts in which she was most admired in New York. But, as her biographer says, "she did not create by any means a favorable impression; her voice appeared 'worn,' and her intonation sharp; *** and she was pronounced 'a good second-rate singer, nothing more.'" At the end of the season, however, Madame Grisi having declined to sing in "I Puritani," Bosio was asked to undertake *Elvira*. She did so; and all at once Philistia woke up to the perception that Bosio was a great artist. She became the talk of musical London. Mr.

LORENZO SALVÌ. (FROM A PRINT BELONGING TO THE COLLECTION OF THOMAS J. MCKEE, ESQ.)

Gye engaged her immediately for three years. She went to Paris, and there had like success—she who only a year or two before, and after she had completed her studies, and was in the first freshness of her voice, had sung there without exciting a passing remark. From this time she was recognized as one of the great prima-donnas of her day. Her voice was a pure, silvery soprano, remarkable alike for its penetrating quality and for a charm so fine and delicate that it seemed almost intellectual. But she was not a remarkably dramatic singer, even in light comedy parts, which best suited her; and her style was not at all declamatory. She *sang*; and in her vocalization she showed the results of intelligent study in the old Italian school. Her phrasing was incomparably fine, and the delicacy of her articulation has been surpassed by no modern prima-donna, not even by Alboni. Thus much of her as a vocal artist; but her charm was greatly personal. Although her acting was always appropriate and in good taste, and at times—as, for example, in the saucy widow of “Don Pasquale”—very captivating, she never seemed to throw herself wholly into her part. She was always Angiolina Bosio, and appeared on the stage like a lady performing admirably in private theatricals. Her bearing was a delight to her audience, and seemed to be a performance, whereas it was only herself. She sang the music of all the great operatic composers to the admiration of the public and the critics of the most exacting disposition; but she was greatest in Rossini’s operas, and in Bellini’s and Donizetti’s. Yet her exquisitely charming and finished performance of *Zerlina* should not be passed over unmentioned. In 1856 she went to St. Petersburg, where she got gain and glory, which tempted her to return there again and yet again; and there, after having been nominated by the Emperor *première cantatrice* to the imperial court (she being the first who ever had that honor), she suddenly died in April, 1859, in the prime of her life and of her powers; for she was not yet quite thirty-five years old. This was the career of the woman of whom her biographer says, after recording the indifference with which she had been received in Paris, and before recounting the details of her slow recognition in London, that between these two non-eventful and semi-eventful periods, being in New York, Philadelphia, and Boston, “she was ardently admired by the Americans.” Possibly if the writer had known more, or had known anything of “the Americans,” and of the capacity for the recognition of musical talent which they have never failed to show, she might have given more importance to their ardent admiration of the unknown Bosio.

Such recognition as Bosio received in New York is always more or less reciprocal in its benefit, and her performances here for two seasons were an education of the public taste in the appreciation of all the most delicate refinements of the art of vocalization. In this respect we owe her hardly less than we owe to any one of the greatest among her predecessors and successors, although they were Malibran, Caradori, Jenny Lind, and Alboni.

And yet another vocal artist of distinction belonging to this company, being, indeed, its musical manager, received at this time in New York his first recognition. This was the baritone Badiali—the great baritone, as he was afterward called in Europe. Signor Badiali, too, brought no reputation to New York, simply because he had none to bring. He had never before been heard of anywhere. But his noble voice, his fine style, and his remarkable powers as a dramatic vocalist were at once appreciated by the critics and the public of New York, and he became a prime favorite, and so continued for some years. Afterward he went to London, where he was so much admired that he said, “I wonder that I never thought of coming to London before.”

In this year, 1851, New York enjoyed a performance of *Norma* by Catarini Barili-Patti. It was the last time that the grand old Italian style of singing was heard in America. I am inclined to think that it has never since been heard even in Europe;—that large simplicity of manner, severe and yet not hard; that thoroughness, that constantly present sense of the decorum of art, died out before we, who were brought up on Donizetti and on Verdi, came to the enjoyment of operatic delights. Catarina Barili-Patti, the eminent mother of a still more eminent daughter, uttered the last notes of an expiring school, and closed her own career in the town in which Adelina Patti, her child but not her pupil, began her splendid course of triumph as the most brilliant vocalist of her day.

Perhaps it should be remarked that about this time Signorina Teresa Parodi appeared in New York as a prima-donna, and won great and well-deserved favor. She was an excellent *Norma*, a part which she much affected. She did not, however, produce any appreciable effect upon public taste, and was soon forgotten.

The two great musical events of the second half of the nineteenth century in America, as before in Europe, were now impending; I mean, it is hardly necessary to say, the appearance of Jenny Lind and of Marietta Alboni. Jenny Lind’s career has no claim upon our attention here; and, indeed, any remarks upon it would be out of place; for before she crossed the Atlantic she had abjured the stage, and

ALBONI. (FROM PHOTOGRAPH BY LE JEUNE.)

during her long sojourn in the United States she was heard only in the concert-room. Moreover, there has recently appeared in the pages of this magazine a full and appreciative account of her American experiences.* There remains to be remarked upon her only the fact that so closely and exclusively did she rivet the attention of the musical public upon herself that, prudent although she was, she was in this unlike Prudence—that when she was present all the other divinities were absent. Little interest was manifested by New-Yorkers in operatic or concert music of a high order, other than hers, during her performances. When she left the city for other places, fashion would assemble at the opera, if there were one; and, indeed, mere fashion did this at all times; but the true music-lovers of the most cultivated society did not thus quickly and rudely disturb their memories of the great artist. Perhaps Mlle. Parodi might have made a stronger impression upon the public of New York had she not had the ill-fortune to make her American *début* in the first flush and fury of the Lind excitement. † She sang, during the next few

* "Jenny Lind," by Sir Julius Benedict, accompanied by a full-page portrait, appeared in this magazine for May, 1881.

† It is, perhaps, just worth while to say that Mlle. Parodi is mentioned above a little before her place in the course of musical events. Jenny Lind preceded her a few weeks; the Swede having appeared at Castle Garden on the 12th September, 1850, and Mlle. Parodi at Astor Place on the 4th November following. Minute accuracy on unessential points is not professed nor sought in these sketches. I am not writing a book of reference.

months, with good acceptance in "Norma," "Lucrezia," "Gemma di Vergy," "Giovanna di Napoli," "Il Barbiere," "Semiramide." About the same time, Truffi appeared in "Parisina" and "Il Giuramento," and Mr. Maurice Strakosch brought out at Astor Place his very clever opera, "Giovanna di Napoli," which, however, did not obtain more than a *succès d'estime*, that most unsuccessful of all so-called successes.

In 1851, Jenny Lind was singing in New York, from the first week in May until the 6th of June; and then came the Havana company again, and with it the enchanting Bosio. I find in my scrap-book an article which I wrote on the 9th of June, 1851, which is noticeable because of its laudation of her, and because her biographer says that she returned to Europe in 1851, and was engaged by Mr. Gye for the season of 1852, for the Royal Italian Opera of London, where she obtained her first European success. She was, therefore, in the summer of 1851 on the eve of departure from the scene of her triumphs.

From this time, although there was opera at Astor Place in the spring of 1852, and Jenny Lind returned as Madame Goldschmidt to give a series of concerts, there was no musical event of any note until the appearance of Alboni at Metropolitan (or Tripler) Hall, on the 23d of June in that year. Her coming had been announced, of course, and something of her reputation was known to all musical people; but nothing had been done to get up an excitement or even to awaken an interest in her movements in the general unmusical public. Thus it was, too, when she came before the public in London and in Paris. In London she had appeared, "almost unknown" in the midst of the Jenny Lind craze (April, 1847), with Grisi and Tamburini,

TRIPLER'S HALL, OR METROPOLITAN HALL, 1854. (FROM AN OLD PRINT IN THE COLLECTION OF GEORGE F. ELDER, ESQ.)

ANGIOLINA BOSIO.

in "Semiramide." Her success was assured before the end of the first act. Nevertheless, when she sang, the following October, in Paris for the first time, many of the Parisians asked, "Who is this Alboni?" They found out who she was on the next morning. It was because of this neglect to blow her own trumpet that the audience at her first concert here, although large enough to be respectable, even in relation to her merits, was not crowded, not a throng, and that she never had what the newspapers call "ovations." Her audiences were always large; and they were composed almost exclusively of the most earnest and most cultivated lovers of music.

Alboni was probably the greatest singer the world has seen since Malibran. She was not, in all respects, fitted to be a great operatic prima-donna; but as a vocalist, pure and simple, she was, both by her natural gifts and by her art, first among the foremost of her

generation. When she came to New York, in 1852, she was thirty years old, and was, like Jenny Lind, in the full maturity of her marvelous powers. She had been taught the elements of vocalization by Baglioli, but to his schooling she had the incomparable good fortune to add instructions from Rossini, who saw her talent, and at a time when, in his own words, she sang "like an itinerant ballad-singer," predicted her success. To his teaching may probably be attributed her love of his music and her mastery of it. She sang his great contralto parts as they had not been sung since the time of Pisaroni, the greatest contralto and the ugliest woman that ever trod the Italian stage. Alboni had appeared at Vienna, at Dresden, and at St. Petersburg before making her great success at London and at Paris, which was in 1847, five years before her visit to America. All that was known of her was that she was much thought

E. FREZZOLINI.

of in Europe, and that she was very stout; so that there was a poor joke current at the time that "she was not all bony, but all fatty." There was not even the first spark of such a raging blaze of excitement as there had been about Jenny Lind. As to what she was, and how she sang, and the impression she produced, I do not know that I can do better than to quote from the article I wrote on the night of her first appearance in New York, and from its two immediate successors, the following passages: *

"Madame Alboni herself then appeared for the grand cavatina in 'Semiramide.' As we saw her before we heard her, our first thought was that she had been unjustly and ungallantly treated on the point of her personal attractions. Although her amplitude exceeds even the most accommodating standard of symmetry, her features are unquestionably fine, and her face needs only a little attenuation to be decidedly handsome. [In fact, Alboni's face was a noble one of the pure Italian type, and very charming

in its expression. Her hair grew around her broad, low, white brow in that arched outline which is found in the finest antique statues, and her mouth was beautiful. Her smile was charming, and not only because it revealed the whitest of coral-set teeth; and her laugh infected the air around her with hilarity. It was impossible not to laugh with her. But to resume my next morning's criticism.] Madame Alboni's voice impresses the ear at once with its sumptuous quality. There is not a moment's question as to the imperial rank of this gift of nature to her. Its powers are instantly manifest, and not only so, but in a moment they are all displayed. Its supremacy was as completely asserted at the close of the recitation of the first air as at the end of the concert. The impression was reiterated. It could not have been deepened. In this voice is the chief power of the singer. It is what we hear that we enjoy, not the thought that what we hear brings up. And it is in the quality, the calibre, and the copiousness of the voice, rather than in its extent or its flexibility, that its charm is found. It has a cool lusciousness which is peculiar. It comes bubbling, gurgling, gushing from that full throat and those gently parted lips, and reminds us of draughts of which poets have sung, but of which Bacchantes have only dreamed. Perfect equality throughout it has not; its rather thin, plaintive, and hautbois-like tone in the upper register being somewhat inconsistent with the large and pompous character of the lower portion; but this is an inequality of quantity only. The quality is throughout an extensive range (from F in the bass clef to C in alt of the G clef) identical. In all

* It may be worth while to say, and it is not foreign to our subject to say, that I wrote the musical criticisms which appeared in the New York "Courier and Enquirer" at this time, while Mr. George William Curtis performed the same office for the "Tribune."

other respects it seems to us, on a single hearing, to be unimpeachable. Her style is not peculiar in any particular, save in the ease and freedom by which it is marked. Many hearers will be charmed by the carelessness of her manner. She seems to give no thought to what she does, but merely to let the flood of song pour itself forth. There are some who will regard this as the perfection of art. Her recitative in the cavatina from 'Semiramide' was large, simple, and grand, and her execution of the aria admirable, but the most charming performance of the evening would have been the duet from 'Don Pasquale,' were it not for the 'wanton heed and giddy cunning' with which she threaded the mazes of *Non piu mesta*. The duettino was so exquisitely sung, expressed so fully the fair, serene loveliness of the composition, that those who are curious in pretty sayings might well have called it moonlight made audible. As to the rondo from 'Cenerentola,' was there ever anything heard like it, or will there ever be again? Milton's charming paradoxical phrase, which we have already applied to it, alone helps us to express the quiet recklessness with which she thrived the intricate mazes of this lovely rondo. Every group of notes was a cluster of gems; every note was perfectly beautiful in itself, and beautiful in its place; and with these vocal jewels she played with a seeming pleased and unconscious carelessness, as if an infant sought a moment's sport in unstringing and scattering priceless pearls."

"That which is perfectly beautiful in its kind seems the more beautiful the more its beauties are scanned; and whatever may be the relative rank which æsthetic criticism may hereafter assign to the style of Madame Alboni, there can be no doubt, we think, in the mind of any one gifted with the ability to judge, that, in her style, her singing is as purely and absolutely beautiful as it is possible for anything earthly to be. There seems to be nothing wanting in the concurrence of voice, style, and method to make every phrase she utters complete in its expression of richness of resource, and of elegance, and in its sensuous charm. Added to this there is an indefinable something, more delicate than expression, yet akin to it, which makes her song float like a seductive aroma around her hearer, penetrating to the most delicate fibers of his being, and pervading him with a dreamy delight. This was manifest even in *Di piacer*, which, by the way, seems more suited to her style than *Una voce*. It is in the music of Rossini that the peculiar character

of Madame Alboni's talent finds its best expression. The geniality, the fullness of life, the impressive gaiety of soul and conscious animal enjoyment which pervaded his music, even in its most dignified passages, in detail and in their union suit her. Their union, indeed, is her nature. She and Rossini have souls akin; and she is, to use a phrase of the day, but his 'medium.' Yet, last evening, Bellini had in her such an interpreter of one of his loveliest and most pathetic compositions as is rare even among great prima-donnas. *Ah non credea* as sung by her will be a treasured memory with all the devotees of music who were fortunate enough to hear it. How grandly was it phrased! how delicately accentuated!"

Yes, indeed; now, after almost thirty years, I can hear with my mind's ear the marvelously, almost miraculously, beautiful way in which she uttered the few notes of this simple phrase

with which she closed this movement, and which, passing in an instant, almost in the twinkling of an eye, yet had in every note, and in this relation of each note to its predecessor and its successor, and in its conception as a whole, and in its execution, an enchanting, subduing charm which produced a feeling of mingled transport and humiliation. One was tempted to go and kneel down before her and do something abject in grateful acknowledgment of this manifestation of supreme musical divinity.

My readers will probably observe in these paragraphs a varied and gradually enhanced appreciation of the great contralto. Yet it is difficult to explain how it was that with her unique voice,—a voice to which no other that has been heard for fifty years can be compared either in volume or in quality,—and with a method absolutely perfect, and a style the charm of which can hardly be expressed in words, she failed to stir her audiences as deeply as other singers did, who were less gifted and less accomplished. This negative trait of her performances became more apparent when she appeared in opera, which she did on the 27th of December, 1852, at the Broadway Theater, a large house then standing in Broadway, nearly opposite the old Hospital, in which, during its short existence,—of about ten years,—there was much good acting and singing. There Alboni went through a brief operatic season, beginning with "La Cenerentola" and including "La Figlia del Reggimento" and "La Sonnambula." The stage did not increase her attractions. She was not an actress; she was not a great operatic prima-donna; she was a singer simply and absolutely—the greatest singer of her half-century;

BROADWAY THEATER. (FROM OLD PRINT IN COLLECTION OF GEO. F. ELDER.)

nothing more. Not that she was awkward on the stage, or that her acting was without intelligence; but that it was matter-of-course acting; she did pretty well what she had seen others do better, and, at times, pleased her audience by the personal expression of her own gayety of heart and rich animal nature. Nor was her figure at all suited to *Cinderella*, to *Amina*, or to the *Daughter of the Regiment*. As she appeared with her *képi* and her canteen, one could not but think of a young Falstaff in short petticoats, and of the old Falstaff's death being "a march of twelve score." Yet this woman had in her heart a yearning to perform the grandest dramatic part known to the modern lyric stage.

One day I was with her in her own apartments, she avowed to me her disappointment with the degree of her success in America, where Mlle. Lind had gained a fortune, and she "hardly enough to buy wine with." Presently, nodding her handsome head to me, she said:

"*Un segreto!*" and then drew back, and looked at me with an arch smile, like a child.

"*Per esser felice!*" I rejoined, luckily thinking of the Brindisi which she sang so splendidly.

"*Sì, sì!*" she merrily cried, clapping her fat hands, and breaking into a soft peal of laughter, so charming and so infectious that a Grand Inquisitor, Torquemada himself, much more a young man *fanatico per la musica*, must have joined in it. Then, with mock gravity, she said: "*Quando io sarò stata buon' ragazza per lungo tempo, voglio mi fare una presenta*" [When I have been a good little girl for a long time I mean to make myself a present], adding, in reply to my look of inquiry, "*La Norma. Io canterò per piacere solo*" [Norma. I shall sing it only for pleasure].

"Why not sing it now?" I asked.

"Ah," she replied, "one must scream a little to sing Norma, and I do not yet know how to scream."

Yes, this queen of contraltos, not content with all the triumph she had achieved, hankered after *Norma*, the part of all parts for which she was most unfitted both in voice and in person, and to which her style was not less unsuited. Nor was she able to restrain her impatience for the long time which she had at first proposed; for on the 28th of January, 1853, she appeared at the Broadway Theater for the first time as *Norma*. To my surprise, she not only sang the music with passion and with fervor, but in her action showed intuitions of dramatic power which I had never before remarked in her. In the second act she was even fiercely impetuous.

She must have brooded over the part until it took complete possession of her. It was a very great performance, regarded from a certain point of view; but Norma-ly it was open to objection. Much of the music was transposed; and, on the other hand, her figure was composed of such a connected system of globes and ellipses that it was impossible to accept her as the Grand Priestess of the Druids, although we had not yet seen Grisi. I have not discovered any record of her performance of this part in Europe; and New York has at least the distinction of Alboni's first appearance, if not that of her only appearance, as *Norma*, as an incident in its operatic annals. Excepting Malibran, no singer, not even Jenny Lind, did so much as Alboni did to elevate and purify the taste of the higher class of music-lovers. She became the model, the standard by which others were to be tried. In the summer of 1853, she returned to Europe, and in July was married to the Conte di Pepoli. She was wealthy, but did not withdraw entirely from her prima-donna life until some years had passed. She is now not heard of, even in her retirement.

We must turn back a little from our continued companionship with the great contralto to give our attention to a soprano of hardly less eminence and of a more splendid career—Sontag, who made her first appearance in America at Metropolitan (Tripler) Hall, on the 27th of September, 1852. This was a very remarkable event; for Sontag was born in 1805; and she, who had sung with Malibran, and had been her rival, and then her reconciled friend (as we have already seen in the first of these sketches), was here in New York, where Malibran had more than a quarter of a century before taken her first step to glory, and had given America its first operatic sensation, opening the rich and varied musical spectacle of which I have been able to give but a sketch made up of outlines and of dots; and Malibran's rival was here in all her early beauty of person and of voice.

The occasion was briefly this. Henrietta Sontag, after a musical career in which all the possible experiences of a prima-donna of the first class were ideally combined,—after enchanting all Europe by her voice, her singing, her acting, and her beauty,—was married in 1828 to Count Rossi, a Sardinian nobleman. The marriage was secret on account of the opposition of the Count's family, although Mlle. Sontag, whose position among artists was exceptional, had been ennobled by the King of Prussia, under the title of Mlle. de Lauenstein. The marriage, however, transpired in 1829, under circumstances painful to the beautiful and unimpeachable young ma-

HENRIETTA SONTAG AS DONNA ANNA IN DON JUAN. (FROM THE ENGRAVING BY GIRARD
AFTER THE PAINTING BY P. DELAROCHE.)

tron. Ere long she retired from the stage, and lived in such privacy as was possible to one who was not only the wife of a noble diplomat but herself a distinguished person. The revolution of 1848 ruined what there was to ruin in Count Rossi; and the Countess, laying aside her title and resuming the name under which she had acquired a reputation still remembered all over Europe, returned to her public artist-life. To the surprise and delight of Europe, she was still the enchanting Henrietta Sontag of twenty years before. After two or three years of renewed European success, she came to New York. The end of my article on her first concert is the following paragraph :

"Madame Sontag began last evening a strange and brilliant phase of her eventful career. When she gathered her first laurels, the metropolis of China might as soon have tempted her seaward as the metropolis of this Republic, which then held no such position. But since that lovely woman who last evening charmed thousands by the mere grace of her presence, first awoke the enthusiasm of Europe, we have become a mighty nation, and this has become a great city, one of the great centers of art and civilization on the globe. We have been growing old; and in our wearying, wearing struggles onward, the whole nation has become haggard and care-worn, even to making us a proverb and a by-word; but she seems to have drunk of the fabled spring which bestowed eternal youth and loveliness; and now to our faded youth comes this blooming matron, with all the bright gifts that were ever hers only mellowed by the gentle touch of enamored Time. It seems as if she might go on singing and charming the world forever; and as if our children might be enchanted, as we are now, by her who, save for the unimpeachable purity of her life, might then, if not now, be called, for her unfading youth and grace, the Ninon de l'Enclos of song."

Sontag, however, was only forty-seven when she came to New York. But she looked, in the concert-room at least, not more than twenty-seven: and a middle-aged musical connoisseur, a French gentleman, who had heard her in Paris in her youth, said to me that he found no change in her voice, except perhaps a little, a very little, loss of fullness and strength in the lower notes. Her singing was just what it had been before. A more remarkable preservation is not known in the annals of art. Hardly less astonishing had been her vocal precocity. It is told of her that at eight years of age she stood upon a table and there sang the grand aria of the Queen of Night in the "*Zauberflöte*," doing this in childish simplicity, "her arms hanging beside her, and her eye following the flight of a butterfly, while her voice, pure, penetrating, and of angelic tone, flowed as unconsciously as a limpid rill from a mountain-side." Afterward she had the advantage of singing children's parts under the direction of

Von Weber, then director of the orchestra at the Prague theater.

Sontag's voice was an absolute soprano, of full but not of extraordinary compass or remarkable power. Its peculiar beauty lay in its quality, that angelic tone which, as we have seen, it had even in her childhood, and in its union of flexibility with firmness. She rivaled the most skillful violin-players in the rapidity, the exactness, and the solidity of tone with which she ran scales, diatonic and chromatic, and with which she executed *fiorette*, and trills singly and in succession, and even staccato scales of two octaves. But she never sank into an accurate musical machine. There was always the inexplicable enchantment of quality, the angelic tone, in whatever she sang; and her style, although never grand, impressive, or deeply pathetic, was always charming. In person she was like her voice, not grandly beautiful, but very pretty, bewitching in her ways, and always elegant,—probably the most lady-like prima-donna that ever trod the stage; unless we must except that captivating embodiment of stately elegance, Mlle. Frezzolini, who came here in 1857, when her personal and vocal attractions were on the wane, but who preserved in the expression of her face and in her bearing a beauty that could never fade. She was the ideal of a beautiful great lady of the olden time. Sontag was always graceful, always seemed to express a certain daintiness of soul and body; she was personally reserved and retiring; and kept herself aloof from the borders of Bohemia as if she had been a crown princess. Twenty years of life in courts, where, from the position of her husband, she sometimes had precedence of all other ambassadors' wives, had developed and perfected in the ennobled Mlle. de Lauenstein a social sentiment in this regard which was innate, and which was part of the charm that had made kings and princes of the finer sort her ardent and respectful admirers. Her figure was pretty; but she was celebrated for no beauty but that of her hands and feet. Her complexion was fair; her large eyes were a soft, pale blue; her hair a light auburn, in which, when she was here, she did not attempt to conceal a few streaks of gray, just perceptible in society, but invisible on the stage.

At her first concerts here, the wonderful young violinist, Paul Jullien, appeared with her. He was then a mere boy; hardly more than a child, for he was but ten years old; but his performance was already that of a virtuoso, and his tone and style were nearly those of a great master of the instrument. One evening, after Madame Sontag had been

here about a month, I went, at one of her concerts, to her private room, where she had been kind enough to receive me before, for she was one of the very few prima-donnas with whom I was on familiar terms. "*Entrez!*" said a male voice when I knocked at the half-open door. I entered, and what should I see but Count Rossi and Paul Jullien sitting together over a basin of water, which was between them on the sofa. Count Rossi looked up and smiled as he held out his hand without rising, and then blew into the bowl. He was engaged with Paul (who a few minutes before had astonished a delighted and cultivated audience) in sailing paper-boats, which the little fellow had begged the Count to make for him from concert programmes. The basin from Madame Sontag's wash-stand furnished the sea on which the fragile fleet was launched. The boy continued his amusement until Madame Sontag entered, and then hastily drying his hands upon another concert bill, took up his violin, and while I was yet musing in wonder at the strangeness of the scene, my rumination was disturbed by the outburst of applause which greeted the entrance of the little boat-sailer upon the stage.

Madame Sontag soon appeared in opera at Niblo's Theater, where she performed *Rosina* in "*Il Barbiere*," *Marie* in "*La Figlia del Reggimento*," *Amina* in "*La Sonnambula*," *Lucia di Lammermoor*, *Lucrezia Borgia*, *Adina* in "*L'Elisir d'Amore*," and *Zerlina* in "*Don Giovanni*." Her dramatic success was not great. As *Rosina* she was captivating; as *Marie* she was pleasing; but in the serious parts of even "*La Sonnambula*" and "*Lucia*" she failed to impress her audience, except by her exquisitely finished singing, and as *Lucrezia Borgia* she failed wholly, except in rendering the tender and delicate beauty of "*Quanto e bello*." I felt obliged to say this very plainly, and at last, owing to a perversion of what I had said, to declare that "every tragic opera, and every act of every tragic opera, and every scene of every act of every tragic opera, in which she has appeared, have plainly shown to close observation that whatever knowledge, and taste, and hard work may have done for her, she is wholly deficient in tragic power." Nor, indeed, had she much dramatic power of even the comic sort. She was arch and elegant—she never could be other than elegant—as *Rosina*; but in "*La Figlia del Reggimento*" she was entirely lacking in that comic power, which, for example, we have all admired so much in Minnie Hauk's performance of *Carmen*. Moreover, she looked older on the stage than in the concert-room. In her ordinary dress no one

ever thought of her age, only of her charm; but when she was tricked out and touched up as the daughter of the regiment, it put ten years upon her face, and she looked like a middle-aged woman playing young.

I found her most youthful and most charming in private, and in particular on one occasion when I dined with her and her husband just before she left New York for the South and Mexico.* Even in the concert-room she lost somewhat of that seductive personal charm, partly intellectual, partly physical, which had made her, next to Malibran, the most idolized prima-donna of modern days. She was very intelligent, talked with spirit, with wit, and sometimes even with humor. And at table she showed the wondrous beauty of her hands. I have known no woman, except Mrs. J. S., with such hands. Of her conversation, I chiefly remember her lively but rueful description of the boredom of high society in England, which she underwent as the Countess Rossi, wife of the Sardinian diplomat. Her visit to America was fatal to her. She died in Mexico, on the 17th of June, 1854, of cholera.

* I desire to remark here upon a matter somewhat personal, and yet not foreign to a sketch of the history of opera in New York. My personal intercourse with Madame Sontag was not at all affected by my strong adverse criticisms upon her serious acting, as I feared it would be. In regard to such matters I had a somewhat peculiar experience. I had been brought up in such a secluded way that I was entirely ignorant, as ignorant as a little child, of the manner in which theatrical and operatic and journalistic matters were managed, having, indeed, never been half a dozen times in a theater when I was called upon to write criticisms upon operatic performances. Absolutely unacquainted with the machinery of puffing, I had never even suspected that the laudatory articles that I saw in newspapers could be paid for, or that there could be an interested motive for the expression of adverse opinion. But I soon found out the true state of the case, to my sorrow. For my articles did much to spoil and break up the business of musical criticism, so called, in New York, which then was in the hands of a few old hack newspaper writers, men equally incompetent and venal. Whatever the value of my criticisms, they were absolutely independent; equally regardless of the interests of artists, managers, and of the journal in which they were published—"The Courier and Enquirer," then the leading newspaper of the city. And I made myself inaccessible to artists and their agents. I had stipulated at first that my name should be concealed, as I (then a law student) had no desire to go into journalism. But after about one year my identity was discovered, and I was approached on all sides. I then laid down for myself an absolute rule, from which I never swerved, not in a single instance, during the ten years in which I wrote musical and dramatic criticisms—this was not to make the acquaintance of an artist, either singer or actor, until after I had fully expressed my opinion in regard to him or her, so that there was nothing to be gained even by being civil to me; also never to ask a favor of any kind, however slight, from a manager or from the agent of an artist; so that I never even asked a seat or a ticket from one. Without a dollar to spare, I yet subscribed for my seat at the opera for the season.

One artist's manager, a little German Hebrew, was so incensed at my severe criticisms that he gave me notice that I should not be admitted to his concerts, even with my bought ticket; but in the end he thought better of this. Furious at his inability to modify my criticisms, or to approach me in any way, he went to the editor of the paper in which they were published (with which I had then no connection), and accused me of being paid by a rival artist to injure his business. He was detained and a messenger dispatched for me, the office in which I was a student being near by. To his evident surprise I soon came in; and he was then invited to repeat his accusation. He could not refuse. I stepped up to him and said:

"You know that you are lying, and if you don't confess it, I'll ——" and I stretched out my hand.

He fled precipitately, but soon returned with a lawyer, and said that he would have me arrested and bound over to keep the peace, unless I would give him my word, in the presence of the lawyer and the editor, that I would not harm him. I, laughing, told him he might do as he pleased, but assured those gentlemen that I would not touch him. His accusation was utterly disregarded, and he was sent about his business; for the editor—the late Charles King—knew me well, as his junior, Mr. Henry J. Raymond, also did, and I went on my way unquestioned. This fellow, however, who was a shrewd, able business man, and as unscrupulous as an adder, threatened me with vengeance, and fulfilled his threat by scattering abroad his insinuations, sowing them in willing and often in fruitful ears. The fact that, from my strict adherence to my pre-

scribed course, they could not possibly be true, was my consolation; but it did not help me with the writers for the other papers, who, with one exception,—Mr. Curtis,—pursued quite a contrary course. It was under these circumstances that Count Rossi called upon me, and said that his wife would like to know me. I told him frankly my rule, and the reason for it.

"*Dame*," he replied, "*vous avez raison. Mais, ne soyez pas trop difficile. Venez nous voir, je vous prie, sans façon. Nous ne sommes pas comme les autres.*"

I accepted the invitation, but not until I had written two or three more articles. And it was some time after I had written my partly adverse articles that I received a dinner invitation from the "Count and Countess Rossi"; for I remarked that in her private relations she took her rank. Jenny Lind was not so magnanimous. When she first appeared, my criticisms withheld from her an acknowledgment of eminence in the Italian dramatic school of singing. At this she took offense; which not all my praise of her singing in what is sometimes called the classical school could do away. I was among the most enthusiastic of her admirers, and the journal in which my articles appeared gave her more attention than any other singer that ever came to New York, and did more for her than any other journal at that time could do. But she never forgave my first qualification of my praise, and she showed her pique in various ways. And thus it was that I never spoke with Jenny Lind, or saw her except upon the platform of a concert-room. Nor did I ever meet Grisi and Mario, who soon followed her to New York, and who will next engage our attention.

Richard Grant White.

THE TRANSFERRED GHOST.

THE country residence of Mr. John Hinckman was a delightful place to me, for many reasons. It was the abode of a genial, though somewhat impulsive, hospitality. It had broad, smooth-shaven lawns and towering oaks and elms; there were bosky shades at several points, and not far from the house there was a little rill spanned by a rustic bridge with the bark on; there were fruits and flowers, pleasant people, chess, billiards, rides, walks, and fishing. These were great attractions, but none of them, nor all of them together, would have been sufficient to hold me to the place very long. I had been invited for the trout season, but should, probably, have finished my visit early in the summer had it not been that upon fair days, when the grass was dry, and the sun was not too hot, and there was but little wind, there strolled beneath the lofty elms, or passed lightly through the bosky shades, the form of my Madeline.

This lady was not, in very truth, my Madeline. She had never given herself to me, nor had I, in any way, acquired possession of her. But as I considered her possession the only sufficient reason for the continuance of my existence, I called her, in my reveries,

mine. It may have been that I would not have been obliged to confine the use of this possessive pronoun to my reveries had I confessed the state of my feelings to the lady.

But this was an unusually difficult thing to do. Not only did I dread, as almost all lovers dread, taking the step which would in an instant put an end to that delightful season which may be termed the ante-interrogatory period of love, and which might at the same time terminate all intercourse or connection with the object of my passion; but I was, also, dreadfully afraid of John Hinckman. This gentleman was a good friend of mine, but it would have required a bolder man than I was at that time to ask him for the gift of his niece, who was the head of his household, and, according to his own frequent statement, the main prop of his declining years. Had Madeline acquiesced in my general views on the subject, I might have felt encouraged to open the matter to Mr. Hinckman, but, as I said before, I had never asked her whether or not she would be mine. I thought of these things at all hours of the day and night, particularly the latter.

I was lying awake one night, in the great bed in my spacious chamber, when, by the

dim light of the new moon, which partially filled the room, I saw John Hinckman standing by a large chair near the door. I was very much surprised at this for two reasons. In the first place, my host had never before come into my room, and, in the second place, he had gone from home that morning, and had not expected to return for several days. It was for this reason that I had been able that evening to sit much later than usual with Madeline on the moonlit porch. The figure was certainly that of John Hinckman in his ordinary dress, but there was a vagueness and indistinctness about it which presently assured me that it was a ghost. Had the good old man been murdered? and had his spirit come to tell me of the deed, and to confide to me the protection of his dear —? My heart fluttered at what I was about to think, but at this instant the figure spoke.

"Do you know," he said, with a countenance that indicated anxiety, "if Mr. Hinckman will return to-night?"

I thought it well to maintain a calm exterior, and I answered:

"We do not expect him."

"I am glad of that," said he, sinking into the chair by which he stood. "During the two years and a half that I have inhabited this house, that man has never before been away for a single night. You can't imagine the relief it gives me."

And as he spoke he stretched out his legs and leaned back in the chair. His form became less vague, and the colors of his garments more distinct and evident, while an expression of gratified relief succeeded to the anxiety of his countenance.

"Two years and a half!" I exclaimed. "I don't understand you."

"It is fully that length of time," said the ghost, "since I first came here. Mine is not an ordinary case. But before I say anything more about it, let me ask you again if you are sure Mr. Hinckman will not return to-night?"

"I am as sure of it as I can be of anything," I answered. "He left to-day for Bristol, two hundred miles away."

"Then I will go on," said the ghost, "for I am glad to have the opportunity of talking to some one who will listen to me; but if John Hinckman should come in and catch me here, I should be frightened out of my wits."

"This is all very strange," I said, greatly puzzled by what I had heard. "Are you the ghost of Mr. Hinckman?"

This was a bold question, but my mind was so full of other emotions that there seemed to be no room for that of fear.

"Yes, I am his ghost," my companion re-

plied, "and yet I have no right to be. And this is what makes me so uneasy, and so much afraid of him. It is a strange story, and, I truly believe, without precedent. Two years and a half ago, John Hinckman was dangerously ill in this very room. At one time he was so far gone that he was really believed to be dead. It was in consequence of too precipitate a report in regard to this matter that I was, at that time, appointed to be his ghost. Imagine my surprise and horror, sir, when, after I had accepted the position and assumed its responsibilities, that old man revived, became convalescent, and eventually regained his usual health. My situation was now one of extreme delicacy and embarrassment. I had no power to return to my original unembodiment, and I had no right to be the ghost of a man who was not dead. I was advised by my friends to quietly maintain my position, and was assured that, as John Hinckman was an elderly man, it could not be long before I could rightfully assume the position for which I had been selected. But I tell you, sir," he continued, with animation, "the old fellow seems as vigorous as ever, and I have no idea how much longer this annoying state of things will continue. I spend my time trying to get out of that old man's way. I must not leave this house, and he seems to follow me everywhere. I tell you, sir, he haunts me."

"That is truly a queer state of things," I remarked. "But why are you afraid of him? He couldn't hurt you."

"Of course he couldn't," said the ghost. "But his very presence is a shock and terror to me. Imagine, sir, how you would feel if my case were yours."

I could not imagine such a thing at all. I simply shuddered.

"And if one must be a wrongful ghost at all," the apparition continued, "it would be much pleasanter to be the ghost of some man other than John Hinckman. There is in him an irascibility of temper, accompanied by a facility of invective, which is seldom met with. And what would happen if he were to see me, and find out, as I am sure he would, how long and why I had inhabited his house, I can scarcely conceive. I have seen him in his bursts of passion, and, although he did not hurt the people he stormed at any more than he would hurt me, they seemed to shrink before him."

All this I knew to be very true. Had it not been for this peculiarity of Mr. Hinckman, I might have been more willing to talk to him about his niece.

"I feel sorry for you," I said, for I really began to have a sympathetic feeling toward this unfortunate apparition. "Your case is

indeed a hard one. It reminds me of those persons who have had doubles, and I suppose a man would often be very angry indeed when he found that there was another being who was personating himself."

"Oh, the cases are not similar at all," said the ghost. "A double or doppelganger lives on the earth with a man, and, being exactly like him, he makes all sorts of trouble, of course. It is very different with me. I am not here to live with Mr. Hinckman. I am here to take his place. Now, it would make John Hinckman very angry if he knew that. Don't you know it would?"

I assented promptly.

"Now that he is away I can be easy for a little while," continued the ghost, "and I am so glad to have an opportunity of talking to you. I have frequently come into your room, and watched you while you slept, but did not dare to speak to you for fear that if you talked with me Mr. Hinckman would hear you, and come into the room to know why you were talking to yourself."

"But would he not hear you?" I asked.

"Oh, no," said the other, "there are times when any one may see me, but no one hears me except the person to whom I address myself."

"But why did you wish to speak to me?" I asked.

"Because," replied the ghost, "I like occasionally to talk to people, and especially to some one like yourself, whose mind is so troubled and perturbed that you are not likely to be frightened by a visit from one of us. But I particularly wanted to ask you to do me a favor. There is every probability, so far as I can see, that John Hinckman will live a long time, and my situation is becoming insupportable. My great object at present is to get myself transferred, and I think that you may, perhaps, be of use to me."

"Transferred!" I exclaimed. "What do you mean by that?"

"What I mean," said the other, "is this: Now that I have started on my career I have got to be the ghost of somebody; and I want to be the ghost of a man who is really dead."

"I should think that would be easy enough," I said. "Opportunities must continually occur."

"Not at all! not at all!" said my companion, quickly. "You have no idea what a rush and pressure there is for situations of this kind. Whenever a vacancy occurs, if I may express myself in that way, there are crowds of applications for the ghostship."

"I had no idea that such a state of things existed," I said, becoming quite interested in the matter. "There ought to be some regular

system, or order of precedence, by which you could all take your turns like customers in a barber's shop."

"Oh dear, that would never do at all!" said the other. "Some of us would have to wait forever. There is always a great rush whenever a good ghostship offers itself—while, as you know, there are some positions that no one would care for. And it was in consequence of my being in too great a hurry on an occasion of the kind that I got myself into my present disagreeable predicament, and I have thought that it might be possible that you would help me out of it. You might know of a case where an opportunity for a ghostship was not generally expected, but which might present itself at any moment. If you would give me a short notice, I know I could arrange for a transfer."

"What do you mean?" I exclaimed. "Do you want me to commit suicide? Or to undertake a murder for your benefit?"

"Oh, no, no, no!" said the other, with a vapory smile. "I mean nothing of that kind. To be sure, there are lovers who are watched with considerable interest, such persons having been known, in moments of depression, to offer very desirable ghostships, but I did not think of anything of that kind in connection with you. You were the only person I cared to speak to, and I hoped that you might give me some information that would be of use; and, in return, I shall be very glad to help you in your love affair."

"You seem to know that I have such an affair," I said.

"Oh, yes," replied the other, with a little yawn. "I could not be here so much as I have been without knowing all about that."

There was something horrible in the idea of Madeline and myself having been watched by a ghost, even, perhaps, when we wandered together in the most delightful and bosky places. But, then, this was quite an exceptional ghost, and I could not have the objections to him which would ordinarily arise in regard to beings of his class.

"I must go now," said the ghost, rising, "but I will see you somewhere to-morrow night. And remember—you help me, and I'll help you."

I had doubts the next morning as to the propriety of telling Madeline anything about this interview, and soon convinced myself that I must keep silent on the subject. If she knew there was a ghost about the house she would probably leave the place instantly. I did not mention the matter, and so regulated my demeanor that I am quite sure Madeline never suspected what had taken place. For some time I had wished that Mr.

Hinckman would absent himself, for a day at least, from the premises. In such case I thought I might more easily nerve myself up to the point of speaking to Madeline on the subject of our future collateral existence, and, now that the opportunity for such speech had really occurred, I did not feel ready to avail myself of it. What would become of me if she refused me?

I had an idea, however, that the lady thought that, if I were going to speak at all, this was the time. She must have known that certain sentiments were afloat within me, and she was not unreasonable in her wish to see the matter settled one way or the other. But I did not feel like taking a bold step in the dark. If she wished me to ask her to give herself to me, she ought to offer me some reason to suppose that she would make the gift. If I saw no probability of such generosity, I would prefer that things should remain as they were.

THAT evening I was sitting with Madeline in the moonlit porch. It was nearly ten o'clock, and ever since supper-time I had been working myself up to the point of making an avowal of my sentiments. I had not positively determined to do this, but wished gradually to reach the proper point, when, if the prospect looked bright, I might speak. My companion appeared to understand the situation—at least, I imagined that the nearer I came to a proposal the more she seemed to expect it. It was certainly a very critical and important epoch in my life. If I spoke, I should make myself happy or miserable forever, and if I did not speak I had every reason to believe that the lady would not give me another chance to do so.

Sitting thus with Madeline, talking a little, and thinking very hard over these momentous matters, I looked up and saw the ghost, not a dozen feet away from us. He was sitting on the railing of the porch, one leg thrown up before him, the other dangling down as he leaned against a post. He was behind Madeline, but almost in front of me, as I sat facing the lady. It was fortunate that Madeline was looking out over the landscape, for I must have appeared very much startled. The ghost had told me that he would see me some time this night, but I did not think he would make his appearance when I was in the company of Madeline. If she should see the spirit of her uncle, I could not answer for the consequences. I made no exclamation, but the ghost evidently saw that I was troubled.

"Don't be afraid," he said—"I shall not let her see me; and she cannot hear me speak

unless I address myself to her, which I do not intend to do."

I suppose I looked grateful.

"So you need not trouble yourself about that," the ghost continued; "but it seems to me that you are not getting along very well with your affair. If I were you, I should speak out without waiting any longer. You will never have a better chance. You are not likely to be interrupted; and, so far as I can judge, the lady seems disposed to listen to you favorably; that is, if she ever intends to do so. There is no knowing when John Hinckman will go away again; certainly not this summer. If I were in your place, I should never dare to make love to Hinckman's niece if he were anywhere about the place. If he should catch any one offering himself to Miss Madeline, he would then be a terrible man to encounter."

I agreed perfectly to all this.

"I cannot bear to think of him!" I ejaculated aloud.

"Think of whom?" asked Madeline, turning quickly toward me.

Here was an awkward situation. The long speech of the ghost, to which Madeline paid no attention, but which I heard with perfect distinctness, had made me forget myself.

It was necessary to explain quickly. Of course, it would not do to admit that it was of her dear uncle that I was speaking; and so I mentioned hastily the first name I thought of.

"Mr. Vilars," I said.

This statement was entirely correct, for I never could bear to think of Mr. Vilars, who was a gentleman who had, at various times, paid much attention to Madeline.

"It is wrong for you to speak in that way of Mr. Vilars," she said. "He is a remarkably well educated and sensible young man, and has very pleasant manners. He expects to be elected to the legislature this fall, and I should not be surprised if he made his mark. He will do well in a legislative body, for whenever Mr. Vilars has anything to say he knows just how and when to say it."

This was spoken very quietly, and without any show of resentment, which was all very natural, for if Madeline thought at all favorably of me she could not feel displeased that I should have disagreeable emotions in regard to a possible rival. The concluding words contained a hint which I was not slow to understand. I felt very sure that if Mr. Vilars were in my present position he would speak quickly enough.

"I know it is wrong to have such ideas about a person," I said, "but I cannot help it."

The lady did not chide me, and after this

she seemed even in a softer mood. As for me, I felt considerably annoyed, for I had not wished to admit that any thought of Mr. Vilars had ever occupied my mind.

"You should not speak aloud that way," said the ghost, "or you may get yourself into trouble. I want to see everything go well with you, because then you may be disposed to help me, especially if I should chance to be of any assistance to you, which I hope I shall be."

I longed to tell him that there was no way in which he could help me so much as by taking his instant departure. To make love to a young lady with a ghost sitting on the railing near by, and that ghost the apparition of a much-dreaded uncle, the very idea of whom in such a position and at such a time made me tremble, was a difficult, if not an impossible, thing to do; but I forbore to speak, although I may have looked my mind.

"I suppose," continued the ghost, "that you have not heard anything that might be of advantage to me. Of course, I am very anxious to hear, but if you have anything to tell me, I can wait until you are alone. I will come to you to-night in your room, or I will stay here until the lady goes away."

"You need not wait here," I said; "I have nothing at all to say to you."

Madeline sprang to her feet, her face flushed and her eyes ablaze.

"Wait here!" she cried. "What do you suppose I am waiting for? Nothing to say to me indeed!—I should think so! What should you have to say to me?"

"Madeline," I exclaimed, stepping toward her, "let me explain."

But she had gone.

Here was the end of the world for me! I turned fiercely to the ghost.

"Wretched existence!" I cried. "You have ruined everything. You have blackened my whole life. Had it not been for you ——"

But here my voice faltered. I could say no more.

"You wrong me," said the ghost. "I have not injured you. I have tried only to encourage and assist you, and it is your own folly that has done this mischief. But do not despair. Such mistakes as these can be explained. Keep up a brave heart. Good-by."

And he vanished from the railing like a bursting soap-bubble.

I went gloomily to bed, but I saw no apparitions that night except those of despair and misery which my wretched thoughts called up. The words I had uttered had sounded to Madeline like the basest insult. Of course, there was only one interpretation she could put upon them.

As to explaining my ejaculations, that was impossible. I thought the matter over and over again as I lay awake that night, and I determined that I would never tell Madeline the facts of the case. It would be better for me to suffer all my life than for her to know that the ghost of her uncle haunted the house. Mr. Hinckman was away, and if she knew of his ghost she could not be made to believe that he was not dead. She might not survive the shock! No, my heart could bleed, but I would never tell her.

The next day was fine, neither too cool nor too warm; the breezes were gentle, and nature smiled. But there were no walks or rides with Madeline. She seemed to be much engaged during the day, and I saw but little of her. When we met at meals she was polite, but very quiet and reserved. She had evidently determined on a course of conduct, and had resolved to assume that, although I had been very rude to her, she did not understand the import of my words. It would be quite proper, of course, for her not to know what I meant by my expressions of the night before.

I was downcast and wretched, and said but little, and the only bright streak across the black horizon of my woe was the fact that she did not appear to be happy, although she affected an air of unconcern. The moonlit porch was deserted that evening, but wandering about the house I found Madeline in the library alone. She was reading, but I went in and sat down near her. I felt that, although I could not do so fully, I must in a measure explain my conduct of the night before. She listened quietly to a somewhat labored apology I made for the words I had used.

"I have not the slightest idea what you meant," she said, "but you were very rude."

I earnestly disclaimed any intention of rudeness, and assured her, with a warmth of speech that must have made some impression upon her, that rudeness to her would be an action impossible to me. I said a great deal upon the subject, and implored her to believe that if it were not for a certain obstacle I could speak to her so plainly that she would understand everything.

She was silent for a time, and then she said, rather more kindly, I thought, than she had spoken before:

"Is that obstacle in any way connected with my uncle?"

"Yes," I answered, after a little hesitation, "it is, in a measure, connected with him."

She made no answer to this, and sat looking at her book, but not reading. From the expression of her face, I thought she was somewhat softened toward me. She knew

her uncle as well as I did, and she may have been thinking that, if he were the obstacle that prevented my speaking (and there were many ways in which he might be that obstacle), my position would be such a hard one that it would excuse some wildness of speech and eccentricity of manner. I saw, too, that the warmth of my partial explanations had had some effect on her, and I began to believe that it might be a good thing for me to speak my mind without delay. No matter how she should receive my proposition, my relations with her could not be worse than they had been the previous night and day, and there was something in her face which encouraged me to hope that she might forget my foolish exclamations of the evening before if I began to tell her my tale of love.

I drew my chair a little nearer to her, and as I did so the ghost burst into the room from the door-way behind her. I say burst, although no door flew open and he made no noise. He was wildly excited, and waved his arms above his head. The moment I saw him, my heart fell within me. With the entrance of that impertinent apparition, every hope fled from me. I could not speak while he was in the room.

I must have turned pale, and I gazed steadfastly at the ghost, almost without seeing Madeline, who sat between us.

"Do you know," he cried, "that John Hinckman is coming up the hill? He will be here in fifteen minutes, and if you are doing anything in the way of love-making, you had better hurry it up. But this is not what I came to tell you. I have glorious news! At last I am transferred! Not forty minutes ago a Russian nobleman was murdered by the Nihilists. Nobody ever thought of him in connection with an immediate ghostship. My friends instantly applied for the situation for me, and obtained my transfer. I am off before that horrid Hinckman comes up the hill. The moment I reach my new position, I shall put off this hated semblance. Good-by. You can't imagine how glad I am to be, at last, the real ghost of somebody."

"Oh!" I cried, rising to my feet and stretching out my arms in utter wretchedness, "I would to Heaven you were mine!"

"I *am* yours," said Madeline, raising to me her tearful eyes.

Frank R. Stockton.

RUSSIAN CHRISTIANITY VERSUS MODERN JUDAISM.

"Let us go thank the Lord, who made us those
To suffer, not to do this deed."

—Old Play.

THE spontaneous action of the prominent citizens of London and New York, without distinction of creed, in protest against the Russian atrocities committed upon the Jews, happily renders unnecessary any denunciation on the part of a Jewess. In the April number of *THE CENTURY* Mme. Ragozin set forth the "Russian side" of the question, which appears to her sufficient explanation of a state of affairs characterized by the London "Times" as "a scene of horrors that have hitherto only been perpetrated in mediæval days during times of war." Murder, rape, arson, one hundred thousand families reduced to homeless beggary, and the destruction of eighty million dollars' worth of property,—such, in fewest words, are the acts for which an excuse is sought. The perusal of a single book—the work of Mr. Jacob Brafmann, a Jewish apostate in the pay of the Russian Government—has forever demolished, in her mind, the fallacy that the Christians have been persecuting the Jews, and has estab-

lished in its stead the conspicuous fact that the Jews have been always, and still are, persecuting the Christians, especially in Russia. This great truth—that a handful of wretched Jews are "undermining the well-being" of the largest empire of the globe—Mme. Ragozin is confident will commend itself to the acceptance of all unprejudiced minds.

Let us first disabuse our readers of the sophistical distinction made by Mme. Ragozin, in common with many other writers, between the "two kinds of Jews," and the idea that "a vast dualism essentially characterizes this extraordinary race." Behind this subtle error lurk all the dangers that have threatened the existence of the people, for whatever calumnies be refuted by a Jewish spokesman, the answer is ever ready: "These charges do not apply to you, and such as you. But how can you be sure that such outrages are not committed by some barbarous sect of your tribe?" Now, we *can* be sure of the Jews—more so, perhaps, than of any other

people in the world, their history being the oldest among civilized nations, their social and moral code having remained unaltered through all time, and the vicissitudes of their fate having exposed them to almost every test which can affect individual or national character. The dualism of the Jews is the dualism of humanity; they are made up of the good and the bad. May not Christendom be divided into those Christians who denounce such outrages as we are considering, and those who commit or apologize for them? Immortal genius and moral purity, as exemplified by Moses and Spinoza, constitute a minority among the Jews, as they do among the Gentiles, but here ends the truth of the matter. Facts disprove even the plausible theory that, where Judeophobia has longest prevailed, there has been a corresponding fundamental degeneracy in the race, for their suppleness and elasticity seem almost without bounds. From the identical conditions which Mme. Ragozin describes in Russia as fatal to the moral and intellectual development of the Jews (the internal restrictions of the *kahal* and the cramping tyranny of external laws) sprang in Germany, as soon as a breathing-place was opened, the generation of Moses Mendelssohn and his gifted family, including Felix, Fanny Hensel, and Dorothea Schlegel, Heine the poet, Edward Gans, Ludwig Börne, Doctor Zunz, Rahel von Ense, Henrietta Herz, and others. And to-day, after little more than fifty years of Jewish enfranchisement, the German Christians are making a piteous outcry that the Jews are usurping the intellectual, political, and financial control of the state.

"It is not the Jews of the Bible, but the Jews of the Talmud, to whom we object," assert the Russians, and the uninitiated Gentile is willing to believe that the Talmud is but a compendium of barbarous laws and puerile catch-words; consequently that its votaries must be a peculiarly degraded, narrow, and obnoxious set. The truth is that all (orthodox) Jews with whom Americans and Europeans are acquainted are Talmudists. The Talmud is, in great part, a modification of the barbarous injunctions contained in the Bible, which continues to be also one of the text-books of Christendom. Many of the most ridiculous, hair-splitting subtleties of the Talmud are simply introduced for the purpose of rendering impossible the fulfillment of harsh Scriptural commandments. As for the intrinsic merits of the book, the life and precepts of the Rabbi Hillel, therein narrated, anticipate those of Jesus; even the "golden rule" is formulated in its pages, while the literary beauty of its purely poetical passages is occasionally of the highest order. In Southern

Russia and the Crimea lives a certain small sect of dissenting Jews, said to be fast dying out, called the Karaïtes, who reject the Talmud, and who have always been ostentatiously favored by the Government. In the midst of the prevailing Jewish reign of terror, they have lately been accorded full rights of citizenship. They number less than five thousand among the three million Jews of the Russian empire. When, therefore, the Czar and his apologists exclaim: "How can you accuse us of persecuting the Jews? It is not the Jews but the Talmudists whom we abhor: consider our kindness to the Karaïtes,"—it is just as if a savage race, bent upon exterminating the Christians, were to make an exception in favor of the Quakers, or as if the Turks were to say: "We bear no grudge against Europeans. True, we oppress and kill Montenegrins, Roumanians, and Bulgarians, but who ever heard of our touching an American missionary!" Mme. Ragozin dilates upon Mr. Brafmann's heroic act of conversion to Christianity, and explains the "tremendous obstacles" and dire penalties that lie in the way of such a feat on the part of a Jew. What can be more natural than that one who has safely defied, as Mr. Brafmann has done, the withering curse of the *kherem*, which Mme. Ragozin quotes in full, should reveal the secrets of the prison-house whence he has escaped? Now, be it submitted to the common sense of any reasonable being: Is it an advantage to-day, socially, civilly, or politically, to be a Jew? Is not every bribe, both spiritual and secular, held out by modern society to persuade the Jew to become a proselyte? Naturally, the Jewish church itself does not offer reward to renegades, but it is not to be supposed that the emancipated Jew stands greatly in awe of a malediction in which he no longer believes. Mme. Ragozin, as a Russian, cannot be ignorant of the fact that if, in a single instance, the anathema which she transcribes were pronounced over the head of a baptized Jew, the priest who had uttered it would be denounced without delay to the authorities, and the midnight arrest, condemnation without trial, and the mines of Siberia would be his portion. There are hundreds of converted Jews in Russia, going about freely and transacting business among their own people as well as among Christians. Such a thing as an indignity, much less an injury, offered to them at the hands of their former co-religionists, has never been heard of.

The path from Judaism to Christianity, so far from being encompassed with terrors, is in reality made smooth and easy by every device which can be invented by missionary societies on the part of the Christians, and

every temptation that can be suggested by practical convenience and worldly ambition in the mind of the Jew.* Mme. Ragozin, then, bases her entire arraignment of Jewish character and institutions upon the documents supplied by a *Jewish convert, at the request of the Russian Government*. What would Christendom have thought of a statement put forward by the Turks after the Bulgarian massacres, drawn up by a renegade Christian who had entered the service of the Ottoman court? Yet it is precisely such a document as this which we are asked to accept in extenuation of the outrages committed by Russian mobs.

There is but one answer to the charges against the Jews, which Brafmann professes to base upon quotations from the Talmud: they are singly and collectively false. They have not even the doubtful merit of originality, being simply a revamping of the wearisome old perversions, garblings, distortions, mistranslations of the spirit and letter of the text, which have been fully refuted by documents familiar to the whole reading public. For the subtle meaning of the Talmud we need not go to a bribed renegade and thief, who had the documents "abstracted" for him ("convey the wise it call!"), "*not without danger*, by a friend from the Jewish archives." Charges of a similar nature to Mr. Brafmann's, but incomparably worse, were satisfactorily refuted two hundred years ago by Manasseh ben-Israel, in his famous petition to Oliver Cromwell.

If a Moslem were to print an expurgated copy of the Bible, citing all the barbarous passages and omitting all the humane and noble features, what would Islam think of the corner-stone of Christianity? Yet this is precisely what the Jew-haters have done with the Talmud. Modern philosophical criticism, no less than a study of Jewish history, and a dawning appreciation of the nobility of the Jewish type of character, have dispelled among all thinking and cultivated minds the web of calumny spun by bigotry and folly around these remarkable volumes.

For a general reply to such libels as Brafmann's, I refer such of my readers as are disposed to credit them to the writings of Emmanuel Deutsch, the Jewish scholar, said to be the original of George Eliot's "Mordecai," and to the works of the orthodox Christian clergyman, Dr. Franz Delitzsch, one of the greatest living Orientalists. "The Talmud" (says the latter in his "Talmud Jews," pub-

lished in 1881, in answer to the attacks of a Jew-baiter) "is a parliament in which the voices of five centuries hold converse. It can easily be believed that nonsense by the side of sense, absurdity by the side of wit, cordial humanity beside harsh intolerance, ludicrous superstition beside true faith, are to be found therein, especially when we remember the character of the age in which it was produced, and whose testimony it is. Obscure phrases, and sentences in the spirit of the New Testament, flourish side by side." The malicious trick of picking out the evil of the book, to build up a monumental protest against Jewish character, has been performed again and again. Jews who have been driven into the obscure recesses of noisome *Ghettos* have been invariably accused of practicing all these degrading customs which Mr. Brafmann has exposed. How does it happen that, whenever the full light of civilization has been allowed to stream upon the Jews, these shadowy horrors vanish without leaving a trace? Has the Jew changed his code? No, not since the days of Moses. But the Christian has granted him the freedom of the sunshine, and the mere light of day has revealed the unreality of the nightmares of darkness.

The mysterious clew to the Jewish question which Mme. Ragozin has discovered is no secret document, but a book called "*Le Livre du Kahal*," published at St. Petersburg in French and Russian in 1869. "Surely no government could tolerate for a single moment so monstrous an anomaly" as the community therein described. "Certainly not with its eyes open!" And yet here, on her own showing, the "hundred Argus-eyes" of the Russian Government, the most absolute of modern despotisms, have been opened for twelve consecutive years, and the kahal still exists with the sanction of the law. If half—nay, if a single one of these allegations could have been substantiated—could not the three million Jews of the empire have been transported *en masse* to Siberia for felony and treason?

Stripped of all circumlocution, the kahal is simply a Jewish congregation under the spiritual direction of the minister and the temporal direction of wardens and trustees. Mme. Ragozin's representation of its powers and functions would lead one to suppose that she was describing the court of the Russian autocrat himself. Are we actually to believe that Christendom is a watery lake, and that the Gentiles are silly fish, to be baited, hooked, and devoured by a race of miserable pariahs? A tolerable acquaintance with history would have taught Mme. Ragozin, on the contrary, that the property of Jews has been always

* As soon as Brafmann had taken this perilous step, Mme. Ragozin tells us he received a "comfortable and honorable position" in an ecclesiastical seminary.

considered the "natural patrimony" of Christian potentates and people, who found means to despoil their victims without even making a pretense of being "snugly sheltered by the law." Here is her account of the unholy processes of the Jews: "The proposed victim is tempted into borrowing, and enticed on and on by proffered facilities as long as it is supposed he still has a chance of rescue. When he has become entangled in the meshes of renewed bills and compound interest, wholly beyond the range of his resources, the blow descends, and the fortunate purchaser enters into open possession of his secretly long-cherished property."

Ridicule, not argument, is the only possible reply. What mystic powers are inherent in the Jew to enable him to "entice into borrowing" any sane man who does not wish to avail himself of the convenience of modern commercial exchange? Would not a man ignorant of the rules of "renewed bills and compound interest" be held responsible by all rational people for his own recklessness and stupidity, not to say unscrupulousness, if he borrowed money wholly beyond the range of his resources to repay? With what words would Mme. Ragozin characterize a Jew who borrowed money of a Christian on such terms, and when "the blow descended" (*i. e.*, when the bill came in), protested that he was innocent of the debt, and had been abused by a Christian sharper? Mme. Ragozin does not even represent (as, indeed, she could not truthfully do) that the Jew speculates in this manner upon the ignorant peasant. "Jews do not live in villages—there is nothing for them to do there; they prefer more populous and wealthier centers." Thus, it is the rich, experienced merchants of Warsaw and Moscow whom we are to imagine as falling a helpless prey into the meshes of a band of wretched outcasts, who are watched with untiring vigilance and suspicion by the officers of the law. Whoever wishes to know what "exploitation" really means may turn to Wallace's "Russia," page 464:

"The peasant who accepted land from a proprietor rarely brought with him the necessary implements. * * * He was obliged, therefore, to borrow from his landlord, and the debt thus contracted was easily converted into a means of preventing his departure if he wished to change his domicile. * * * The proprietors were the capitalists of the time. The *muzhik* was probably then, as now, only too ready to accept a loan without taking the necessary precautions for repaying it. The laws relating to debt were terribly severe, and there was no powerful judicial organization to protect the weak."

Now, who is guilty of "sucking out the blood of the people"? The Russian Christian who "exploits" the benighted peasant,

or the persecuted Jew who lends money, on well-established conditions, to wealthy business men?

That the Jews should ever form a hostile "state within the state" is rendered impossible by a solemn Biblical injunction commanding fidelity to the ruling government: "And seek the welfare of the city whither I have banished you, and pray in its behalf unto the Lord, for in its welfare shall ye fare well."* There is no such thing, therefore, as an independent disloyal Jewish community, in Russia or out of Russia.

Mme. Ragozin tells us that the Jews "trade upon the weakness" of the innocent creatures around them, by entering largely into the liquor business. "All the public-houses in Russia," she says, "are kept by Jews." She seems to forget that drunkenness is notoriously the national vice of Russia, and is spread over the whole empire of which the Jews inhabit one seventh part. Recent statistics prove that drunkenness in Russia increases in inverse ratio to the proportion of Jews in the population, being worst in those provinces whence they are excluded, while the old kingdom of Poland, where they swarm, is less affected by the national vice than any other part of the empire. Mme. Ragozin excuses the weakness of her compatriots by explaining that the *vodka*, or whisky, is, in moderation, a necessity of existence to the poor, half-starved peasant—"warmth in the inhuman winter cold, mirth in his rare hours of rest, * * * medicine in sickness. * * * But how easy the slip into excess!" The impartial observer will, of course, agree with Mme. Ragozin that, when the fatal "slip into excess" occurs, the responsibility lies, not with the self-indulgent peasant, but with the inn-keeper who offers for sale that which, "in moderation," is the staff of life! A credible eyewitness informs me that he saw a Jewish inn-keeper threatened with violence for *refusing to sell* any more liquor to peasants already stupefied with intoxication. If the Russian Christian would imitate the virtue of his fellow-countryman, the Moslem Tartar, who contrives to resist the "inhuman winter cold" notwithstanding the fact that his religion exacts a rigid sobriety, the trade of the Jewish inn-keeper would be curtailed in a more humane and legitimate manner than any yet suggested by Russian legislators.

Mme. Ragozin accuses the Jews of monopolizing the butcher trade, and feeding whole districts upon meat which is little better than carrion—selling the refuse of their market to Christians, in accordance with the

* Jeremiah, xxix. 7. (Literally translated.)

injunction of the Mosaic law: "Ye shall not eat of anything that dieth of itself; thou shalt give it unto the stranger that is in thy gates, that he may eat it, or thou mayest sell it unto an alien, for thou art an holy people unto the Lord thy God." (Deut. xiv. 21.)

("The Devil can cite Scripture for his purpose.") The above verse alludes to meat which Christians do not object to use, but which is forbidden by Jewish law. According to the latter many maladies, such as perforation of internal organs, hardening of tissues, etc., render unfit for food meat which no Gentile would reject. Every Jew knows that to sell diseased or tainted meat to Christians is as unorthodox as it is immoral, and would lead, moreover, directly to the penitentiary. If any one believes that Mme. Ragozin's construction of the text be true, let him look over the fourteenth chapter of Deuteronomy, breathing, as it does, the broadest spirit of hospitality, humanity, and what is called nowadays "Christian" charity. Moses specifies the food from which his people must abstain, and enjoins them, after collecting the tithe of their increase, to turn this into money and spend it according to their hearts' desire, and enjoy it with their households, and with the Levite that is within their gates. "Thou shalt not forsake him, for he hath no part or inheritance with thee. And the Levite, * * * and the stranger, and the fatherless, and the widow which are within thy gates, shall come and shall eat, and shall be satisfied, that the Lord thy God may bless thee in all the work of thine hand which thou doest." (Deut. xiv. 27-29.)

Such is the spirit of this barbarous Mosaic code, which has been superseded in Russia by the law of love! Moreover, even on Mme. Ragozin's own showing, the Christians who are willing to pay the same price as the Jews can have the best meat! We know that, in the Middle Ages, numberless people were willing to swear at the stake that the Jews had poisoned all the wells of Europe; the old foe simply wears a new face, and the Jews are at their old tricks of wholesale murder.

We learn from Mme. Ragozin that the Jews, while "equally sheltered by the laws with all their fellow-subjects" (which is false), "scrupulously perform every year a public religious ceremony [the *Kol-Nidreh*], which offers a loop-hole of release from the obligation of keeping any oath or promise made to the Government, or to individuals belonging to the state religion." Here is the truth about the *Kol-Nidreh*: On the Day of Atonement, which is a solemn fast for the Jews, the hasty vows that have been forgotten during the

previous year are remitted by means of a special prayer, called the *Kol-Nidreh*. Lest there should be any misunderstanding concerning this prayer, a note appears in all Jewish rituals (Russian as well as American), to the effect that the formula "has been contrived in order to remit to the public their hasty vows, but *not to absolve any one from an obligation or a judicial oath*." The prayer is responded to by the entire congregation in these words: "They shall all be null and void, without power or confirmation. And it shall be forgiven to the whole congregation of Israel, and to the *stranger who sojourneth among them*; for all the people did it ignorantly." How little of a conspiracy against the ruling government is intended by this innocent form is evinced additionally by the fact that, directly after this, comes the prayer for the Government. The Gentile, whose promises are forgiven, gains fully as much indulgence from the formula as the Jew. The high commercial standing of the Jews in America (not to speak of their record in all other civilized countries where they have been treated like human beings) proves this people to be scrupulously observant of promises, oaths, and business engagements. "In the great financial scandals of our day, notably in Belgium," says Emile de Laveleye, "only Christians have figured."*

As for the Jews being "equally sheltered before the Russian law with their Christian fellow-subjects," if any further proof be needed than the recent unpunished outrages upon their lives and property, I will cite the latest authority upon the subject, M. A. Leroy-Beaulieu, whose magnificent work "*L'Empire des Tsars*," now in course of publication, affords the fullest and clearest exposition yet made of the actual condition of Russia: "Even since the latest reforms, the Israelites still remain in regard to their domicile, their property, and their elective functions, subject to certain restrictions, which make them a separate class even in the midst of the classes to which they belong. This inferior position entailed upon the Jews has, doubtless, much to do with the participation of a certain number of them in the political crimes of recent years, while the rigors demanded against them from time to time, by the patriots of Moscow, Kiev, and Petersburg, are little calculated to inspire them with love and respect for the imperial laws." (Page 283.)

It is false that the Jews are "kept aloof by their own rulers" from modern culture. Witness the disproportionate number of Jews and Jewesses thronging the universities, to which

* "*Lettres d'Italie*," p. 68. Bruxelles, 1880.

they have only recently been granted admission. More than fifty per cent. of the students at Kiev University are said to be Jews. They are not allowed, except in specially privileged cases, to live in Kiev proper; they live outside, and walk in and out of the town morning and night. There is but one limit fixed to the tyranny of Russian laws against Jews, and that is the caprice of absolutism. Over and above the law is enthroned the Czar. Hence, although until the year 1861 the Jews were literally reduced to the level of pariahs by the stereotyped phrase "to all people, with the exception of the Jews," which followed every clause of the Russian code, the Czar reserves the arbitrary right to confer whatever honor he please upon any individual Jew.

If Russian Jews be as Mme. Ragozin represents them, they are what Russian Christians have made them. Was it not Heine who said: "Every country has the Jews it deserves"? Mme. Ragozin says the Jews are hated not because of different race, religion, dress, peculiar customs, etc., but because of their "servility, their abjectness, their want of manliness, their failure to stand up for themselves and resent injuries." Any one who aims at being as strictly logical as Mme. Ragozin might know that it is in vain to expect the virtues of freemen from a community of slaves. Of this same people, a prominent American Christian clergyman (Rev. Dr. Howard Crosby) publicly declared a few weeks ago: "It is the glory of America that she finds among the Israelites the purest and strongest elements of republican liberty." The Hon. J. W. Foster, late United States minister at St. Petersburg, writes: "I do not mean to convey the impression that the Jews of Russia are equal in intelligence and social standing with their co-religionists of the most enlightened countries of Europe and America. Far from it. But they are superior in education and thrift to the same class among whom they belong." The cry against the Jews, in most countries where they have had protection from the law, is not that they are servile, but that they are arrogant.

According to Mme. Ragozin's statement, the Jews, "herding together in unutterable filth and squalor, are a loathsome and really dangerous element—a standing institution for the propagation of all kinds of horrible and contagious diseases." We know how rigidly the sanitary and hygienic laws of the Mosaic code have been obeyed by Jews in all countries, and how frequently the almost miraculous vitality of this people has been ascribed to such obedience. On the other hand, we have authoritative testimony con-

cerning the unclean habits of the poorer classes of Russia. I quote again from M. Leroy-Beaulieu:

"The very precautions necessitated by the cold are far from wholesome. In order to resist the winter, Russians have to live in a heavy, thick atmosphere of vitiated air, which is seldom renewed. In his wooden *isba*, often surrounded with an embankment of dung, the peasant huddles with his whole family around the enormous stove, on which they all sleep at night. The climate is as unfavorable to cleanliness as to health. * * * The peasant is condemned to live in a stifling atmosphere, impregnated with miasma. The hot, infected air of his cabin germinates myriads of insects, and all kinds of parasites swarm around. The ordures thrown out of the house disappear in the snow, and recover all their fetidness in the spring. Nothing can exceed the stench of a Russian thaw. Even in the towns, the filth cannot always flow freely through the sewers, which are stopped up by the ice. The snow, which resembled sand or pounded glass under the sleighs, is transformed into a thick, nauseous mud, from which one's boots carry the emanations indoors. Under such sanitary conditions, it is no wonder to see this people a prey to all sorts of epidemics, and even the plague itself make its appearance still in European Russia, as it did at Vetlianka in 1879. * * * The necessity for being well muffled up is for the people an obstacle to cleanliness as well as to health. The peasant sleeps in his clothes, and passes night and day in the same sheepskin *touloup*. It is true that he takes a vapor-bath once a week, but unfortunately he is obliged to put his clothes on again, which are infested with vermin." ("L'Empire des Tsars," pp. 129, 130.)

Mme. Ragozin will have difficulty in convincing those who are conversant with such facts as the above that the Jews are the cause of Russian pestilence. It must be borne in mind that Russia forcibly retains this canker in her body politic. Emigration as well as immigration is prohibited to the Jews. When General Ignatieff proclaimed, a short time ago, that he "confidently expected the Western frontiers to be soon opened to the Israelites," probably very few Americans realized that this generous extension of privilege meant freedom to *leave*, not to *enter*, the empire. The present emigration is effected by means of wholesale and public bribery of Government officials, in which the Jews have to squander thousands of rubles. Mme. Ragozin seems to think that, in acts of official corruption, the criminal is he who offers, not he who accepts, a bribe, and she wishes to guard her country against the evil effects of "the unlawful favors shown to the Jews." Let it be remembered, too, that the Jew offers a bribe to protect his property and life, the Christian accepts it to enrich himself surreptitiously at the expense of others. Mme. Ragozin melts with compassion to think of the "long line of exiles emigrating across the Amoor, driven out by the extortion of the Jews." It has been popularly supposed that the mines of Siberia, the notorious Third Section of the late Czar's Imperial Chancel-

lerie, and several articles of the Russian code, had some connection with the restlessness of the Russians. But Mme. Ragozin assures us it is a petty tribe of clever Jewish traders, gagged, bound, and restricted in every way by the tyranny of unjust laws, who are "sucking out the blood" of all the Russias.* A companion-picture to Mme. Ragozin's fancy-sketch of the melancholy procession of moujiks may be actually seen by any American who crosses the ferry to Ward's Island, New York, where are huddled together hundreds of homeless refugees, among whom are not a few men of brilliant talents and accomplishments,—the graduates of Russian universities, scholars of Greek as well as of Hebrew, and familiar with all the principal European tongues,—engaged in menial drudgery and burning with zeal in the cause of their wretched co-religionists. There are the results of every kind of atrocity, which impelled these despoiled exiles, not from one district to another of their own country, but across the wide Atlantic to an unfamiliar land. No American who has seen them, and heard from their own lips the simple narration of their sufferings, will have much compassion left to spare for the whisky-ruined peasants described by Mme. Ragozin. Of these horrors, no one in whose veins flows a drop of Jewish blood can speak with becoming composure.† The position of the Jews in Russia

* Among five hundred refugees at Brody there was not a single money-lender. They were all artisans and traders.

† The problem of the Amoor and other Russian emigrants is a simple one. A thrifty, sober people like the Jews, side by side with a class of besotted idlers like the majority of the moujiks, is bound to win material prosperity. Tourguéneff, in his last novel, "Virgin Soil," gives us a tragic picture of deserted Russian villages, and the real key to their misery, in a poem supposed to be written by the hero:

"SLEEP.

"It was a long time since I had seen my birthplace, but I did not find the slightest change in it. Deathly torpor, absence of thought, roofless houses, ruined walls, filth and stench, poverty and misery, insolent or melancholy eyes of slaves,—everything has remained the same.

"Our people is emancipated, and its hand rests as before, inert by its side. Nothing, nothing has changed. In one single point we have outstripped Europe, Asia, the whole world. No, never have my dear compatriots slept so terrible a sleep. Everything is asleep; everywhere,—in the village, the city, the *télèga*, the sleigh,—by day and night, standing and sitting, the merchant, the *tschinovnik*, sleep; in his tower sleeps the watchman, in the cold snow and beneath the burning sun; the prisoner sleeps, and the judge dozes. The peasants sleep a death-like slumber; they reap, they plow, they sleep; they thresh the wheat, they continue sleeping; father, mother, children, all sleep. He who strikes and he who is struck sleep equally. Only the tavern is awake, with its eye always open! And pressing between his five fingers a jug of brandy, with his brow on the North Pole and his feet in the Caucasus, sleeps in an eternal slumber our fatherland, holy Russia!"

has been likened to that of the Chinese in the United States, but the two cases bear no analogy. The Jews have not emigrated to Russia: they are in the land of their forefathers. Says ex-Minister Foster: "It is true that for centuries past Russia has had laws prohibiting the immigration of the Jews; but the conquest of the provinces in the South-west brought in more than two million Jews as subjects of the empire."

Mme. Ragozin points with dignified complacency to Russia's "millions of Mohammedan subjects living peaceably amidst the Christians. Who ever heard of an outbreak against them?" Let us not be deceived by this specious plea. Russia is only semi-European; fully two-thirds of her enormous bulk lies in Asia. While the Mohammedans of European Russia bear about the same numerical relation as the Jews do to the Christian population, yet she is bounded on the south by the Ottoman Empire itself; at her eastern gate lies Persia, a Mohammedan power which she is ever anxious to conciliate, and a large part of her territory embraces provinces which are wholly Mohammedan. "In Asiatic Russia," says M. Leroy-Beaulieu, "the Tartars have for congeners as well as co-religionists the Khirgiz, the most extensive of all the Turkish branches; in Turkestan the Turcomans and the Osbeys; in the Caucasus the Kumuks and other small tribes, and even in Siberia Mohammedans who have more or less claim to the title of Tartars." (Pp. 88, 89.) India, with her population of fifty million Mohammedans, generally supposed to be the ulterior aim of all Russia's policy, lies not far distant.

Now, if we imagine a huge Jewish sovereignty entrenched on the borders of the Russian Empire, and powerful allies scattered about in every direction, it is not difficult to believe that the outbreaks against the Russian Jews would be as infrequent as are those against the Mohammedans. The latter have their mosques, their schools in which the Koran is the basis of instruction, and their mollahs, or umpires, just as the Jews have their synagogues, their beth-din, and their kahal. But the Russians have not yet found it necessary to see in such institutions a standing menace to the existence of the Russian Empire.

That the Jews are as a rule shrewd, astute, and sharp at a bargain no one will deny; that a rapacious envy of their gains is at the bottom of all the religious and political outbreaks against them, I am as firmly convinced as is Mme. Ragozin herself. But none the less is it a fact that this envy, ashamed to appear under its proper name, seeks to disguise itself under the mask of any and every

other sentiment—patriotism, self-preservation, religious zeal, righteous indignation in a thousand forms. But is it not as puerile as it is monstrous to assert that the Christians, who outnumber the Jews by millions, who have the whole power of the law and the throne to back them, not to speak of the prejudice of the whole civilized world in their favor, can find no other weapons than tyranny, violence, and murder to preserve them against the Jew, who has nothing but his wits? When Peter the Great was petitioned to grant the right of settling in Russia to a colony of Jewish merchants, he replied, jestingly, "Why, they would starve to death among the Russians." Concerning Russian business habits, Bielinski, one of the most distinguished of their contemporary authors, writes: "When I go shopping in the city, while my ears are deafened and my human dignity is insulted by the vulgar policy of our national business community, advertising its own wares and almost forcibly dragging purchasers into the shops, then do I realize that I have fallen among the greatest swindlers in the world! What is to be done? The Russian is born so! We condemn this Asiatic ostentation, this cringing politeness bordering on servility, this shameless boasting, and can only say, like the fish to the angling-line, it has always been thus in Russia."* "Down with the Jews!" say the Loyalists; "they are at the bottom of Nihilism!" "Down with the Jews and all the property-holding classes!" yell the Nihilists. "When the pitcher falls upon the stone," says the Talmud, "woe unto the pitcher! When the stone falls upon the pitcher, woe unto the pitcher! Whatever befalls, woe unto the pitcher!"

Mme. Ragozin tells us that "in all cases Jewish riots begin spontaneously"! In other words, we are to accept them as natural phenomena, like volcanic eruptions or earthquakes, for which only the inscrutable laws of Providence are responsible. According to her, race-animosity or religious intolerance has never been at work in connection with them, and she continues, with truly feminine logic: "The difference between the Middle Ages and now, apart from the mild form of the recent paroxysms consequent on the general softening of men's natures, is chiefly this: then, religious feeling was actively mixed up with economical grievances, while now it is totally absent, and never could this mediæval specter be dragged forth to the light of our very sober, unfanatical age. Let us once and forever drop this sentimental Liberal slang, invented by the Liberal press of Germany,

which is controlled by emancipated Jews." To a Russian mind and heart, the recent paroxysms may seem to have assumed a very mild form indeed, "consequent on the general softening;" etc. To an American, they do not appear in such a rosy light. Here is the picture the Hon. W. M. Evarts draws of them—not from accounts of German Hebrews, but of English journals, such as the London "Times," which have sent a thrill of horror through all civilized Christendom. "These persecutions, these oppressions, these cruelties, these outrages, have taken every form of atrocity in the experience of mankind, or which the resources of the human tongue can describe. Men have been cruelly murdered, women brutally outraged, children dashed to pieces, or burnt alive in their homes," etc., etc. Is this what Mme. Ragozin calls the "sentimental Liberal slang of a Hebrew journalist, inflamed by a mistaken national zeal"?*

"Amid the vast amount of savage prejudice still existing against the Jews," says the "Pall Mall Gazette," "cultivated dislike had better hold its tongue." The Russian persecution of the Jews, of which we are only now receiving the horrible details, has been going on for fully three years. The outbreak at Ielzavetgrad, which furnishes Mme. Ragozin with a "convenient introduction," was by no means the beginning of the trouble. In March, 1879, nine Jews were brought up for trial in the Caucasus, on the charge of having slain a Christian child and tapped its blood for Passover; and the same hideous fiction, the identical "mediæval specter," was revived simultaneously in several districts, invariably leading to riot, pillage, and murder. The cold-blooded tone in which Mme. Ragozin relates "the disturbance" at Ielzavetgrad enables us to realize, as we could not otherwise have done, the spirit in which such outrages are perpetrated. "The mob behaved with remarkable coolness and discrimination." What did they do? Why, they simply sacked, gutted, and ruthlessly destroyed the homes of hundreds of innocent people, made a bonfire of their effects, tore up like waste paper bank-notes to the amount of thousands of rubles, offered in ransom by the wretched victims, and not being able to resist their *only* weakness, they drank themselves into a state of hopeless intoxication, and were in some cases almost drowned in the liquor that had bestialized them. Is not this a pleasant picture of humanity? That the riot was prompted by no love of gain

* How tenderly soft must be the natures of men who, in one case authentically reported in all the leading journals, poured kerosene oil over a human being and set it on fire!

is proved in Mme. Ragozin's eyes by the fact that the rioters retained nothing, and their object was simply to despoil and cripple, not to enrich themselves. Some simpletons who came in from the country, and took possession by the wagon-load of the valuables piled up in the market-place, actually did not know they were committing a blamable act! *Sancta simplicitas!* what precious innocents these Russians must be! Mme. Ragozin is obliged to confess that such extenuation, however, cannot be admitted of the conduct of some "well-dressed women in carriages," who carried off jewels which they were afterward obliged by the officers of the law to relinquish. Of course, the consideration that the law was bound to interfere, at some time or other, to protect even Jewish subjects had no connection whatever with the "extraordinary moderation" the rioters evinced in destroying, rather than retaining, their spoils! No lives were lost, owing to the "prudence" of the Jews. The poor creatures at bay shut themselves up in their houses, and only when they were occasionally so foolish as to fire a pistol in defense of their hearths and homes did this "good-natured mob" show "manifest signs of irritation." "Hebrew lawyers and physicians were not molested, they being

considered 'useful members of society'!" At Odessa, Kiev, and Warsaw, Mme. Ragozin cannot say as much for her countrymen. She is obliged to confess that blood was shed, and even, by a lamentable mistake, some innocent Christians were sacrificed who happened to be passing through the streets.

Mme. Ragozin, in her account of the outrages, so far from exculpating her compatriots, has taken from them the one human excuse (not justification) which even a mob may plead in self-defense—the influence of unbridled passion. She simply reduces them to the level of fiends, as calculating and cunning as they are merciless. But it were an insult to our readers to fancy that any extenuation, however plausible, of such horrors could have a moment's weight with them. Were Mme. Ragozin's (or Brafmann's) statements ten times true, rather than the stale and flimsy libels which they are, they would bear no relation whatever to the deeds she attempts to explain. Mr. Evarts has put the question upon the only ground which Americans need consider or act upon: "It is not that it is the oppression of Jews by Russians—it is that it is the oppression of men and women by men and women: and we are men and women!"

Emma Lazarus.

ROMANCE.

My Love dwelt in a Northern land,
A dim tower in a forest green
Was his, and far away the sand
And gray wash of the waves was seen
The woven forest-boughs between:

And through the Northern summer night
The sunset slowly died away,
And herds of strange deer, silver-white,
Came gleaming through the forest gray,
And fled like ghosts before the day.

And oft, that month, we watched the moon
Wax great and white o'er wood and lawn,
And wane, with waning of the June,
Till, like a brand for battle drawn,
She fell, and flamed in a wild dawn.

I know not if the forest green
Still girdles round that castle gray,
I know not if the boughs between
The white deer vanish ere the day:
The grass above my Love is green;
His heart is colder than the clay.

Andrew Lang.

GEORGE INNESS.

UNDER THE GREENWOOD.

It is little short of impertinent to write of a painter who, in his own work, has already expressed himself a thousand times better. But there are many who never see his pictures, and many who, seeing them, lack the habit of judging and do not understand. The natural refuge of the writer on art is the commonplace of praise, extracted either from the comments of the artist on his own productions, or from utterances, private or public, on the part of his friends. For who cares to be dogmatic

in the analysis of work which the painter alone understands, and he not always thoroughly? By much more is the hazard greater when one comes to consider the subtler processes which go before the work—namely, the mental and moral processes which give that work its value. We meet with a picture that gives us a pleasant feeling; it is a graceful figure that one would like to have in one's home; or a landscape that recalls memories of happy days. Having become possessed of it, there

PINE-GROVES OF BARBARINI VILLA.

is a period of enjoyment which ends either pleasurably or ill. In one case, it fits into place and becomes a spiritual comrade; in the other tedium sets in, and one feels that its absence would be a relief. But now and then we come upon a picture that may not be certainly and at once pleasurable in its effect, but it arrests the attention with a shock. We may be troubled before it; but if we are not hampered by prejudices or schooled learning,—if we have resolved not to take opinions at second-hand, but to be brave enough to admire what gives us sensations of pleasure, or akin thereto,—we may be sure that, to us at least, the work of art is a masterpiece. Our taste may change. Ten years hence we may have come to other conclusions, sounder or less sound. But, for the time being, this is the picture that reveals to us a glimpse of that shadowy paradise of which the gate-keeper is genius.

Some such shock has befallen the writer while looking at more than one—yes, more than ten—of the landscapes of George Inness. A private opinion, to be sure, and perhaps worth no more and no less than that of anybody else. But when one has such a sensation, it is interesting to follow it back and see if there is not good reason for its existence. Are the technical processes by which the artist reaches these effects marked by the freedom and variety, the grasp and certainty, which characterize a master of his profes-

sion? And behind the technical work does there lie a mental labor which will explain to some extent the excitement produced in the mind of the observer? These few pages are scant space in which to make the trial, but possibly a more pretentious medium would only serve to show more plainly how threadbare is the attempt.

Looking at the life of Inness from the outside, it is merely that of a thousand other artists. He had few advantages of education; became an engraver; was overtaken by ill health. He had his days of enthusiasm and hope. He married and brought up children—one a painter of promise, with children of his own. When fortune smiled he enjoyed three stays in Europe—the last, and most fruitful of beautiful work, being of four years' duration. He shared the struggles of American art before the war—its well-meant but not always wise encouragements after the war, its period of dejection and loss of prestige. There have been years in his life when he sold pictures quickly at very high prices, succeeded by more years when he made nothing. He has felt the fallacious stimulus of our "good times," and endured the wholesome discipline of our "hard times." And what is the upshot of it all? Well, for one thing, the lack of pettiness seen in his work might reasonably be attributed to this varied experience. As devoted to his studio as J. J., the painter drawn by Thackeray, and as careless of the

business portion of his profession, nevertheless, Inness has not been able to escape the usual lot of men. Black Care has peeped over his shoulder and insisted on having a hand in his work. Another thing is the ab-

hood, which answered scorn for scorn, and social snubbing by artistic snubbing. Elastic, like our government, the social atmosphere in which he found himself was full of crudities, but full of life; if there was no great support

CLOSE OF A STORMY DAY.

sence of early paintings. What has become of all the pictures painted before 1860, when the pre-Raphaelite movement was beginning to have its echoes on this side of the water? Sold to all sorts of people, at all sorts of prices, in all sorts of ways; destroyed, many of them, painted over by their maker, scattered to the four quarters of the earth. There would have been no chance for this artist to coddle his pictures and concentrate his art upon itself, even if it had been strongly in his nature to do so. Another result: no possibility of becoming self-conscious and affected, like too many of his English cousins in art. Severely as the social fabric of New York handled him, there was breadth in its treatment. If it did not buy his pictures, it was either because it was honestly ignorant of their value, or because it thought it could not afford the money. But there was no social caste to drive artists and writers into one of two fatal paths—either into revolt at the fretting and pervasive tyranny, or into those grimaces which often prove a passport to success.

Inness has suffered; but there has never been a necessity here, as there was in England, that painters of genius should band themselves together into a Pre-Raphaelite Brother-

in it, there was no demoralizing influence exerted by it upon his art. He fought his way along by his own methods, without the depressing feeling that, let his genius be ever so great, ninnies were being born every day whom a large body of his fellow-citizens would rank above him. The acid that bit into the soul of Carlyle was present in America in such a feeble, dilute condition that the painter need never feel its presence.

Inness seems never to have had even so much of social ambition as to make him wish to knock at those doors in his city which are least ready to open to men neither rich nor well-accredited. Sufficient for him were his own family, his studio, and his private circle of friends. A steady workman at his profession, he would go to nature for impressions, simply, neither with boast nor with too much hope. Sometimes it is plain that he has labored hard at his sketches; hours and days pass while struggling at one scene. In such cases the work is minute, painstaking, almost painful. For his nature is most excitable, and can only be made to apply itself by the strongest exercise of will. But then the benefit of self-restraint shows unerringly in the sketch. On other occasions, he has been an impressionist in the fullest sense of the term.

AN AUTUMN MORNING.

Overwhelmed by the beauty of a scene, the play of light and shade, the balance of clouds, distant hills and nearer masses of forest, he has dashed his paint on with hardly a line of pencil or charcoal to guide him, working in that rapt condition of mind during which the lapse of time is not felt, in which the mind seems to extend itself through the fingers to the tip of the brush, and the latter, as it moves on the prepared surface, seems to obey the general laws of nature which fashioned the very landscape that is being counterfeited at the instant. These were moments of the painter's ecstasy, rare enough in comparison with cooler moods, but leaving their mark with equal unerringness. From sketches taken under such varying circumstances have arisen in the quiet of his studio the procession of landscapes issuing from his hand during the past thirty years. Grave landscapes and gay, landscapes noble and plain, expressive landscapes and those that told of indifferent moods. Some touch a height of magnificence that gives one cause to remember the great men of former days—Claude, Poussin, Rosa, Ruysdael, Constable, Turner. Others have the sturdy look of Rousseau. But Inness is not an imitator or follower of any of these; if he had one merit only, it would be originality. Genius more varied is not unknown and genius that has broader limits. But in his own lines as a

landscapist and colorist he is like no one else. Consider his "Stone Pines at Monte Mario," and "Hickory Grove at Medfield, Mass.," his "Coming Storm," and "Light Triumphant."

It is only at a distance that the work of Inness seems to be unvaried. It is always landscape, and always one feels the individual manner which has not been allowed to degenerate into mannerism. But the moods in which the different pictures have been conceived are often varied, and then another key-note of color is struck. Sometimes that note is laid down on the canvas at the start; its complementary color is added; then follow the other colors and their shades of color, all with reference to the first. Again, it may seem better to reverse the order somewhat: the key color is washed over later. Inness has learned to subordinate his materials; they flow plastic under his brush or thumb. A disciple of the older school, he seldom uses the palette-knife or brushes of extraordinary character, yet, if he thought better effects could be gained through them, he would not hesitate a moment to use them. This may seem trivial; it is only mentioned to show that, notwithstanding the intensity of certain of his convictions, which will presently be mentioned, he has no narrowness regarding the methods of his work or the tools employed. When the right mood is on he becomes dra-

SUNSET.

matic, although always as a landscapist, and reaches closely to the borders of the sublime. There is a moorland piece which shows this trait well. Heavy bowlders encumber the moor; one almost hides a farm-house, whose gray roof, were it not for the smoke at its chimney, might be taken for another mass of rock. A figure is detected in the open central space. The sky is magnificent with heavy, black rain-clouds, that reflect the ruggedness of the moor; in the center, and as a counter-part of the farm-house roof, is a brilliant white cloud that has caught the sunlight. There is a fine glowing effect in the heavens and in the distant moor that is aided by the smoke and the

little curling white clouds above the heavier masses. This is not direct work from nature—it is pure dramatic imagination. It is based on a very different scene. The original is a comparatively sober copy of a real landscape, in which thickets and woods stand for the bowlders, a peaceful train of cattle fills a green meadow in the center, and in which the bed of the wild stream, that seems at one time to have spun the bowlders about like curling-stones, is a placid river. The narrow realist will be likely to object to a picture which he will say is one of *chic*. But what then? Suppose it is. *Chic* is a great thing—if you are great enough in art to use and not abuse it!

It has become almost hackneyed to divide the works of a painter into so many "styles," more or less representative of varying periods of his development. The habit is convenient as affording a method of obtaining a comprehensive view; it is also the natural method, for artists often do materially change their styles. With Inness, distinctions of the kind are not sharply defined, yet they exist all the same. His art has been very slow in development. He does not accept philosophical ideas suddenly, nor without great stress of thought—a veritable spiritual combat. Three epochs may be distinguished in his work, but their borders overlap, and it would be rash to affirm absolutely in every

the Italian masters,—his influences were rather French, Flemish, and Dutch,—but because he painted Italian scenes. Finally, a post-war style, in which he now works without loss of the good in his previous efforts, but with complete control of his art. If big words are not out of place, the present may be called his synthetic style as opposed to the analytic of the days before the war. In the figure he was never grounded, partly because of an overwhelming tendency to landscape, but also because of illness in youth and the lack of sound instruction to be had in New York when he was a boy. It is heresy to suggest that in the end the omission has served him. But is it not imaginable that the lack of early

LOITERING.

case to which of the three a picture belongs. With due deference, therefore, to the possibility of mistake, these three styles may be postulated: An ante-war style, consisting of painstaking, rather stiff, analytical work, similar to that of many of his comrades in the "Hudson River School," etc. Secondly, a war style, which we may consider the result of the agitation produced by the four years of tumult and national anguish, and which shows itself in fluidity of outlines, a breaking-up of the old rigidity, a new grasp of what is magnificent in landscape breadth, a throwing overboard of the pettiness of the former style. This may also be called the "Italian" style of Inness, not so much because he learned from

training, such as artists get easily to-day, kept him poor and humble and forced him to greater efforts in the only branch of painting he could follow?

There remains the personality behind the artistic product. A painter deserving the name of artist works, consciously or unconsciously, from inner rules which he has, as it were, invented for himself. It is easily conceivable that he may be a great artist, and yet unequal in his work; a genius, and surpassed by lesser men in deftness of hand. But behind his pictures he must have intellectual and moral forces more potent than those of the ordinary craftsman of his profession, and also possess naturally either a fair share of facility

in the expression of his ideas, or else such indomitable will that he overcomes that lack in his temperament by hard labor. Now, Inness piques himself on the logic displayed in the management of his landscapes. His methods are the result of much observation of nature and the pictures of modern and ancient masters. Particulars are reasoned out with a rigidity of logic that sounds dry. His groping after truth has been as constant as it was earnest. Yet there is plenty of imagination and poetry in the scenes. Back of the landscapes, in whose confection rules founded on logic that can be expressed in the mathematical terms have been strictly followed, lies the whole world of immaterial spirits, of whom Swedenborg was the latest prophet. Not for Inness the wild extravagances of technique belonging to the later pictures of Turner. The so-called "Slave-ship" is a bugbear. He has a horror of the illogical presence of floating iron chains and of marine monsters unknown to the merely human eye—neither fish, flesh, nor good red herring. His contempt for the "Slave-ship" is so great that one is half persuaded that there is self-illusion at the bottom, and that some day Inness will awake to the fact that the picture which shocked him so much is just the picture he would prefer out of all the other eccentricities of Turner. He regards as unmanly, if not positively ignorant, the fashion Turner had of placing the vanishing point—that point to which all the parallel lines seem to tend—to the left or the right of the picture, instead of near the center, thus disturbing its repose. But—paradox as it may seem—along with such dry and technical axioms, such *Philisterschaft*, in a true artist goes the fact that to Inness the whole cosmogony of inner spirits superintends the creation of the pictures. He is nothing if not an idealist.

He is, in fact, without being of a complicated nature, an artist with more than one side to his character. Alternately one might take him for a poet or a Philistine; an idealist or a hide-bound realist; an impressionist or a pre-Raphaelite. Beginning under the influence of Durand, he saw the limitations of that good but restricted painter. From Thomas Cole he had the same repulsion that shows in his criticism of Turner. The pre-Raphaelite influences in their English shape were strong enough to make him try more than one study in that direction. But good sense—or, shall we say, the intuition of genius?—saved him from exhibiting much that smacked strongly of a movement wholesome as a preparation but misleading when taken literally. The impressionists also leave him cold, for has he not been, on many occasions,

an impressionist? Some of his studies are faithful imitations of nature pursued for weeks at a time. Others, as we have said, are dashed in during the heat of imaginative creation.

Like some of the great Dutchmen, like their reverential followers Constable, Corot, Rousseau, landscape is to this artist the highest walk of art. It not only represents the nature that we see and the human feelings that move us when we look on nature, but something that includes both. It is an expression—feeble enough, to be sure, but still an expression—of the Godhead. In the mind of Inness, religion, landscape, and human nature mingle so thoroughly that there is no separating the several ideas. You may learn from him how the symbolization of the Divine Trinity is reflected in the mathematical relations of perspective and aerial distance. That such ideas are not mere whims with him is attested by various papers published in the magazines where he has given some of his thoughts. He not only believes what he says, but tries to carry out in his pictures this interrelation of art and religion. He is too much of an artist to make the result hard and absolute, as, to choose an extreme example in the opposite direction, Holman Hunt did in "The Shadow of the Cross." Holman Hunt seeks to return to the simplicity of the Van Eycks in treating religious questions, and would like to make himself a pious burgher of the tenth century in order to accomplish it. Inness is a modern to the last degree, and, thrown in upon himself by a scoffing world, tries to express his religious opinions under the veil of landscape. Perhaps even that is saying too much. Do his landscapes hint of religion? Does he try to express religion? We should say no. It is rather the methods by which he does them that are governed in his own mind by religious ideas. The result is fine, but, to the world, too far removed to be understood as religious in motive. Let us, then, rather say of his religion that he does not express, but hides it, in his art. Holman Hunt uses religious scenes to point a moral. Inness uses his convictions of a "world religion" in order to "adorn a tale." Out of all the landscape-painters stimulated and over-stimulated by the civil war, a few are emerging here and there into the position of masters. A rough and unideal schooling has been theirs: the public ignorant and uncritical; the press ignorant and hypercritical, or else fulsome in praise. Here an artist would be ruined by the injudicious support of friends and followers; there another was starved mentally and pinched actually by lack of notice. The survivors in the struggle are such landscape-

painters as Homer Martin, George Fuller, and others. Inness belongs to the scanty band.

He is often compared to Rousseau. No doubt Rousseau had some effect in crystallizing the ideas of Inness in landscape art, but the latter is in no sense his follower. The limitations of Rousseau have not been maintained—who knows whether wisely or not? Truly American in this, Inness has demanded more elbow-room than his great Parisian contemporary. Inside his own wider field he is also more versatile. Strangely enough, he approaches in temperament and physique a type that is considered Gallic. Black, slender, agile, not tall, vivacious of gesture, rapid in talk, easily moved, imaginative within sharply defined bounds, he is more of a Gaul than the average Frenchman. The name Inness means "island" in the Irish and Highland Scotch dialects of the Celtic. Mr. Inness is probably of comparatively pure Celtic blood, and may, for that reason, be dowered with ideality, opinionativeness, enthusiasm. In talk he becomes so carried away by the subject that he forgets how time is flying. What pleases him best is to have many pictures in process of making at one time. Then, having them arranged about his room, he

likes to attack one or the other, as the mood strikes him. It is the insatiable craving for movement and variety which makes him picturesque even while at work on what are often considered sober landscapes. No painter labors harder; but the intensity of his work must find relief in change of mood and method. Habit has made him love the chains that bind him in his studio, but his excitable mind must have vent. For that reason one can see in his studio, side by side on different easels, a careful wood interior that has just escaped the commonplace by a happy flood of light which he has poured into a blue patch of sky, caught again on a trickling stream and reflected off on the nodding heads of blackberry vines; a wild stretch of desolation on a moor, with an accompanying drama of cloud-forms; or a railway embankment with laborers and supply-train on the long sweep of red clay, and, beyond them, the steeples of a New Jersey town. There are even genre pictures—small groups of girls at play, and such attempts at work foreign to his best vein. But in these the landscape is always the valuable part.

Inness paints Nature as the Ossian of the Highlands sang of it—in its great outer, rather than in its little inner, form.

Henry Eckford.

LOVE CROWNED.

A MAIDEN, with a garland on her head,
 Sat in her bower between two lovers: one
 Wore such a wreath as hers; the other none.
 But him, in merry wise, she garlanded
 With that she wore; then, gayly, took instead
 The other's wreath and wore it as her own;
 Whereat both smiled, each deeming she had shown
 Himself the favorite. Though she nothing said
 Concerning this by any spoken word,
 Yet by her act, methinks, the maid preferred
 The lover she discrowned. A friendly thing
 Or whimsical—no more—the gift she gave
 (A queen might do as much by any slave),
 But he whose crown she wore was her heart's king.

John Godfrey Saxe.

THROUGH ONE ADMINISTRATION.*

BY FRANCES HODGSON BURNETT,

Author of "That Lass o' Lowrie's," "Haworth's," "Louisiana," "A Fair Barbarian," etc., etc.

CHAPTER XIV.

DURING the hot days and nights of the next few weeks, Tredennis found life rather a dreary affair. Gradually the familiar faces he met on the avenue became fewer and fewer, the houses he knew one after another assumed their air of summer desertion, offering as their only evidences of life an occasional colored servant sunning him or herself on the steps; the crowds of nursery-maids with their charges thinned out in the parks, and the freshness of the leaves was lost under a coating of dust, while the countenances of those for whom there was no prospect of relief expressed either a languid sense of injury or the patience of despair.

"But after all," Tredennis said, on two or three occasions, as he sat in one of the parks in the evening,—“after all, I suppose most of them have—an object,” adding the last two words with a faint smile.

He was obliged to confess to himself that of late he found that the work which he had regarded as his object had ceased to satisfy him. He gave his attention to it with stern persistence, and refused to spare himself when he found his attention wandering; he even undertook additional labor, writing in his moments of leisure several notable articles upon various important questions of the day, and yet he had time left to hang heavy on his hands and fill him with weariness; and at last there came an evening when, after sitting in one of the parks until the lamps were lighted, he rose suddenly from his seat, and spoke as if to the silence and shadow about him.

"Why should I try to hide the truth from myself?" he said. "It is too late for that. I may as well face it like a man, and bear it like one. Many a brave fellow has carried a bullet in his body down to his grave, and seldom winced. This is something like that, I suppose, only that pain——" And he drew a sharp, hard breath, and walked away down the deserted path without ending the sentence.

He made many a struggle after this to

resist one poor temptation which beset him daily—the temptation to pass through the street in which stood the familiar house, with its drawn blinds and closed doors. Sometimes, when he rose in the morning, he was so filled with an unreasoning yearning for a sight of its blankness that he was overwhelmed by it, and went out before he breakfasted.

"It is weakness and self-indulgence," he would say, "but it is a very little thing, and it can hurt no one—it is only a little thing, after all." And he found a piteous pleasure—at which at first he tried to smile, but at which before long he ceased even to try to smile—in the slow walk down the street, on which he could see this window or that, and remember some day when he had caught a glimpse of Bertha through it, or some night he had spent in the room within when she had been gayer than usual, or quieter—when she had given him some new wound, perhaps, or when she had half-healed an old one in some mood of relenting he had not understood.

"There is no reason why I should understand any woman," was his simple thought. "And why should I understand her unless she chose to let me? She is like no other woman."

He was quite sure of this. In his thoughts of her he found every word and act of hers worth remembering and even repeating mentally again and again for the sake of the magnetic grace which belonged only to herself, and it never once occurred to him that his own deep sympathy and tender fancy might brighten all she did.

"When she speaks," he thought, "how the dullest of them stir and listen! When she moves across a room, how natural it is to turn and look at her, and be interested in what she is going to do! What life I have seen her put in some poor, awkward wretch by only seating herself near him and speaking to him of some common thing! One does not know what her gift is, and whether it is well for her or ill that it was given her, but one sees it in the simplest thing she does."

It was hard to avoid giving himself up to such thoughts as these, and when he most needed

refuge from them he always sought it in the society of the professor; so there were few evenings when he did not spend an hour or so with him, and their friendship grew and waxed strong until there could scarcely have been a closer bond between them.

About two weeks after Richard Amory's departure, making his call later than usual one evening, he met, coming down the steps, Mr. Arbuthnot, who stopped, with his usual civility, to shake hands with him.

"It is some weeks since we have crossed each other's paths, Colonel," he said, scrutinizing him rather closely. "And, in the meantime, I am afraid you have not been well."

"Amory called my attention to the fact a short time ago," responded Tredennis, "and so did the professor. So, perhaps, there is some truth in it. I hadn't noticed it myself."

"You will presently, I assure you," said Arbuthnot, still regarding him with an air of interest. "Perhaps Washington doesn't agree with you. I have heard of people who couldn't stand it. They usually called it malaria, but I think there was generally something——" He checked himself somewhat abruptly, which was a rather unusual demonstration on his part, as it was his habit to weigh his speech with laudable care and deliberation. "You are going to see the professor?" he inquired.

"Yes," answered Tredennis.

The idea was presenting itself to his mind that there was a suggestion of something unusual in the questioner's manner—that it was not so entirely serene as was customary, that there was even a hint of some inward excitement strong enough to be repressed only by an effort. And the consciousness of this impressed itself upon him even while a flow of light talk went on, and Arbuthnot smiled at him from his upper step.

"I have been to see the professor, too," he was saying, "and I felt it was something of an audacity. His invitations to me have always been of the most general nature, but I thought I would take the liberty of pretending that I fancied he regarded them seriously. He was very good to me, and exhibited wonderful presence of mind in not revealing that he was surprised to see me. I tried not to stay long enough to tire him, and he was sufficiently amiable to ask me to come again. He evidently appreciated the desolation of my circumstances."

"You are finding it dull?" said Tredennis.

"Dull!" repeated Arbuthnot. "Yes, I think you might call it dull. The people who kindly condescend to notice me in the winter have gone away, and my dress-coat is packed in camphor. I have ceased to be useful, and

even if Fate had permitted me to be ornamental, where should I air my charms? There seems really no reason why I should exist, until next winter, when I may be useful again, and receive, in return, my modicum of entertainment. To be merely a superior young man in a Department is not remunerative in summer, as one ceases to glean the results of one's superiority. At present I might as well be inferior, and neither dance, nor talk, nor sing, and be utterly incapacitated by nature for either carrying wraps or picking up handkerchiefs—and you cannot disport yourself at the watering-places of the rich and great on a salary of a hundred dollars a month, and you could only get your sordid 'month's leave,' if such a thing were possible."

"I—have been dull myself," said Tredennis, hesitantly.

"If it should ever occur to you to drop in and see a fellow-sufferer," said Arbuthnot, "it would relieve the monotony of *my* lot, at least, and might awaken in me some generous emotions."

Tredennis looked up at him.

"It never has occurred to you so far, I see," was Arbuthnot's light reply to the look, "but if it should, don't resist the impulse. I can assure you it is a laudable one. And my humble apartment has the advantage of comparative coolness."

When Tredennis entered the library, he found the professor sitting in his usual summer seat near the window. A newspaper lay open on his knee, but he was not reading it—he seemed, indeed, to have fallen into a reverie of a rather puzzling kind.

"Did you meet any one as you came in?" he asked of Tredennis, as soon as they had exchanged greetings.

"I met Mr. Arbuthnot," Tredennis answered, "and stopped a few moments on the steps to talk to him."

"He has been entertaining me for the last hour," said the professor, taking off his glasses and beginning to polish them. "Now, will you tell me," he asked, with his quiet air of reflective inquiry into an interesting subject,— "will you tell me why he comes to entertain *me*?"

"He gave me the impression," answered Tredennis, "that his object in coming was that you might entertain him, and he added that you were very good to him, and he appeared to have enjoyed his call very much."

"That is his way," responded the professor, impartially. "And a most agreeable way it is. To be born with such a way as a natural heritage is to be a social millionaire. And the worst of it is, that it may be a gift entirely apart from all morals and substantial virtues. Bertha has it. I don't know where she got it.

Not from me, and not from her poor mother. I say it *may be* apart from all morals and substantial virtues. I don't say it always is. I haven't at all made up my mind what attributes go along with it in Arbuthnot's case. I should like to decide. But it would be an agreeable way in a criminal of the deepest dye. It is certainly agreeable that he should in some subtle manner be able to place me in the picturesque attitude of a dignified and entertaining host. I didn't entertain him at all," he added, simply. "I sat and listened to him."

"He is frequently well worth listening to," commented Tredennis.

"He was well worth listening to this evening," said the professor. "And yet he was light enough. He had two or three English periodicals under his arm, one of them was 'Punch,' and—and I found myself laughing quite heartily over it. And then there was something about a new comic opera, and he seemed to know the libretto by heart, and ran over an air or so on the piano. And he had been reading a new book and was rather clever about it—in his way, of course, but still it was cleverness. And then he went to the piano again and sang a captivating little love-song very well, and after it, got up and said good-night—and on the whole I regretted it. I liked his pictures, I liked his opera, I liked his talk of the book, and I liked his little love-song. And how should he know that an old dry-bones would like a tender little ballad and be touched by it, and pleased because his sentiment was discovered and pandered to. Oh, it is the old story. It's his way—it's the way."

"I am beginning to think," said Tredennis, slowly, "that 'his way' might be called sympathy and good feeling and fine tact, if one wanted to be specially fair to him."

The professor looked up rather quickly.

"I thought you did not like him," he said.

Tredennis paused a moment, looking down at the carpet as if deliberating.

"I don't think I do," he said at length, "but it's no fault of his—the fault lies in me. I haven't the way, and I am at a disadvantage with him. He is never at a loss, and I am; he is ready-witted and self-possessed, I am slow and rigid, and I suppose it is human that I should try to imagine at times that I am at a disadvantage only because my virtues are more solid than his. They are not more solid; they are only more clumsy and less available."

"You don't spare yourself," said the professor.

"Why should I spare myself?" said Tredennis, knitting his brows. "After all, *he* never

spares himself. He knows better. He would be just to me. Why should I let him place me at a disadvantage again by being unjust to him? And why should we insist that the only good qualities are those which are unornamental? It is a popular fallacy. We like to believe it. It is very easy to suspect a man of being shallow because we are sure we are deep and he is unlike us. This Arbuthnot—"

"This Arbuthnot," interposed the professor, with a smile. "It is curious enough to hear you entering upon a defense of 'this Arbuthnot.' You don't like him, Philip. You don't like him."

"I don't like myself," said Tredennis, "when I am compared with him—and I don't like the tendency I discover in myself—the tendency to disparage him. I should like to be fair to him, and I find it difficult."

"Upon my word," said the professor, "it is rather fine in you to make the effort, but"—giving him one of the old admiring looks—"you were always rather fine, Philip."

"It would be finer, sir," said Tredennis, coloring, "if it were not an effort."

"No," said the professor, quietly, "it would not be half so fine." And he put out his hand and let it rest upon the arm of the chair in which Tredennis sat, and so it rested as long as their talk went on.

In the meantime, Arbuthnot walked rather slowly down the street, quite conscious of finding it necessary to make something of an effort to compose himself. It was his recognition of this necessity which had caused him to change his first intention of returning to his bachelor apartment after having made his call upon Professor Herrick. And he felt the necessity all the more strongly after his brief encounter with Colonel Tredennis.

"I will go into the park and think it over," he said to himself. "I'll give myself time."

He turned into Lafayette Park, found a quiet seat, and took out a very excellent cigar. He was not entirely surprised to see that, as he held the match to it, his hand was not as steady as usual. Tredennis had thought him a little pale.

The subject of his reflections, as he smoked his cigar, was a comparatively trivial incident taken by itself, but he had not taken it by itself, because in a flash it had connected itself with a score of others, which at the times of their occurring had borne no significance whatever to him.

His visit to the professor had not been made without reasons, but they had been such reasons as, simply stated to the majority of his ordinary acquaintance, would have been received with open amazement or polite discredit, and this principally because they

were such very simple reasons indeed. If such persons had been told that, finding himself without any vestige of entertainment, he had wandered in upon the professor as a last resource, or that he had wished to ask of him some trivial favor—or that he had made his call without any reason whatever—they would have felt such a state of affairs probable enough, but being informed that while sitting in the easiest of chairs, in the coolest possible *negligee*, reading an agreeable piece of light literature, and smoking a cigar, before his open window, he had caught sight of the professor at his window, sitting with his head resting on his hand, and being struck vaguely by some air of desolateness and lassitude in the solitary old figure, had calmly laid aside book and cigar, had put himself into conventional attire, and had walked across the street with no other intention than that of making the best of gifts of entertainment it was certainly not his habit to overvalue—those to whom the explanation had been made would have taken the liberty of feeling it somewhat insufficient, and would in nine cases out of ten privately have provided themselves with a more complicated one, cautiously insuring themselves against imposture by rejecting at the outset the simple and unvarnished truth.

Upon the whole, the visit had been a success. On entering, it is true, he found himself called upon to admire the rapidity with which the professor recovered from his surprise at seeing him, but as he had not been deluded by any hope that his first appearance would awaken unmistakable delight, he managed to make the best of the situation. His opening remarks upon the subject of the weather were not altogether infelicitous, and then he produced his late number of "Punch," and the professor laughed, and, the ice being broken, conversation flourished, and there was no further difficulty. He discovered, somewhat to his surprise, that he was in better conversational trim than usual.

"It is a delusive condition to be in," he explained to the professor, "but experience has taught me not to be taken in by it and expect future development. It wont continue—as you no doubt suspect. It is the result of entire social stagnation for several weeks. I am merely letting off all my fireworks at once—inspired to the improvidence by your presence. I am a poor creature, as you know, but even a poor creature is likely to suffer from an idea a day. The mental accumulations of this summer, carefully economized, will support me in penury during the entire ensuing season. I only conjure you not to betray me when you hear

me repeat the same things by installments at Mrs. Amory's evenings."

And saying it, he saw the professor's face change in some subtle way as he looked at him. What there was in this look and change to make him conscious of an inward start, he could not have told. It was the merest lifting of the lids, combined with an almost imperceptible movement of the muscles about the mouth, and yet he found it difficult to avoid pausing for a moment. But he accomplished the feat, and felt he had reason to be rather proud of it. "Though what there is to startle him in my mention of Mrs. Amory's evenings," he reflected, "it would require an intellect to explain."

Being somewhat given to finding entertainment in quiet speculation upon passing events, he would doubtless have given some attention to the incident even if it had remained a solitary unexplained and mystifying trifle. But it was not left to stand alone in his mind.

It was not fifteen minutes before, in drawing his handkerchief from his breast-pocket, he accidentally drew forth with it a letter, which fell upon the newspaper lying upon the professor's lap, and for a moment rested there with the address upward.

And the instant he glanced from the pretty feminine envelope to the professor's face, Arbuthnot recognized the fact that something altogether unexpected had occurred again.

As he had looked from the envelope to the professor, so the professor looked from the envelope to him. Then he picked the letter up and returned it.

"It is a letter," Arbuthnot began,—"a letter ——" and paused ignominiously.

"Yes," said the professor, as if he had lost something of his own gentle self-possession. "I see it is a letter."

It was not a happy remark, nor did Arbuthnot feel his own next effort a particularly successful one.

"It is a letter from Mrs. Amory," he said. "She is kind enough to write to me occasionally."

"Yes," responded the professor. "I saw that it was from Bertha. Her hand is easily recognized."

"It is an unusual hand," said Arbuthnot. "And her letters are very like herself. When it occurs to her to remember me—which doesn't happen as frequently as I could wish—I consider myself fortunate. She writes as she talks, and very few people do that."

He ended with a greater degree of composure than he had begun with, but to his surprise he felt that his pulses had quickened and that there had risen to his face a touch of warmth suggestive of some increase of

color, and he did not enjoy the sensation. He began to open the letter.

"Shall I ——" he said, and then suddenly stopped.

He knew why he had stopped, but the professor did not, and to make the pause and return the letter to its envelope and its place in his pocket without an explanation required something like hardihood.

"She is well, and seems to be taking advantage of the opportunity to rest," he said, and picked up his "Punch" again, returning to his half-finished comment upon its cartoon as if no interruption had taken place.

As he sat on his seat in the park, apparently given up to undivided enjoyment of his cigar, his mind was filled with a tumult of thought. He had not been under the influence of such mental excitement for years. Suddenly he found himself confronting a revelation perfectly astounding to him.

"And so I am the man!" he said, at last. "I am the man!"

He took his cigar out of his mouth and looked at the end of it with an air of deliberate reflection, as is the masculine habit.

"It doesn't say much for me," he added, "that I never once suspected it—not once."

Then he replaced his cigar, with something like a sigh.

"We are a blind lot," he said.

He did not feel the situation a pleasant one; there were circumstances under which he would have resented it with a vigor and happy ingenuity of resource which would have stood him in good stead, but there was no resentment in his present mood. From the moment the truth had dawned upon him, he had treated it without even the most indirect reference to his own very natural feelings, and there had been more sacrifice of himself and his own peculiarities in his action when he had returned the letter to his pocket than even he himself realized.

"It was not the letter to show him," was his thought. "She does not know how much she tells me. He would have understood it as I do."

He went over a good deal of ground mentally as he sat in the deepening dusk, and he thought clearly and dispassionately, as was his habit when he allowed himself to think at all. By the time he had arrived at his conclusions, it was quite dark. Then he threw the end of his last cigar away and rose, and there was no denying that he was pale still, and wore a curiously intense expression.

"If there is one thing neither man nor devil can put a stop to," he said, "it is an experience such as that. It will go on to one of two ends—it will kill her or she will kill it.

The wider of the mark they shoot, the easier for her, and as for me," he added, with a rather faint and dreary smile, "perhaps it suits me well enough to be merely an alleviating circumstance. It's all I'm good for. Let them think as they please."

And he brushed an atom of cigar-ash from his sleeve with his rather too finely feminine hand, and walked away.

CHAPTER XV.

HE paid the professor another visit a few days later, and afterward another and another.

"What," said the professor, at the end of his second visit, "is it ten o'clock? I assure you it is usually much later than this when it strikes ten."

"Thank you," said Arbuthnot. "I never heard that civility accomplished so dexterously before. It is perfectly easy to explain the preternatural adroitness of speech on which Mrs. Amory prides herself. But don't be too kind to me, Professor, and weaken my resolution not to present myself unless I have just appropriated an idea from somewhere. If I should appear some day *au naturel*, not having taken the precaution to attire myself in the mature reflections of my acquaintance, I shouldn't pay you for the wear and tear of seeing me, I'll confess beforehand."

"I once told you," said the professor to Tredennis, after the fourth visit, "that I was not fond of him, but there had been times when I had been threatened with it. This is one of the times. Ah!" with a sigh of fatigue, "I understand the attraction—I understand it."

The following week, Tredennis arrived at the house one evening to find it in some confusion. The *coupé* of a prominent medical man stood before the pavement, and the servant who opened the door looked agitated.

"The professor, sir," he said, "has had a fall. We hope he aint much hurt, and Mr. Arbuthnot and the doctor is with him."

"Ask if I may go upstairs," said Tredennis, and, as he said it, Arbuthnot appeared on the landing above, and, seeing who was below, came down at once.

"There is no real cause for alarm," he said, "though he has had a shock. He had been out, and the heat must have been too much for him. As he was coming up the steps he felt giddy, and lost his footing and fell. Doctor Malcolm is with him, and says he needs nothing but entire quiet. I am glad you have come. Did you receive my message?"

"No," answered Tredennis. "I have not been to my room."

"Come into the library," said Arbuthnot. "I have something to say to you."

He led the way into the room, and Tredennis followed him, wondering. When they got inside, Arbuthnot turned and closed the door.

"I suppose," he said, "you know no more certainly than I do where Mr. Amory is to be found." And as he spoke he took a telegram from his pocket.

"What is the matter?" demanded Tredennis. "What has——"

"This came almost immediately after the professor's accident," said Arbuthnot. "It is from Mrs. Amory, asking him to come to her. Janey is very ill."

"What!" exclaimed Tredennis. "And she alone, and probably without any physician she relies on!"

"Some one must go to her," said Arbuthnot, "and the professor must know nothing of it. If we knew of any woman friend of hers we might appeal to her, but everybody is out of town."

He paused a second, his eyes fixed on Tredennis's changing face.

"If you will remain with the professor," he said, "I will go myself, and take Doctor Wentworth with me."

"You!" said Tredennis.

"I shall be better than nothing," replied Arbuthnot, quietly. "I can do what I am told to do, and she mustn't be left alone. If her mother had been alive, she would have gone,—if her father had been well, he would have gone,—if her husband had been here——"

"But he is not here," said Tredennis, with a bitterness not strictly just. "Heaven only knows where he is."

"It would be rather hazardous to trust to a telegram reaching him at Merrittsville," said Arbuthnot. "We are not going to leave her alone even until we have tried Merrittsville. What must be done must be done now. I will go and see Doctor Wentworth at once, and we can leave in an hour if I find him. You can tell the professor I was called away."

He made a step toward the door, and as he did so Tredennis turned suddenly.

"Wait a moment," he said.

Arbuthnot came back.

"What is it?" he asked.

There was a curious pause, which, though it lasted scarcely longer than a second, was still a pause.

"If I go," said Tredennis, "it will be easier to explain my absence to the professor." And then there was a pause again, and each man looked at the other and each was a trifle pale.

It was Arbuthnot who spoke first.

"I think," he said, without moving a muscle, "that you had better let me go."

"Why?" said Tredennis, and the unnatural quality of his voice startled himself.

"Because," said Arbuthnot, as calmly as before, "you will be conferring a favor on me, if you do. I want an excuse for getting out of town and—I want an opportunity to be of some slight service to Mrs. Amory."

Before the dignity of the stalwart figure towering above his slighter proportions, he knew he appeared to no advantage as he said the words, but to have made the best of himself he must have relinquished his point at the outset, and this he had no intention of doing, though he was not enjoying himself. A certain cold-blooded pertinacity which he had acquired after many battles with himself was very useful to him at the moment.

"The worst thing that could happen to her just now," he had said to himself, ten minutes before, "would be that he should go to her in her trouble." And upon this conviction he took his stand.

In placing himself in the breach, he knew that he had no means of defense whatever—that any reasons for his course he might offer must appear, by their flimsiness, to betray in him entire inadequacy to the situation in which he seemed to stand, and that he must present himself in the character of a victim to his own bold but shallow devices, and simply brazen the matter out; and when one reflects upon human weakness, it is certainly not to his discredit that he had calmly resigned himself to this before entering the room. There was no triviality in Tredennis's mood, and he made no pretense of any. The half-darkness of the room, which had been shaded from the sun during the day, added to the significance of every line in his face. As he stood with folded arms, the shadows seemed to make him look larger, to mark his pallor, and deepen the intensity of his expression.

"Give me a better reason," he said.

Arbuthnot paused. What he saw in the man moved him strongly. In the light of that past of his, which was a mystery to his friends, he often saw with terrible clearness much he was not suspected of seeing at all, and here he recognized what awakened in him both pity and respect.

"I have no better one," he answered. "I tell you I miss the exhilaration of Mrs. Amory's society, and want to see her, and hope she will not be sorry to see me." And having said it, he paused again before making his *coup d'état*. Then he spoke deliberately, looking Tredennis in the eyes. "That you should think anything detrimental to Mrs.

Amory, even in the most shadowy way, is out of the question," he said. "Think of me what you please."

"I shall think nothing that is detrimental to any man who is her friend," said Tredennis, and there was passion in the words, though he had tried to repress it.

"Her friendship would be a good defense for a man against any wrong that was in him," said Arbuthnot, and this time the sudden stir of feeling in him was not altogether concealed. "Let me have my way," he ended. "It will do no harm."

"It will do no good," said Tredennis.

"No," answered Arbuthnot, recovering his impervious air, "it will do no good, but one has to be sanguine to expect good. Perhaps I need pity," he added. "Suppose you are generous and show it me."

He could not help seeing the dramatic side of the situation, and with half-conscious irony abandoning himself to it. All at once he seemed to have deserted the well-regulated and decently arranged commonplaces of his ordinary life, and to be taking part in a theatrical performance of rather fine and subtle quality, and he waited with intense interest to see what Tredennis would do.

What he did was characteristic of him. He had unconsciously taken two or three hurried steps across the room, and he turned and stood still.

"It is I who must go," he said.

"You are sure of that?" said Arbuthnot.

"We have never found it easy to understand each other," Tredennis answered, "though perhaps you have understood me better than I have understood you. You are quicker and more subtle than I am. I only seem able to see one thing at a time, and do one thing. I only see one thing now. It is better that I should go."

"You mean," said Arbuthnot, "better for me?"

Tredennis looked down at the floor.

"Yes," he answered.

A second or so of silence followed, in which Arbuthnot simply stood and looked at him. The utter uselessness of the effort he had made was borne in upon him in a manner which overpowered him.

"Then," he remarked at length, "if you are considering me, there seems nothing more to be said. Will you go and tell the professor that you are called away, or shall I?"

"I will go myself," replied Tredennis.

He turned to leave the room, and Arbuthnot walked slowly toward the window. The next moment Tredennis turned from the door and followed him.

"If I have ever done you injustice," he

said, "the time is past for it, and I ask your pardon."

"Perhaps it is not justice I need," said Arbuthnot, "but mercy—and I don't think you have ever been unjust to me. It wouldn't have been easy."

"In my place," said Tredennis, with a visible effort, "you would find it easier than I do to say what you wished. I —"

"You mean that you pity me," Arbuthnot interposed. "As I said before, perhaps I need pity. Sometimes I think I do," and the slight touch of dreariness in his tone echoed in Tredennis's ear long after he had left him and gone on his way.

CHAPTER XVI.

IT was ten o'clock and bright moonlight when Tredennis reached his destination—the train having brought him to a way-side station two miles distant, where he had hired a horse and struck out into the county road. In those good old days when the dwelling of every Virginia gentleman was his "mansion," the substantial pile of red brick before whose gate-way he dismounted had been a mansion too, and had not been disposed to trifle with its title, but had insisted upon it with a dignified squareness which scorned all architectural devices to attract attention. Its first owner had chosen its site with a view to the young "shade-trees" upon it, and while he had lived upon his property had been almost as proud of his trees as of his "mansion"; and when, long afterward, changes had taken place, and the objects of his pride fell into degenerate hands, as the glories of the mansion faded, its old friends the trees grew and flourished, and seemed to close kindly in about it, as if to soften and shadow its decay.

On each side of the drive which led down to the gate-way, grew an irregular line of these trees, here and there shading the way from side to side, and again leaving a space for the moonlight to stream upon. As he tied his horse, Tredennis glanced up this drive-way toward the house.

"There is a light burning in one of the rooms," he said. "It must be there that——" He broke off in the midst of a sentence, his attention suddenly attracted by a figure which flitted across one of the patches of moonlight.

He knew it at once, though he had had no thought of seeing it before entering the house. It was Bertha, in a white dress and with two large dogs following her, leaping and panting when she spoke in a hushed voice, as if to quiet them.

She came down toward the gate with a

light, hurried tread, and, when she was within a few feet of it, spoke.

"Doctor," she said, "oh, how glad I am—how glad!" and, as she said it, came out into the broad moonlight again and found herself face to face with Tredennis.

She fell back from him as if a blow had been struck her—fell back trembling, and as white as the moonlight itself.

"What!" she cried, "is it *you—you?*"

He looked at her, bewildered by the shock his presence seemed to her.

"I did not think I should frighten you," he said. "I came to-night because the professor was not well enough to make the journey. Doctor Wentworth will be here in the morning. He would have come with me, but he had an important case to attend."

"I did not think *you* would come," she said, breathlessly, and put out her hand, groping for the support of the swinging gate, which she caught and held.

"There was no one else," he answered.

He felt as if he were part of some strange dream. The stillness, the moonlight, the heavy shadows of the great trees, all added to the unreality of the moment; but most unreal of all was Bertha herself, clinging with one trembling hand to the gate, and looking up at him with dilated eyes.

"I did not think *you* would come," she said again, "and it startled me—and——" She paused with a poor little effort at a smile, which the next instant died away. "Don't—don't look at me!" she said, and, turning away from him, laid her face on the hand clinging to the gate.

He looked down at her slight white figure and bent head, and a great tremor passed over him. The next instant she felt him standing close at her side.

"You must not—do that," he said, and put out his hand and touched her shoulder.

His voice was almost a whisper—he was scarcely conscious of what his words were—he had scarcely any consciousness of his touch. The feeling which swept over him needed no sense of touch or sound—the one thing which overpowered him was his sudden sense of a nearness to her which was not physical nearness at all.

"Perhaps I was wrong to come," he went on; "but I could not leave you alone—I could not leave you alone. I knew that you were suffering, and I could not bear that."

She did not speak or lift her head.

"Has it been desolate?" he asked.

"Yes," she answered, in a hushed voice.

"I was afraid so," he said. "You have been alone so long—I have thought of it almost every hour of the day; you are not used

to being alone. Perhaps it was a mistake. Why do you tremble so?"

"I don't know," she answered.

"My poor child!" he said. "My poor child!" And then there was a pause which seemed to hold a life-time of utter silence.

It was Bertha who ended it. She stirred a little, and then lifted her face. She looked as he remembered her looking when he had first known her—only that she was paler, and there was a wearied softness in her eyes. She made no attempt at hiding the traces of tears in them, and she spoke as simply as a child.

"I thought it was the doctor, when I heard the horse's feet," she said; "and I was afraid the dogs would bark and waken Janey. She has just fallen asleep, and she has slept so little. She has been very ill."

"You have not slept," he said.

"No," she replied. "This is the first time I have left her."

He took her hand and drew it gently through his arm.

"I will take you up to the house," he said, "so that you can hear every sound; but you must stay outside for a little while. The fresh air will do you good, and we can walk up and down while I tell you the reason the professor did not come."

All the ordinary conventional barriers had fallen away from between them. He did not know why or how, and he did not ask. Suddenly he found himself once again side by side with the Bertha he had fancied lost forever. All that had bewildered him was gone. The brilliant little figure with its tinkling ornaments, the unemotional little smile, the light laugh, were only parts of a feverish dream. It was Bertha whose hand rested on his arm—whose fair young face was pale with watching over her child—whose soft voice was tremulous and tender with innocent, natural tears. She spoke very little. When they had walked to and fro before the house for a short time, she said:

"Let us go and sit down on the steps of the porch," and they went and sat there together—he upon a lower step and she a few steps above, her hands clasped on her knee, her face turned half away from him. She rarely looked at him, he noticed, even when he spoke to her or she spoke to him; her eyes rested oftener than not upon some far-away point under the trees.

"You are no better than you were when you went away," he said, looking at her cheek where the moonlight whitened it.

"No," she answered.

"I did not think to find you looking like this," he said.

"Perhaps," she said, still with her eyes

fixed on the far-away shadows, "perhaps I have not had time enough. You must give me time."

"You have had two months," he returned.

"Two months," she said, "is not so long as it seems." And between the words there came a curious little catch of the breath.

"It has seemed long to you?" he asked.

"Yes."

She turned her face slowly and looked at him.

"Has it seemed long to you?" she said.

"Yes," he replied, "long and dreary."

She swayed a little toward him with a sort of unconscious movement; her eyes were fixed upon his face with a wistful questioning; he had seen her look at her children so.

"Was it very hot?" she said. "Were you tired? Why did you not go away?"

"I did not want to go away," he answered.

"But you ought to have gone away," she said. "You were not used to the heat, and — Let the light fall on your face so that I can see it!"

He came a little nearer to her, and as she looked at him the wistfulness in her eyes changed to something else.

"Oh," she cried, "it has done you harm. Your face is quite changed. Why didn't I see it before? What have you been doing?"

"Nothing," he answered.

He did not stir, or want to stir, but sat almost breathlessly still, watching her, the sudden soft anxiousness in her eyes setting every pulse in his body throbbing.

"Oh," she said, "you are ill—you are ill! How could you be so careless? Why did not papa —"

She faltered—her voice fell and broke. She even drew back a little, though her eyes still rested upon his.

"You were angry with me when you thought I did not take care of myself," she said; "and you have been as bad as I was, and worse. You had not so many temptations." And she turned away, and he found himself looking only at her cheek again, and the soft side-curve of her mouth.

"There is less reason why I should take care of myself," he said.

"You mean"—she asked, without moving—"that there are fewer people who would miss you?"

"I do not know of any one who would miss me."

Her hands stirred slightly, as they lay in her lap.

"That is underrating your friends," she said, slowly. "But"—altering her tone—"it is true, I have the children and Richard."

"Where is Richard?" he asked.

"I don't know."

"When you heard from him last," he began.

"He is a bad correspondent," she said.

"He always finds so much to fill his time when he is away. There is an understanding between us that he shall write very few letters. I am responsible for it myself, because I know it spoils everything for him when he has an unwritten letter on his conscience. I haven't heard from him first yet since he went West."

She rose from her seat on the step.

"I will go in now," she said. "I must speak to Mrs. Lucas about giving you a room, and then I will go to Janey. She is sleeping very well."

He rose, too, and stood below her, looking up.

"You must promise not to think of me," he said. "I did not come here to be considered. Do you think an old soldier, who has slept under the open sky many a night, cannot provide for himself?"

"Have you slept so often?" she asked, the very triviality of the question giving it a strange sweetness to his ears.

"Yes," he answered. "And often with no surety of waking with my scalp on."

"Oh!" she exclaimed, and made an involuntary movement toward him.

He barely restrained his impulse to put out his hands, but hers fell at her sides the next instant.

"I am a great coward," she said. "It fills me with terror to hear of things like that. Is it at all likely that you will be ordered back?"

"I don't know," he replied, his uplifted eyes devouring all the sweetness of her face. "Would that —"

The very madness of the question forming itself on his lips was its own check.

"I don't want to think of it," he said. Then he added, "As I stand here I look up at you. I never looked up at you before."

"Nor I down at you," she returned. "You are always so high above me. It seems strange to look down at you."

It was all so simple and inconsequent, but every word seemed full of the mystery and emotion of the hour. When he tried afterward to recall what they had said, he was bewildered by the slightness of what had been uttered, even though the thrill of it had not passed away.

He went up the steps and stood beside her.

"Yes," he said, speaking as gently as he might have spoken to a child. "You make me feel what a heavy-limbed, clumsy fellow I am. All women make me feel it, but you more than all the rest. You look almost like a child."

"But I am not very little," she said; "it is only because I am standing near you."

"I always think of you as a small creature," he said. "I used to think, long ago, that some one should care for you."

"You were very good, long ago," she answered softly. "And you are very good now to have come to try to help me. Will you come in?"

"No," he said, "not now. It might only excite the child to-night if she saw me, and so long as she is quiet, I will not run the risk of disturbing her. I will tell you what I am going to do. I am not going to leave you alone. I shall walk up and down beneath your window, and if you need me you will know I am there, and you have only to speak in your lowest voice. If she should be worse, my horse is at the gate, and I can go for the doctor at once."

She looked up at him with a kind of wonder.

"Do you mean that you intend to stand sentinel all night?" she said.

"I have stood sentinel before," was his reply. "I came to stand sentinel. All that I can do is to be ready if I am wanted."

"But I cannot let you stay up all night," she began.

"You said it had been desolate," he answered. "Wont it be less desolate to know that—that some one is near you?"

"Oh, yes! Oh, yes!" she said. "But——"
 "Go upstairs," he said, "and promise me that, if she still sleeps, you will lie down and let your nurse watch her."

The gentle authority of his manner seemed to impress her curiously. She hesitated as if she scarcely understood it.

"I—don't—know," she faltered.

"You will be better for it to-morrow," he persisted, "and so will she."

"I never did such a thing before," she said, slowly.

"I shall be beneath the open window," he said, "and I have the ears of an Indian. I shall know if she stirs."

She drew a soft, troubled breath.

"Well," she said, "I will—go."

And, without another word, she turned away. He stood and watched her as she moved slowly across the wide porch. At the door she stopped and turned toward him.

"But," she said, faint lines showing themselves on her forehead, "I shall be remembering that you—are not asleep."

"You must not remember me at all," he answered.

And then he stood still and watched her again until she had entered the house and noiselessly ascended the staircase, which was a few yards from the open door, and then, when he could see her white figure in the darkness no more, he went out to his place beneath the

window, and strode silently to and fro, keeping watch and listening until after the moon had gone down and the birds were beginning to stir in the trees.

CHAPTER XVII.

AT six o'clock in the morning, Bertha came down the stairs again. Her simple white gown was a fresh one, and there was a tinge of color in her cheeks.

"She slept nearly all night," she said to Tredennis, when he joined her, "and so did I. I am sure she is better." Then she put out her hand for him to take. "It is all because you are here," she said. "When I wakened for a moment, once or twice, and heard your footsteps, it seemed to give me courage and make everything quieter. Are you very tired?"

"No," he answered, "I am not tired at all."

"I am afraid you would not tell me if you were," she said. "You must come with me now and let me give you some breakfast."

She led him into a room at the side of the hall. When the house had been a "mansion," it had been considered a very imposing apartment, and, with the assistance of a few Washingtonian luxuries which she had dexterously grafted upon its bareness, it was by no means unpicturesque even now.

"I think I should know that you had lived here," he said, as he glanced around.

"Have I made it so personal?" she replied. "I did not mean to do that. It was so bare at first, and, as I had nothing to do, it amused me to arrange it. Richard sent me the rugs and odds and ends, and I found the spindle-legged furniture in the neighborhood. I am afraid it wont be safe for you to sit down too suddenly in the chairs, or to lean heavily on the table. I think you had better choose that leathern arm-chair and abide by it. It is quite substantial."

He took the seat, and gave himself up to the pleasure of watching her as she moved to and fro between the table and an antique sideboard, from whose recesses she produced some pretty cups and saucers.

"What are you going to do?" he asked.

"I am going to set the table for your breakfast," she said, "because Maria is busy with the children, and the other nurse is with Janey, and the woman of the house is making your coffee and rolls."

"You are going to set the table!" he exclaimed.

"It doesn't require preternatural intelligence," she answered. "It is rather a simple thing, on the whole."

It seemed a very simple thing as she did it,

and a very pretty thing. As he leaned against the leathern back of his chair, beginning vaguely to realize by a dawning sense of weariness that he had been up all night, he felt that he had not awakened from his dream yet, or that the visions of the past months were too far away and too unreal to move him.

The early morning sunlight made its way through the vines embowering the window, and cast lace-like shadows of their swaying leaves upon the floor, and upon Bertha's dress when she passed near. The softness of the light mellowed everything, and intensified the touches of color in the fans and ornaments on the walls and mantel, and in the bits of drapery thrown here and there as if by accident, and in the midst of this color and mellowed light Bertha moved before him, a slender, quiet figure, making the picture complete.

It was her quietness which impressed itself upon him more than all else. After the first moments, when she had uttered her cry on seeing him and had given way in her momentary agitation, he had noticed that a curious change fell upon her. When she lifted her face from the gate all emotion seemed to have died out of it; her voice was quiet. One of the things he remembered of their talk was that they had both spoken in voices so low as to be scarcely above a whisper.

When the breakfast was brought in, she took a seat at the table to pour out his coffee and attend to his wants. She ate very little herself, but he rarely looked up without finding her eyes resting upon him with wistful interest.

"At least," she said once, "I must see that you have a good breakfast. The kindest thing you can do this morning is to be hungry. Please be hungry, if you can."

The consciousness that she was caring for him was a wonderful and touching thing to him. The little housewifely acts with which most men are familiar were bewilderingly new to him. He had never been on sufficiently intimate social terms with women to receive many of these pretty services at their hands. His unsophisticated reverence for everything feminine had worked against him, with the reserve which was one of its results. It had been his habit to feel that there was no reason why he should be singled out for the bestowal of favors, and he had perhaps ignored many through the sheer ignorance of simple and somewhat exaggerated humility.

To find himself sitting at the table, alone with Bertha in her new mood,—Bertha quiet and beautiful,—was a moving experience to him. It was as if they two must have sat there every day for years, and had the pros-

pect of sitting so together indefinitely. It was the very simplicity and naturalness of it all which stirred him most. Her old vivid gayety was missing: she did not laugh once, but her smile was very sweet. They talked principally of the children, and of the common things about them, but there was never a word which did not seem a thing to be cherished and remembered. After a while, the children were brought down, and she took Meg upon her knee, and Jack leaned against her while she told Tredennis what they had been doing, and the sun creeping through the vines touched her hair and the child's, and made a picture of them. When she went upstairs, she took Meg with her, holding her little hand and talking to her in pretty maternal fashion, and after the two had vanished, Tredennis found it necessary to pull himself together with a strong effort, that he might prove himself equal to the conversational demands made upon him by Master Jack, who had remained behind.

"I will go and see Janey again," she had said. "And then, perhaps, you will pay her a visit."

When he went up, a quarter of an hour later, he found his small favorite touchingly glad to see him. The fever from which she had been suffering for several days had left her languid and perishable-looking, but she roused wonderfully at the sight of him, and when he seated himself at her bedside, regarded him with adoring admiration, finally expressing her innocent conviction that he had grown very much since their last meeting.

"But it doesn't matter," she hastened to assure him, "because I don't mind it and mamma doesn't, either."

When in the course of the morning Doctor Wentworth arrived, he discovered him still sitting by the bedside, only Janey had crept close to him and fallen asleep, clasping both her small hands about his large one, and laying her face upon his palm.

"What!" said the doctor. "Can you do that sort of thing?"

"I don't know," answered Tredennis, slowly. "I never did it before."

He looked down at the small, frail creature, and the color showed itself under his bronzed skin.

"I think she's rather fond of me—or something," he added with *naïveté*, "and I like it."

"She likes it, that's evident," said the doctor.

He turned away to have an interview with Bertha, whom he took to the window at the opposite end of the room, and after it was over they came back together.

"She is not so ill as she was yesterday," he said, "and she was not so ill then as you thought her." He turned and looked at Bertha herself. "She doesn't need as much care now as you do," he said, "that's my impression. What have you been doing with yourself?"

"Taking care of her," she answered, "since she began to complain of not feeling well."

He was a bluff, kindly fellow, with a bluff, kindly way, and he shook a big forefinger at her.

"You have been carrying her up and down in your arms," he said. "Don't deny it."

"No," she answered, "I won't deny it."

"Of course," he said. "I know you—carrying her up and down in your arms, and singing to her and telling her stories, and holding her on your knee when you weren't doing anything worse. You'd do it if she were three times the size."

She blushed guiltily, and looked at Janey.

"Good heaven!" he said. "You women will drive me mad! Don't let me hear any more about fashionable mothers who kill their children! I find my difficulty in fashionable children who kill their mothers—and in little simpletons who break down under the sheer weight of their maternal nonsense. Who was it who nearly died of the measles?"

"But—but," she faltered, deprecatingly, "I don't think I ever had the measles."

"They weren't your measles," he said, with amiable sternness. "They were Jack's, and Janey's, and Meg's, and so much the worse."

"But," she interposed, with a very pretty eagerness, "they got through them beautifully, and there wasn't a cold among them."

"There wouldn't have been a cold among them if you'd let a couple of sensible nurses take care of them. Do you suppose I'm not equal to bringing three children through the measles? It's all nonsense, and sentiment, and self-indulgence. You like to do it, and you do it, and, as a natural consequence, you die of somebody else's measles—or come as near it as possible."

She blushed as guiltily as before, and looked at Janey again.

"I think she is very much better," she said.

"Yes," he answered, "she is better, and I want to see you better. Who is going to help you to take care of her?"

"I came to try to do that," said Tredennis.

Bertha turned to look at him.

"You?" she exclaimed. "Oh, no! You are very good, but now the worst is over, I couldn't —"

"Should I be in the way?" he asked.

She drew back a little. For a moment she

had changed again, and returned to the ordinary conventional atmosphere.

"No," she said, "you know that you would not be in the way, but I should scarcely be likely to encroach upon your time in such a manner."

The doctor laughed.

"He is exactly what you need," he said. "And he would be of more use to you than a dozen nurses. He won't stand any of your maternal weakness, and he will see that my orders are carried out. He'll domineer over you, and you'll be afraid of him. You had better let him stay. But you must settle it between you after I am gone."

Bertha went down-stairs with him to receive a few final directions, and when she returned, Tredennis had gently released himself from Janey, and had gone to the window, where he stood evidently awaiting her.

"Do you know," he said, with his disproportionately stern air, when she joined him,—"do you know why I came here?"

"You came," she answered, "because I alarmed you unnecessarily and it seemed that some one must come, and you were kind enough to assume the responsibility."

"I came because there was no one else —" he began.

She stopped him with a question she had not asked before, and he felt that she asked it inadvertently.

"Where was Laurence Arbuthnot?" she said.

"That is true," he replied, grimly. "Laurence Arbuthnot would have been better."

"No," she said, "he would not have been better."

She looked up at him with a curious mixture of questioning and defiance in her eyes.

"I don't know why it is that I always manage to make you angry," she said; "I must be very stupid. I always know you will be angry before you have done with me. When we were down-stairs —"

"When we were down-stairs," he put in, hotly, "we were two honest human beings, without any barriers of conventional pretense between us, and you allowed me to think you meant to take what I had to offer, and then, suddenly, all is changed, and the barrier is between us again—because you choose to place it there, and profess that you must regard me, in your pretty, civil way, as a creature to be considered and treated with form and ceremony."

"Thank you for calling it a pretty way," she said.

And yet there was a tone in her low voice which softened his wrath somehow—a rather helpless tone, which suggested that she had

said the words only because she had no other resource, and still must utter her faint protest.

"Is it for *me*," he went on, "to come to you with a civil pretense instead of an honest intention? I am not sufficiently used to conventionalities to make myself bearable. I am always blundering and stumbling. No one can feel that more bitterly than I do, but you have no right to ignore my claim to do what I can when I might be of use. I might be of use because the child is fond of me, and in my awkward fashion I can quiet and amuse her as you say no one but yourself can."

"Will you tell me?" she asked, frigidly, "what right I have to permit you to make of yourself a—a nursemaid to my child?"

"Call it what you like," he answered. "Speak of it as you like. What right does it need? I came because ——"

His recollection of her desolateness checked him. It was not for him to remind her again by his recklessness of speech that her husband had not felt it necessary to provide against contingencies. But she filled up the sentence.

"Yes, you are right," she said. "As you said before, there was no one else—no one."

"It chanced to be so," he said; "and why should I not be allowed to fill up the breach for the time being?"

"Because it is almost absurd," she said, inconsequently. "Don't you see that?"

"No," he answered, obstinately.

Their eyes met, and rested upon each other.

"You don't care?" she said.

"No."

"I knew you wouldn't," she said. "You never care for anything. That is what I like in you,—and dread."

"Dread?" he said; and in the instant he saw that she had changed again. Her cheeks had flushed, and there was upon her lips a smile, half-bitter, half-sweet.

"I knew you would not go," she said, "as well as I knew that it was only civil in me to suggest that you should. You are generous enough to care for me in a way I am not quite used to—and you always have your own way. Have it now—have it as long as you are here. Until you go away I shall do everything you tell me to do, and never once oppose you again—and—perhaps I shall enjoy the novelty."

There was a chair near her, and she put her hand against it as if to steady herself, and the color in her face died out as quickly as it had risen.

"I did not want you to go," she said.

"You did not want me to go?"

"No," she answered, in a manner more baffling than all the rest. "More than anything in the world I wanted you to stay. There, Janey is awakening!"

And she went to the bed and kneeled down beside it, and drew the child into her arms against her bosom.

(To be continued.)

THE SONS OF CYDIPPE.

By sacred Argos Polycleitus carved,
In Indian ivory and Persian gold,
To Hera, mother of all, dreadful, benign,
A glorious statue in his darkened house.

Straight from her throat ran the pure folds, and fell
In seemly curves about her unseen feet:
The fillets of her lifted head were bound
With brodered stories of the Fates and Hours;
Scepter and ripe pomegranate, as was meet,
Her queenly hands sustained, and by her side
The rustling peacock spread his gorgeous train.

For ancient Chrysis, from her wrinkled hands
 Letting the torch down fall in obscure sleep,
 Careless, not breathed on by the serious gods,
 Had touched the old Heræum with white flame,
 And like a dream the fabric, full of prayers,
 Vows of forgotten athletes, maidens' gifts,
 Robes of dead priests, echoes of hymns and odes,
 Had glared against the noonday, and was not.

So, nigher to Canathus, on lower ground,
 Nearer the bright sea, myriad-islanded,
 Argos had built her outraged deity
 A nobler fane among those holy trees—
 Platans and elms—that drank her virgin spring;
 And all was done, and on this certain day,
 From the dark house, shrouded and swathed in cloths,
 The dread majestic goddess passed in state
 To be unveiled within her own abode.

Then while the people, clustered in the sun,
 Shouted and pressed, and babes were held aloft,
 At one shrill summons of the sacred flute,
 In all her gold-and-white magnificence,
 The austere god smiled on her worshipers,
 Who suddenly fell silent in their awe.
 Then came a shout, and from the woodland road,
 Craving a passage through the whispering throng,
 Two youths appeared, under a shameful yoke,
 Flushed with the sun, and soiled with dust, and bowed,
 Who dragged a chariot with laborious arms,
 Bleeding and chafed; and on the chariot sate—
 With a thin bay-leaf in her aged hair—
 A matron with uplifted eyes elate.

Then while all wondered, and the young men sank,
 Breathless and glad, before the glorious god,
 The high-priest lifted up his voice, and said:
 "Blessed art thou, Cydippe, blessed be
 Thy sons who shamed themselves to bring thee here!
 Oh, not in vain for Biton, not in vain
 For Cleobis, the unfruitful toil, the sweat,
 The groaning axles, and the grinding yoke!
 Unoiled their limbs, unfiled their hair,
 Unbathed their feet, hateful to maids and harsh,
 But to the gods sweeter than amber drops
 That gush from fattest olives of the press,
 Fairer than leaves of their own bay, more fresh
 Than rosy coldness of young skin, their stains,
 Since like a sacrifice of nard and myrrh
 Their filial virtue sanctifies the winds."

Then slowly old Cydippe rose and cried:
 "Hera, whose priestess I have been and am,
 Virgin and matron, at whose angry eyes
 Zeus trembles, and the windless plain of heaven
 With hyperborean echoes rings and roars,
 Remembering thy dread nuptials, a wise god,
 Golden and white in thy new-carven shape,
 Hear me! and grant for these my pious sons,
 Who saw my tears, and wound their tender arms
 Around me, and kissed me calm, and since no steer

Staid in the byre, dragged out the chariot old,
And wore themselves the galling yoke, and brought
Their mother to the feast of her desire,
Grant them, O Hera, thy best gift of gifts!"

Whereat the statue from its jeweled eyes
Lightened, and thunder ran from cloud to cloud
In heaven, and the vast company was hushed.
But when they sought for Cleobis, behold
He lay there still, and by his brother's side
Lay Biton, smiling through ambrosial curls,
And when the people touched them they were dead.

Edmund W. Gosse.

THE HELLENIC AGE OF SCULPTURE.

WITH Alexander the Great begins a new era in the history of Greece and in the history of the world. Like a tornado, bearing all before it, we see this Greek conqueror sweeping over the East, overturning vast empires, and shaking the hoary civilizations of Asia to their very center. But in his wake follow the clarifying influences of Hellenic culture. Spreading, now, far beyond the narrow limits of Greece, it leaves its impress on that great period which, extending down to the prevalence of Roman dominion throughout the ancient world, is generally called the Hellenic age.

The kingdoms of the Ptolemies, of the Seleucidæ, of Thrace, and of Macedon now occupy the foreground of history; and the smaller Greek states of old are bandied back and forth between the jealous sovereigns, or, as in the case of Rhodes, preserve an almost uninterrupted neutrality. The once proud republics of Greece thus became dependant on the favor of the most powerful. The old historic rights were gone. Should we add to this picture the terrible crimes of most of the ruling houses, their breaches of faith, their cruel selfishness in disregarding the rights of others, we should have some idea of what

the historian has recorded of these troublous times. But, besides these distresses within, barbarians, wild, devastating hordes of Gauls, or Galatians, as the ancient Greeks called them, overran Greece from the north, and, passing the Hellespont, spread terror, also, among the flourishing cities and states of Asia Minor.

Following Alexander, in his course, to the shores of the Nile and far into the heart of Asia, we may trace the life-giving influence of Greek civilization, and watch its growth. We see, springing up all over the vast region he conquered, numberless Greek cities, not the monotonous conglomerates of the Orient, but corporations, having vigorous internal life, and calling into play the powers of the individual citizen. The story that Alexander founded sixty cities among the barbarians, Droysen declares, is not exaggerated, and the fact that this great Greek colonizer only began the work, is abundantly proved by what is recorded of his successors. But how brief are the accounts given of the way in which these cities were laid out; of their temples, palaces, and theaters, and of the wealth of statuary and relief which adorned them! The stories of the splendor of Alexandria and of Antioch, of the palaces and

triumphal arches there to be seen, of the sacred images in the groves, the costly pictures and statues in the private apartments, are tantalizing in their meagerness. And yet, by gleanings from the poets and inferences from the imitative art of the ensuing age, many features in the activity of these Hellenic times have already been traced. Thus, looking through a thick veil, the practiced eye has read backward, as it were, from the familiar ruins of Roman times up to greater Hellenic originals behind them. So Helbig, in his "*Untersuchungen über die Campanische Wandmalerei*," has most skillfully traced the paintings of Pompeii back to the decorations of the Greek houses in this post-Alexandrian age, and has shown, as well, that much of the sculpture of the Roman time is only the echo of stronger, more original, art that had gone before.

Of late, excavations have happily come to the rescue in disclosing the treasures of that obscured age. The discovery in Samothrace of a number of temples, with their sculptural decoration, and the glorious figure of victory-bringing Niké, is followed by astounding revelations at Pergamon. How much more remains hidden for us beneath the soil of Asia Minor, where numberless beautiful Greek cities flourished, it would be hazardous to conjecture; and one need but question the topographer of Asia Minor, to find how many ancient sites are, as yet, untouched, and how sanguine are his hopes for a rich harvest, in the future, from this virgin soil. The Greeks, who, in an earlier age, had been confined to the narrow limits of their native land, now had the world opened up to them, and, indeed, were driven out into this greater world, by those highly wrought and varied activities which burst the bonds of soil, seeking a freer outlet. Sometimes as thrifty tradesmen or bold adventurers, again as travelers or physicians, and often as hireling soldiery, Greeks were met with everywhere, from the Indies in the East to Massilia (modern Marseilles) in the West. This wider field and intenser life brought with it, among other features of the time, an increased pursuit of knowledge. The stirring tempests and ever-changing scenes through which the age passed, stimulated to thought and reflection. The history of literature, the sciences of archaeology, philosophy, grammar, and astronomy, now flourished as never before. Anatomy was raised by men like Erasistratus to the rank of an independent study, wielding, as monuments show, a powerful influence on artists and art. Asiatics, in their turn, now visited Greece, and everywhere, as the nations were thrown together and became better ac-

quainted, a feeling of brotherhood was awakened. The sharp distinction between Greek and barbarian now disappeared; the Greeks recognized many admirable traits in those they had once despised, and even at the courts of Demetrius Poliorcetes a semi-Hellenic, semi-oriental, etiquette was introduced. The products of oriental art were, also, eagerly sought after, as we learn from literary notices, and from oriental remains in Greek graves, such as those discovered in the tomb of a Greek lady, in Southern Russia. Although oriental art exercised much influence on Greek drapery and the minor decoration of the time, as appears from the paintings on vases, it seems to have little affected sculpture, except, perhaps, in rousing it to the use of more fantastic combinations, as well as to more splendid undertakings, as we see in new marbles from Pergamon.

Hand in hand with Greeks, wherever they emigrated, went their love of art. Alexander tarried long at Ephesus, in the society of the painter Apelles, before launching out upon the sea of Asiatic conquest; he enjoyed, likewise, the intimate friendship of the gifted sculptor, Lysippus. The eagerness with which people in high position, as well as in private life, collected art treasures, and the large sums they paid, testify to a general appreciation of the beautiful. Mnason, of Elatea, we learn from Pliny, paid to Aristides a sum equal to twenty thousand dollars for a picture of the battle with the Persians, and to Asclepiodorus seven thousand dollars for a picture of the twelve gods, and for each hero painted for him by Theomnestus he gave three hundred and ninety dollars. King Attalus, of Pergamon, is said to have bid one hundred and seventeen thousand eight hundred and eighty dollars for a picture by Aristides, at the sale of the Corinthian booty, after Mummus's conquest; and Aristotle tells us that, even in his time, statues and paintings formed an indispensable part of the furniture in rich houses. Indeed, so highly were works of art prized, that through them political favor was sometimes sought. Aratus, of the Achæan League, says Plutarch, sent pictures of the old Sicyon school to Alexandria, to win the aid of the Egyptian King Ptolemy III. for his imperiled cause. Nicomedes, of Bithynia, so longed to own Praxiteles's Aphrodite, that he offered to pay off the entire debt of the city of Cnidus; his offer, however, was declined. Besides thus encouraging art, by making generous purchases, building temples, laying out new cities, and the like, some of these rulers, as Plutarch tells us, even tried their hand as practical artists. Attalus III., the last king of Pergamon, modeled in wax and cast and chis-

LIFE-SIZE MARBLE HEAD. (GLYPTOTHEK, MUNICH.)

eled in bronze. Antiochus Epiphanes sought recreation in the studios of artists in metal. A familiarity with art processes seems to have been shared by private citizens as well.

The prevalence of monarchical institutions doubtless produced changes in society which affected art. Hitherto, the individual had been greatly influenced by his participation in public affairs. Now, as the guidance of state affairs became concentrated in the hands of the monarch, this essential groundwork of the old Hellenic civilization was gone. From motives of self-interest, or preference, men now developed in a single direction. They became, in a word, specialists, and the professions were sharply sundered, as they had not been in older Greece. Protogenes, who was living in Rhodes, during the siege of that city, painted quietly in his garden, which stood in the midst of the enemy's camp; and when asked by the hostile leader, Demetrius, how he ventured to remain outside the walls, replied that he knew Demetrius warred against Rhodes, and not against art. Here Protogenes frequently received the besieger, who proved his appreciation of the painter's work by sparing a certain quarter of the city, for fear of injuring his picture of "Ialysus and the Dog." Men of each calling—poets, learned men, and actors—naturally clubbed together, and the professional classes became sharply defined. It is not strange that these new classes, each bearing its peculiar and characteristic stamp, should have offered a fruitful and attractive field for art. So comedy, we find, caught the unique features of city life, developing to great perfection the type of the adventurous soldier, the wealthy citizen, the artist, the artisan, the parasite, etc.; idyllic verse busied itself with the rural classes, shepherds, hunters, and fisher-folk; and sculpture and painting did not fall behind the sister art of poetry. So the fisherman, as sung in verse,—weather-beaten and tough-skinned,—appeared in statues, doubtless, like the one in the Vatican, where the humble costermonger is crying the fish he carefully holds in a basket. So the actor was represented as wearing the mask and other curious paraphernalia of his calling, such as the false stomach, etc., as seen in many statues in the Villa Albani. One, for instance, has taken off his mask, as if in answer to the applause of the public.

The social position of woman was also greatly changed. Issuing from the almost oriental seclusion of former times, she took a more prominent part in public affairs; and there was, besides, far greater freedom of intercourse between the sexes. Ladies appear, moreover, to have had an intriguing influence in the affairs of government. A species of gal-

lanty began to show itself. An astronomer called a comet "Berenice's Hair," and a poet makes the warlike hero of old Achilles cover the hand of Deidamia with kisses, doubtless reflecting the customs of the day in his verse. On the one hand, the ladies of the court seem to have become more stately, and on the other, there was a tendency to coquettishness which, perhaps, is reflected for us in the more elaborate and ambitious toilets, as represented on the monuments. In spite of the social and political fermentation of this age, mercantile activity was great, and material prosperity developed extensively, under the patronage of wise rulers. As a striking instance, the vigorous republic of Rhodes, a noted center of ancient trade, succeeded in amassing great wealth, which was devoted largely to the patronage of art. Here, towering above the harbor, was to be seen that renowned colossus of the sun-god, one of the seven wonders of the world. But Rhodes boasted more than a hundred colossi, any one of which would have made any other city celebrated. Her artists seem to have formed a new and independent school, whose ramifications extended into Asia Minor.

With this general increase in wealth came a wide-spread luxuriousness. The size and magnificence of enduring works, such as the Samothrace Niké, the Pergamon altar, etc., as well as the lavishness with which art was applied to beautify ephemeral public festivals, are characteristic of this time. The fashion was set by Alexander's unbounded extravagance in piling up a mountain of precious treasure to be burned on the funeral pyre of his beloved Hephæstion. Ten thousand talents were set apart for this purpose, and an additional two thousand were contributed by friends, high dignitaries, and the Babylonians. A part of the wall of Babylon was torn down to furnish material for the structure, which arose, in five divisions, to a height of two hundred feet. The whole gleamed with gold, purple cloth, decorative paintings, and statuary. On its summit stood sirens of costly workmanship, out of which sounded the funeral dirge. Amid sacrifices, mourning processions, and songs of lament, this gorgeous pyre was given to the flames. Offerings now followed in honor of the hero Hephæstion, Alexander himself consecrating the first gifts. Ten thousand bullocks were slain as sacrifices to the glorified friend, and the whole army was invited to a grand repast, still other festivities following on the ensuing days. Alexander's successors vied with one another in gorgeous pageantry and lavish public ceremonies.

Great but silent revolutions were taking place in the old modes of thought and feeling.

In older times, the conception of the gods, their working and overruling providence, had expressed itself in sacred stories and incidents, analogous to human deeds and sufferings. These the exuberant Greek fancy had multiplied indefinitely, each tribe, each locality indeed, modifying them, and adapting them to their peculiar circumstances and local beliefs. Out of this very profusion grew the necessity of order and arrangement. Once these

beings, the artist's fancy, like that of the poets, seems to break loose from the more sober ancient myths, and to riot in new fantastic creations of tremendous power, as we see in the great frieze of the Pergamon altar, recently discovered,—or that it finds vent in a garrulous, story-telling language, as in the representation of the Telephus myth, in the small frieze of the same altar, which will be considered later. This straining after higher

satisfaction than the old gods and myths could give, was, moreover, greatly stimulated by external conquest, with its widened fields of vision. The opportunities for studying and observing the religions and worship of conquered nations confirmed the dissatisfaction with local worship. Hence, it was possible for Alexander to worship the deities of Babylon and Egypt, as well as his own, and to honor, in the God of the Jews, that highest power in which Aristotle had recognized the eternal, creating reason. With such a widened religious horizon, the Greek god Hades could wander to Alexandria, there to be honored with statues, temples, and altars as the Græco-Egyptian Serapis; and, on the other hand, the Egyptian deities Isis, Anubis, and Harpocrates, in Hellenic form, could find worshipers in the Greek

VOTIVE RELIEF TO PAN AND THE NYMPHS. FOUND AT GALLIOLI. (VIENNA.)

myths were the expression of what mankind, in its childhood, had seen and felt; but could they suffice to solve the problems of a thinking age? Stretching their hands out beyond the old cosmogonies, men sought to grasp the eternal principles of the world, and of the very gods themselves. They found a spiritual power over all, which molded existing matter, and striding forward, they arrived at a rational philosophy, which recognized, and at last embraced, a pure and noble deism. And yet, although affected by this new atmosphere, the people still clung to the religious traditions of old. The Athenians might laugh at impious jokes in comedy, and admire the bold infidelity of a Diogenes, yet they continued to celebrate their festival in honor of Athene in the old way, and punished with great severity those who made light of the sacred mysteries. It is not strange, then, that we do not hear in this period of the development in plastic art of new ideals of the great gods, but only of the repetition and variation of that perfect array created by the genius of the centuries gone before. Nor is it strange that, when representing inferior mythical

states of Asia Minor, as well as in Athens, Corinth, and the interior of the Peloponnesus.

But this very acceptance of so much that was foreign was fraught with many dangers to the Greek world. Turning to strange and unknown superstitions, the mysteries of Isis, of Mithras, and of the Cabiri gained importance. Astrology, witchcraft, and the dreaded influence of the sibyls worked like a species of intoxication.

If we may judge from existing remains, sculpture seems now to have well-nigh deserted its old home in Athens and the Peloponnesus, and to have found a regal welcome in the rich kingdoms of Asia Minor, and in the island republic of Rhodes. The few monuments in Athens which may be traced to the third century B. C., compared with the same class in the preceding century, show great sinking in ability and conception. The beautiful large tombstones of careful workmanship are supplanted by monuments very small and carelessly executed. A law made by Demetrius, of Phalerus, in the latter part of the fourth century B. C., limited the size of tombstones. Doubtless, the troublous times,

SMALL MARBLE HEAD FOUND AT PATRAS. (BERLIN MUSEUM.)

and the insecurity of property at Athens, had much to do with this falling off. The story that the Athenians raised three hundred and sixty statues to Demetrius, of Phalerus, in thirty days, and then destroyed them, to raise new ones to his successful enemy, though hard to believe in detail, suggests that there must have been much activity of a servile kind. Moreover, we cannot doubt that sculptors continued to be employed to a certain extent, since Demosthenes' nephew succeeded in having a statue of the great orator put up in Athens in the midst of those trying times, and many votive reliefs bear

the marks of this age. These are, however, mainly interesting on account of their mythological information and inscriptions. Like these Athenian reliefs in composition, but superior in workmanship, is that graceful tablet from Gallipoli, now in Vienna. It represents a grotto sacred to the nymphs and to Pan. This small semi-goat, semi-human god, sits in the corner, with legs crossed, and is blowing his rustic syrinx. Toward an altar below him, Hermes, with staff—the kerykeion or Latin caduceus—in hand, leads three nymphs, a sisterly group of gracefully moving figures, their drapery blown by the wind. In feature and elaborate coiffure they resemble strongly a beautiful little marble head recently found in Patras, as well as that larger head of the same type which is one of the great treasures of the Munich Glyptothek, and which, doubtless, came originally from Greece.

We know, alas, very little of the art of the third century B. C., but such heads as these, and the terra cottas from Tanagra and Corinth, seem to indicate that taste and artistic ability were still at no low ebb in Greece itself.

The direct channels by which the influence of the richly developed art of the Phidian and the following age passed over to new fields of activity, are only partially known. We know that the influence of Alexander's court sculptor, Lysippus, passed over to Rhodes through his pupil Chares, of Lindus. The recent German excavations on the summit of Pergamon have brought to our knowledge still another skillful master of the school of Lysippus in Asia Minor, one Xenocrates, who executed bronze statues, and was also a celebrated writer on art. Xenocrates' name may still be read on a slab belonging to one of the pedestals which stood near the temple of Athene, on its ancient piazza. Here were once to be seen bronze figures, which we may now believe were originals of such celebrated works as the statue popularly known as the "Dying Gladiator." R. Bohn's view of this beautiful ancient square, restored from accurate study of the site, and from fragments there discovered, may give us, even to-day, a distinct idea of the spot where Xenocrates' work was to be seen. On still another pedestal, from this beautiful site, may be read the fragmentary name *ραξιτελης* (raxiteles), doubtless a part of the word Praxiteles, and, perhaps, pointing to a descendant of the renowned Athenian master of the same name, since it was customary among the Greeks to pass on the same name in a family for many generations. If this Praxiteles was, then, really a grandson of the older mas-

ter, the fact would indicate the influence of Athenian as well as Peloponnesian art in Asia Minor. But the extent of this relationship with the older Greek art-centers is still uncertain. We do not yet know to what degree art developed independently in these new fields, since safe comparisons are only beginning to be made on the basis of the excavations which are still unearthing new treasures in Asia Minor.

coins. The goddess, towering above the green of the holy place, appeared on the prow of a marble ship, discovered, also, on this now wasted site. She seemed rushing by, with raised wings and trumpet, heralding victory. As fragments recently adjusted to the bosom show, both arms were raised. With one hand she held the trumpet to the mouth, and with the other, probably, held high the wreath of victory. Before long, the statue, with its mag-

HEAD OF DEMOSTHENES. (ATHENS.)

And yet, in the monuments from the Hellenic age, different streams of artistic expression are already evident. An intensified realism in detail and tremendous action are found, combined with ideal form of great power, as seen in the colossal Niké of Samothrace, who sweeps down with lightning speed,—the powerful form, with its rushing drapery, seeming to force us to make way for the imposing goddess of victory as she passes. This great statue, now in the Louvre, was erected in the sacred shrine at Samothrace by Demetrius Poliorcetes, early in the third century B. C., in thanks for a naval victory, as is shown by comparison with his

nificent drapery and intense life, will be raised again on its ancient prow, forming one of the greatest attractions of the Louvre; a worthy sister of the Venus of Melos, and a speaking witness to the power of the sculptor of the third century before our era. There are, moreover, in the Hellenic age, signs of a going back to the excessive simplicity of archaic work, as illustrated in a head from Pergamon, now in Berlin, in which the lack of detail and the stiff severity seem a protest against the luxurious forms of the other monuments there found, calling to mind the preraphaelite tendency of to-day.

But a great striving of that age, starting in

science with Aristotle, seems to have been to grasp the reality of things. So, in history, not merely the great main facts were given, but every particular. When Xenophon, of an elder day, described a historical person, he mentioned only what was essential to his character; but now, descriptions of appearances, clothing, and habits were added, making the picture more vivid. The same tendency appears, also, in marble and bronze portraits of this time, some of which have recently been excavated; others are preserved to us in Roman imitations. The sculptors represented men just as they lived and walked among them, and grasped characteristics of form and face with startling force and naturalness, quite different from the ideal generalization of the earlier age. Let us but compare the portrait of Pericles, now in the Vatican, with that of Demosthenes in the Royal Gardens at Athens. Although the former is only a feeble copy from an original of the fifth century B. C., it is evident that the artist has shown us the great Pericles through the veil of ideality. Demosthenes, on the other hand, we seem to see bodily before us. His furrowed brow, knitted eyebrows, closely pressed lips, we feel confident, show us the noble patriot as he appeared to the Athenians daily, and make us regret that the speaking head is so fragmentary.

An original of this time is the magnificent life-size bronze portrait-head recently brought

PORTRAIT-HEAD, IN BRONZE, OF A VICTOR IN THE OLYMPIC GAMES. (OLYMPIA.)

to light by the excavations at Olympia. It was found in a part of the sacred grove, far removed from the great temple where the statue to which it belonged doubtless stood. The neck shows signs of having been roughly cut away from the trunk, and its site and mode of concealment indicate that this head had been hidden by the plunderer, whose intention was to dispose of it, as he had already done with the metal body. In this head we see a powerful athlete, as the wreath in his hair indicates; so brutal are his features that we are tempted to associate him with professional prize-fighters. That he had won the Olympic victor's wreath of wild olive, appears from a single leaf of sheet-bronze still above the right temple, showing that other leaves had, also, been fastened on to the shaggy hair after the head was cast. The swollen ears mark him as a combatant in the boxing-game, and his portrait-features may indicate that he was one of those thrice victorious, to whom the honor of a portrait-statue, in the sacred grove, was allowed. What a contrast this profile to the ideal faces with which we are familiar in earlier Greek art! Gone is the line of beauty in forehead and chin—a brush-like beard making more pronounced the projection of the brutal chin far beyond the upper part of the face. In contrast to portrait-heads of an earlier time, each detail of skin and hair is brought out by the most skillful use of the burin, the locks being made more natural by strong furrows, graven parallel with their general flow. The same care in chiseling is seen also in the skin, and not only in parts in tension over

HEAD OF PERICLES. COPY OF AN ORIGINAL OF THE FIFTH CENTURY B. C. (VATICAN.)

the forehead, but also in the wrinkled folds about the eyes, especially in the uninjured right side of the face. Indeed, the characteristics of this ancient athlete have been so admirably caught, that we do not wonder that his great strength and determined will won the prize on the ancient boxing-ground.

By comparing this head with those of the fourth century B. C., and with the Pergamon marbles, and remembering that with Lysippus a strongly realistic style of portraiture was encouraged, we gain a clew to its age. Placed alongside the so-called Mausolos of the British Museum, from the Mausoleum at Halicarnassus, this bronze athlete seems much more realistic in its conception. The Mausoleum was erected about the middle of the fourth century B. C., and hence we may conclude that this athlete, with its more developed portraiture, belongs to a later date. Contrasted, on the other hand, with any one of the giants of the Pergamon frieze, which are from the second century B. C., this head seems reserved in style. Compare, for instance, the bold modeling of the disheveled eyebrows of the Pergamon giants with the careful regularity with which those of this athlete's head are graven. Such characteristics in treatment make it probable that this bronze head is somewhat older than the giant's, and belongs to the third century B. C.

But, besides such accurate and admirable portraits of living persons, of which other examples are found on coins of this time, the poets and sages of the past received similar life-like forms. This tendency was pronounced in Alexander's great sculptor, Lysippus, and the efforts to portray persons of whom no iconical statues existed continued after him. So old Æsop, the poet of fable, and the seven wise men, who had lived in the sixth century B. C., came in for a share in plastic portraiture. Among the recently discovered Pergamon inscriptions is one showing that the monument once supported a portrait of the ancient lyric poet Alcæus, Sappho's admirer. Fortunately, among existing monuments there are a few masterpieces of this kind, showing how out of the sayings of these old men the character had been read and brought to marvelous expression. In heads of Homer, the blind old man and divinely inspired singer of Greek imagination seems represented to us bodily. Æsop almost speaks to us in that marble in the Villa Albani which Burckhardt calls "the concentrated ideal of a witty cripple." In the head of Hippocrates we see the kindly and genial physician. So, probably, the idea of Socrates developed,

in this age, under the immediate influence of Plato's vivid description of the great philosopher.

But this fondness for reality, as seen in the portraits of that time, did not stop with them. Many other subjects which occupied the attention of poets and artists were treated in a like realistic manner. Life, after Alexander, as we have seen, had greatly changed in many respects. The multiplication of large cities throughout the civilized world, with their dense populations, the more intense and excited life, the over-refinement which pervaded some ranks, and the sharp isolation of the different classes, were influences which tended to introduce artificiality and shut men out from direct communion with nature. The idyl deals, by preference, with the children of nature, untainted by civilization, and living in unclouded union with fountain, forest, field, and flock, and the sculptor's fancy busies

FISHERMAN. (VATICAN.)

itself with fishermen, shepherds, or merry, rollicking childhood. In consequence of this spirit, many walks in life which had been hitherto well-nigh unheeded in art are now represented in all their attractive and many of their forbidding features: the fisherman, already alluded to, appears with his excessively plain face and horny skin, as well as the plump form of the baby, in all its roundness and presumptuous strength; wrestling, perhaps, with an animal, or playing with a huge mask, or carrying a vase. Such statues, we learn, were often used as signifi-

cant decorations of fountains; those of children being, also, not infrequently found as tombstone monuments.

The Boy Extracting a Thorn from his Foot, a marble statue of rare workmanship in the British Museum, and, in general composition, but not in detail, like the Bronze Boy of the Capitol, is a speaking witness to this spirit of the Hellenic age. Volumes have been written on the severer bronze figures at Rome, discussing the probability of the Bronze Boy's

we hope that he may succeed. How true the vigorous form and homely peasant face, and how charming the workmanship of the marble! Although not ideal, the features appeal to us, and were we asked to choose to-day some pleasing ornament for garden or shady fountain, we could not do better than select this rustic, with his wounded foot, who in ancient times, likewise, decorated a fountain, as may be inferred from the holes in his rocky seat. This fondness for homely scenes at this

J. T. HAN SC.

being an original of the archaic period of Greek art. Fürtwängler, in a masterly argument, has shown, however, that its spirit can only be that of an early naïve time, and the discovery of the fine naturalistic marble of the British Museum seems clearly to confirm his brilliant theory. This marble boy, bending over his raised foot, with open mouth and intent gaze, is so deeply absorbed in extracting the offending brier that our sympathy with the rustic lad is at once enlisted, and

time passed out beyond every-day life, and invaded the realms of mythology as well. In Hellenic poetry, even the Olympic gods engage in trivialities like every-day people. Thus, Hermes is made to blacken his face with ashes, in order to scare the naughty children of the gods. Little Artemis, three years old, as she visits Hephaestus's workshop, climbs upon Briareus's knee, and plucks out of his shaggy breast a handful of hair. Aphrodite offers a reward to any one who will bring

BRONZE HEAD OF SATYR. (GLYPTOTHEK, MUNICH.)

back her runaway child, Eros, or she takes the infant god to learn music of a shepherd, to whom, however, the little mischief-maker teaches love. In plastic art, like any human child, Eros plays with the weapons of the mighty heroes. It is this merry, roguish child of later myth who has become the pet figure among the Greek gods in modern times. How different this chubby busybody is from the youth of earlier art,—the dreamy, love-whispering god, personifying a world of soul-influence, who has been shown by Fürstwängler, in an article entitled "Eros in der Vasen Malerei." No less interesting is the transformation among the followers of Dionysus, that changes the almost sentimental, graceful satyrs of the fourth century B. C. into homely forms suggested by the peasantry, and overflowing with roguish fun and mischief. This is admirably illustrated by a male satyr, six inches high, recently discovered in Pergamon, now one of the choice treasures of the Berlin Museum. Here the sylvan sprite

has become a thorough rustic in character and form. Drawing back, he raises his right hand, which once doubtless held his short shepherd's crook, and parries a blow. So brimming full of mischievous glee is his homely, almost bestial face, that we seem to hear his boisterous laugh, and are tempted to join in his contagious merriment. In his left hand he carries the syrinx, an attribute which seems to have been borrowed from the god Pan. The merry, pleasure-loving satyr of an older art took life too easy to be at enmity with any being. But this satyr expresses fully the changed ideas of the new times, even though in pose he reëchoes that of Myron's Marsyas, a master-work of a previous century, transmitted to us in a marble copy in the Lateran Museum. Thus, the Pergamon satyr fights in earnest, like any young mortal, although the old, roguish satyr-look lights up his face, and his large mouth, low nose, and pointed ears tell us of his animal nature.

An admirable head in the Munich Glyp-

tothek, about life-size, and originally from the Villa Albani, is so like in spirit and workmanship to the works of this age after Alexander that we may give it a glance. It shows us another of these merry followers of Dionysus, his face alive with smiles, and his features so much like those of a simple peasant lad, that, were it not for his large, pointed ears, we might be tempted to consider him a genuine shepherd. Unfortunately, the modern neck and bust, on which the head rests, do not correspond well with the features. We naturally expect a face so merrily laughing to be roguishly tipped, but it has been restored as most primly erect. By covering the neck and bust while looking at this head, the expression of fun and hilarity in the face, now seeming to verge toward a grimace, now toward the merriest sport, will be astonishingly enhanced. Although somewhat nobler in feature than the Pergamon bronze, there is no mistaking the same rustic character and naïve boorishness here also given to one of Dionysus's suite, and rendered with a startling naturalness in the minutest detail.

Not the least of the attainments of sculpture, during this age, was the noble rendering of race peculiarities. This is well illustrated by the fragment of a statue in the British

Museum—a rare bronze head, which was discovered at a depth of eleven feet under the mosaic pavement of the *cella* in the temple of Apollo at Cyrene, in Northern Africa. Here we see the curly hair, thick lips, and other features of the negro given, in striking contrast to the Greek and Roman types. The eye-sockets, once doubtless filled to imitate life, are now empty, but the marvelous details of hair and beard are still perfect. So vigorous is the conception of this head, and, in workmanship, so like the head of the bronze athlete found at Olympia, that we may safely believe it to belong to the same age, that is, the third century B. C. It was then that the Greek colonies of Cyrenaica were in a flourishing condition, and it would have been most natural that some African king from a neighboring province should there have dedicated a statue of himself in the temple of the Greek god Apollo. In this matter of race-portraiture, however, Pergamon stands at the front, offering us celebrated works of great power, representing the sturdy form and face of the ancient Galatians. Most widely known among these statues is, doubtless, that fallen figure of the Capitol, which is commonly called the "Dying Gladiator."

Wandering back in imagination to the time of the Apocalypse, we find that Pergamon was then the seat of one of the seven churches in Asia, but, passing on, still farther back, to two centuries B. C., we find it the capital of a powerful Greek kingdom. To-day, traveling due north from Smyrna, and following up the river Caicus twenty miles inland, we should come upon this ancient site, now called Bergama, a flourishing Turkish town. From the blue sea, even, we may descry, at the base of mountain ranges in the background, the craggy summit of the Acropolis, from which, in those ancient times, there went out great power into the surrounding world, shattering and hurling back hordes of barbarian Galatian invaders. And here it is that modern excavations have discovered great art-treasures, throwing untold light on the sculpture of that remote age.

The origin of the Pergamon dynasty was as follows: Lysimachus, one of Alexander's generals, and an aspirant to regal power, being hard pressed, left a vast treasure, \$14,000,000, in Pergamon's impregnable fortress, in the keeping of a faithful servant, Philetærus. But Lysimachus, having killed his own son, incurred the just indignation of many of his followers. Among these was Philetærus, who was so outspoken in the condemnation of his master as to incur the enmity of the ruling house. Driven, in self-defense, 280 B. C., to take possession of the fortress and treasure, he declared himself

THE SATYR MARSYAS, AFTER MYRON. (LATRAN MUSEUM, ROME.)

BRONZE HEAD WITH NEGRO FEATURES, FROM CYRENE. (BRITISH MUSEUM.)

independent, and thus founded a dynasty, which was to become one of the richest and most attractive of the age. From the time of its foundation by the obscure Phileærus, the character of this Pergamon house compared most favorably with that of the other ruling houses of the day. Public and private virtue was a marked feature of its rulers. Elsewhere we find brother turned against brother, and father even against son; here the members of the family were devoted to each other. The devotion of the royal sons of Attalus I. to their mother, a woman of humble birth but noble character, expressed itself in temples dedicated to her, one of which, it is recorded, was sculptured with mythic and other scenes illustrating the devotion of sons to mothers. An inscription just discovered at Pergamon, on a pedestal which occupied the beautiful piazza about Athene's temple on the Acropolis, makes still more vivid this family affection, the stone letters telling us that Attalus II. put up this statue "to his mother, Queen Apollonis, because of her love to him."

Moreover, the Pergamon princes were not oriental despots, but desired the good opinion of their subjects and allies, to whom, even

though Romans, they were always true. They manifested a great regard for Greece itself, and the intercourse was lively between this rising city and the old seats of culture in Hellas. In Sicyon, Attalus I. raised a heavy mortgage on an Apollo temple, and restored it to free use. In 197 B. C., he made a present of ten talents of silver and ten thousand measures of wheat to the same city. For the former favor the citizens had erected to him a colossal statue on the market-place, near Apollo's statue, but now they honored him with a golden statue, and a yearly festival. After the earthquake at Rhodes, in the third century B. C., that city also experienced the munificence of this monarch. These Pergamon princes encouraged the sciences and arts most liberally. As memorials of their large-minded wisdom in these matters, were the royal library at Pergamon and their sculptural monuments, recently discovered, which were the admiration of the ancient world, and give to us astonished moderns a glimpse of those days of departed glory. These princes were, moreover, Greek rulers of a Greek people, thus forming a happy union which did not exist in all the other empires of the day, and which was, doubtless,

FIGHTING PERSIAN, VOTIVE GIFT OF ATTALUS TO ATHENS. (VATICAN.)

most favorable to awakening those capabilities which still lay dormant in Greek art.

But for the achievement of anything great and noble in this art, there was needed the inspiration and impulse of a heroic spirit and glorious deeds, just as much as in the old days of Phidias. Fortunately, once more the Greeks were privileged to win glorious victory, not over the Greeks or jealous rivals alone, but such as the Athenians had once won at Marathon over invading barbarians. As Miltiades and his brave had conquered the Persians on the plain of Marathon, so now Attalus and his people overwhelmed the barbarian Galatians who threatened their homes. The Galatians of Christian times are well known to us, through the Apostle Paul's epistle, but we are less familiar with the deeds of their fierce forefathers who, about the third century before the apostle's time, were tempted away from their northern

homes by stories of marvelous treasure piled up in Greek temples and shrines. Pouring down into Macedonia and Hellas, plundering, burning, and massacring wherever they went, they even attacked Apollo's sacred shrine at Delphi. Passing over into Asia Minor, they levied heavy tribute everywhere, and spread panic and terror before them. Pausanias, in describing their deeds in Greece, cannot find words strong enough to depict their atrocities. He also tells us how they raged against the weak of their own number, killing those who could not follow in the flight. Suffice it that we have some idea of the anguish and distress they left behind them, and of the formidableness of the foe Attalus had to meet. To appreciate this fully, however, we must hear what Pausanias relates of the fierce bravery and fearless scorn of death of these half-naked barbarians. The only protection they had in

THE DYING GALATIAN, FALSELY CALLED THE DYING GLADIATOR. (CAPITOL MUSEUM, ROME.)

battle, he tells us, was their shields, and they had little knowledge of the science of war. Like wild beasts they attacked the enemy, with a vehemence and courage which is almost unparalleled. Nor did their fury cease so long as breath was in their bodies, even when felled by the battle-ax or sword, or when pierced by arrow or spear. Some even drew the spear out of their wounds and hurled it at the enemy, or used it in close hand-to-hand fight. The giant-like stature and the power of these barbarians are also described by Diodorus, who makes the picture more vivid still, by telling of their tough skin and bristling hair, made still stiffer by the use of a peculiar salve, and by being brushed off from the forehead down toward the neck, as is seen in the heads of Pan and satyrs, by which treatment it became thick, and much resembled horses' manes. A few had the beard entirely shaven; others, and especially those of rank, left only the mustache, but so long and full as to cover the mouth. They carried into battle a bent horn and a large shield. Their favorite adornment, he adds, was the twisted neck-band of metal, called the torque, still found in Celtic graves. From inscriptions recently discovered in Pergamon, it seems that Attalus and Eumenes did not have to contend with the Galatians alone, but also with their ally, Antiochus Hierax, whom, also, the Pergamon princes finally overcame. When those barbarians, some time before, had swarmed about

Apollo's sacred shrine at Delphi, it was piously believed the god himself had appeared, descending from the high heavens in light supernal, and, shaking the glittering eyes, had wrought deliverance from their mad attacks. In accordance with a time-honored custom, the Greeks then consecrated statues to the delivering deities, as thank-offerings, among which were bronze statues, one of them, doubtless, being the original of the Apollo Belvidere and its numerous copies of later times. Pliny, in a tantalizingly short sentence, tells us that several artists represented the battles of Attalus and Eumenes against the Galatians, mentioning Isigonus, Pyromachus, Stratoniscus, and Antigonus.

One of the discoveries recently made at Pergamon throws unexpected light on these works, showing us where they stood, telling us what victories they celebrated and the gods they honored, as well as the names of a few of the artists; two of which, although mutilated, correspond with Pliny's record. The fragments containing this information go by the name of the "battle monument," and consist of inscribed slabs of dark gray marble, which made up different pedestals, as R. Bohn has shown after careful study of the subject. On the top slabs, traces of the feet of statues are to be seen, of such a character that we may be sure they were of bronze; bits of bronze fingers and drapery have also been found, but, as might be expected, the valuable metal statues themselves have long since

disappeared. Wandering, to-day, over the ancient pavement of the lofty terrace of the Acropolis of Pergamon, cleared at last of rubbish and grass, we look upon a glorious view spread out at our feet; we trace the beautiful Caicus valley out into the plain and see the blue Mediterranean beyond. Gazing immediately around us, we behold to our right the fragments of the ancient temple of Athene Polias, the revered goddess of this height. Turning to the north and east, the eye falls upon the spot where the columns of Attalus II.'s stoa, rising in two stories, form a stately colonnade, inclosing two sides of the holy square. Filling out the picture, we would delight to dwell upon the balustrade of the upper gallery, sculptured all over with trophies of war, shields (like that on which falls the Dying Gladiator), helmets, chariots, spears, etc., so suggestive in their composition that, as we study them in beautiful fragments, preserved in Berlin, we almost see the confusion of battle, and hear the din of clanging armor.

Besides decorating their own Acropolis, the Pergamon rulers remembered also Athens, the ancient seat of Greek glory. There Attalus II. likewise built a stoa, and Attalus I. sent thither votive offerings of sculpture, which were seen in the ancient citadel by Pausanias, who tells us that these figures stood on the south wall, and measured about four feet in length. Here were represented (1) the historic victory of Marathon over the Persians, and (2) its mystic prototype, the battle of the Athenians with the Amazons; two

other groups, the counterparts of these, as it were, completing the offering. In one, Attalus's victory over the Galatians was represented, and, in the other, a speaking mythic parallel, the combat of the gods with the giants. One of the statues of these gods, Dionysus, Plutarch informs us, was precipitated, in a great storm, from the lofty Athenian Acropolis into the theater below, but the fate of the remainder is recorded by no ancient writer. The rough mass of the long pedestal was discovered a few years since by Böttcher, on the south wall of the Acropolis, but no statues were found. The keen eye of Brunn, however, has detected, scattered through the galleries of Europe, marble statues corresponding in size and subjects to those mentioned by Pausanias. Awakened by Brunn's observation, others have identified additional statues sent by Attalus to Athens, of which ten are now known to us, there being three in Venice, four in Naples, one in the Vatican, one in the Louvre, and one at Aix. Nine of these admirable little marble statues may be traced to their discovery in the neighborhood of the baths of Alexander Severus at Rome, early in the sixteenth century, proving that they are not, as some have conjectured from their realistic character, the work of the contemporaries of Michael Angelo. They were, no doubt, brought from Athens, at the time when Greek works were imported on a wholesale scale, to the capital of the Roman state. All the statues represent warriors from the conquered side: one a beautiful Amazon; another, a muscular, shaggy-

DYING GALATIAN. (BACK VIEW.)

haired giant; another, a youthful Persian. How powerfully the passions of war and the peculiar features of races not Greek were represented, will appear from a glance at the bristly-haired and sinking, but still fighting, Galatian of the Venice Museum, or at the cowering Persian of the Vatican. We are impressed by the striking similarity in the attitude of one other of these little statues to that of the so-called "Dying Gladiator." That greater marble works, similar in character to those described, were also executed by the ancient sculptors of Pergamon is evident from the statues of finer workmanship, but similar in subject, in the museums of Rome. One of these is the so-called "Dying Gladiator" of the Capitol, the other, that less celebrated but equally powerful work in the Villa Ludovici, representing a despairing warrior, standing on his long, oval shield. With one hand he plunges a dagger into his own neck, with the other he holds, in his relaxed grasp, the arm of his wife, dying at his side. The sight of this victim of the warrior's mad despair, and the pathos of her sinking, alone alleviate the painfulness of this terrible scene. So great is the resemblance between this upright figure of the Villa Ludovici and the so-called Gladiator of the Capitol, that we could easily believe

them to be brothers. Notice, besides, how all the characteristics of the Galatians of old, as known from history, are expressed in both these forms: the giant frame, tough, leathery skin, bristling hair, long, overhanging mustache, circling torque, large shield, bent horn, and nudity in battle, as well as the wild, unbridled passion of the barbarian.

Comparing the dying figure of the Capitol and the Ludovici group with the small statues of Galatians, Attalus's votive gifts to Athens, above described, we find, moreover, a striking similarity, which makes it clear that these two greater statues, likewise, represent Pergamon's fierce northern enemies. That they once decorated Pergamon's summit seems confirmed by the recent discovery there of a marble torso of a similar fallen warrior, of beautiful workmanship. The Dying Galatian and the Ludovici group were, moreover, discovered together, in the sixteenth century, in the gardens of Sallust, in Rome, and are of a kind of marble found only in Asia Minor. This discovery in Rome, and not Pergamon, is explained by the well-known mania of the Romans for pirating Greek art, and since the last ruler of Pergamon left by will his treasures to that greedy people, it would be natural for them to remove

GALATIAN WARRIOR AND HIS DYING WIFE. (VILLA LUDOVICI, ROME.)

many statues they found in his city to the Tiber.

How admirably the sculptor in Pergamon caught the strongly pronounced physique of the barbarian foe! Not only the general features, giant size, powerful build, and ruggedness of that people, who terrified even warlike Romans as well as more peaceable Greeks, are given in these statues, but the details of their firmly knit muscles, callous skin (toughened by exposure), the broad skull, pointed chin, low-bridged nose, high cheekbones, overhanging eyebrows, and bristling, thick hair,—peculiarities still met in some branches of the Teutonic race. The difference in the treatment of the skin, with its leathery folds, in these barbarians, especially at the waist, appears in contrast to the Hermes of Praxiteles, with its soft skin of the ideal Greek race. The partial polish of the statue of the Dying Galatian seems to be a most successful imitation of the smooth surface of bronze, the peculiarities of which are even more closely followed in the treatment and minute details of the short, stiff hair. On the supposition that these statues once stood in the Acropolis of Pergamon, Bohn, in his restored view of the open square about the temple of Athene, has put the Ludovici

SARCOPHAGUS. (CAPITOL, ROME.)

group and the Dying Galatian on the long pedestal in the front of the picture.

In these statues, the innermost being of the Galatians is, moreover, powerfully portrayed. The fury of wild beasts, we are told, seemed to seize them as they rushed naked into battle. If they lost the day, they gave way to a frenzy of despair, taking their own lives as well as those of the wounded and feeble among them. On a relief in Rome we see a barbarian plunging a dagger into his own breast, under the very hoofs of his victor's horse. Brennus, the Galatian chieftain who had dared to storm Apollo's shrine, we are told, took his life when vanquished. So, also, the Ludovici Galatian, having slain his wife, now destroys himself. The dying warrior of the Capitol no longer shows brave defiance. Death has stricken him, too, probably in consequence of a fatal stab received at the enemy's hand. It has often been supposed that, like the Ludovici Galatian, he had taken his own life, but his manner of falling, the one fact that the wound is on the side away from the heart, and the other that some one has withdrawn the weapon from the gash, seem to prove that a victorious enemy has robbed him of his life. The sword in this statue is a later addition.

How different these intensely tragic and realistic monuments from the Greek sculptures preserved to us from earlier times. The Pergamon artist, in common with the spirit of

his time, could not have represented otherwise the barbarian who had just overrun his land and caused him so much distress. Prince and people had seen and fought the dreaded enemy too recently, and knew his uncouth face and powerful frame too well, and had suffered too much at his hand, to be satisfied with only ideal or symbolic representation of him. The sculptor did not then hold on to the older, colorless type of the barbarian, characterizing him by mere accessories of national costume or armor, while giving him ideal beauty of form and soul, but represented him just as he saw him in nature. The square and rugged forms do not, therefore, impress by symmetry and exquisite grace of proportion, but by fullness and overflow of power; their very divergence from the Greek bringing out more strongly such wild force.

But let us not imagine that the ancient sculptor in Pergamon was content with expressing thanks for victory to the gods. His fancy took still higher flights in ideal creations of great power and absolute beauty, as revealed in the sculptures of the "Greek Altar" recently discovered at Pergamon, and now in the Berlin Museum,—the tragedy of the ruthless Galatians' being mirrored in the tremendous conflicts of gods with giants. But this topic must be reserved for a final paper.

Lucy M. Mitchell.

JAMES RUSSELL LOWELL.

IN a liberal sense, and somewhat as Emerson stands for American thought, the poet Lowell has become our representative man of letters. Not as our most exact scholar, though of a rich scholarship, and soundly versed in branches which he has chosen to follow. Not as an indomitable writer, yet, when he writes, from whom are we surer to receive what is brilliant and original? Nor yet chiefly as a poet, in spite of the ideality, the feeling, the purpose, and the wit that belong to his verse and that first brought him into reputation. But, whatsoever the conjunction that has enabled Mr. Lowell to reach and maintain his typical position, we feel that he holds it, and, on the whole, ought to hold it. His acquirements and versatile writings, the conditions of his life, the mold of the man, and the spirit of his whole work, have given him a peculiar distinction, and this largely without his thought or seeking. Such a nimbus does not form around one who summons it: it glows and gathers almost without his knowledge,—and not at once, but, like the expression of a noble face, after long experience and service.

I have spoken of one poet as excelling others in the adroitness of a man of the world. Mr. Lowell's qualities secure him honor and allies without the need of adroitness. He is regarded not only as a man of letters, but as a fine exemplar of culture, and of a culture so generous as to be thought supra-American by those observers who, while pronouncing him a citizen of the world, are careful to exclude this country from his range. Professor Dowden, for instance, says: "Taken as a whole, the works of Lowell do not mirror the life, the thoughts, and passions of the nation. They are works, as it were, of an English poet who has become a naturalized citizen of the United States; who admires the institutions and has faith in the ideas of America, but who cannot throw off his allegiance to the old country and its authorities." But here is a manifest assumption. Doubtless, Lowell's mirror does not reflect Dr. Dowden's conception of the life, the thoughts, and passions of this nation, but the critic might revise his conception if better informed. In the poet's writings we find the life and passion of New England, to a verity, and the best thought of our people at large. For, when I say that he is a type of American culture, I mean of republican culture, and

nothing more or less. Those who hold to the republican idea believe that its value is to be found in its leveling tendency; by which I do not mean a general reduction to the lowest caste, but the gradual elevation of a multitude to the standard which individuals have reached,—among them so many of the writing craft, from Franklin's generation to our own. In this respect I do not, of course, mention Mr. Lowell's position as distinctive,—the names of other scholars and writers instantly come to mind,—nor have our men of culture been confined to any guild or profession. Marshall and Story, Pinkney, Wirt, Winthrop, Sumner and Bayard, jurists, orators, and statesmen,—soldiers, merchants, artisans, Americans of every class,—have shown that culture is a plant that thrives in a republic no less than under royal care. Their number is increasing; the average grade is advanced. If this were not so, republicanism would be a failure: in this matter it is on trial no less than in its ability to promote the establishment of first-class museums, libraries, academies, even without governmental aid.

We count Mr. Lowell, among others, as a specimen of home-culture, not of foreign, and especially of our Eastern type. His life shows what the New England culture, not always so fortunate, can do for a man of genius. And thus, even aside from his writings, he is a person of note. The tributes frequently paid him would of themselves keep his name before us. But it is natural for him to shun publicity, and the movements of authors greatly beneath him are more zealously chronicled than his own; nor is he, I think, so commonly read as a few other poets of his standing. Yet many of his sayings, like those of Emerson, are a portion of our usual discourse and reference, and the people have taken some of his lyrics faithfully to heart. He has written one work which bids fair to become a classic. Whether as a poet and critic, or as a man of affairs, of rare breeding and the healthiest moral tone, Mr. Lowell is one of whom it may be affirmed, in the words applied to another, that a thing derives more weight from the fact that he has said it. Are we conscious, then, of having in view a man better than his best writings? But this may be said of many authors, and there must be, at all events, a live personality behind good work.

Lowell's sense of this, and of the strength and fullness of existence, keep him void of

conceit. He often has seemed impatient of his art, half-ready to cry out upon it, lest it lead him from green fields and forests, from the delight of life itself. He is not swift to magnify his office above the heroic action of other men. This catholicity is rare among poets and artists, whose dearest failing is a lack of concern for people or things not associated with their own pursuits. On the other hand, poetry is the choicest expression of human life, and the poet who does not revere his art and believe in its sovereignty is not born to wear the purple. Lowell, in fortunate seasons, goes back from life to song with new vigor and wisdom, and with a loyalty strengthened by experiences. After all, the man dies, while his imaginative works may survive even the record of his name. Therefore the work is the essential thing; and Mr. Lowell's work, above all, is so imbued with his individuality, that none can overlook the relations of the one to the other, or fail, in comprehending his poetry, to enter into the make and spirit of the poet himself.

II.

MR. UNDERWOOD has given some account of Lowell's ancestry, and of the conditions which led to the birth and breeding of a poet. We have a picture of the Cambridge manor, Elmwood,—a home not wanting in the relics of an old-time family,—portraits, books, and things of art. Mr. Lowell's father, and his father's father, were clergymen, orthodox, well-read, bearing honored names; his mother, a gifted woman, the mistress of various languages, and loving the old English songs and ballads,—no wonder that three of her children came to be authors, and this one, the youngest, a famous citizen and poet. It is not hard to fill in these outlines with something of the circumstance that, as I pointed out in the case of Mrs. Browning, fore-ordains the training of a genius; that supplies, I repeat, the means of its self-training, since the imagination derives its sustenance like a plant, selecting and assimilating for itself. All it needs is food, atmosphere, a place to grow. In these Lowell was exceptionally favored, under the influence of local and family traditions, the home-culture, the method of his father, and the taste of the mother from whom he inherited his bent toward letters and song.

His college course made little change in this way of growth. He might fail of advantages to be gained from drill and drudgery; but was sure to extend his reading in the direction of his natural tastes, until acquainted with many literatures. His subsequent study of the law probably added the logical disci-

pline that enables one to formulate ideas. But any voice that would restrict him to his profession must have fallen "vainlier than the hen's to her false chickens in the pool." Instinct, judgment, everything, pointed to letters as his calling. The period of his start, and his father's literary tastes, are indicated by his avowal that he was brought up "in the old superstition" that Pope "was the greatest poet that ever lived." This would account for his escape to the renaissance of beauty and romance; just as the repression of an orthodox training may have had much to do with his early liberalism in politics and theology.

It seems that the light-hearted Cambridge student was eager for all books except those of the curriculum, and troubled himself little as to mathematics and other prosaic branches. This was quite in accordance with precedent, *teste* Landor or Shelley, yet I doubt not that he was more than once sorry for it in after years. And I suspect that he passed for what he was, or promised to be, with the Faculty, and became something of an oracle among his mates. There was more eagerness then, at Harvard, than now; the young fellows were not ashamed to wear their hearts upon their sleeves. The gospel of indifferentism had not been preached. The words "clever" and "well-equipped" now seem to express our highest good; we avoid sentimentalism, but nourish less that genius which thrives in youth upon hopefully garnished food.

Lowell wrote the Class Poem, and took leave to print it, being under discipline at the time appointed for its delivery. Mr. Sanborn neatly points out that it abounded in conventional satire of the new-fangled reformers whom the poet was soon to join. As a law graduate, he shortly clouded his professional chances by writing for the Boston "Miscellany," and issuing a little book of verse. A writer's first venture is apt to be a novel or poem. Should he grow in station, it becomes rare, or valued for its indications. The thin, pretty volume, "A Year's Life," does show traits of its author's after-work, but not so distinctly as many books of the kind. Three years later he termed its contents,

"the firstlings of my muse,
Poor windfalls of unripe experience."

But three years are a long time in the twenties. There are a few ideal passages in this book, and some that suggest his forming tendencies. It was inscribed to "Una," whom he aptly might have called Egeria, for she was already both the inspirer and the sharer of his best imaginings. A few well-chosen pieces are

retained in the opening division of Mr. Lowell's standard collection. Of these, "Threnodia" is a good specimen of his early manner. The simple and natural lines "With a Pressed Flower" are in contrast with vaguer portions of the first book, and have a characteristic thought in the closing stanza, where he says of flowers, that

"Nature, ever kind to love,
Hath granted them the same sweet tongue,
Whether with German skies above,
Or here our granite rocks among."

The cullings from "A Year's Life," with various and riper odes, lyrics, and sonnets, make up the "Early Poems" of his latest edition, showing his range at the date of their production.

Some of the longer pieces lack compactness, and betray an imagination still somewhat nebulous. "The Sirens," "Irené," "My Love," "Rosaline," are like the first poems of Tennyson, then a risen star. There is a trace of Shelley in the lines "To Perdita, Singing," and "The Moon." "Allegra" is sweet, direct, original. The sonnets upon reading Wordsworth, a sonnet to Spenser (in "A Year's Life"), and one to Keats, afford hints of the poet's healthy tastes. Those to Phillips and Giddings prove that he was no laggard in the unpopular antislavery movement. As to other reforms, it is plain that he began to have convictions,—or, at least, to have a conviction that he had convictions. "The Heritage" and "A Rich Man's Son" were taken up by the press, and are still found in our school-readers. Lowell's voice was for independence, human rights, the dignity of labor. Some of the love-poetry is exquisite. Its serenity declares that no other word than happiness is needed for the history of the time between the dates of his first and second books. To be sure, he set himself to edit "The Pioneer," the conditions being so adverse that poets and essayists who now should make the fortune of a magazine could not prolong its short existence. But we think of Lowell as enjoying to the full those three zestful years,—a briefless barrister, perhaps, yet guarded by the Muse, and having the refined companionship of the girl whose love he sought and won. In the year of his marriage to Maria White, he published a second volume, whose contents, with other verse composed before "Sir Launfal," exhibit his poetic genius in its fresh maturity.

"The Legend of Brittany," an artistic and legendary poem, was, for that time, quite a significant production, so much so that Poe said it was "the noblest poem yet written by an American." It commended itself to him

because, unlike some of Lowell's verse, it was designed for poetry and nothing else—it is not in the least didactic. And that Poe said this, and meant it, shows how few were the longer poems of merit we then had produced. The Legend is a sweet, flowing tale, in the *ottava rima*, after the mode of Keats and up to the standard of Leigh Hunt. It needs dramatic force in the climax, but is simple and delicately finished. A still better piece of artwork is "Rhœcus," that Greek legend of the wood-nymph and the bee. The poet by chance subjected himself, and not discreditably, to the test of a comparison with the most bewitching of Landor's Hellenics, "The Hamadryad." Much might be said, in view of these two idyls, upon the antique and modern handlings of a theme. Landor worked as a Grecian might, giving the tale in chiseled verse, with no curious regard for its teachings. Its beauty is enough for him, and there it stands—a Periclean vase. His instinct became a conscious method. In a letter to Foster he begs him to amend the poem by striking out a bit of "reflection" which a true hamadryad should "cut across":

"Why should the beautiful
(And thou art beautiful) disturb the source
Whence springs all beauty?"

Mr. Lowell's "Rhœcus" is an example of the modern feeling. Passages such as that beginning:

"A youth named Rhœcus, wandering in the wood,"

are simple and lovely; the scene where Rhœcus, playing dice, rudely treats the winged messenger, is a picture equaling the best of Landor's. But the story itself is preceded by a moralizing commentary, and other glosses of the same kind are here and there. The whole is treated as an allegory conveying a lesson. The wood-nymph herself draws one, tenderly and sadly, at the close:

"Alas! the voice returned, 'tis thou art blind,
Not I unmerciful. I can forgive,
But have no skill to heal thy spirit's eyes;
Only the soul hath power o'er itself."

This method confuses the beauty of the poem, though distinct enough in purpose, and characteristic of the New England school.

The poet, in truth, felt himself called upon for secular work. With all his love of beauty, he had a greater dread of dilettanteism. The air was full of "progress," and he made a general assay of the new thoughts and enthusiasms. Reform-verse came naturally from the young idealist portrayed by his friend Page. The broad collar and high-parted, flowing hair set off a handsome, eager face, with the

look of Keats and the resolve of a Brook-Farmer. But he was wholly himself, incapable of the affectation which—in a time when poetry is not the first choice of readers—markets its wares by posing for the jest and zest of fashion, and brings into contempt the grand old name of poet among those who know poetry only as a name. Affectation and self-seeking in art, as elsewhere, are detestable. Only the genius of Byron, in a romantic period, atoned for his trace of the former. So far as Byron was an actor, he was a great one. It makes no difference whether the affectation be one of virility or of refinement; the self-seeking is apt to be that of the author or artist who devotes one day in the month to work, and all the rest to advertising it. You may see his outward type in the water-fly *Osric*, of whom *Hamlet* says that "'tis a vice to know him." Such creatures and their habits are the breed of special times—men with some bit of talent, gaining their paltry ends, and sure to be duly classified at last. And so *Osric*, as *Hamlet* disdainfully perceives, with "many more of the same breed that the drossy age dotes on," has "only got the tune of the time * * *

a kind of yesty collection, which carries them through and through the most fond and winnowed opinions." But Lowell, I say, was himself alone, wearing his Arcadian garb, yet hasting to throw aside his crook at the sound of the trumpet. His "progressive" verse often was fuller of opinion than beauty, of eloquence than passion. Some of it is in a measure which reformers have seemed to hit upon by an exasperating instinct—the much-abused verse shown at its best in "Locksley Hall." With the typical radical, it is enough to make a thing wrong that it is accepted by a majority. Lowell found himself with the minority, but the minority then chanced to be the party of a future, and, in essentials, wholly right. If Whittier and himself, like the Lake Poets before them, became didactic through moral earnestness, it none the less aided to inspire them. Their verse advanced a great cause, and, as years went by, grew in quality—perhaps as surely as that of poets who, in youth, reject all but artistic considerations.

Before Lowell's thought and imagination had gained their richness, he had to contend with a disproportionate flow of language, if using forms that did not of themselves restrict it. "Prometheus," "Columbus," "A Glance Behind the Curtain," are studies upon massive themes, weakened because their matter is not compactly molded. Yet the poet had a terse art of saying things, as when he made Cromwell declare that

and himself said :

"They are slaves who dare not be
In the right with two or three,"

or, similarly, spoke up for

"One faith against a whole earth's unbelief,
One soul against the flesh of all mankind."

His manner often was fine :

"All other glories are as falling stars,
But universal Nature watches theirs,
Such strength is won by love of human kind."

"The moon will come and go
With her monotonous vicissitude."

"The melancholy wash of endless waves."

His analytic turn early cropped out in the "Studies for Two Heads," which is all Lowell—as one now would say. The poem "To the Past" is written with more circumstance than Bryant's, but the latter, in simple grandeur and diction, is the more imaginative. To indicate, finally, the chief reservation of Mr. Lowell's admirers, I must own that these poems often are marked with technical blemishes, from which even his later verse is not exempt. In trying both to express his conviction and to find a method of his own, he betrayed an irregular ear, and a voice rare in quality, but not wholly to be relied upon. He had a way, moreover, of "dropping" like his own bobolink, of letting down his fine passages with odd conceits, mixed metaphors, and licenses which as a critic he would not overlook in another. To all this add a knack of coining uncouth words for special tints of meaning, when there are good enough counters in the language for any poet's need. Space can be more agreeably used than by citing examples of these failings, which a reader soon discovers for himself. They have perplexed the poet's friends and teased his reviewers. Although such defects sometimes bring a man's work nearer to us, the question is as to their influence upon its permanent value. Verse may be faultily faultless, or may go to the other extreme. We are indebted, as usual, to Mr. Lowell himself for our critical test. Writing of Wordsworth, he says that "the work must surpass the material," and refers to "that shaping imagination which is the highest criterion of a poet."

It is a labor that physics pain to recall the verse by which he gained that hold upon his countrymen which strengthens through lengthening years. The public was right in its liking for "The Changeling," "She Came and Went," "The First Snow-fall," than which there are few more touching lyrics of

the affections. "The Shepherd of Admetus" and "An Incident in a Railway Car" are on themes which moved the poet to harmonize his taste and thought. When called upon, as he supposed, to make a choice between Taste and his conception of Duty, Taste sometimes went to the wall. Doubtless, he grew to see that the line of Beauty does not always follow Duty's follower, and that the surrender of the former itself may be in the nature of a crime. His sense never was more subtle, his taste never more delightful, than in the flawless stanzas on the "Phoebe," recently printed in this magazine. The public keeps in store for him the adage of the willful songster. That he "can" sing was discovered at the outset. One such piece as "Hebe" decided that point:

"I saw the twinkle of white feet,
I saw the flash of robes descending;
Before her ran an influence fleet
That bowed my heart like barley bending."

It also included his theory of song, and a sound one:

"Coy Hebe flies from those that woo,
And shuns the hands would seize upon her;
Follow thy life, and she will sue
To pour for thee the cup of honor."

To this lesson of his own experience he recurs again and again:

"Whither? Albeit I follow fast,
In all life's circuit I but find,
Not where thou art, but where thou wast,
Sweet beckoner, more fleet than wind!

* * * * *
All of thee but thyself I grasp;
I seem to fold thy luring shape,
And vague air to my bosom clasp,
Thou lithe, perpetual Escape!"

Like other poets of quality, Mr. Lowell has found the Muse, between her inspirations, a coquette and evader. He forms his rule accordingly:

"Now, I've a notion, if a poet
Beat up for themes, his verse will show it;
I wait for subjects that hunt me,
By day or night wont let me be,
And hang about me like a curse,
Till they have made me into verse."

From a poet who does this, we shall get flavor, and, in any event, the best of himself. Lowell's career, telling equally of use and song, has proved the wisdom of his admonitions:

"Harass her not; thy heat and stir
But greater coyness breed in her;
* * * * *
The Muse is womanish, nor deigns
Her love to him that pules and plains;
* * * * *

The epic of a man rehearse,
Be something better than thy verse;
Make thyself rich, and then the Muse
Shall court thy precious interviews,
Shall take thy head upon her knee,
And such enchantment lilt to thee,
That thou shalt hear the life-blood flow
From farthest stars to grass-blades low."

To which one may add, without malice, that Mr. Lowell can give even the Muse lessons in the art of flirting; knowing from long practice that, when she once has yielded her heart, she forgives even the infidelities of a favored lover.

There is a beautiful feeling in Lowell's poems of Nature. Wordsworth has dwelt upon the contrast between the youthful regard for Nature,—the feeling of a healthy and impassioned child,—and that of the philosopher who finds in her a sense "of something far more deeply interfused." The latter is a gift that makes us grave. It led Bryant to worship and invocation; and now, in the new light of science, we seek for, rather than feel, the soul of things. The charm of Lowell's outdoor verse lies in its spontaneity; he loves Nature with a child-like joy, her boon companion, finding even in her illusions welcome and relief,—just as one gives himself up to a story or a play, and will not be a doubter. Here he never ages, and he beguiles you and me to share his joy. It does me good to see a poet who knows a bird or flower as one friend knows another, yet loves it for itself alone. He sings among the woods, as Boone hunted, refusing to be edified, and with no wish for improvements. This one section he reserves for life itself:

"Away, my poets, whose sweet spell
Can make a garden of a cell!
I need ye not, for I to-day
Will make one long sweet verse of play."

His manhood shall not make him lose his boyhood; the whiff of the woods, the brook's voice, the spangle of spring-flowers,—these never fail to stir the old-time thrill; our hearts leap with his, and for once forget to ask the reason why.

Outside the "Pictures from Appledore" there is little of the ocean in his verse: the sea-breeze brings fewer messages to him than to Longfellow and Whittier. His sense of inland nature is all the more alert,—for him the sweet security of meadow-paths and orchard-closes. He has the pioneer heart, to which a homestead farm is dear and familiar, and native woods and waters are an intoxication. The American, impressed at first by the oaks and reaches of an Old-World park, soon wearies of them, and takes like a partridge to the bush. What Lowell loves most in nature

are the trees and their winged habitants, and the flowers that grow untended. "The Indian Summer Reverie" is an early and delightful avowal of his pastoral tastes. His favorite birds and trees, the meadows, river, and marshes, all are there, put in with strokes no modern descriptive poet has excelled. Browning's capture of the thrush's song is rivaled by such a touch as this:

"Meanwhile that devil-may-care, the bobolink,
Remembering duty, in mid-quaver stops
Just ere he sweeps o'er rapture's tremulous brink,
And 'twixt the winrows most demurely drops."

The poems "To a Pine-Tree" and "The Birch-Tree," with their suggestive measures, are companion-pieces that will last. The poet shares the stormy reign of the monarch of Katahdin; yet loves the whisper of the birch in the vale:

"Thou art the go-between of rustic loves;
Thy white bark has their secrets in its keeping;
Reuben writes here the happy name of Patience,
And thy lithe boughs hang murmuring and weeping
Above her, as she steals the mystery from thy
keeping."

Of Lowell's earlier pieces, the one which shows the finest sense of the poetry of Nature is that addressed "To the Dandelion." The opening phrase ranks with the selectest of Wordsworth and Keats, to whom imaginative diction came intuitively,—

"Dear common flower, that grow'st beside the way,
Fringing the dusty road with harmless gold,"

and both thought and language are felicitous throughout:

"Thou art my tropics and mine Italy;
To look at thee unlocks a warmer clime;
The eyes thou givest me
Are in the heart, and heed not space or time:
Not in mid June the golden-cuirassed bee
Feels a more summer-like warm ravishment
In the white lily's breezy tent,
His fragrant Sybaris, than I, when first
From the dark green thy yellow circles burst."

This poem contains many of its author's peculiar beauties and none of his faults; it was the outcome of the mood that can summon a rare spirit of art to express the gladdest thought and most elusive feeling.

I think, also, that "The Vision of Sir Launfal" owed its success quite as much to a presentation of Nature as to its misty legend. It really is a landscape-poem, of which the lovely passage, "And what is so rare as a day in June?" and the wintry prelude to Part Second, are the specific features. Like the Legend of Brittany, it was a return to poetry as poetry, and a sign that the author

was groping for a theme equal to his reserved strength. The Vinland fragment hints at a wider range of experiment. Thus far, in fact, no positively *new* notes. Lowell had shown his art and insight, a brave purpose, absolute sympathy with Nature. The ferment of his youth had worked itself clear. "Occasional" pieces, the stanzas to Kossuth, the poem on the English graves at Concord, came from definite convictions and a strong hand. He was a man, well girded, who had not found his best occasion; who needed the pressure of imminent events to bring out his resources and make his work enduring. The question, "How can I make a real addition to literature?" often must have come to one so penetrative. Possibly he was hampered, also, by his own culture. The Dervish's ointment may be too freely applied to the eyes; too close a knowledge of the verities may check ideal effort,—too just a balance of faculties produces indecision. Practical success in art must come from every-day ambition and experiment.

But creative results are apt to follow upon the gift to look at things from without. If Lowell had not utilized his surroundings, he was none the less aware of them. The solution of his problem came when least expected, and as a confirmation of his theory of the Unsought. The clew was not in ancestral or Arthurian legends, but in his own time and at his door-stone. It was woven of the homeliest, the most ungainly, material. It led to something so fresh and unique that its value, like that of other positively new work, at first hardly could have been manifest, even to the poet himself.

III.

THE "Biglow Papers" ended all question of Mr. Lowell's originality. They are a master-work, in which his ripe genius fastened the spirit of its region and period. Their strength lies in qualities which, as here combined, were no man's save his own. They declare the faith of a sincere and intelligent party with respect to war,—a sentiment called out by the invasion of Mexico, unjust in itself, but now seen to be a historical factor in the world's progress. This was a minority faith, held in vulgar contempt, and there was boldness in declaring it. Again, the "Biglow Papers" were the first, and are the best, metrical presentation of Yankee character in its thought, dialect, manners, and singular mixture of coarseness and shrewdness with the fundamental sense of beauty and right. Never sprang the flower of art from a more unpromising soil; yet these are eclogues as true

as those of Theocritus or Burns. Finally, they are not merely objective studies, but charged with the poet's own passion, and bearing the marks of a scholar's hand.

The work plainly shows its manner of growth. The first lyric struck the vein, the poet's mind took fire by its own friction, and one effort inspired another. The "Papers" made an immediate "hit"; the public instinctively passed a judgment upon them, in which critics were able to concur after the poet had made an *opus* of the collected series. Here was now seen that maturity of genius, of which Humor is a flower revealing the sound kind man within the poet. Such a work is, also, an illustration and defense of the tenure of Wit in the field of art. Verse made only as satire belongs to a lower order. Of such there are various didactic specimens. But Wit has an imaginative side, and Humor springs like Iris—all smiles and tears. The wit of poets often has been the faculty that ripened last, the overflow of their strength and experience. In the "Biglow Papers," wit and humor are united as in a composition of high grade. The jesting is far removed from that clownish gabble which, if it still increases, will shortly add another to the list of offenses that make killing no murder.

Mr. Lowell was under thirty at this time, and fairly may be reckoned among poets who have done great work in youth. His leap from provincialism is seen in the accessory divisions of his completed satire. The "Notices of an Independent Press" are a polygonal mirror in which journalism saw all its sins reflected, and wherewith he scanned not others' follies only, but his own, mocking our spread-eagleism, anglophobia, and the weaker phases of movements in which himself had joined. He burlesqued in mock Latin the venerable pomp of college-catalogues and Down-East genealogies. Then followed a clever analysis of the Yankee dialect, extended and made authoritative in a prefix to his second series. In the very first contribution of Mr. Biglow, the native Yankee is immortally portrayed. The ludicrous realism of the transcript is without parallel:

"Jest go home an' ask our Nancy
Wether I'd be sech a goose
Ez to jine ye,—guess you'd fancy
Th: eternal bung wuz loose!
She wants me fer home consumption,
Let alone the hay's to mow,—
Ef you're arter folks o' gumption,
You've a darned long row to hoe."

How the poet must have enjoyed that stanza! What rollicking delight! But he quickly recalls the inborn pride and patriotism,

the sacred wrath, of the true New England, and cries out from a wounded spirit:

"Massachusetts, God forgive her,
She's a-kneelin' with the rest,
She, thet ough' to ha' clung ferever
In her grand old eagle-nest!"

His rejection of the popular ideal of Webster, his branding ridicule of Robinson, Cushing, Palfrey, and his scorn of trimmers, vitalized the "Biglow Papers" and make their hits proverbial. The first series was a protest not only against the slave-holders' invasion of Mexico, but against war itself. Twenty-five years later a greater war arose, a mortal struggle to repress the wrong that caused the first. To such a conflict even Lowell could not say nay; his kinsmen freely gave their blood, and bereavement after bereavement came fast upon him. In the second series of the "Biglow Papers" the humor is more grim, the general feeling more intense. Still they are not Tyrtæan strains, but chiefly called out by political episodes,—like the Mason and Slidell affair,—and constantly the poet seeks a relief from the tension of the hour. One feels this in reading the dialogue, between the Bridge and Monument at Concord, suggested by Burns's "Twa Briggs,"—the return to "Sunthin' in the Pastoral Line," or, most of all, "The Courtin'." This bucolic idyl is without a counterpart; no richer juice can be pressed from the wild-grape of the Yankee soil. Of the epistles, the tenth has the most pathetic under-tone. It was composed, seemingly at a heat, in answer to a request for

"Sunthin' light an' cute,
Rattlin' an' shrewd an' kin' o' jingleish."

Mr. Biglow justifies the tone of his new series by avowing the immeasurable anguish and perplexity of the time:

"Where's Peace? I start, some clear-blown night,
When gaunt stone walls grow numb an' number,
An', creakin' 'cross the snow-crus' white,
Walk the col' starlight into summer."

His heart is full with its own sorrows; he half-despises himself "for rhymin'," when his young kinsmen have fallen in the fray:

"Why, haint I held them on my knee?
Didn't I love to see 'em growin',
Three likely lads ez wal could be,
Hahnsome an' brave, an' not too knowin'?"
* * * * *

"Taint right to hev the young go fust,
All throbbin' full o' gifts an' graces,
Leavin' life's paupers dry ez dust
To 'try an' make b'lieve fill their places!"

He longs for Peace, but invokes her to come, and rhymed, not as the poet he was, but under grim compulsion.

"Not like a mourner, bowed
For honor lost and dear ones wasted,
But proud, to meet a people proud,
With eyes that tell o' triumph tasted!
Come, with han' grippin' on the hilt,
An' step that proves ye Victory's daughter!
Longin' fer you, our sperits wilt
Like shipwrecked men's on raf's for water."

IV.

These final lyrics, less varied and sparkling than their predecessors, are, in not unfrequent passages, more poetical. The author's statement of the causes and method of his work is more suggestive than Poe's whimsical analysis of "The Raven," and not open to the suspicion of being written for effect.

The "Biglow Papers," as we now have them, form a strongly proportioned work, and are a positive addition to the serio-comic literature of the world. They are almost apart from criticism; there is no prototype by which to test them. Lowell has been compared to Butler, but "Hudibras," whether as poetry or historical satire, is vastly below the master-work of the New England idyllist. The titles of a few great books, each of which has no fellow, come to mind as we think of its possible rank and duration, and I observe that Mr. Sanborn does not fear to mention the highest. It is a point in favor of transatlantic judgment that the "Biglow Papers" first gave Mr. Lowell the standing, with those who make opinion in England, which his choicest poems of art and nature had failed to procure for him. From that time their interest in himself and his work has been apparent. Their university degrees, their estimates of his genius and character, declare him to be one whom the mother-land delights to honor, and have made more distinct the position which, as I have said, he holds among our men of letters.

His literary satire, "A Fable for Critics," was a good-natured tilt at the bards of Griswold's "Parnassus,"—a piece of uneven merit, but far from being open to the charge—that of malevolence—which Poe brought against it. The estimate of Poe is not unfair, and other sketches—such as those of Bryant, Hawthorne, and Dwight—are deftly made. Nor could one put a surer finger upon Lowell's short-comings than his own in the lines upon himself. The allegory of the fable is trite. Its sections are loosely united, the language and rhythm are at hap-hazard, and, on the whole, it is a careless production, however true to the time and tribe it celebrates. It is hard to conceive why Mr. Lowell should permit his editions to retain the extravaganzas of "Dr. Knott," so little above the grade of the hackney verse in which poor Hood punned

A POET of intellectual scope will not content himself with verse, as the sole outlet of his thought and feeling. Mr. Lowell's essays display his genius in free activity, and have added greatly, and justly, to his authority and standing. I could not select better illustrations of the union of the critical and artistic faculties, or of the distinctions and analogies between the verse and prose of a poet.

It is to be noted that Lowell's political and moral convictions appear chiefly in his verse. His prose appertains to literature, and, with the exception of some graceful sketch-work, bits of travel and reminiscence, has been restricted to criticism. His earliest prose volume was of this kind, in the form of "Conversations" on the old poets and dramatists. These are the ardent generalizations of a young poet, appreciative rather than searching. They are superseded by his maturer survey of their field, but had a stimulating influence in their time. Many who were students then remember the glow which they felt when Lowell's early lectures and essays directed them to a sense of what is best in English song. Young enthusiasts, at Cambridge, found him an ideal teacher and professor of belles-lettres. As years went on, his critical pen was rarely idle. A good fate determined that he should be subjected to the demands of journalistic routine—that he should carry the "Atlantic Monthly" to a sure foot-hold, advancing the standard of our magazine literature; and that he should afterward hold for nine years the editorship of the "North American Review." Such a charge overcomes a writer's *vis inertiae*. He naturally becomes his own best contributor, and it was, in a measure, to the spur of his engagements that we owe a notable series of literary essays, many of which first appeared in the review I have named. Publishers have not found his study a reservoir into which they might insert their taps at pleasure. But one must spend time in gathering knowledge to give it out richly, and few comprehend what goes to a page of Lowell's manuscript. The page itself, were it a letter or press-report, could be written in a quarter-hour; but suppose it represents, as in one of his greater essays, the result of prolonged studies—the reading, indexing, formulating works in many languages, upon his shelves or in the Harvard library? Of all this he gives the ultimate quintessence, a distillation fragrant with his own genius. Who can estimate the toil of such work? What can adequately

pay for it? There are two guerdons that raise the spirit to scorn delights and live laborious days: Milton sings of one—but the surer is the “exceeding great reward” of the work itself.

Mr. Lowell's important reviews and studies, selected with excellent discretion, are contained in “My Study Windows,” and in the first and second series of “Among My Books.” These, with the “Fireside Travels,” make up the collection, in four volumes, of his prose works. His style is marked by individuality. Mr. Underwood suggests that “the distinctive prose of a poet is necessarily quite removed from general apprehension.” The word “distinctive” seems the one qualification that justifies the remark. And how is a poet's prose distinctive? Not in rhythmic undulations, if he be a true poet and artist. Such a writer does not lend the semblance of verse to his prose. To do this, he must produce something inferior to either. Few metrical cadences in the prose of Milton, Goldsmith, Coleridge, Byron, Landor, or Bryant. Its strength and beauty are of another kind. Many of Dickens's passages, we know, can be assorted into lengths of semi-metrical verse; but Dickens, when he tried to make poems, had no great success. Thackeray, whose prose is prose, was, within his range, a charming poet. Longfellow's “Hyperion” is exceptional—written as a “prose-poem” by a young artist fresh from the sentiment of German mystics and romances. As for Carlyle, he was a poet, as Lowell says, “without the gift of song.” He invented a special kind of prose as his form of poetic expression. I infer that a poet's prose is not removed from general apprehension by its technique; all things considered, I expect to find it as clear and unadulterate as that of any layman—not more illogical, not more dependent on the reader's intuition to fill out its lapses. A poet's instinct is constructive, little given to omissions in prose syntax. If his prose is hard to understand, it may be that he is a learned thinker, whose thoughts and references do not come at once within popular apprehension.

It is because a poet is more original, not more erratic, than many laymen, that his prose often is so individual. Mr. Lowell's is clear enough to those familiar with the choicest literature. In critical exploits that bring out his resources, he is not a writer for dullards, and to read him enjoyably is a point in evidence of a liberal education. His manner, in fact, is Protean, adjusted to his topic, and has a flexibility that well expresses his racy wit and freshness: combined with this, peculiarities that irritate the most catholic minds. Outspoken reviewers have subjected it to minute analysis, and declared their sense of

its short-comings. Their statement that it is not creative, but critical, is true in the ordinary meaning; yet I doubt if “creative” criticism and that which is truly critical differ like the experimental and analytic chemistries. Certainly Lowell is a most suggestive essayist. He sets us a-thinking, and, after a stretch of comment, halts in by-paths, or enlivens us with his sudden wit. He has the intellect, held to be a mark of greatness, that “puts in motion the intellect of others.” But he is charged with querulousness, inconsistency of judgment, contempt for unity, and with the habit of becoming entangled in expression. Attention is directed to the conceits, the whimsical diction and recondite instances, to be found in these essays. Verse, not prose, is declared by a few to be his proper vehicle. The indictment has some foundation, but to what extent does it affect his general merits? Things bad in themselves are often part of an author's essential quality. It seems to me that there is a close analogy between the styles of Mr. Lowell's verse and prose, distinct as the two forms are,—an analogy to be observed, if I had space to point it out, in the verse and prose of other poets, and inevitable from an author's habits of mind. I cannot better state the matter than by saying that the beauties and faults of the one are those of the other; both are open to the criticisms already made, and to which I may refer again; but each is sustained by a spirit which makes the reader forgive and forget. Under the drift and stubble that float on the surface is the strong, deep current which bears them along, or throws them to the side, and keeps a central channel clear.

Mr. Lowell's lighter touches have the grace that is always modern. The “Fireside Travels” make his censors withhold their arrows of the chase, pleased with the landscape and the guide. However exquisite the art of our latest sketch-writers, who is better company than Lowell in Old-World loiterings or more deft in wood-craft and garden-craft at home? His other prose volumes have sturdier characteristics. Here are the companion-pieces on Lessing and Rousseau; the series—a labor of years—upon the great English masters, from Chaucer to Keats and Carlyle; the elaborate study of Dante; the off-hand portraits of Josiah Quincy, Lincoln, Thoreau; no common subjects these,—who grapples them must do his best, or suffer a fall. Other essays, too, that are not soon forgotten: “Witchcraft in New England,” the famous treatise “On a Certain Condescension in Foreigners,” and two papers—“My Garden Acquaintance,” and “A Good Word for Winter,”—outdoor studies that would have de-

lighted the man of Selborne. The style of the critical prose certainly is not modeled upon Addison and his school; it is scarcely what Lowell himself describes as "that exquisite something called Style, which makes itself felt by the skill with which it effaces itself, and masters us at last with a sense of indefinable completeness." To some it may seem a stumbling-block; but to most, I fancy, it is the self-expression of a versatile, learned, original man. When over-freighted with words from other languages, new and old, the polyglotism implies so close a familiarity with many literatures that he cannot avoid drawing on them for his purpose. A pedant quotes for the sake of a display of learning; Lowell, because he has mastered everything connected with his theme. His style, as I have hinted, sometimes is quaintly influenced by his topic and its associations. "Witchcraft" revives here and there the manner of more than one seventeenth-century homilist. The English proper of this curious and learned essay, with all its auroral qualities, is less simple and strong than that of the critic's noble discourse of Dryden, whose very Latinism seems to befit the spirit of its hero. It should be noted that Lowell's polysyllables—and few writers have more—do not weigh down the page; they are accelerative, galloping, even charging, in leap on leap, from section to section. His word-coining is less venial, for he does not lack taste, and at times exercises it rigidly. But his humor, learning, and caprice audaciously put it by, with a "Go thy ways till I need thee!" His comments on Spenser's innovations should be self-applied, and especially the words culled from Bellay, who bids his poet "Fear not to innovate somewhat * * * with modesty, however, with analogy, and judgment of ear." His linguistic arsenal serves him well: nor does he fail of fine exordiums and perorations, and sentences whose "beauty and majesty," as he says of Spenser's, he refuses to endanger by "experiments of this kind." But we should miss something if we held him to his own formula of the best writing, that in which the "component parts" of English "are most exquisitely proportioned one to the other."

Authors who do lay-work for a living, and pursue their art in hours which are the breathing-time of other men, are permitted few of the common pleasures for which they needs must crave. Their manuscripts are written in their blood, and the ink grows pale apace. Even the delight of reading, that at once stimulates and draws upon the brain, is forbidden to one who is harnessed in the van of a professional career. But Lowell, I suspect, has been shy of any harness from which

he could not bolt at will. His book-feeding has been unstinted, omnivorous: he was born among books, reared upon them, and has taken from them that which enriches him yet leaves them none the poorer. Of all writing-men, he who can read without stint is to be envied. Take the essay on Chaucer; it is the result of perfect equipment for a literary task. It is a spring-time brew of philological comment and poetic induction: it reeks with fact, flavored by originality. Here is a rare elucidation of both the letter and the spirit of Chaucer's song; no mere scholar could so illumine the process, and no poet who was not a scholar would venture upon it. Lowell is the contratype of Poe, who made a flourish of scholarship, and was sure of little for which he did not cram. Poe's humor, moreover, was a heavy lance, awkwardly and maliciously couched; Lowell holds his weapon with grace and courtesy, and has a sword of wit in reserve, should affairs grow serious. His faculty of scholarly assimilation and reproduction resembles Montaigne's. What he thoroughly enjoys is work like his review of the "Library of Old Authors." This paper opens with a talk upon books, pleasant as Lamb's gossip and with latter-day thought and criticism beneath the winning style; then follow swift but searching etymological tests of early authors and modern editors, from which the latter come out with some loss of luster. Lowell's idea of translation is free reproduction by a man of genius. He values Chapman, and declares that Keats, of all men, was the one to have translated Homer. One would like to see a translation from his own hand, say of Aristophanes: should the text halt, the commentary alone would repay us, and the freest versions by Lowell might be something "more original than his originals." His wit inclines him to condense professional truths in expressions that stick in the memory. The monograph on Spenser sparkles with clever, pointed sayings: "Chaucer had been in his grave one hundred and fifty years ere England had secreted choice material enough for the making of another great poet." Of ancient poetasters, it cannot be said "that their works have perished because they were written in an obsolete dialect; for it is the poem that keeps the language alive, and not the language that buoys up the poem." * * * "The complaints one sometimes hears of the neglect of our older literature are the regrets of archaeologists rather than of critics. One does not need to advertise the squirrels" (this sentence is like Landor) "where the nut-trees are, nor could any amount of lecturing persuade them to spend their teeth on a

hollow nut." * * * "Any verse that makes you and me foreigners is not only not great poetry, but no poetry at all." Speaking of Dunbar's works, "Whoso is national enough to like thistles may browse there to his heart's content. I am inclined for other pasture, having long ago satisfied myself by a good deal of dogged reading that every generation is sure of its own share of bores without borrowing from the past." And in "Witchcraft" he says that Sidney "seems to have divined the fact that there is but one kind of English that is always appropriate and never obsolete, namely, the very best." With all this point and wisdom, he often cannot refrain from unleashing conceits that fly without "stamping" their imagery. In a single page he compares Chaucer's style to a river and a precious vintage, and contrasts it with the froth of champagne and the folly of Milo. In relation to Shakspeare's birth, we have astrology, vinous processes, and alembic projection, following upon one another as illustrations of the coming nativity. Afterward, while censuring language that is "literary, so that there is a gap between the speech of books and that of life," Mr. Lowell tells us that "a mind in itself essentially original becomes in the use of such a medium of utterance unconsciously reminiscential and reflective, lunar and not solar, in expression and even in thought!" Passages of this sort not unnaturally move other critics, in their turn, to fling a *de te fabula* at the writer. An author, in truth, "should consider how largely the art of writing consists in knowing what to leave in the inkstand." But Mr. Lowell is not unconscious of these things: he toys with licenses, as if to prove that, next to Chapman, "he has the longest wind * * * without being long-winded," of all authors. Nor have we any writer whose imagery is oftener strong and exquisite: as in the description of a snowy winter landscape, or at the close of his "Milton," or where, in "Spenser," he glorifies the handiwork of "the witch, Imagination."

Lowell's scrutiny is sure, and his tests are apt and instant. He is a detective to be dreaded by pretenders. He wastes no reverence upon traditional errors, but no man is more impatient of sham-reform, less afraid of *odia*, whether theological, scientific, or æsthetic. As a comparative critic, there are few so well served by memory and reading. In the essay on Milton he treats with novel discrimination the respective modes of Shakspeare, Milton, and Tasso. Writing of Wordsworth, Swinburne, and others, he uses the comparative method to good purpose. No one is a better judge of what is original. Most

things have been said more than once, and he knows by whom. His standard is the manner of saying. "In the parliament of the present," he declares, "every man represents a constituency of the past"; and again, "Writers who have no past are pretty sure of having no future"; and "It is the man behind the words that gives them value." He names Chaucer, Shakspeare, Dryden, in evidence of the truth that "It is not the finding of a thing, but the making something of it after it is found, that is of consequence." In his paper on Wordsworth, he draws a distinction between originality and eccentricity which, I fear, will not soon become obsolete for want of cases in illustration. Striking points are frequent in his critical prose. It is Lowell who says, of Shakspeare, that the manner of a first-class poet is incommunicable, and therefore he never can found a school. His essay on Carlyle, undertaken at a time when few ventured to dispute the old Norseman's autocracy, is, on the whole, as just as it is independent; that on Lincoln could only have been written by one whose convictions rendered him prophetic. Lowell's analogical gift is seen in his comparison of Lincoln to Henry IV.—made before the President's assassination had completed the parallel. His declaration, in "Spenser," of the qualities of voice that "define a man as a poet," is not to be gainsaid, and he also gives us a clever test of the worth of allegory,—it must be that which the reader "helps to make out of his own experience." It is true that his verdicts are not always such as we agree with, nor do they always agree among themselves. Being a poet, he is prone to express his immediate feeling without submitting it to the principles that, in fact, govern his final judgment. This imparts life to a writer, but subjects him to the charge of inconsistency, especially if it is not his habit to revise past work. Mr. Lowell scarcely does justice to Wordsworth's imagination, though keenly alive to the bard's puerilities and want of humor. His essay on Dryden, as a presentation of the man and poet, is the best of its length, and contains some of the writer's finest apothegms; that on Pope is inferior,—the critic being so out of personal liking for the figure-head of his youth, as to treat him—not without fairness and discrimination, but I think inadequately. He possibly overrates Clough, as a signal representative of modern feeling, yet may be forgiven for this, as he knew and loved him, and was joined with him in the freemasonry of comrades and poets. He has touched very lightly, once and again, on Emerson, but with precision and truth. His analysis of Thoreau is sharply criticised as being narrow, but it did expose the defect-

ive side of a unique character, and, all things considered, is the subtlest of his minor reviews.

Mr. Lowell rightly holds the highest imagination to be, not so much that which "gathers into the intense focus of passionate phrase," as "the faculty that shapes and gives unity of design and balanced gravitation of parts." His work, as we have seen, at times displays the former kind, rather than the latter. It is in dwelling on special traits, with praise or censure, that he seems discursive. Thus, while his "Shakspere Once More" includes a masterly exposition of the dramatist's style, it is fragmentary—even more than need be—in the special touches that follow. Other papers fall short in construction; they are not sustained upon the scales indicated at commencement. This lack of balance, I am sure, is due quite as much to circumstances as to the critic's temperament, and largely to the limits of the periodicals for which he has written. His mind seizes upon a great theme, in mass and in detail, and he begins as if to cover it thoroughly. "Lessing" opens with a broad view of the German intellect and literature; "Chaucer" with a survey of the Troubadour period; and the analogous introductions to Spenser, Dryden, Pope, are of the utmost value. But to complete an essay upon this plan a book must be written. We are none the less grateful for Lowell's noble vestibules, even though we find them too large for the structures. Surplusage is a regal fault. We see that he can be an artist at will, though constantly setting the law of his nature above all laws. Some of the greater essays are both various and complete. That upon Dante is a superb example; one need not be a Dantean scholar to comprehend the scope and strength of this prolonged, cumulative, coherent analysis of the Florentine's career—fortified by citations, and enriched with a knowledge of Italian history, literature, atmosphere, at the close of the thirteenth century, such as few living men possess.

Have I not indicated that the unflinching value of Mr. Lowell's prose work consists in freedom and variety that are the true reflex of the man himself? His resources make him prodigal, and he has the brave impatience of a skilled performer who trusts his ear and is none too careful of the written score. We seem to have his first notes, and find them better than the revised drafts of other men. It is a fellow-feeling which leads him to say of Dryden, that "one of the charms of his best writing is that everything seems struck off at a heat, as by a superior man in the best mood of his talk." This transfer of his own nature is delightful. He *will* be free, and his censors should rate his freedom at its worth,

and not hold him too rigidly to conventionalities which he understands, yet chooses to forego. Even the arrangement of his essays seems to be a chance one, but there is an art in the chance. He has given us a series of literary monographs in which Americans may take just pride, for his genius has imparted new light and freshness to the greatest themes. To these he might add equally notable studies of Cervantes, Molière, and Goethe. No living man could venture with less presumption to summon up once more the spirits of those masters. But already the wealth of his critical product is surprising. I think that a selection of apothegms and maxims could be made from it, which, for original thoughts and wise teaching of the author's art, would be worth more to the literary neophyte, and afford more satisfaction to veteran readers, than a digest of the English prose of any other writer since Landor in his prime.

v.

MR. LOWELL's prose diversions, so wide in range, could not have been made without some lapse of fealty to the Muse of Song. When, in 1868, the volume "Under the Willows" appeared, a note stated that the poems mostly had been written at intervals during many years. There is, none the less, an air of afternoon about them. They are the songs of a man who in truth has *gelebt und geliebet*—to revive the motto of his juvenile book—and who has lived to love again. Their thought is subtler, their subjectivity that of one who reads the hearts of others in his own. The title-piece is a most refreshing stretch of pastoral verse. Here and elsewhere his sympathy with birds and trees continues, and much resembles Landor's:

"But I in June am midway to believe
A tree among my far progenitors, *

And I have many a life-long leafy friend,
Never estranged nor careful of my soul,
That knows I hate the axe."

The close recalls the very feeling of the "Thalysia" of Theocritus, yet escapes the parallel displayed in certain idyls of Tennyson. The opening gives us a finer rhapsody of June, though less apt to catch the popular ear, than the one in "Sir Launfal." No common musician can touch so variously a well-worn theme.

I do not read these later poems without remembering the moods to which Arthur Clough was subject, and which also affect the verse of another with whom his too brief life was associated. "Auf Wiedersehen" and its

"Palinode"—delicate, brooding, dithyrambic—might seem the work of either Clough or Matthew Arnold, and "A Mood" and "The Fountain of Youth" are quite in sympathy with that of the last-named poet. Mr. Arnold, like Lowell, delights in "accidentals" and in haunting measures, often admirably rendered. But I think few of his lines are both so suggestive and so vibratory as these from Lowell's exquisite fantasy, "In the Twilight":

"Sometimes a breath floats by me,
An odor from Dreamland sent,
That makes the ghost seem nigh me
Of a splendor that came and went,
Of a life lived somewhere, I know not
In what diviner sphere,
Of memories that stay not and go not,
Like music once heard by an ear
That cannot forget or reclaim it,—
A something so shy, it would shame it
To make it a show,
A something too vague, could I name it,
For others to know,
As if I had lived it or dreamed it,
As if I had acted or schemed it,
Long ago!

"And yet, could I live it over,
This life that stirs in my brain,
Could I be both maiden and lover,
Moon and tide, bee and clover,
As I seem to have been, once again,
Could I but speak and show it,
This pleasure, more sharp than pain,
That baffles and lures me so,
The world should not lack a poet,
Such as it had
In the ages glad
Long ago!"

Between verse like this, and that of Mr. Hosea Biglow, each definite in flavor, the range is phenomenal. To extend a comparison made for the sole purpose of illustrating Lowell's bent, I will say that in a former review I extolled the beauty of Arnold's objective verse—a kind to which his early preface would restrict the modern poet. But with reference to his occasional hardness of touch, and to the mental conflicts revealed by Clough and himself, I scarcely did full justice to a suggestive class of his poems, in a form peculiarly his own,—poems which grow upon the reader and stand the test of years,—and of these I will name, as good examples, "The Buried Life" and "A Summer Night." Lowell and Arnold, poets nearly equal in years, both scholars, both original thinkers, occupy representative positions,—the one in Old England and the other in the New,—which are singularly correspondent. Two things, however, are to be noted. The American has the freer hand and wider range as a poet. Humor, dialect-verse, and familiar epistles come from him as naturally as his stateliest odes. Again, while both poets feel the perplexities of the

time, Arnold's difficulties are the more restrictive of his poetic glow; with him the impediments are spiritual, with Lowell they are material and to be overcome. Mr. Lowell at times has found himself restricted by our local conditions, set forth in my recent articles. Like Mr. Arnold, he also feels the questioning spirit of our age of Unrest; but his nature is too various and healthy to be depressed by it. The cloud rests more durably on Arnold. Lowell always has one refuge,—to which, also, the poet of the Highland "Bothie" did not resort in vain. Give him a touch of Mother Earth, a breath of free air, one flash of sunshine, and he is no longer a bookman and a brooder; his blood runs riot with the Spring; this inborn, poetic elasticity is the best gift of the gods. Faith and joy are the ascensive forces of song. Lowell trusts in Nature and she gladdens him. How free and unjaded the spirit of "Al Fresco," and of the sprayey "Pictures from Appledore"! At times he places you

"So nigh to the * * heart of God,
You almost seem to feel it beat
Down from the sunshine and up from the sod."

Men are no less near to him. Like Thoreau,—who knew the world, having "traveled" many years in Concord,—he believes that

"Whatever molds of various brain
E'er shaped the world to weal or woe,
Whatever empires wax and wane,
To him that hath not eyes in vain
Our village-microcosm can show."

His rustics act and speak for themselves. Some of his lyrics are as dramatic, in their way, as those of Browning,—a poet whose erratic temper, also, is not unlike his own.

It is worth the consideration of those who deplore the effect of "over-culture" upon our poets, that the verse of Lowell and Emerson seems the product of their instant moods. The highest culture has learned to unlearn, and Mr. Lowell, when he wrote "A Winter Hymn to my Fire," had surely reached its freehold. A masterly, unstinted improvisation—the freshness of youth, with the off-hand ease of an accomplished workman—the mellow thought and rich imagination of a poet in his prime. Lowell's culture has not bred in him an undue respect for polish, and for established ways and forms. Precisely the opposite. Much learning and a fertile mind incline him to express minute shades of his fancy by a most iconoclastic use of words and prefixes. This trait lessened the dignity of his blank-verse poem, "The Cathedral," admired for its noble passages and justly censured for things that jar and seem out of place. It is not so much

a stately pile, conforming to itself, that has risen "like an exhalation," as a structure builded part by part, and at different periods of grandeur or grotesqueness. Contrast the imposing finale—the dome of the edifice—with the whimsical by-play of the tourists airing their French. A sensitive reader, himself a poet and critic, not long ago said to me that he never could wholly forgive Mr. Lowell for using the word "undisprived" in this elevated poem. But I do not know in what other production the changeful thoughts of a mind swiftly considering the most complex modern problems, are caught so naturally, and as if on the instant by some phrenographic process. "A Familiar Epistle," without the extreme finish of Mr. Dobson's work, adds no less to the raciness of Swift or Gay a poet's blood and fire. It has been said that Lowell's verse and prose are marked by a manner, rather than by style, in the modern sense,—which latter I take to be an airy, elusive perfection of language and syntax, that of itself wins the reader, and upon which writers of a new school have built up reputations. The thought, the purpose,—these are the main ends with Lowell, though prose or meter suffer for it, and there is no doubt that his manner exactly repeats his habit of mind; and so in this case, as ever, the style is again the man. My own explanation of things which annoy us in his loftier pieces, is that his every-day genius is that of wit and humor. His familiar and satiric writings are consistent works of art. It is upon his serious and exalted moods that these things seem to intrude, like the whisperings of the Black Man in the ears of a Puritan at prayers.

Where he has bravely exorcised his annoyance in the lyric efforts that hold a poet responsible, not only to himself, but also to the needs of great occasions. In these there is nothing erratic or perverse. The handiwork is unequal, but not seldom the vigorous intellect and throbbing heart of the man lift him to the airiest heights of a nation's song. I refer, of course, to his odes, delivered since the close of our civil war.

Of these the first, and strongest, is the "Ode Recited at the Harvard Commemoration." The poet was fresh from the woes and exaltations of the war. He had an occasion that comes but once in a life-time. The day, the place, the memories of inexorable events, his heart wrung with its own losses and sharing the proud grief of his Alma Mater,—these all united to call forth Mr. Lowell's highest powers. Another poet would have composed a less unequal ode; no American could have glorified it with braver passages, with whiter heat, with language and imagery so befitting

impassioned thought. Tried by the rule that a true poet is at his best with the greatest theme, Lowell's strength is indisputable. The ode is no smooth-cut block from Pentelicus, but a mass of rugged quartz, beautified with prismatic crystals, and deep-veined here and there with virgin gold. The early strophes, though opening with a fine abrupt line, "Weak-winged is song," are scarcely firm and incisive. Lowell had to work up to his theme. In the third division, "Many loved Truth, and lavished life's best oil," he struck upon a new and musical intonation of the tenderest thoughts. The quaver of this melodious interlude carries the ode along, until the great strophe is reached,

"Such was he, our Martyr-Chief,"

in which the man, Abraham Lincoln, whose death had but just closed the national tragedy, is delineated in a manner that gives this poet a preëminence, among those who capture likeness in enduring verse, that we award to Velasquez among those who fasten it upon the canvas. "One of Plutarch's men" is before us, face to face: an historic character whom Lowell fully comprehended, and to whose height he reached in this great strophe. Scarcely less fine is his tearful, yet transfiguring, Avete to the sacred dead of the Commemoration. The weaker divisions of the production furnish a background to these passages, and at the close the poet rises with the invocation,

"Bow down, dear Land, for thou hast found release!"

—a strain which shows that when Lowell determinedly sets his mouth to the trumpet, the blast is that of Roncesvalles. Three other heroic odes were composed, it is just to repeat, "after he had precluded himself," by the Harvard poem, "from many of the natural outlets of thought and feeling." That upon Washington, delivered "Under the Old Elm," is the longest and most imposing. Despite its form, it is too long for an ode, and Mr. Lowell has more fitly entitled it a poem. The characterization of Washington is less bold and sympathetic than that of Lincoln. Better the 'superb tribute to the Mother of Presidents,

"Virginia gave us this imperial man,"

which ends the poem with forty unbroken lines that again bring us to the height of Lowell's power. The closing strophes of the Centennial Ode—"Flawless his hand," and "They steered by stars the elder shipmen

knew"—are quite as notable. Mr. Underwood has well called the three odes an Alpine group,—yet each in its length and unevenness brings to mind a Rocky Mountain chain, in which snow-clad, sunlit peaks arise, connected by vaguely outlined ridges of the Sierra.

In a passage of the last-named ode there is food for thought between the lines :

"Poets, as their heads grow gray,
Look from too far behind the eyes,
Too long-experienced to be wise
In guileless youth's diviner way;
Life sings not now, but prophesies."

But the second-sight of age has been always, I have said, a portion of Lowell's strength and disability. One thing, perhaps, is needed to make his career ideal: some adequate theme, and mode of treatment, for a work of pure poetry, that shall be, through its imaginative beauty, the rival and contratype of his serio-comic masterpiece, "Fitz-Adam's Story," a portion of the long-projected "Nooning," indicates one direction in which he has felt his way; but he has not followed up the clew with the unhesitating, unrelenting purpose that distinguishes Longfellow. Even now, and after his more heroic flights, it might be a diversion to his later years, and certainly would revive an interest in American verse, if he would go back and complete "The Nooning," making it, as he can, the most charming of New England's idyllic poems.

VI.

LOWELL, then, is a poet who seems to represent New England more variously than either of his comrades. We find in his work, as in theirs, her loyalty and moral purpose. She has been at cost for his training, and he, in turn, has read her whole heart, honoring her as a mother before the world, and seeing beauty in her common garb and speech. To him, the Eastern States are what the fathers, as he has said, desired to found,—no New Jerusalem, but a new England, and, if it might be, a better one. His poetry has the strength, the tenderness, and the defects of the Down-East temper. His doctrines and reflections, in the midst of an ethereal distillation, betimes act like the single drop of prose which, as he reports a saying of Landor to Wordsworth, precipitates the whole. But again he is all poet, and the blithest, most

unstudied songster on the old Bay Shore. He is, just as truly, an American of the Americans, alive to the idea and movement of the whole country, singularly independent in his tests of its men and products—from whatever section, or in however unpromising form, they chance to appear. Many have found him the surest to detect and welcome, at the time when welcome was needed and lesser men held back, what there might be in them of worth. He is an artist who recognizes things outside of art, and would not rate the knack of writing lines to a lady's girdle above all other wonders of the age. In default of the motive for a sustained and purely ideal work, he has awaited the visits of the Muse, and acted on the moment at her bidding; none of our poets, indeed, has so thrown the responsibility on a monitor whom no industry can placate, who is deaf to entreaty, but gives without stint at her own will. He will sing when she bids him, or not at all. But this is in the nature of genius, and thus brings me to a conclusion. The world readily perceives the genius that is set off by an eccentric or turbid life. Taking advantage of this, false Amphitryons often vaunt themselves for a while. But let a true poet be born to culture and position, and have a share of things which constitute good fortune, and his rarer gift has no romantic aid to bring it into notice: its recognition comes solely through its product, and not fully until "after some time be past." And if Lowell be not, first of all, an original genius, I know not where to look for one. Judged by his personal bearing, who is brighter, more persuasive, more equal to the occasion and himself,—less open to Doudan's stricture upon writers who hoard and store up their thoughts for the betterment of their printed works? Lowell's treasury can stand the drafts of both speech and composition. Judged by his works, as a poet in the end must be, he is one who might gain by revision and compression. But think, as is his due, upon the high-water marks of his abundant tide, and see how enviable the record of a poet who is our most brilliant and learned critic, and who has given us our best native idyl, our best and most complete work in dialectic verse, and the noblest heroic ode that America has produced,—each and all ranking with the first of their kinds in English literature of the modern time.

Edmund Clarence Stedman.

NEW ENGLAND'S CHEVY-CHASE.

'Twas the dead of the night. By the pine-knot's red light
Brooks lay, half-asleep, when he heard the alarm—
Only this, and no more, from a voice at the door:
"The Red-Coats are out and have passed Phipps's Farm!"

Brooks was booted and spurred; he said never a word;
Took his horn from its peg, and his gun from the rack;
To the cold midnight air he led out his white mare,
Strapped the girths and the bridle and sprang to her back.

Up the North County Road at her full pace she strode,
Till Brooks reined her up at John Tarbell's to say:
"We have got the alarm—they have left Phipps's Farm;
You rouse the East Precinct and I'll go this way."

John called his hired man, and they harnessed the span;
They roused Abram Garfield, and Garfield called me.
"Turn out right away, let no minute-man stay—
The Red-Coats have landed at Phipps's!" says he.

By the Powder-House Green seven others fell in;
At Nahum's the Men from the Saw-Mill came down;
So that when Jabez Bland gave the word of command,
And said "Forward, March!" there marched forward The Town.

Parson Wilderspin stood by the side of the road,
And he took off his hat, and he said, "Let us pray!
O Lord, God of Might, let Thine Angels of Light
Lead Thy Children to-night to the Glories of Day!
And let Thy Stars fight all the Foes of the Right,
As the Stars fought of old against Sisera."

And from heaven's high Arch those Stars blessed our March
Till the last of them faded in twilight away,
And with Morning's bright beam, by the bank of the stream,
Half the County marched in, and we heard Davis say:
"On the King's own Highway I may travel all day,
And no man hath warrant to stop me," says he;
"I've no man that's afraid, and I'll march at their head."
Then he turned to the boys—"Forward, march! Follow me."

And we marched as he said, and the Fifer, he played
The old "White Cockade," and he played it right well.
We saw Davis fall dead, but no man was afraid—
That Bridge we'd have had, though a Thousand Men fell.

This opened the Play, and it lasted all Day.

We made Concord too hot for the Red-Coats to stay;
Down the Lexington Way we stormed—Black, White, and Gray:
We were first at the Feast, and were last in the Fray.

They would turn in dismay, as Red Wolves turn at bay.

They leveled, they fired, they charged up the Road:
Cephas Willard fell dead; he was shot in the head
As he knelt by Aunt Prudence's well-sweep to load.

John Danforth was hit just in Lexington street,

John Bridge at that lane where you cross Beaver Falls;
And Winch and the Snows just above John Munroe's—
Swept away by one swoop of the big cannon balls.

I took Bridge on my knee, but he said: "Don't mind me:
Fill your horn from mine—let me lie where I be.
Our Fathers," says he, "that their Sons might be free,
Left their King on his Throne and came over the Sea;
And that man is a Knave or a Fool who, to save
His life, for a Minute would live like a Slave."

Well! all would not do. There were men good as new,—

From Rumford, from Saugus, from towns far away,—
Who filled up quick and well for each soldier that fell,
And we drove them, and drove them, and drove them all Day.
We knew, every one, it was War that begun
When that morning's marching was only half-done.

In the hazy twilight, at the coming of Night,

I crowded three buck-shot and one bullet down.
'Twas my last charge of lead, and I aimed her and said:
"Good luck to you, Lobsters, in old Boston Town."

In a barn at Milk Row, Ephraim Bates and Thoreau,

And Baker and Abram and I made a bed;
We had mighty sore feet, and we'd nothing to eat,
But we'd driven the Red-Coats, and Amos, he said:
"It's the first time," says he, "that it's happened to me
To march to the sea by this road where we've come;
But confound this whole day but we'd all of us say
We'd rather have spent it this way than to home."

The hunt had begun with the dawn of the sun,

And night saw the Wolf driven back to his Den.
And never since then, in the Memory of Men,
Has the old Bay State seen such a hunting again.

Edward Everett Hale.

A MODERN INSTANCE.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "The Undiscovered Country," etc.

XVI.

BARTLEY stood for a moment, and then went out and wandered aimlessly about till night-fall. He went out shocked and frightened at what he had done, and ready for any reparation. But this mood wore away, and he came back sullenly determined to let her make the advances toward reconciliation, if there was to be one. Her love had already made his peace, and she met him in the dimly lighted little hall with a kiss of silent penitence and forgiveness. She had on her hat and shawl, as if she had been waiting for him to come and take her out to tea; and on their way to the restaurant, she asked him of his adventure among the newspapers. He told her briefly, and when they sat down at their table he took out the precious order and showed it to her. But its magic was gone; it was only an order for twenty-five dollars, now; and two hours ago it had been success, rapture, a common hope and a common joy. They scarcely spoke of it, but talked soberly of indifferent things.

She could not recur to her father's visit at once, and he would not be the first to mention it. He did nothing to betray his knowledge of her intention, as she approached the subject through those feints that women use, and when they stood again in their little attic room she was obliged to be explicit.

"What hurt me, Bartley," she said, "was that you should think for an instant that I would let father ask me to leave you, or that he would ask such a thing. He only came to tell me to be good to you, and help you, and trust you; and not worry you with my silliness and—and—jealousy. And I don't ever mean to. And I know he will be good friends with you yet. He praised you for working so hard;"—she pushed it a little beyond the bare fact;—"he always did that; and I know he's only waiting for a good chance to make it up with you."

She lifted her eyes, glistening with tears, and it touched his peculiar sense of humor to find her offering him reparation, when he had felt himself so outrageously to blame; but he would not be outdone in magnanimity, if it came to that.

"It's all right, Marsh. I was a furious idiot, or I should have let you explain at once. But you see I had only one thought in my mind, and that was my luck, which I wanted to share with you; and when your father seemed to have come in between us again——"

"Oh, yes, yes!" she answered. "I understand." And she clung to him in the joy of this perfect intelligence, which she was sure could never be obscured again.

When Bartley's article came out, she read it with a fond admiration which all her praises seemed to leave unsaid. She bought a scrap-book, and pasted the article into it, and said that she was going to keep everything he wrote.

"What are you going to write the next thing?" she asked.

"Well, that's what I don't know," he answered. "I can't find another subject like that, so easily."

"Why, if people care to read about a logging-camp, I should think they would read about almost anything. Nothing could be too common for them. You might even write about the trouble of getting cheap enough rooms in Boston."

"Marcia," cried Bartley, "you're a treasure! I'll write about that very thing! I know the 'Chronicle-Abstract' will be glad to get it."

She thought he was joking till he came to her after a while for some figures which he did not remember. He had the true newspaper instinct, and went to work with a motive that was as different as possible from the literary motive. He wrote for the effect which he was to make, and not from any artistic pleasure in the treatment. He did not attempt to give it form, to imagine a young couple like himself and Marcia coming down from the country to place themselves in the city; he made no effort to throw about it the poetry of their ignorance and their poverty, or the pathetic humor of their dismay at the disproportion of the prices to their means. He set about getting all the facts he could, and he priced a great many lodgings in different parts of the city; then he went to a number of real-estate agents, and, giving himself out as a reporter of the

"Chronicle-Abstract," he interviewed them as to house-rents, past and present. Upon these bottom facts, as he called them, he based a "spicy" sketch, which had also largely the character of an *exposé*. There is nothing the public enjoys so much as an *exposé*; it seems to be made in the reader's own interest; it somehow constitutes him a party to the attack upon the abuse, and its effectiveness redounds to the credit of all the newspaper's subscribers. After a week's stay in Boston, Bartley was able to assume the feelings of a native who sees his city falling into decay through the rapacity of its landladies. In the heading of ten or fifteen lines which he gave his sketch, the greater number were devoted to this feature of it; though the space actually allotted to it in the text was comparatively small. He called his report "Boston's Boarding-Houses," and he spent a paragraph upon the relation of boarding-houses to civilization, before detailing his own experience and observation. This part had many of those strokes of crude picturesqueness and humor which he knew how to give, and was really entertaining; but it was when he came to contrast the rates of house-rent and the cost of provisions with the landladies'

"PERPENDICULAR PRICES"

that Bartley showed all the virtue of a born reporter. The sentences were vivid and telling; the *ensemble* was very alarming; and the conclusion was inevitable that, unless this abuse could somehow be reached, we should lose a large and valuable portion of our population; especially those young married people of small means with whom the city's future prosperity so largely rested, and who must drift away to find homes in rival communities if the present exorbitant demands were maintained.

As Bartley had foretold, he had not the least trouble in selling this sketch to the "Chronicle-Abstract." The editor probably understood its essential cheapness perfectly well; but he also saw how thoroughly readable it was. He did not grumble at the increased price which Bartley put upon his work; it was still very far from dear; and he liked the young Downeaster's enterprise. He gave him as cordial a welcome as an over-worked man may venture to offer when Bartley came in with his copy, and he felt like doing him a pleasure. Some things out of the logging-camp sketch had been copied, and people had spoken to the editor about it, which was a still better sign that it was a hit.

"Don't you want to come round to our club to-night?" asked the editor, as he handed Bartley the order for his money

across the table. "We have a bad dinner, and we try to have a good time. We're all newspaper men together."

"Why, thank you," said Bartley, "I guess I should like to go."

"Well, come round at half-past five, and go with me."

Bartley walked homeward rather soberly. He had meant, if he sold this article, to make amends for the disappointment they had both suffered before, and to have a commemorative supper with Marcia at Parker's; he had ignored a little hint of hers about his never having taken her there yet, because he was waiting for this chance to do it in style. He resolved that, if she did not seem to like his going to the club, he would go back and withdraw his acceptance. But when he told her he had been invited,—he thought he would put the fact in this tentative way,—she said: "I hope you accepted!"

"Would you have liked me to?" he asked, with relief.

"Why, of course! It's a great honor. You'll get acquainted with all those editors, and perhaps some of them will want to give you a regular place."

A salaried employment was their common ideal of a provision for their future.

"Well, that's what I was thinking myself," said Bartley.

"Go and accept at once," she pursued.

"Oh, that isn't necessary. If I get round there by half-past five, I can go," he answered.

His lurking regret ceased when he came into the reception-room, where the members of the club were constantly arriving, and putting off their hats and overcoats, and then falling into groups for talk. His friend of the "Chronicle-Abstract" introduced him lavishly, as our American custom is. Bartley had a little strangeness, but no bashfulness, and, with his essentially slight opinion of people, he was promptly at his ease. These men liked his handsome face, his winning voice, the good-fellowship of his instant readiness to joke; he could see that they liked him, and that his friend Ricker was proud of the impression he made; before the evening was over he kept himself with difficulty from patronizing Ricker a little.

The club has grown into something much more splendid and expensive; but it was then content with a dinner certainly as bad as Ricker promised, but fabulously modest in price, at an old-fashioned hotel, whose site was long ago devoured by a dry-goods palace. The drink was commonly water or beer; occasionally, if a great actor or other distinguished guest honored the board, some

spendthrift ordered champagne. But no one thought fit to go to this ruinous extreme for Bartley. Ricker offered him his choice of beer or claret, and Bartley temperately preferred water to either; he could see that this raised him in Ricker's esteem.

No company of men can fail to have a good time at a public dinner, and the good time began at once with these journalists, whose overworked week ended in this Saturday-evening jollity. They were mostly young men, who found sufficient compensation in the excitement and adventure of their underpaid labors, and in the vague hope of advancement; there were grizzled beards among them, for whom neither the novelty nor the expectation continued, but who loved the life for its own sake, and would hardly have exchanged it for prosperity. Here and there was an old fellow, for whom probably all illusion was gone; but he was proud of his vocation, proud even of the changes that left him somewhat superannuated in his tastes and methods. None, indeed, who have ever known it, can wholly forget the generous rage with which journalism inspires its followers. To each of those young men, beginning the strangely fascinating life as reporters and correspondents, his paper was as dear as his king once was to a French noble; to serve it night and day, to wear himself out for its sake, to merge himself in its glory, and to live in its triumphs without personal recognition from the public, was the loyal devotion which each expected his sovereign newspaper to accept as its simple right. They went and came, with the prompt and passive obedience of soldiers, wherever they were sent, and they struggled each to "get in ahead" of all the others with the individual zeal of heroes. They expanded to the utmost limits of occasion, and they submitted with an anguish that was silent to the editorial excision, compression, and mutilation of reports that were vitally dear to them. What becomes of these ardent young spirits, the inner history of journalism in any great city might pathetically show; but the outside world only knows them in the fine frenzy of interviewing, or of recording the midnight ravages of what they call the devouring element, or of working up horrible murders or tragical accidents, or of tracking criminals who have baffled all the detectives. Hearing their talk, Bartley began to realize that journalism might be a very different thing from what he had imagined it in a country printing-office, and that it might not be altogether wise to consider it merely as a stepping-stone to the law.

With the American eagerness to recognize talent, numbers of good fellows spoke to him

about his logging sketch; even those who had not read it seemed to know about it as a hit. They were delighted to be able to say, "Ricker tells me that you offered it to old Witherby, and he wouldn't look at it!" He found that this fact, which he had doubtfully confided to Ricker, was not offensive to some of the "Events" people who were there; one of them got him aside, and darkly owned to him that Witherby was doing everything that any one man could to kill the "Events," and that in fact the counting-room was running the paper.

All the club united in abusing the dinner, which in his rustic ignorance Bartley had not found so infamous; but they ate it with perfect appetite and with mounting good spirits. The president brewed punch in a great bowl before him, and, rising with a glass of it in his hand, opened a free parliament of speaking, story-telling, and singing. Whoever collected a song or a story that he liked called upon the owner of it to sing it or tell it; and it appeared not to matter how old the fun or the music was: the company was resolved to be happy; it roared and clapped till the glasses rang. "You will like this song," Bartley's neighbors to right and left of him prophesied: or, "Just listen to this story of Mason's,—it's capital,"—as one or another rose in response to a general clamor. When they went back to the reception-room they carried the punch-bowl with them, and there, amid a thick cloud of smoke, two clever amateurs took their places at the piano, and sang and played to their hearts' content, while the rest, glass in hand, talked and laughed, or listened, as they chose. Bartley had not been called upon, but he was burning to try that song in which he had failed so dismally in the logging-camp. When the pianist rose at last, he slipped down into the chair, and, striking the chords of the accompaniment, he gave his piece with brilliant audacity. The room silenced itself, and then burst into a roar of applause, and cries of "Encore!" There could be no doubt of the success.

"Look here, Ricker," said a leading man, at the end of the repetition, "your friend must be one of us!"—and, rapping on the table, he proposed Bartley's name.

In that simple time the club voted *viva voce* on proposed members, and Bartley found himself elected by acclamation, and in the act of paying over his initiation fee to the treasurer, before he had well realized the honor done him. Everybody near him shook his hand, and offered to be of service to him. Much of this cordiality was merely collective good-feeling; something of it might justly be attributed to the punch; but the greater part was

honest. In this civilization of ours, grotesque and unequal and imperfect as it is in many things, we are bound together in a brotherly sympathy unknown to any other. We new men have all had our hard rubs, but we do not so much remember them in soreness or resentment as in the wish to help forward any other who is presently feeling them. If he will but help himself too, a hundred hands are stretched out to him.

Bartley had kept his head clear of the punch, but he left the club drunk with joy and pride, and so impatient to be with Marcia and tell her of his triumphs, that he could hardly wait to read the proof of his boarding-house article, which Ricker had put in hand at once for the Sunday edition. He found Marcia sitting up for him, and she listened with a shining face while he hastily ran over the most flattering facts of the evening. She was not so much surprised at the honors done him as he had expected: but she was happier, and she made him repeat it all and give her the last details. He was afraid she would ask him what his initiation had cost; but she seemed to have no idea that it had cost anything, and though it had swept away a third of the money he had received for his sketch, he still resolved that she should have that supper at Parker's.

"I consider my future made," he said aloud, at the end of his swift cogitation on this point.

"Oh, yes!" she responded, rapturously. "We needn't have a moment's anxiety. But we must be very saving still till you get a place."

"Oh, certainly," said Bartley.

XVII.

DURING several months that followed, Bartley's work consisted of interviewing, of special reporting in all its branches, of correspondence by mail and telegraph from points to which he was sent; his leisure he spent in studying subjects which could be treated like that of the boarding-houses. Marcia entered into his affairs with the keen half-intelligence which characterizes a woman's participation in business; whatever could be divined, she was quickly mistress of; she vividly sympathized with his difficulties and his triumphs; she failed to follow him in matters of political detail or of general effect; she could not be dispassionate or impartial; his relation to any enterprise was always more important than anything else about it. On some of his missions he took her with him, and then they made it a pleasure excursion; and if they

came home late with the material still unwritten, she helped him with his notes, wrote from his dictation, and enabled him to give a fuller report than his rivals. She caught up with amusing aptness the technical terms of the profession, and was voluble about getting in ahead of the "Events" and the other papers, and she was indignant if any part of his report was cut out or garbled, or any feature was spoiled.

He made a "card" of grouping and treating with picturesque freshness the spring openings of the milliners and dry-goods people; and when he brought his article to Ricker, the editor ran it over, and said, "Guess you took your wife with you, Hubbard."

"Yes, I did," Bartley owned. He was always proud of her looks, and it flattered him that Ricker should see the evidences of her feminine taste and knowledge in his account of the bonnets and dress-goods. "You don't suppose I could get at all these things by inspiration, do you?"

Marcia was already known to some of his friends whom he had introduced to her in casual encounters. They were mostly unmarried, or, if married, they lived at a distance, and they did not visit the Hubbards at their lodgings. Marcia was a little shy, and did not quite know whether they ought to call without being asked, or whether she ought to ask them; besides, Mrs. Nash's reception-room was not always at her disposal, and she would not have liked to take them all the way up to her own room. Her social life was, therefore, confined to the public places where she met these friends of her husband's. They sometimes happened together at a restaurant, or saw one another between the acts at the theater, or on coming out of a concert. Marcia was not so much admired for her conversation by her acquaintance, as for her beauty and her style; a rustic reluctance still lingered in her; she was thin and dry in her talk with any one but Bartley, and she could not help letting even men perceive that she was uneasy when they interested him in matters foreign to her.

Bartley did not see why they could not have some of these fellows up in their room for tea; but Marcia told him it was impossible. In fact, although she willingly lived this irregular life with him, she was at heart not at all a Bohemian. She did not like being in lodgings or dining at restaurants; on their horse-car excursions into the suburbs, when the spring opened, she was always choosing this or that little house as the place where she would like to live, and wondering if it were within their means. She said she would gladly

do the work herself; she hated to be idle so much as she now must. The city's novelty wore off for her sooner than for him: the concerts, the lectures, the theaters, had already lost their zest for her, and she went because he wished her to go, or in order to be able to help him with what he was always writing about such things.

As the spring advanced, Bartley conceived the plan of a local study, something in the manner of the boarding-house article, but on a much vaster scale: he proposed to Ricker a timely series on the easily accessible hot-weather resorts, to be called "Boston's Breathing-Places," and to relate mainly to the sea-side hotels and their surroundings. His idea was encouraged, and he took Marcia with him on most of his expeditions for its realization. These were largely made before the regular season had well begun; but the boats were already running, and the hotels were open, and they were treated with the hospitality which a knowledge of Bartley's mission must invoke. As he said, it was a matter of business, give and take on both sides, and the landlords took more than they gave in any such trade.

On her part, Marcia regarded dead-heading as a just and legitimate privilege of the press, if not one of its chief attributes; and these passes on boats and trains, this system of paying hotel bills by the presentation of a card, constituted distinguished and honorable recognition from the public. To her simple experience, when Bartley told how magnificently the reporters had been accommodated, at some civic or commercial or professional banquet, with a table of their own, where they were served with all the wines and courses, he seemed to have been one of the principal guests, and her fear was that his head should be turned by his honors. But, at the bottom of her heart, though she enjoyed the brilliancy of his present life, she did not think his occupation comparable to the law in dignity. Bartley called himself a journalist, now, but his newspaper connection still identified him in her mind with those country editors of whom she had always heard her father speak with such contempt: men dedicated to poverty and the despite of the local notables who used them. She could not shake off the old feeling of degradation, even when she heard Bartley and some of his fellow-journalists talking in their boastful vein of the sovereign character of journalism; and she secretly resolved never to relinquish her purpose of having him a lawyer. Till he was fairly this, in regular and prosperous practice, she knew that she should not have shown her father that she was right in marrying Bartley.

In the meantime their life went ignorantly on in the obscure channels where their isolation from society kept it longer than was natural. Three or four months after they came to Boston, they were still country people, with scarcely any knowledge of the distinctions and differences so important to the various worlds of any city. So far from knowing that they must not walk in the Common, they used to sit down on a bench there, in the pleasant weather, and watch the opening of the spring, among the lovers whose passion had a publicity that neither surprised nor shocked them. After they were a little more enlightened, they resorted to the Public Garden, where they admired the bridge, and the rock-work, and the statues. Bartley, who was already beginning to get up a taste for art, boldly stopped and praised the Venus, in the presence of the gardeners planting tulip-bulbs.

They went sometimes to the Museum of Fine Arts, where they found a pleasure in the worst things which the best never afterward gave them; and where she became as hungry and tired as if it were the Vatican. They had a pride in taking books out of the Public Library, where they walked about on tiptoe with bated breath; and they thought it a divine treat to hear the great organ play at noon. As they sat there in the Music Hall, and let the mighty instrument bellow over their strong young nerves, Bartley whispered Marcia the jokes he had heard about the organ; and then, upon the wave of aristocratic sensation from this experience, they went out and dined at Copeland's, or Webber's, or Fera's, or even at Parker's: they had long since forsaken the humble restaurant with its doilies and its ponderous crockery, and they had so mastered the art of ordering that they could manage a dinner as cheaply at these finer places as anywhere, especially if Marcia pretended not to care much for her half of the portion, and connived at its transfer to Bartley's plate.

In his hours of leisure, they were so perpetually together that it became a joke with the men who knew them to say, when asked if Bartley were married, "Very *much* married." It was not wholly their inseparableness that gave the impression of this extreme conjugality; as I said, Marcia's uneasiness when others interested Bartley in things alien to her, made itself felt even by men. She struggled against it because she did not wish to put him to shame before them, and often with an aching sense of desolation she sent him off with them to talk apart, or left him with them if they met on the street, and walked home alone rather than let any one

say that she kept her husband tied to her apron-strings. His club, after the first sense of its splendor and usefulness wore away, was an ordeal; she had failed to conceal that she thought the initiation and annual fees extortionate. She knew no other bliss like having Bartley sit down in their own room with her; it did not matter whether they talked; if he were busy, she would as lief sit and sew, or sit and silently look at him as he wrote. In these moments she liked to feign that she had lost him, that they had never been married, and then come back with a rush of joy to the reality. But on his club nights she heroically sent him off, and spent the evening with Mrs. Nash. Sometimes she went out by day with the landlady, who had a passion for auctions and cemeteries, and who led Marcia to an intimate acquaintance with such pleasures. At Mount Auburn, Marcia liked the marble lambs, and the emblematic hands pointing upward with the dexter finger, and the infants carved in stone, and the angels with folded wings and lifted eyes, better than the casts which Bartley said were from the antique, in the Museum. On this side her mind was as wholly dormant as that of Mrs. Nash herself. She always came home feeling as if she had not seen Bartley for a year, and fearful that something had happened to him. The hardest thing about their irregular life was that he must sometimes be gone two or three days at a time, when he could not take her with him. Then it seemed to her that she could not draw a full breath in his absence; and once he found her almost wild on his return: she had begun to fancy that he was never coming back again. He laughed at her when she betrayed her secret, but she was not ashamed; and when he asked her, "Well, what if I hadn't come back?" she answered passionately, "It wouldn't have made much difference to me: I should not have lived."

The uncertainty of his income was another cause of anguish to her. At times he earned forty or fifty dollars a week: oftener he earned ten; there was now and then a week when everything that he put his hand to failed, and he earned nothing at all. Then Marcia despaired; her frugality became a mania, and they had quarrels about what she called his extravagance. She imbibed her daily bread by blaming him for what he spent on it; she wore her oldest dresses, and would have had him go shabby in token of their adversity. Her economies were frantic child's-play,—methodless, inexperienced, fitful: and they were apt to be followed by remorse in which she abetted him in some wanton excess.

The future of any heroic action is difficult to manage; and the sublime sacrifice of her pride and all the conventional proprieties which Marcia had made in giving herself to Bartley was inevitably tried by the same sordid tests that every married life is put to.

That salaried place which he was always seeking on the staff of some newspaper, proved not so easy to get as he had imagined in the flush of his first successes. Ricker willingly included him among the "Chronicle-Abstract's" own correspondents and special reporters; and he held the same off-and-on relation to several other papers; but he remained without a more definite position. He earned perhaps more money than a salary would have given him, and in their way of living he and Marcia laid up something out of what he earned. But it did not seem to her that he exerted himself to get a salaried place; she was sure that, if so many others who could not write half so well had places, he might get one if he only kept trying. Bartley laughed at these business-turns of Marcia's, as he called them; but sometimes they enraged him, and he had days of sullen resentment when he resisted all her advances toward reconciliation. But he kept hard at work, and he always owned at last how disinterested her most ridiculous alarm had been.

Once, when they had been talking as usual about that permanent place on some newspaper, she said,

"But I should only want that to be temporary, if you got it. I want you should go on with the law, Bartley! I've been thinking about that. I don't want you should always be a journalist."

Bartley smiled.

"What could I do for a living, I should like to know, while I was studying law?"

"You could do some newspaper work,—enough to support us,—while you were studying. You said when we first came to Boston that you should settle down to the law."

"I hadn't got my eyes open, then. I've got a good deal longer row to hoe than I supposed, before I can settle down to the law."

"Father said you didn't need to study but a little more."

"Not if I were going into the practice at Equity. But it's a very different thing, I can tell you, in Boston; I should have to go in for a course in the Harvard Law School, just for a little start-off."

Marcia was silenced, but she asked, after a moment:

"Then you're going to give up the law, altogether?"

"I don't know what I'm going to do; I'm going to do the best I can for the present, and

trust to luck. I don't like special reporting, for a finality; but I shouldn't like shystering, either."

"What's shystering?" asked Marcia.

"It's pettifogging in the city courts. Wait till I can get my basis,—till I have a fixed amount of money for a fixed amount of work,—and then I'll talk to you about taking up the law again. I'm willing to do it whenever it seems the right thing. I guess I should like it, though I don't see why it's any better than journalism, and I don't believe it has any more prizes."

"But you've been a long time trying to get your basis on a newspaper," she reasoned. "Why don't you try to get it in some other way? Why don't you try to get a clerk's place with some lawyer?"

"Well, suppose I was willing to starve along in that way, how should I go about to get such a place?" demanded Bartley, with impatience.

"Why don't you go to that Mr. Halleck you visited here? You used to tell me he was going to be a lawyer."

"Well, if you remember so distinctly what I said about going into the law when I first came to Boston," said her husband, angrily, "perhaps you'll remember that I said I shouldn't go to Halleck until I didn't need his help. I shall not go to him for *his* help."

Marcia gave way to spiteful tears.

"It seems as you were ashamed to let them know that you were in town. Are you afraid I shall want to get acquainted with them? Do you suppose I shall want to go to their parties, and disgrace you?"

Bartley took his cigar out of his mouth, and looked blackly at her.

"So, that's what you've been thinking, is it?"

She threw herself upon his neck.

"No! no, it isn't!" she cried, hysterically.

"You know that I never thought it till this instant; you know I didn't think it at all; I just *said* it. My nerves are all gone; I don't know *what* I'm saying half the time, and you're as strict with me as if I were as well as ever! I may as well take off my things,—I'm not well enough to go with you, to-day, Bartley."

She had been dressing while they talked for an entertainment which Bartley was going to report for the "Chronicle-Abstract," and now she made a feint of wishing to remove her hat. He would not let her. He said that if she did not go, he should not; he reproached her with not wishing to go with him any more; he coaxed her laughingly and fondly.

"It's only because I'm not so strong, now," she said, in a whisper that ended in a kiss on his cheek. "You must walk very slowly, and not hurry me."

The entertainment was to be given in aid of the Indigent Children's Surf-Bathing Society, and it was at the end of June, rather late in the season. But the Society itself was an after-thought, not conceived till a great many people had left town on whose assistance such a charity must largely depend. Strenuous appeals had been made, however: it was represented that ten thousand poor children could be transported to Nantasket Beach, and there, as one of the ladies on the committee said, bathed, clam-baked, and lemonaded three times during the summer at a cost so small that it was a saving to spend the money. Class Day falling about the same time, many exiles at Newport and on the North Shore came up and down; and the affair promised to be one of social distinction, if not pecuniary success. The entertainment was to be varied: a distinguished poet was to read an old poem of his, and a distinguished poetess was to read a new poem of hers; some professional people were to follow with comic singing; an elocutionist was to give impressions of noted public speakers; and a number of vocal and instrumental amateurs were to contribute their talent.

Bartley had instructions from Ricker to see that his report was very full socially. "We want something lively, and, at the same time, nice and tasteful, about the whole thing, and I guess you're the man to do it. Get Mrs. Hubbard to go with you, and keep you from making a fool of yourself about the costumes." He gave Bartley two tickets. "Mighty hard to get, I can tell you, for *love* or money,—especially love," he said; and Bartley made much of this difficulty in impressing Marcia's imagination with the uncommon character of the occasion. She had put on a new dress which she had just finished for herself, and which was a marvel not only of cheapness, but of elegance; she had plagiarized the idea from the costume of a lady with whom she stopped to look in at a milliner's window where she formed the notion of her bonnet. But Marcia had imagined the things anew in relation to herself, and made them her own; when Bartley first saw her in them, though he had witnessed their growth from the germ, he said that he was afraid of her, she was so splendid, and he did not quite know whether he felt acquainted. When they were seated at the concert, and had time to look about them, he whispered, "Well, Marsh, I don't see anything here that comes near you in style," and she flung a little corner of her drapery out over his hand so that she could squeeze it: she was quite happy again.

After the concert, Bartley left her for a moment, and went up to a group of the commit-

tee near the platform, to get some points for his report. He spoke to one of the gentlemen, note-book and pencil in hand, and the gentleman referred him to one of the ladies of the committee, who, after a moment of hesitation, demanded in a rich tone of injury and surprise, "Why! Isn't this Mr. Hubbard?" and, indignantly answering herself, "Of course it is!" gave her hand with a sort of dramatic cordiality, and flooded him with questions: "When did you come to Boston? Are you at the Hallecks'? Did you come— Or no, you're *not* Harvard. You're not *living* in Boston? And what in the world are you getting items for? Mr. Hubbard, Mr. Atherton."

She introduced him in a breathless climax to the gentleman to whom he had first spoken, and who had listened to her attack on Bartley with a smile which he was at no trouble to hide from her. "Which question are you going to answer first, Mr. Hubbard?" he asked quietly, while his eyes searched Bartley's for an instant with inquiry which was at once kind and keen. His face had the distinction which comes of being clean-shaven in our bearded times.

"Oh, the last," said Bartley. "I'm reporting the concert for the 'Chronicle-Abstract,' and I want to interview some one in authority about it."

"Then interview *me*, Mr. Hubbard," cried the young lady. "I'm in authority about this affair,—it's my own invention, as the White Knight says,—and then I'll interview you afterward. And you've gone into journalism, like all the Harvard men! So glad it's you, for you can be a perfect godsend to the cause if you will. The entertainment hasn't given us all the money we shall want, by any means, and we shall need all the help the press can give us. Ask me any questions you please, Mr. Hubbard: there isn't a friend here that I wouldn't sacrifice to the last personal particular if the press will only do its duty in return. You've no idea how we've been working during the last fortnight since this Old Man of the Sea-Bathing sprang upon us. I was sitting quietly at home, thinking of anything else in the world, I can assure you, when this atrocious idea occurred to me." She ran on to give a full sketch of the inception and history of the scheme up to the present time. Suddenly she arrested herself and Bartley's flying pencil: "Why, you're not putting all that nonsense down?"

"Certainly I am," said Bartley, while Mr. Atherton, with a laugh, turned and walked away to talk with some other ladies. "It's the very thing I want. I shall get in ahead of all the other papers on this; they haven't had anything like it, yet."

She looked at him for a moment in horror. Then:

"Well, go on; I would do anything for the cause!" she cried.

"Tell me who's been here, then," said Bartley.

She recoiled a little.

"I don't like giving names."

"But I can't say who the people were unless you do."

"That's true," said the young lady thoughtfully. She prided herself on her thoughtfulness, which sometimes came before and sometimes after the fact. "You're not obliged to say who told you?"

"Of course not."

She ran over a list of historical and distinguished names, and he slyly asked if this and that lady were not dressed so and so, and worked in the costumes from her unconsciously elaborate answers; she was afterward astonished that he should have known what people had on. Lastly he asked what the committee expected to do next, and was enabled to enrich his report with many authoritative expressions and intimations. The lady became all zeal in these confidences to the public; at last, she told everything she knew, and a great deal that she merely hoped.

"And now come into the committee-room and have a cup of coffee; I know you must be faint with all this talking," she concluded. "I want to ask you something about yourself." She was not older than Bartley, but she addressed him with the freedom we use in encouraging younger people.

"Thank you," he said coolly; "I can't very well. I must go back to my wife, and hurry up this report."

"Oh, is Mrs. Hubbard here?" asked the young lady, with well-controlled surprise. "Present me to her!" she cried, with that fearlessness of social consequences for which she was noted; she believed there were ways of getting rid of undesirable people without treating them rudely.

The audience had got out of the hall, and Marcia stood alone near one of the doors waiting for Bartley. He glanced proudly toward her, and said: "I shall be very glad."

Miss Kingsbury drifted by his side across the intervening space, and was ready to take Marcia impressively by the hand when she reached her; she had decided her to be very beautiful and elegantly simple in dress, but she found her smaller than she had looked at a distance. Miss Kingsbury was herself rather large,—sometimes, she thought, rather too large: certainly too large if she had not had such perfect command of every

inch of herself. In complexion she was richly blonde, with beautiful fair hair roughed over her forehead, as if by a breeze, and apt to escape in sunny tendrils over the peachy tints of her temples. Her features were massive rather than fine; and though she thoroughly admired her chin and respected her mouth, she had doubts about her nose which she frankly referred to friends for solution: had it not *too* much of a knob at the end? She seemed to tower over Marcia as she took her hand at Bartley's introduction, and expressed her pleasure at meeting her.

"I don't know why it need be such a surprise to find one's gentlemen friends married, but it always is, somehow. I don't think Mr. Hubbard would have known me if I hadn't insisted upon his recognizing me; I can't blame him: it's three years since we met. Do you help him with his reports? I know you do! You *must* make him lenient to our entertainment,—the cause is so good! How long have you been in Boston? Though I don't know why I should ask that,—you may have always been in Boston! One used to know everybody; but the place is so large, now. I should like to come and see you; but I'm going out of town to-morrow, for the summer. I'm not really here now, except *ex officio*; I ought to have been away weeks ago, but this Indigent Surf-Bathing has kept me. You've no idea what such an undertaking is. But you *must* let me have your address, and as soon as I get back to town in the fall, I shall insist upon looking you up. Good-bye! I must run away now, and leave you; there are a thousand things for me to look after yet to-day."

She took Marcia again by the hand, and superadded some bows and nods and smiles of parting, after she released her, but she did not ask her to come into the committee-room and have some coffee; and Bartley took his wife's hand under his arm and went out of the hall.

"Well," he said, with a man's simple pleasure in Miss Kingsbury's friendliness to his wife, "that's the girl I used to tell you about,—the rich one with the money in her own right, whom I met at the Hallecks'. She seemed to think you were about the thing, Marsh! I saw her eyes open as she came up, and I felt awfully proud of you: you never looked half so well. But why didn't you *say* something?"

"She didn't give me any chance," said Marcia, "and I had nothing to say, any way. I thought she was very disagreeable."

"Disagreeable!" repeated Bartley, in amaze. Miss Kingsbury went back to the committee-room, where one of the amateurs had been lecturing upon her.

"Clara Kingsbury can say and do, from the best heart in the world, more offensive things in ten minutes than malice could invent in a week. Somebody ought to go out and drag her away from that reporter by main force. But I presume it's too late already; she's had time to destroy us all. You'll see that there wont be a shred left of us in *his* paper, at any rate. Really, I wonder that, in a city full of nervous and exasperated people like Boston, Clara Kingsbury has been suffered to live. She throws her whole soul into everything she undertakes, and she has gone so *en masse* into this Indigent Bathing, and splashed about in it so, that I can't understand how we got anybody to come to-day. Why, I haven't the least doubt that she's offered that poor man a ticket to go down to Nantasket and bathe with the other Indigents; she's treated *me* as if I ought to be personally surf-bathed for the last fortnight; and if there's any chance for us left by her tactlessness, you may be sure she's gone at it with her conscience, and simply swept it off the face of the earth."

XVIII.

ONE hot day in August, when Bartley had been doing nothing for a week, and Marcia was gloomily forecasting the future, when they would have to begin living upon the money they had put into the savings-bank, she reverted to the question of his taking up the law again. She was apt to recur to this in any moment of discouragement, and she urged him now to give up his newspaper work, with that wearisome persistence with which women can torment the men they love.

"My newspaper work seems to have given me up, my dear," said Bartley. "It's like asking a fellow not to marry a girl that wont have him." He laughed and then whistled; and Marcia burst into fretful, futile tears, which he did not attempt to assuage.

They had been all summer in town; the country would have been no change to them; and they knew nothing of the sea-side, except the crowded, noisy, expensive resorts near the city. Bartley wished her to go to one of these for a week or two, at any rate, but she would not; and in fact neither of them had the born citizen's conception of the value of a summer vacation. But they had found their attic intolerable; and, the single gentlemen having given up their rooms by this time, Mrs. Nash let Marcia have one lower down, where they sat looking out on the hot street.

"Well," cried Marcia at last, "you don't

care for my feelings, or you would take up the law again."

Her husband rose with a sigh that was half a curse, and went out. After what she had said, he would not give her the satisfaction of knowing what he meant to do; but he had it in his head to go to that Mr. Atherton to whom Miss Kingsbury had introduced him, and ask his advice; he had found out that Mr. Atherton was a lawyer, and he believed that he would tell him what to do. He could at least give him some authoritative discouragement which he might use in these discussions with Marcia.

Mr. Atherton had his office in the "Events" building, and Bartley was on his way thither when he met Ricker.

"Seen Witherby?" asked his friend. "He was round looking for you."

"What does Witherby want with me?" asked Bartley, with a certain resentment.

"Wants to give you the managing-editorship of the 'Events,'" said Ricker, jocosely.

"Pshaw! Well, he knows where to find me, if he wants me very badly."

"Perhaps he doesn't," suggested Ricker.

"In that case, you'd better look him up."

"Why, you don't advise ——"

"Oh, I don't advise anything! But if *he* can let by-gones be by-gones, I guess *you* can afford to! I don't know just what he wants with you, but if he offers you anything like a basis, you'd better take it."

Bartley's basis had come to be a sort of by-word between them; Ricker usually met him with some such demand as, "Well, what about the basis?" or "How's your poor basis?" Bartley's ardor for a salaried position amused him, and he often tried to argue him out of it. "You're much better off as a free lance. You make as much money as most of the fellows in places, and you lead a pleasanter life. If you were on any one paper, you'd have to be on duty about fifteen hours out of the twenty-four; you'd be out every night till three or four o'clock; you'd have to do fires, and murders, and all sorts of police business; and now you work mostly on fancy jobs: something you suggest yourself, or something you're specially asked to do. That's a kind of a compliment, and it gives you scope."

Nevertheless, if Bartley had his heart set upon a basis, Ricker wanted him to have it. "Of course," he said, "I was only joking about the basis. But if Witherby should have anything to offer, don't quarrel with your bread and butter, and don't hold yourself *too* cheap. Witherby's going to get all he can, for as little as he can, every time."

Ricker was a newspaper man in every

breath. His great interest in life was the "Chronicle-Abstract," which paid him poorly and worked him hard. To get in ahead of the other papers was the object for which he toiled with unremitting zeal; but after that he liked to see a good fellow prosper, and he had for Bartley that feeling of comradeship which comes out among journalists when their rivalries are off. He would hate to lose Bartley from the "Chronicle-Abstract"; if Witherby meant business, Bartley and he might be ex-coriating each other before a week passed, in sarcastic references to "our esteemed contemporary of the 'Events,'" and "our esteemed contemporary of the 'Chronicle-Abstract'"; but he heartily wished him luck, and hoped it might be some sort of inside work.

When Ricker left him, Bartley hesitated. He was half minded to go home and wait for Witherby to look him up, as the most dignified and perhaps the most prudent course. But he was curious and impatient, and he was afraid of letting the chance, whatever it might be, slip through his fingers. He suddenly resolved upon a little ruse, which would still oblige Witherby to make the advance, and yet would risk nothing by delay. He mounted to Witherby's room in the "Events" building, and pushed open the door. Then he drew back embarrassed, as if he had made a mistake.

"Excuse me," he said, "isn't Mr. Atherton's office on this floor?"

Witherby looked up from the papers on his desk, and cleared his throat. Ever since he refused Bartley's paper on the logging-camp, he had accused him in his heart of fraud because he had sold his rejected sketch to another paper, and anticipated his own tardy enterprise in the same direction. Each little success that Bartley made added to Witherby's dislike; and whilst Bartley had written for all the other papers, he had never got any work from the "Events." Witherby had the guilty sense of having hated him as he looked up, and Bartley on his part was uneasily sensible of some mocking paragraphs of a more or less personal cast, which he had written in the "Chronicle-Abstract," about the enterprise of the "Events."

"Mr. Atherton is on the floor above," said Witherby. "But I'm very glad you happened to look in, Mr. Hubbard. I—I was just thinking about you. I—wont you take a chair?"

"Thanks," said Bartley, non-committally; but he sat down.

Witherby fumbled about among the things on his desk before he resumed his own seat.

"I hope you have been well since I saw you?"

"Oh, yes, I'm always well. How have you been?"

Bartley wondered whither this exchange of civilities tended; but he believed he could keep it up as long as old Witherby could.

"Why, I have not been very well," said Witherby, getting into his chair at last, and taking up a paper-weight to assist him in conversation. "The fact is, Mr. Hubbard, I find that I have been working too hard. I have undertaken to manage the editorial department of the 'Events' in addition to looking after its business, and the care has been too great. It has told upon me. I flatter myself that I have not allowed either department to suffer —"

He referred this point so directly to him that Bartley made a murmur of assent, and Witherby resumed.

"But the care has told upon me. I am not so well as I could wish. I need rest, and I need help," he added.

Bartley had by this time made up his mind that, if Witherby had anything to say to him, he should say it unaided.

Witherby put down the paper-weight, and gave his attention for a moment to a paper-cutter.

"I don't know whether you have heard that Mr. Clayton is going to leave us?"

"No," Bartley said, "I hadn't heard that."

"Yes, he is going to leave us. Mr. Clayton and I have not agreed upon some points, and we have both judged it best that we should part." Witherby paused again, and changed the positions of his inkstand and mucilage-bottle. "Mr. Clayton has failed me, as I may say, at the last moment, and we have been compelled to part. I found Mr. Clayton—unpractical."

He looked again at Bartley, who said,

"Yes?"

"Yes, I found Mr. Clayton so much at variance in his views with—with my own views—that I could do nothing with him. He has used language to me which I am sure he will regret. But that is neither here nor there; he is going. I have had my eye on you, Mr. Hubbard, ever since you came to Boston, and have watched your career with interest. But I thought of Mr. Clayton, in the first instance, because he was already attached to the 'Events,' and I wished to promote him. Office during good behavior, and promotion in the direct line: I'm *that* much of a civil-service reformer," said Mr. Witherby.

"Certainly," said Bartley.

"But, of course, my idea in starting the 'Events' was to make money."

"Of course."

"I hold that the first duty of a public jour-

nal is to make money for the owner; all the rest follows naturally."

"You're quite right, Mr. Witherby," said Bartley. "Unless it makes money, there can be no enterprise about it, no independence,—nothing. That was the way I did with my little paper down in Maine. The first thing—I told the committee when I took hold of the paper—is to keep it from losing money; the next is to make money with it. First peaceable, then pure: that's what I told them."

"Precisely so!" cried Witherby.

He was now so much at his ease with Bartley that he left off tormenting the things on his desk, and used his hands in gesticulating.

"Look at the churches themselves! No church can do any good till it's on a paying basis. As long as a church is in debt, it can't secure the best talent for the pulpit or the choir, and the members go about feeling discouraged and out of heart. It's just so with a newspaper. I say that a paper does no good till it pays; it has no influence, its motives are always suspected, and you've got to make it pay by hook or by crook before you can hope to—to—forward any good cause by it. That's what I say. Of course," he added, in a large, smooth way, "I'm not going to contend that a newspaper should be run *solely* in the interest of the counting-room. Not at all! But I do contend that when the counting-room protests against a certain course the editorial-room is taking, it ought to be respectfully listened to. There are always two sides to every question. Suppose all the newspapers pitch in—as they sometimes do—and denounce a certain public enterprise: a projected scheme of railroad legislation, or a peculiar system of banking, or a coöperative mining interest, and the counting-room sends up word that the company advertises heavily with us; shall *we* go and join indiscriminately in that hue and cry, or shall we give our friends the benefit of the doubt?"

"Give them the benefit of the doubt," said Bartley. "That's what I say."

"And so would any other practical man!" cried Witherby. "And that's just where Mr. Clayton and I differed. Well, I needn't allude to him any more," he added, leniently. "What I wish to say is this, Mr. Hubbard: I am overworked, and I feel the need of some sort of relief. I know that I have started the 'Events' in the right line at last,—the only line in which it can be made a great, useful, and respectable journal, efficient in every good cause,—and what I want now is some sort of assistant in the management who shall be in full sympathy with my own ideas. I don't want a mere slave,—a tool; but I do want an independent, right-minded

man, who shall be with me for the success of the paper the whole time and every time, and shall not be continually setting up his will against mine on all sorts of *doctrinaire* points. That was the trouble with Mr. Clayton. I have nothing against Mr. Clayton personally; he is an excellent young man in very many respects; but he was all wrong about journalism, all wrong, Mr. Hubbard. I talked with him a great deal, and tried to make him see where his interest lay. He had been on the paper as a reporter from the start, and I wished very much to promote him to this position; which he could have made the best position in the country. The 'Events' is an evening paper; there is no night-work; and the whole thing is already thoroughly systematized. Mr. Clayton had plenty of talent, and all he had to do was to step in under my direction and put his hand on the helm. But, no! I should have been glad to keep him in a subordinate capacity; but I had to let him go. He said that he would not report the conflagration of a peanut-stand for a paper conducted on the principles I had developed to him. Now, that is no way to talk. It's absurd."

"Perfectly," Bartley laughed his rich, caressing laugh, in which there was the insinuation of all worldly-wise contempt for Clayton and all worldly-wise sympathy for Witherby. It made Witherby feel good, better, perhaps, than he had felt at any time since his talk with Mr. Clayton.

"Well, now, what do you say, Mr. Hubbard? Can't we make some arrangement with you?" he asked, with a burst of frankness.

"I guess you can," said Bartley. The fact that Witherby needed him was so plain that he did not care to practice any finesse about the matter.

"What are your present engagements?"

"I haven't any."

"Then you can take hold at once?"

"Yes."

"That's good."

Witherby now entered at large into the nature of the position which he offered Bartley. They talked a long time, and in becoming better acquainted with each other's views, as they called them, they became better friends. Bartley began to respect Witherby's business ideas, and Witherby, in recognizing all the admirable qualities of this clear-sighted and level-headed young man, began to feel that he had secretly liked him from the first, and had only waited a suitable occasion to unmask his affection. It was arranged that Bartley should come on as Witherby's assistant, and should do whatever

he was asked to do in the management of the paper; he was to write on topics as they occurred to him, or as they were suggested to him. "I don't say whether this will lead to anything more, Mr. Hubbard, or not; but I do say that you will be in the direct line of promotion."

"Yes, I understand that," said Bartley.

"And now as to terms," continued Witherby, a little tremulously.

"And now as to terms," repeated Bartley to himself; but he said nothing aloud. He felt that Witherby had cut out a great deal of work for him, and work of a kind that he could not easily find another man both willing and able to do. He reflected also that in developing his ideas of journalism, Witherby had in some degree put himself into his power. He resolved that he would have all that his service was worth.

"What should you think of twenty dollars a week?" asked Witherby.

"I shouldn't think it was enough," said Bartley, amazed at his own audacity, but enjoying it, and thinking how he had left Marcia with the intention of offering himself to Mr. Atherton as a clerk for ten dollars a week. "There is a great deal of labor in what you propose, and you command my whole time. You would not like to have me do any work outside of the 'Events.'"

"No," Witherby assented. "Would twenty-five be nearer the mark?" he inquired soberly.

"It would be nearer, certainly," said Bartley. "But I guess you better make it thirty." He kept a quiet face, but his heart throbbed.

"Well, say thirty, then," replied Witherby, so promptly that Bartley perceived with a pang that he might as easily have got forty from him. But it was now too late, and a salary of fifteen hundred a year passed the wildest hopes he had cherished half an hour before.

"All right," he said quietly. "I suppose you want me to take hold at once?"

"Yes, on Monday. Oh, by the way," said Witherby, "there is one little piece of outside work which I should like you to finish up for us; and we'll agree upon something extra for it, if you wish. I mean our 'Solid Men' series. I don't know whether you've noticed the series in the 'Events'?"

"Yes," said Bartley, "I have."

"Well, then, you know what they are. They consist of interviews—guarded and in-offensive as respects the sanctity of private life—with our leading manufacturers and merchant princes at their places of business and their residences, and include a description of these, and some account of the lives of the different subjects."

"Yes, I have seen them," said Bartley. "I've noticed the general plan."

"You know that Mr. Clayton has been doing them. He made them a popular feature. The parties themselves were very much pleased with them."

"Oh, people are always tickled to be interviewed," said Bartley. "I know they put on airs about it, and go round complaining to each other about the violation of confidence, and so on; but they all like it. You know I reported that Indigent Surf-Bathing entertainment, in June, for the 'Chronicle-Abstract.' I knew the lady who got it up, and I interviewed her after the entertainment."

"Miss Kingsbury?"

"Yes." Mr. Witherby made an inarticulate murmur of respect for Bartley in his throat, and involuntarily changed toward him, but not so subtly that Bartley's finer instinct did not take note of the change. "She was a fresh subject, and she told me everything. Of course I printed it all. She was awfully shocked—or pretended to be—and wrote me a very Oh-dear-how-could-you note about it. But I went round to the office the next day, and I found that nearly every lady mentioned in the interview had ordered half a dozen copies of that issue sent to her sea-side address, and the office had been full of Beacon-street swells the whole morning buying 'Chronicle-Abstracts'—the one with the report of the concert in it." These low views of high society, coupled with an apparent familiarity with it, modified Mr. Witherby more and more. He began to see that he had got a prize. "The way to do with such fellows as your 'Solid Men,'" continued Bartley, "is to submit a proof to 'em. They never know exactly what to do about it, and so you print the interview with their approval, and make 'em *particeps criminis*. I'll finish up the series for you, and I won't make any very heavy extra charge."

"I should wish to pay you whatever the work was worth," said Mr. Witherby, not to be outdone in nobleness.

"All right; we sha'n't quarrel about that, at any rate."

Bartley was getting toward the door, for he was eager to be gone now to Marcia, but Witherby followed him up as if willing to detain him.

"My wife," he said, "knows Miss Kingsbury. They have been on the same charities together."

"I met her a good while ago, when I was visiting a chum of mine at his father's house here. I didn't suppose she'd know me; but she did at once, and began to ask me if I was at the Hallecks',—as if I had never gone away."

"Mr. Ezra B. Halleck?" inquired Witherby reverently. "Leather trade?"

"Yes," said Bartley. "I believe his first name was Ezra. Ben Halleck was my friend. Do you know the family?" asked Bartley.

"Yes, we have met them—in society. I hope you're pleasantly situated where you are, Mr. Hubbard? Should be glad to have you call at the house."

"Thank you," said Bartley; my wife will be glad to have Mrs. Witherby call."

"Oh!" cried Witherby. "I didn't know you were married! That's good! There's nothing like marriage, Mr. Hubbard, to keep a man going in the right direction. But you've begun pretty young."

"Nothing like taking a thing in time," answered Bartley. "But I haven't been married a great while; and I'm not so young as I look. Well, good-afternoon, Mr. Witherby."

"What did you say was your address?" asked Witherby, taking out his note-book. "My wife will certainly call. She's down at Nantasket now, but she'll be up the first part of September, and then she'll call. Good-afternoon."

They shook hands at last, and Bartley ran home to Marcia. He burst into the room with a glowing face.

"Well, Marcia," he shouted, "I've got my basis!"

"Hush! No! Don't be so loud! You haven't!" she answered, springing to her feet. "I don't believe it! How hot you are!"

"I've been running almost—all the way from the 'Events' office. I've got a place on the 'Events,'—assistant managing-editor,—thirty dollars a week," he panted.

"I knew you would succeed yet—I knew you would, if I could only have a little patience. I've been scolding myself ever since you went. I thought you were going to do something desperate, and I had driven you to it. But Bartley, Bartley! It can't be true, is it? Here, here! Do take this fan. Or no, I'll fan you, if you'll let me sit on your knee! O poor thing, how hot you are! But I thought you wouldn't write for the 'Events'; I thought you hated that old Witherby, who acted so ugly to you when we first came."

"Oh, Witherby is a pretty good old fellow," said Bartley, who had begun to get his breath again. He gave her a full history of the affair, and they rejoiced together over it, and were as happy as if Bartley had been celebrating a high and honorable good fortune. She was too ignorant to feel the disgrace, if there were any, in the compact which Bartley had closed, and he had no

principles, no traditions by which to perceive it. To them it meant unlimited prosperity; it meant provision for the future, which was to bring a new responsibility and a new care.

"We will take the parlor with the alcove, now," said Bartley. "Don't excite yourself," he added, with tender warning.

"No, no," she said, pillowing her head on his shoulder, and shedding peaceful tears.

"It doesn't seem as if we should ever quarrel again, does it?"

"No, no! We never shall," she murmured.

"It has always come from my worrying you

about the law, and I shall never do that any more. If you like journalism better, I shall not urge you any more to leave it, now you've got your basis."

"But I'm going on with the law, now, for that very reason. I shall read law all my leisure time. I feel independent, and I shall not be anxious about the time I give, because I shall know that I can afford it."

"Well, only you mustn't overdo." She put her lips against his cheek. "You're more to me than anything you can do for me."

"Oh, Marcia!"

(To be continued.)

LECTURING IN TWO HEMISPHERES.

IN Great Britain there is no organized system of lecturing such as exists in America; no bureau, no lyceums, no habitual lecture-attending community. In this respect, as in many others, Old England is far behind this lusty, forward child of hers on the western side of the Atlantic. She has, indeed, a few organized lecture courses in her principal cities, such as those of the Royal Society and the London Institute in the metropolis, the Philosophical Institution in Edinburgh, and the Athenæum in Glasgow; and here and there a casual mechanics' institute may have a strictly local course; but there is no organized lecture machinery. When, after the Russo-Turkish war, I thought of taking to the stump, we searched in vain for precedents that would furnish some guide. There were the lecture tours of Thackeray and the reading tours of Dickens; but then Thackeray and Dickens were giants and I was but a pygmy. They had commanded audiences by the greatness of their reputations as well as by their genius; whereas I had but earned some casual prestige in perhaps the most precarious and ephemeral of all the fields of fame. Since the days of those Titans the lecture path had been deserted, and its very trail was overgrown. The manager with whom I was in treaty is a theatrical man, and he, in default of any sign-post, obeyed his theatrical instincts. I was to storm the country as if I had been a strong theatrical combination, condensed into the person of a very shy and mediocre man. There was to be an advance agent to secure the halls and bill the towns; another advance agent, a little later, to see that all the arrangements were in trim, and to talk to the newspaper men. I was to be

"personally conducted" by a smart manager, who took with him his own detachment of money-takers and ushers. The campaign began, and the auguries seemed favorable. The houses were always good, and for the most part crowded. After a fortnight of the country, I made a rush up to London. A friend had written to me of an eligible investment; and I was eager to embark in it some portion, at least, of the lecture-plunder. I hurried to the manager's office, in the full assurance that I should carry away a large check. The books had been duly made up, and the balance sheet on the fortnight's business showed: "Mr. Forbes, Dr. £5 6s. 9d.!"

This was not wholly satisfactory. Large as had been the receipts, the expenses had more than eaten them up. Men who have a "mission" are no doubt glad to lecture for nothing, and treat it as immaterial that they should even be a trifle out of pocket. "Apostles" take with them neither staff nor scrip, and dollars would only disturb their rapt absorption in æsthetic dreams. But I am not an "apostle"; I have no particular "mission," except to amuse, and, frankly, it seemed to me that, if I could lecture only at a loss, I would much rather not lecture at all. So the advance agents and the rest of the costly machinery were suppressed; circulars were sent out to local people, naming definite terms; and the tour was continued under much more favorable conditions. It lasted for six months; and after the Zulu War, I pillaged the country for six months longer. Then I came to America, and now I am zig-zagging toward Australia.

The varying strains of an *Æolian* harp, the cats'-paws that wind-flurries make on calm water, the moods of a child—all these are monotonous in comparison with the varieties in the behavior of lecture audiences. In Great Britain, audiences are fairly demonstrative; often almost boisterously so. If at the commencement something happens to catch their fancy, they will applaud clear through, and sometimes, indeed, embarrass the lecturer by applauding him in places where he wonders what on earth they find to be demonstrative about. American audiences are, for the most part, much more self-restrained and critical. They are silentest, perhaps, in New England. Almost the first time I spoke in America was in Worcester, Mass. I toiled on for half an hour, doing my best, but the audience gave no sign. When I looked out over it, I saw only a sea of cold, attentive faces, immobile alike to my efforts at pathos and at humor. Then I began to feel mean. "You are a poor stick," I said to myself, "and it is sheer impudence for you to stand upon a platform and pretend to be a lecturer. They have found you out to be a fraud; only they are too civil to hiss you, or to get up and go away!" Well, I know I very nearly went away myself. But I hardened my heart and got through somehow, the whole audience remaining to the bitter end. There was scarcely a hand-clap when I ended, and I quailed to encounter the secretary of the committee. But he was quite satisfied. "Our people are not demonstrative," he observed,—no, faith, I was well aware of that,—"but you held them to the last, and we shall all be glad to have you back again next year!" Very soon I learned that the criterion of an American audience's satisfaction is whether it goes away in the middle or remains to the end. For the American is a free man, and does not at all understand why he should sit out a performance that fails to interest him. But some American towns are quite lavish in their cordiality; and, what is strange, you will find two places, not ten miles apart, whereof the audience in one will be as cold as a stone, the other as warm as a live coal; so that local idiosyncrasy can have nothing to do with the matter. A Boston audience has the reputation of being the most coldly critical in the republic; but my personal experience is quite the contrary of this. Baltimore is exceptionally warm; so is Charleston, S. C.; so is Hartford, Conn., and warmest and most appreciative of all is Cincinnati. It is less trying for the lecturer to see before him coldly critical faces, than stolidly bewildered faces. The former may thaw into appreciation; at least, he is being followed with intelligence, if not with sympathy. But

the stolid faces are reflexes of the mind within, heavily asking the questions: "What in creation is the man talking about? Who was Sedan? Is Plevna a member of Congress? Is Ignatieff a town?" And then the dull ray of intelligence when Bismarck is mentioned, because the listener happens to know a town by that name up in Dakota!

Before setting out on my lecture campaign in America, I found a gentleman who bore to me a remarkable resemblance, and promptly engaged him as traveling agent to accompany me. The number of times that good man has been interviewed as Mr. Forbes! He understood the business thoroughly, having, indeed, once been an interviewer himself; he had no perceptible American accent, and I think he spent his spare moments in inventing pretty stories wherewith to fill the note-books of the omnivorous interviewer. In the personal resemblance there was a pleasant sense of the fitness of things that substitutes do not always afford. During a recent tour which Dr. William Howard Russell made in America with the Duke of Sutherland, I have heard that the famous war correspondent of the London "Times" sometimes saved his Grace from the interviewer by confronting that personage himself. But this gave rise to confusion. There are regions of America where it is implicitly believed that his Grace of Sutherland is a dapper little clean-shaved man, with an iron-gray mustache and hair to match, and with a very pronounced Irish accent. This is not, to say the least, wholly accurate. The Duke is a tall man, with a huge brown beard, and a very marked English pronunciation.

The loyalty of the Canadians to the British Crown is beautifully fervent; they would rather, I am sure, be torn limb from limb than suffer annexation to the United States. Indeed, I have some idea that, deep down in the Canadian heart, there lurks the notion of, one of these fine mornings, annexing the United States to Canada. A little Canadian town will fly more loyal bunting on the Queen's birthday than you can see, on the same auspicious occasion, in the whole of the mother country. In the provincial regions of Canada, it is the practice to conclude all public gatherings with singing "God save the Queen." In every community there is a champion vocalist, for whose powers this practice gives scope; and he springs to the chance as if he had found a nugget. But occasionally the champion vocalist is not on hand; he may be "under the weather," or behind the bars, or may not have a taste for the performance of the evening. Probably the latter cause had kept away the champion on one occasion which I remember. The chairman had duly

made the stereotyped announcement, "The audience will disperse, singing 'God save the Queen,'" but there was no response. There was no one present who dared to initiate the vocal performance. Here was a predicament! Obviously, the loyalty of the place would be compromised if the audience should disperse without fulfilling the behest! In despair, the chairman, isolated on the platform as he was, himself essayed to set the ball a-rolling. But, in the first place, he could not sing; in the second place, he didn't know the words; in the third place, as I learned afterward, he was not popular, and the audience rather enjoyed his discomfort. Valiantly he plunged into the breach. "God save our precious Queen!" came from him in an inharmonious strain; but he never got any further, and nobody would help him. He tried it again, but with the same untoward result; and then he turned and left the platform, "a sadder and a wiser man."

I remember a curious incident that happened in Canada in connection with the British national anthem. In one of my lectures I describe the pathetic abandonment of state ceremony at Sandringham, while the Prince of Wales lay sick there of what threatened so formidably to be a fatal illness. The audience listened spell-bound. I uttered the sentence: "The Queen strolled up and down in front of the house, unattended, in the brief interval she allowed herself from the sick-room." Suddenly came an interruption. A tall, gaunt figure in the crowd uprose, and, pointing at me a long finger on the end of a long arm, uttered the word "*Stop!*" Then, facing the audience, he exclaimed: "Ladies and gentlemen! This loyal audience will now sing 'God save the Queen!'" The audience promptly stood up and obeyed with genuine fervor, I meanwhile patiently waiting the finale of the interlude. When it had finished, I proceeded with my narrative, and, as a contrast to the sorrow of Sandringham, depicted the happy pageant in St. Paul's Cathedral on the thanksgiving-day for the Prince's recovery. It is the custom in Canada to propose a vote of thanks to the lecturer, and the chairman rose and uttered the usual formula. Again the tall, gaunt figure was on his legs. "Ladies and gentlemen," said he, "I rise to propose an amendment to the motion. I move that the lecturer be requested to repeat the portion of the lecture referring to our gracious sovereign." And repeat it I did.

Lecturing all over the habitable globe, one has often strange meetings, which go to prove how small a place, after all, this world of ours is. Up in Minnesota, a man came to me, after the lecture, and told me that he had once given me a thrashing in the old school-days—

a cheerful episode, which he succeeded in recalling to my somewhat reluctant memory. Once, in Canada, an old woman came to me, and told me that she had been my nurse in childhood, in the quiet rural parsonage in the old country. I also remember being received at the depot of an important American town by two gentlemen, one of whom told me that he was its mayor, and, further, that he had lived with me under my parental roof when we were both boys. To the latter statement I demurred. He must be in error, I said, for no one had ever lived with us except brothers and sisters. He re-asserted the statement, and I had no alternative but to repudiate it, for I believed that the recollection was of some one else. He had clearly been rather boasting to his companion of the familiarity; and, now that I was denying the statement, it was comic to note the disparaging air of suspicion with which his friend was coming to regard the worthy mayor. It was all sufficiently embarrassing to me, who was sure the man was wrong, and who, although I felt for him, could not assist him out of his dilemma. Finally, he snatched a moment, while his friend was looking the other way, to whisper to me behind his hand: "Mon, dinna ye mind me? I was the herd-laddie." A flood of revelation poured in on me, and next moment we had clasped hands. All was clear. He had not cared to tell his friend of the capacity in which he had, in truth, been an inmate of our homestead; but it was rather too much to expect me, in middle age, to carry about with me the memory of every member of a long succession of "herd-laddies."

In 1874, an emigrant ship was burned, on her voyage from England to New Zealand, and all on board perished, with the exception of the third mate and two seamen, who had kept alive, through long exposure in an open boat, by the terrible expedient of subsisting on the bodies of their comrades. I met the trio, on their return to England, and gathered from the lips of Macdonald, the mate, the full details of the ghastly story. I gave the poor wretch a sum of money for his information, and otherwise was of some service to him. He drifted away, and soon, in the turmoil of a campaign in Spain, I had forgotten altogether about the man who had told me that he had lived for ten days on human flesh, and owned, in his Scottish accent, that it "was no bad eatin', when once ye had gotten a bit used to it." Three or four years afterward, I chanced to be lecturing in Dundee. As I was leaving the hall, a man accosted me. "Mr. Forbes, ye'll no mind me?" I had to confess that I could not remember

him. He moved from one leg to the other in a curiously unsettled way, as if he were discussing to himself exactly in what relation he should recall himself; and, at length, in a hollow, gloomy voice, he said: "Mon, I'm the cannibal!"

A chairman is a very valuable strengthener of the lecturer's position; he gives him countenance and also confidence, in which latter quality you may have observed that most lecturers are very deficient. A chairman "bosses the show" generally, and furnishes the requisite finish to the *tout ensemble*. But there are chairmen and chairmen. It is not exactly agreeable, for instance, to be taken aside, by the gentleman to whom you have just been introduced as your chairman, and to listen to something like the following: "I have got to say a few words of introduction, you know; and I'm rather ashamed to say that I never heard of you before to-night. Just give me a little summary of your antecedents, will you? I've a vague notion you were in some war or other. Let me see, was it at Waterloo you were, or in the Crimea?" Then, there is the chairman who has a list of the season's course handed to him, and mistakes you for some other lecturer named therein. For instance, once, in New England, a chairman solemnly arose by my side, and said: "Ladies and gentlemen, allow me to present to you the lecturer of the evening, the Hon. Charles Bradlaugh, the celebrated English free-thinker and orator. It is possible that you may not agree with all he may utter, but I think I can promise him, from a New England audience, at least an attentive and patient hearing!"

But there are more terrible chairmen than even such a man as this. Once I was lecturing in a large town in the north of Ireland. My chairman was one of those civic knights with whom Ireland so much abounds—a comfortable, portly man of rotund exterior and pleasant manners. I had dined with him, and he had dined well and drunk well. He introduced me, and the lecture proceeded favorably. I was plowing away, right in the heart of my most pathetic passage,—a passage with the rendering of which I never was satisfied unless it made the audience weep, and in which I never felt I had achieved complete success unless it caused a lady or two to faint,—when, suddenly, I heard a titter, which presently swelled into a general guffaw. What! did the audience mean, then, deliberately to insult me? I paused in speechless indignation, and the laughter ceased, too. I recommenced, and still the tittering went on. This was too much. I again halted, and was turning to appeal to the chairman, when there fell on my ears the strange

sound of a prolonged and placid snore. My portly chairman was sound asleep! I, too, had to simulate amusement, and, thirsting for his blood, I smiled blandly as I went and stirred him up. He awoke, and smiled sweetly up in my face. "Where am I?" he asked, as Mr. Pickwick did in the wheelbarrow. Well, I recommenced, and so did he! Long before I had reached my next pathetic passage he was asleep again, and softly snoring. Pathos was wasted on this slumbrous gentleman, and I spent the rest of the hour, for the most part, in poking him up, amid the unrestrained laughter of the audience. If I knew a lecturer who was starting out with a comic lecture, about the success of which he had some doubt, I should advise him to secure a sleepy-headed chairman.

I may, perhaps, venture here to tell a little story about a lecturing experience of Mr. Stanley, the African explorer. When he had returned to England from that wonderful journey of his across the continent of Africa, and while he was writing his book, I suggested to a theatrical manager that he should propose to Mr. Stanley to make a lecturing tour through England, and tell the people of that country of his wonderful adventures. Stanley consented, and sallied forth. The tour was fairly successful. After some weeks' absence from London, Mr. Stanley returned for a few days, and his manager went to see him and ask him how the lecturing flourished. "Very well," said Stanley, "in a financial sense. The halls are always crowded when I begin; but, as I go on, the people go trickling out, till, at the end, I am left with only half an audience, and I don't like it. It seems to me they come to stare at me as if I were a gorilla, and, when they have stared their fill, they rise and go, not pretending to take any interest in what I am telling them." The manager suggested that, perhaps, he was too monotonous; that he ought to diversify his serious parts with some play of humor. But Stanley objected that there was no humor in his composition, which was quite true. "I'm not like Mark Twain or Artemus Ward," said he. "There is no fun in me, but only dead earnest." (This puts me in mind of the remark a Scotch ex-editor once made about the man who had succeeded him. "Aye," said he, candidly, "the new man is a much better man than me. It is true I can joke, but I joke with difficulty, whereas he jokes just spontaneous." Well, Stanley can't joke, either spontaneous or with difficulty.) Just then the manager heard a hideous howling, proceeding from the lower regions of the house. "What, in the name of Cæsar, is that noise?" asked the manager.

"Oh," said Stanley, "it's only my black boy, Kalulu, that I brought from the interior of Africa, you know. He's singing one of his confounded war-songs while he polishes my boots."

A bright thought occurred to the manager.

"Have him up," he exclaimed, "and let us hear him."

Kalulu was summoned, and, nothing loath, gave his war-song and its accompanying wild dance, in their native, blood-curdling horror. In fact, he wanted to go on war-dancing and war-singing all day, and was with difficulty suppressed, after breaking most of the furniture, and was sent back to his boots.

"Now," said the manager, with the acumen of a showman, "here is your chance for the introduction of a diversion. About the middle of your lecture lead up to and introduce one of Kalulu's war-dances and songs, and say that the lecture will conclude with another exhibition!"

Stanley agreed, and the necessary intimation was duly given in the advertisements. Some weeks later, Stanley returned again to London, and the manager went to see him.

"Oh, yes," said Stanley, "the audiences stop right through to the end. By the way, you'd better alter that advertisement. It runs now: 'Lecture by Mr. Stanley on South Africa, with War-dance and Song by his Native Boy, Kalulu, in the middle and again at the conclusion.' You had better have it changed to this, I think: 'A South-African Concert by Kalulu, Mr. H. M. Stanley's Black Boy, accompanied by War-dances, with an Introduction and some Explanations by Mr. Stanley.' You see," continued Stanley, moodily, "the crowd keeps on encoring Kalulu's first performance till the time comes for the second; when I try to get a little show, they won't have me, but put me down with wild shouts for 'Kalulu! Kalulu!'"—which evidence of bad taste hurt Stanley's sense of self-esteem, and he felt quite jealous of poor Kalulu, who, however, soon died, partly of over-zeal for his war-dancing and singing, partly because he was too fond of rum.

A somewhat similar experience once befell myself. I was duly engaged to lecture in a small town in the western part of New York State. On the journey I happened to notice, occupying a seat in the same car with me, a very handsome woman, rather of the Spanish type of beauty. When I reached my destination, she appeared to have reached hers also. We got out together. The local secretary introduced himself to me on the platform, giving his name as my correspondent, and we seated ourselves together in the hotel-

omnibus. The lady followed, with rather a bewildered aspect, and presently, addressing the secretary, said: "Mr. —, I am Madame Serena." It was an awkward moment for the secretary. I was on my right date in the local lecture course, and the lady, who was a well-known *pianiste*, had been secured for the succeeding entertainment; but in writing to her, the secretary had heedlessly assigned to her my date. So here she was, with his letter in her hand to prove that the error was not hers; and here I was, too, iron-clad in my contract. What was to be done? The committee held a meeting, and the secretary came to me, and asked whether I would have any objections that the lady should play for a quarter of an hour before I began to lecture, that I should make an interval of a quarter of an hour in the middle, which she should fill up, the evening to conclude with a final quarter of an hour of piano-forte music. Of course, I consented, but to this day that New York town has not heard the latter half of that lecture! It endured me, as I thought with some reluctance, after the musical overture; but it would have none of me after the interlude. The gifted *pianiste* had to prolong her interlude till it merged in her finale; and I am quite sure I enjoyed listening to her more than talking myself. Only it would have done the audience good to have heard the latter half of that lecture!

It is bad enough to realize that you are a failure; but it is quite too harrowing to be told so to your face, and all the more harrowing when your informant does not know whom he is addressing. Once, long ago, I gave an isolated lecture in Manchester, on the Carlist war in Spain, from which I had recently returned. It was a poor subject, it was a bad lecture, and it was a worse lecturer. I felt rather miserable as I stood in the auditorium, trying to converse with the secretary while the fag end of the audience slowly dispersed. A young gentleman sauntered up and, not recognizing me as the lecturer, addressed the secretary. "Inferribly poor lecture," this friendly creature observed. "Don't you think so?" he asked of the secretary. That official remained dumb in embarrassment. "Don't you think so, sir?" said he, addressing me. "I quite agree with you," was my reply, made in sad truth. "Of course it was," he continued. "We all know the fellow can write first-rate; but he ought to stick to his pen, and not try to lecture, for he can't lecture worth a blank! Isn't that so, sir?" again addressing me, as a previous sympathizer. Again I expressed agreement with him, and he was proceeding with detailed criticism of an emphatic character, when the

secretary, in a cold perspiration, clutched hold of him, dragged him to one side, and whispered something to him. The next thing I saw of the frank and ingenuous critic was his fluttering coat-tails, as he dashed headlong from the hall. He could not rally himself even to apologize; and, besides, what had he to apologize for?

Law-suits are unpleasant things, and I would counsel every one to shun them as he would a snake. I have had but one in my life, and that was about a lecture. Can any one tell exactly how long a lecture ought to last? Very few people know that there is a legal decision on this important point; that decision was given in the course of this lawsuit in which I was involved. The trouble occurred in the town of Newport, in Monmouthshire, England. I was to lecture there, as it might be to-night, and I had promised Mrs. M——, the wife of the famous painter, to be present at the marriage of her daughter to an old Zuluwar comrade of mine, on the following morning in a church in the west end of London. I could only accomplish this by leaving Newport, after the lecture, by a train stopping at that place at 9:35 P. M. The lecture-hour was eight, the lecture would last an hour and a half, and I would have just five minutes to drive to the station and catch the train. Now, in South Wales punctuality is not a virtue with audiences; the chairman has a habit of making a speech when introducing the lecturer, and when the lecture is finished there is a vote of thanks to the lecturer and then to the chairman, all of which prolongs the performance to two hours. My plan was to begin at eight, tell the chairman to make no speech, and escape before the votes of thanks. I sent an intimation to the local agent to advertise punctual commencement, explaining my object. I reached Newport, dressed, and was sitting, waiting for the time to go to the hall, when my secretary rushed in with the tidings that the local agent would not consent to the arrangement I had suggested, and had told him he would not pay the fee unless the full ordinary programme was leisurely gone through. I at once went across, told the agent the lecture was advertised punctually for eight; that I would begin at that hour, would speak for an hour and a half, and that then I would have done my part and would go. He replied that in that case he would not pay the fee. Now, I should have carried out my programme, and so put him in the wrong; but I lost my temper for the moment, quietly said, "Then in that case I shall not lecture," and left the place.

When I drove up to the depot, an hour and a half later, an angry mob occupied the

platform, and the local agent was haranguing it and denouncing me. I got the most plentiful abuse. I had outraged the people of Newport, was bellowed at me, and there were threats of lynching me. Fists were flourished in my face, and every moment I expected to be attacked. When the train came up and I entered the carriage, a shower of mud and small stones broke the window and bespattered me. I duly attended the marriage, and, feeling that I had not acted with full consideration for my audience, I telegraphed the mayor of Newport that I would give a free lecture for the benefit of the local charities, which offer was accepted. A good sum was realized for the town infirmary, and I was reinstated in the good graces of Newport.

But the local agent went to law with me. He sued me for his expenses out of pocket, and concluded, besides, for one hundred pounds in the name of lost profits. The trial came off at the next South Wales assizes. His contention was that he was acting in the interests of the Newport people in prohibiting the curtailment of the lecture. Mine was that the lecture hour was eight, and that my lecture was only an hour and a half long; when the proceedings were protracted, it was because of unpunctuality and other people's oratory. In proof of my assertion I offered to read my lecture to the court, but the jury visibly shuddered, and the judge said life was too short for this kind of evidence. However, he summed up in my favor, and the jury followed his lead; so that I won my only law-suit. The plaintiff appealed to a higher court in London, and the case came on before Lord Coleridge, who made very short work of the matter.

"It is acknowledged," said he, "by the defendant that his lecture is an hour and a half long, and it seems the plaintiff wanted it longer. Now I hold," he continued, "that any lecture is a common nuisance that lasts longer than an hour, and so I dismiss the appeal."

At Newport I was threatened with violence because I had not lectured. Once, at Cork, in the south of Ireland, I was threatened with personal violence if I dared to lecture. Years before, when poor John Mitchell came back from America as the member-elect for Tipperary, and when the election was declared void because Mitchell was still under the sentence of felony, I had visited Ireland in a journalistic capacity. The scenes I witnessed were so full of humor that I could not refrain from describing them in my newspaper in a strain of badinage, and as Irishmen—who like nothing so well as to make jokes at

other people's expense—do not relish fun made of themselves, I became the temporary object of popular indignation. But I had thought all this interlude of nonsense had long been forgotten, and I journeyed serenely to Cork to lecture in its theater. On arriving, I found the dead-walls beplastered with the placard: "Men of Cork! The traducer of John Mitchell is among you to-night. You know how to receive him!" This did not greatly scare me, because I had no idea it was meant seriously, and, at the appointed hour, I betook myself to the theater. Long before I reached the stage-door, I heard the clamor inside. Behind, I found panic and demoralization raging. There was nobody to receive me, and only one old fellow in charge of the stage. I prevailed on him to find a table and a chair; then he and I pulled up the curtain, and I walked out from the wing upon the stage, alone and unbefriended. The crowd in the front had been amusing themselves by singing a doggerel ditty containing unpleasant allusions to myself, and by yelling their anxiety that England should be relegated to an unpleasantly warm region. My appearance was the signal for a howl that made the roof tremble. I bowed, pretending to mistake the clamor for a greeting of vociferous friendliness, and, opening my manuscript, essayed to commence. I never got beyond the first three words. The place became a bedlam of din; so I bowed and sat down, looking out blandly on the turmoil. The people in the stalls and the dress circle, who were friendly to me, were clapping their hands vigorously. The pit and the gallery were yelling down this demonstration, and yelling me down as well, with a fervor that did credit to their lungs. After twenty minutes of this turmoil there was a lull of exhaustion, of which I took advantage to stand up and try to begin again. But it had not been exhaustion—only temporary cessation. The moment I rose, the din recommenced worse than ever. I stood silent for a while, till some eggs began to whiz past my ears. It occurred to me that I had given the enterprise a fair trial, and that the eggs were rather a polite hint that it was time to go and own myself foiled. So I made a polite bow and leisurely withdrew, followed by a howl of triumph to which the previous noises had been child's play. I found chaos raging behind the scenes. The directors of the theater had turned up by this time, mad with impotent fury. "Bedad," cried one, "I'll have the place cleared at the point of the bayonet!" "Why," replied I, "the people have broken no law. They are only expressing their sentiments, which they have a perfect right to do." But, all the same, he sent for the lieutenant of

police, and requested him to clear the building. The lieutenant took my view, and declined to act. Then it was proposed that the manager should go on and appeal to the audience to be reasonable. I ventured to express my opinion that such an appeal would have no effect, and that it might as well be accepted at once that a continuation was not possible. The manager's wife was on hand, and she flung herself around her husband in an excess of frantic terror. "Oh, S——, S——!" she shrieked, "sure ye mustn't face the blagyuards. They'll kill my S——! They'll massacre ye, and tear ye limb from limb!" But, nevertheless, the manager went on, only to return very pale, with one rotten egg on his hat, and another in the bosom of his shirt. Then I went away. A young gentleman with a revolver in his hand offered to escort me. I declined the escort, and bade him put up his weapon. I know the Irish people; they bear no malice, and they become good-humored when they have gained their point. I walked out through the throng in the lobby, quite alone; and, so far from being molested, I was actually cheered. In Cork, they like a man to show that he is not afraid of them. There was a crowd at the depot when I left, two hours later, and as I drove up alone, the throng was quite demonstrative in its sudden friendliness. I might have lectured in Cork the following evening without encountering a single hiss.

There is in America a considerable proportion of colored population; but the "colored folk" are not in any appreciable number among lecture audiences; indeed, I do not remember ever to have noticed a colored listener. On one occasion, however, I had reason to anticipate this pleasure. Arriving one afternoon at the station of a little town in Pennsylvania, I handed my valise to a colored man who offered to take it, and told him I would walk up to the hotel. I was standing at the hotel counter, talking with the local agent, when he arrived with the valise.

"What shall I give you, George?" was my question.

"D'know, boss," said he, in a bashful, winning way, "I'd like a ticket to the leckchaw to-night pow'ful!"

This was indeed a touching compliment, and at my request the local agent gave him a pass. I was so full of complacency that I asked the man whether he had a wife.

"Wife? Yes, boss, I've got a wife, an' I'm sho' she'd like a ticket too!"

A ticket was handed him for the wife, and he departed, grateful; but when lecture-time came, I searched the audience in vain for a

colored man or a colored woman. Next morning, George duly turned up to carry my valise down to the station.

"I didn't see you at the lecture last night," I ventured to observe.

"Leckchaw!" retorted George, with un-

disguised contempt. "Psha! I don't shin around no leckchaws! Why, I traded off them 'ere tickets for twenty-fi' cents!"

And away he tramped with the valise, mumbling depreciatory comments in reference to "leckchaws."

Archibald Forbes.

THE STREET OF THE HYACINTH.

BY CONSTANCE FENIMORE WOOLSON,

Author of "Rodman the Keeper," "Anne," etc.

IN TWO PARTS:—I.

It was a street in Rome, narrow, winding, not over-clean. Two vehicles, meeting there, could pass only by grazing the doors and windows on either side, after the usual excited whip-cracking and shouts which make the new-comer imagine, for his first day or two, that he is proceeding at a perilous speed through the sacred city of the soul.

But two vehicles did not often meet in the street of the Hyacinth. It was not a thoroughfare, not even a convenient connecting link; it skirted the back of the Pantheon, the old buildings on either side rising so high against the blue that the sun never came down lower than the fifth line of windows, and looking up from the pavement was like looking up from the bottom of a well. There was no foot-walk, of course; even if there had been one no one would have used it, owing to the easy custom of throwing from the windows a few ashes, and other light trifles, for the city refuse-carts, instead of carrying them down the long stairs to the door below. They must be in the street at an appointed hour, must they not? Very well, then—there they were; no one but an unreasonable foreigner would dream of objecting.

But unreasonable foreigners seldom entered the street of the Hyacinth. There were, however, two who lived there, one winter not long ago; and upon a certain morning in the January of that winter a third came to see these two. At least he asked for them, and gave two cards to the Italian maid who answered his ring; but when, before he had time to even seat himself, the little curtain over the parlor door was raised again, and Miss Macks entered, she came alone. Her

mother did not appear. The visitor was not disturbed by being obliged to begin conversation immediately; he was an old Roman sojourner, and had stopped fully three minutes at the end of the fourth flight of stairs to regain his breath, before he mounted the fifth and last to ring Miss Macks's bell. Her card was tacked upon the door: "Miss Ettie F. Macks." He surveyed it with disfavor, while the little, loose-hung bell rang a small but exceedingly shrill and ill-tempered peal, like the barking of a small cur. "Why in the world doesn't she put her mother's card here, instead of her own?" he said to himself. "Or, if her own, why not simply 'Miss Macks,' without that nickname?"

But Miss Macks's mother had never possessed a visiting-card in her life. Miss Macks was the visiting member of the family; and this was so well understood at home, that she had forgotten that it might not be the same abroad. As to the "Ettie," having been called so always, it had not occurred to her to make a change. Her name was Ethelinda Faith, Mrs. Macks having thus combined euphony and filial respect—the first title being her tribute to æsthetics, the second her tribute to the memory of her mother.

"I am so very glad to see you, Mr. Noel," said Miss Macks, greeting her visitor with much cordial directness of voice and eyes. "I have been expecting you. But you have waited so long—three days!"

Raymond Noel, who thought that, under the circumstances, he had been unusually courteous and prompt, was rather surprised to find himself thus put at once upon the defensive.

"We are not always able to carry out

our wishes immediately, Miss Macks," he replied, smiling a little. "I was hampered by several previously made engagements."

"Yes; but this was a little different, wasn't it? This was something important—not like an invitation to lunch or dinner, or the usual idle society talk."

He looked at her; she was quite in earnest.

"I suppose it to be different," he answered. "You must remember how little you have told me."

"I thought I told you a good deal! However, the atmosphere of a reception is no place for such subjects, and I can understand that you did not take it in. That is the reason I asked you to come and see me, here. Shall I begin at once? It seems rather abrupt."

"I enjoy abruptness; I have not heard any for a long time."

"That I can understand, too; I suppose the society here is all finished off—there are no rough ends."

"There are ends. If not rough, they are often sharp."

But Miss Macks did not stop to analyze this; she was too much occupied with her own subject.

"I will begin immediately, then," she said. "It will be rather long; but, if you are to understand me, you ought of course to know the whole."

"My chair is very comfortable," replied Noel, placing his hat and gloves on the sofa near him, and taking an easy position with his head back.

Miss Macks thought that he ought to have said, "The longer it is, the more interesting," or something of that sort. She had already described him to her mother as "not over-polite. Not rude in the least, you know—as far as possible from that; wonderfully smooth-spoken; but yet, somehow—awfully indifferent." However, he was Raymond Noel; and that, not his politeness or impoliteness, was her point.

"To begin with, then, Mr. Noel, a year ago I had never read one word you have written; I had never even heard of you. I suppose you think it strange that I should tell you this so frankly; but, in the first place, it will give you a better idea of my point of view; and, in the second, I feel a friendly interest in your taking measures to introduce your writings into the community where I lived. It is a very intelligent community. Naturally, a writer wants his articles read. What else does he write them for?"

"Perhaps a little for his own entertainment," suggested her listener.

"Oh, no! He would never take so much trouble just for that."

"On the contrary, many would take any amount, just for that. Successfully to entertain oneself—that is one of the great successes of life."

Miss Macks gazed at him; she had a very direct gaze.

"This is just mere talk," she said, not impatiently, but in a business-like tone. "We shall never get anywhere if you take me up so. It is not that your remarks are not very cultivated and interesting, and all that; but simply that I have so much to tell you."

"Perhaps I can be cultivated and interesting dumbly. I will try."

"You are afraid I am going to be diffuse; I see that. So many women are diffuse! But I shall not be, because I have been thinking for six months just what I should say to you. It was very lucky that I went with Mrs. Lawrence to that reception where I met you. But, if it had not happened as it did, I should have found you out all the same. I should have looked for your address at all the bankers', and, if it was not there, I should have inquired at all the hotels. But it was delightful luck getting hold of you in this way, almost the very minute I enter Rome!"

She spoke so simply and earnestly that Noel did not say that he was immensely honored, and so forth, but merely bowed his acknowledgments.

"To go back. I shall give you simply heads," pursued Miss Macks. "If you want details, ask, and I will fill them in. I come from the West. Tuscolee Falls is the name of our town. We had a farm there, but we did not do well with it after Mr. Spurr's death, so we rented it out. That is how I come to have so much leisure. I have always had a great deal of ambition; by that I mean that I did not see why things that had once been done could not be done again. It seemed to me that the point was—just determination. And then, of course, I always had the talent. I made pictures when I was a very little girl. Mother has them still, and I can show them to you. It is just like all the biographies, you know. They always begin in childhood, and astonish the family. Well, I had my first lessons from a drawing-teacher who spent a summer in Tuscolee. I can show you what I did while with him. Then I attended, for four years, the Young Ladies' Seminary in the county-town, and took lessons while there. I may as well be perfectly frank and tell the whole, which is that everybody was astonished at my progress, and that I was myself. All sorts of things are prophesied out there about my future. You see, the neighborhood is a very generous-spirited one, and they like to think they have discovered a genius

at their own doors. My telling you all this sounds, I know, rather conceited, Mr. Noel. But if you could see my motive, and how entirely without conceit my idea of myself really is, you would hold me free from that charge. It is only that I want you to know absolutely the whole."

"I quite understand," answered her visitor.

"Well—I hope you do. I went on at home, after that, by myself, and I did a good deal. I work pretty rapidly, you see. Then came my last lessons, from a third teacher. He was a young man from New York. He had consumption, poor fellow! and cannot last long. He wasn't of much use to me in actual work. His ideas were completely different from those of my other teachers, and, indeed, from my own. He was unreliable, too, and his temper was uneven. However, I had a good deal of respect for his opinion, and *he* told me to get your art-articles and read them. It wasn't easy. Some of them are scattered about in the magazines and papers, you know. However, I am pretty determined, and I kept at it until I got them all. Well, they made a great impression upon me. You see, they were new." She paused. "But I doubt, Mr. Noel, whether we should ever entirely agree," she added, looking at him reflectively.

"That is very probable, Miss Macks."

Miss Macks thought this an odd reply. "He is so queer, with all his smoothness!" she said to her mother afterward. "He never says what you think he will say. Now, any one would suppose that he would have answered that he would try to make me agree, or something like that. Instead, he just gave it right up, without trying! But I expect he sees how independent I am, and that I don't intend to *reflect* any one."

"Well, they made a great impression," she resumed. "And as you seemed to think, Mr. Noel, that no one could do well in painting who had not seen and studied the old pictures over here, I made up my mind to come over at any cost, if it was a possible thing to bring it about. It wasn't easy, but—here we are. In the lives of all—almost all—artists, I have noticed—haven't you?—that there comes a time when they have to live on hope and their own pluck, more than upon anything tangible that the present has to offer. They have to take that risk. Well, I have taken it; I took it when we left America. And now I will tell you what it is I want from *you*. I haven't any hesitation in asking, because I am sure you will feel interested in a case like mine, and because it was your writings really that brought me here, you know. And so, then, first: I would like your opinion of all

that I have done, so far. I have brought everything with me to show you. Second: I want your advice as to the best teacher; I suppose there is a great choice in Rome. Third: I should be glad if you would give a general oversight to all I do, for the next year. And last, if you would be so kind, I should much enjoy making visits with you to all the galleries and hearing your opinions again by word of mouth, because that is always so much more vivid, you know, than the printed page."

"My dear Miss Macks! you altogether overestimate my powers," said Noel, assuaged by these far-reaching demands, so calmly and confidently made.

"Yes, I know. Of course it strikes you so—strikes you as a great compliment that I should wish to put myself so entirely in your hands," answered Miss Macks, smiling. "But you must give up thinking of me as the usual young lady; you must not think of me in that way any more than I shall think of you as the usual young gentleman. You will never meet me at a reception again; now that I have found *you*, I shall devote myself entirely to my work."

"An alarming girl!" said Noel to himself. But, even as he said it, he knew that, in the ordinary acceptance of the term at least, Miss Macks was not alarming.

She was twenty-two; in some respects she looked older, in others much younger, than most girls of that age. She was tall, slender, erect, but not especially graceful. Her hands were small and finely shaped, but thin. Her features were well cut; her face oval. Her gray eyes had a clear directness in their glance, which, combined with the other expressions of her face, told the experienced observer at once that she knew little of what is called "the world." For, although calm, it was a deeply confident glance; it showed that the girl was sure that she could take care of herself, and even several others, also, through any contingencies that might arise. She had little color; but her smooth complexion was not pale—it was slightly brown. Her mouth was small, her teeth small, and very white. Her light-brown hair was drawn back smoothly from her forehead, and drawn up smoothly behind, its thickness braided in a close knot on the top of her head. This compact coiffure, at a time when most feminine foreheads in Rome and elsewhere were shaded almost to the eyebrows by curling locks, and when the arched outline of the head was left unbroken, the hair being coiled in a low knot behind, made Miss Macks look somewhat peculiar. But she was not observant of fashion's changes. That had been the mode in Tuscolee; she had grown

accustomed to it; and, as her mind was full of other things, she had not considered this one. One or two persons, who noticed her on the voyage over, said to themselves, "If that girl had more color, and if she was graceful, and if she was a little more womanly,—that is, if she would not look at everything in such a direct, calm, impartial, impersonal sort of way,—she would be almost pretty."

But Miss Macks continued without color and without grace, and went on looking at things as impersonally and impartially as ever.

"I shall be most happy, of course, to do anything that I can," Noel had answered. Then to make a diversion, "Shall I not have the pleasure of seeing Mrs. Macks?" he asked.

"Mrs. Macks? Oh, you mean mother. My mother's name is Spurr—Mrs. Spurr. My father died when I was a baby, and, some years afterward, she married Mr. Spurr. She is now again a widow. Her health is not good, and she sees almost no one, thank you."

"I suppose you are much pleased with the picturesqueness of Roman life, and—ah—your apartment?" he went on.

"Pleased?" said Miss Macks, looking at him in wonder. "With our apartment? We get along with it because we must; there seems to be no other way to live, in Rome. The idea of having only a story of a house, and not a whole house to ourselves, is dreadful to mother; she cannot get used to it. And, with so many families below us,—we have a clock-mender, a dress-maker, an engraver, a print-seller, and a cobbler,—and only one pair of stairs, it does seem to me dreadfully public."

"You must look upon the stair-way as a street," said Noel. "You have established yourselves in a very short time."

"Oh, yes. I got an agent, and looked at thirty places the very first day. I speak Italian a little, so I can manage the housekeeping; I began to study it as soon as we thought of coming, and I studied hard. But all this is of secondary importance; the real thing is to get to work. Will you look at my paintings now?" she said, rising as if to go for them.

"Thanks; I fear I have hardly time to-day," said Noel. He was thinking whether it would be better to decline clearly and in so many words the office she had thrust upon him, or trust to time to effect the same without an open refusal. He decided upon the latter course; it seemed the easier, and also the kinder to her.

"Well,—another day, then," said Miss Macks, cheerfully, taking her seat again. "But about a teacher?"

"I hardly know ——"

"Oh, Mr. Noel! you *must* know."

And, in truth, he did know. It came into his mind to give her the name of a good teacher, and then put all further responsibilities upon him.

Miss Macks wrote down the name in a clear, ornamental handwriting.

"I am glad it isn't a foreigner," she said. "I don't believe I should get on with a foreigner."

"But it is a foreigner."

"Why, it's an English name, isn't it? Jackson."

"Yes, he is an Englishman. But isn't an Englishman a foreigner in Rome?"

"Oh, you take that view? Now, to me, America and—well, yes, perhaps England, too, are the nations. Everything else is foreign."

"The English would be very much obliged to you," said Noel, laughing.

"Yes, I know I am more liberal than most Americans; I really like the English," said Miss Macks, calmly. "But we keep getting off the track. Let me see—Oh, yes. As I shall go to see this Mr. Jackson this afternoon, and as it is not likely that he will be ready to begin to-morrow, will you come then and look at my pictures? Or would you rather commence with a visit to one of the galleries?"

Raymond Noel was beginning to be amused. If she had shown the faintest indication of knowing how much she was asking,—if she had betrayed the smallest sign of a desire to secure his attention as Raymond Noel personally, and not simply the art-authority upon whom she had pinned her faith,—his disrelish for various other things about her would have been heightened into utter dislike, and it is probable that he would never have entered the street of the Hyacinth again. But she was so unaware of any intrusion, or any exorbitance in her demands, probably so ignorant of—certainly so indifferent to—the degree of perfection (perfection of the most quiet kind, however) visible in the general appearance and manner of the gentleman before her, that (he said to himself) he might as well have been one of her own Tuscolee farmers, for all she knew to the contrary. The whole affair was unusual; and Noel rather liked the unusual, if it was not loud—and Miss Macks was, at least, not loud; she was dressed plainly in black, and she had the gift of a sweet voice, which, although very clear, was low-toned. Noel was an observer of voices, and he had noticed hers the first time he heard her speak. While these thoughts were passing through his mind, he was answering that he feared his engagements for the next day would, unfortunately, keep him from putting himself at her service.

Her face fell; she looked much disappointed.

"Is it going to be like this all the time?" she asked, anxiously. "Are you always engaged?"

"In Rome, in the winter, one generally has small leisure. It will be the same with you, Miss Macks, when you have been here a while longer; you will see. As to the galleries, Mr. Jackson has a class, I think, and probably the pupils will visit them all, under his charge; you will find that very satisfactory."

"But I don't want Mr. Jackson for the galleries; I want *you*," said Miss Macks. "I have studied your art-criticisms until I know them by heart, and I have a thousand questions to ask about every picture you have mentioned. Why, Mr. Noel, I came to Europe to see you!"

Raymond Noel was rather at a loss what to answer to this statement, made by a girl who looked at him so soberly and earnestly with clear gray eyes. It would be of no avail again to assure her that his opinions would be of small use to her; as she had said herself, she was very determined, and she had made up her mind that they would be of great use, instead of small. Her idea must wear itself out by degrees. He would try to make the degrees easy. He decided that he would have a little private talk with Jackson, who was a very honest fellow; and, for the present, he would simply take leave.

"You are very kind," he said, rising. "I appreciate it, I assure you. It has made me stay an unconscionable time. I hope you will find Rome all you expected, and I am sure you will; all people of imagination like Rome. As to the galleries, yes, certainly; a—ah—little later. You must not forget the various small precautions necessary here as regards the fever, you know."

"Rome will not be at all what I expected if *you* desert me," answered Miss Macks, paying no attention to his other phrases. She had risen, also, and was now confronting him at a distance of less than two feet; as she was tall, her eyes were not much below the level of his own.

"How can a man desert when he has never enlisted?" thought Noel, humorously. But he kept his thought to himself, and merely replied, as he took his hat: "Probably you will desert me; you will find out how useless I am. You must not be too hard upon us, Miss Macks; we Americans lose much of our native energy if we stay long over here."

"Hard?" she answered,—"hard? Why, Mr. Noel, I am absolutely at your feet!"

He looked at her, slightly startled, although his face showed nothing of it; was she, after all, going to——? But no; her

sentence had been as impersonal as those which had preceded it.

"All I said about having contrary opinions, and all that, amounts to nothing," she went on, thereby relieving him from the necessity of making reply. "I desire but one thing, and that is to have you guide me. And I don't believe you are really going to refuse. You haven't an unkind face, although you *have* got such a cold way! Why, think of it: here I have come all this long distance, bringing mother, too, just to study, and to see you. I shall study hard; I have a good deal of perseverance. It took a good deal to get here in the first place, for we are poor. But I don't mind that at all; the only thing I should mind, the only thing that would take my courage away, would be to have you desert me. In all the troubles that I thought might happen, I assure you, I never once thought of *that*, Mr. Noel. I thought of course you would be interested. Why, in your books you are all interest. Are you different from your books?"

"I fear, Miss Macks, that writers are seldom good illustrations of their own doctrines," replied Noel.

"That would make them hypocrites. I don't believe you are a hypocrite. I expect you have a habit of running yourself down. Many gentlemen do that, and then they think they will be cried up. I don't believe you are going to be unkind; you *will* look at the pictures I have brought with me, wont you?"

"Mr. Jackson's opinion is worth a hundred of mine, Miss Macks; my knowledge is not technical. But, of course, if you wish it, I shall take pleasure in obeying." He added several conventional remarks as filling-up, and then, leaving his compliments for "your mother,"—he could not recall the name she had given,—he went toward the little curtained door.

She had brightened over his promise.

"You will come Monday, then, to see them, wont you?—as you cannot come to-morrow," she said, smiling happily.

When she smiled (and she did not smile often), showing her little white, child-like teeth, she looked very young. He was fairly caught, and answered, "Yes." But he immediately qualified it with a "That is, if it is possible."

"Oh, *make* it possible," she answered, still smiling and going with him herself to the outer door, instead of summoning the maid. The last he saw of her she was standing in the open door-way, her face bright and contented, watching him as he went down. He did not go to see her pictures on the following Monday; he sent a note of excuse.

Some days later he met her.

"Ah, you are taking one of the delightful walks?" he said. "I envy you your first impressions of Rome."

"I am not taking a walk—that is, for pleasure," she answered. "I am trying to find some vegetables that mother can eat; the vegetables here are so foreign! You don't know how disappointed I was, Mr. Noel, when I got your note. It was such a setback! Why couldn't you come right home with me now—that is, after I have got the vegetables—and see the pictures? It wouldn't take you fifteen minutes."

It was only nine o'clock, and a beautiful morning. He thought her such a novelty, with her urgent invitations, her earnest eyes, and her basket on her arm, that he felt the impulse to walk beside her a while through the old streets of Rome; he was very fond of the old streets, and was curious to see whether she would notice the colors and outlines that made their picturesqueness. She noticed nothing but the vegetable-stalls, and talked of nothing but her pictures.

He still went on with her, however, amused by the questions she put to the vegetable-dealers (questions compiled from the phrase-books), and the calm contempt with which she surveyed the Roman artichokes they offered. At last, she secured some beans, but of sadly Italian aspect, and Noel took the basket. He was much entertained by the prospect of carrying it home. He remarked to himself that, of all the various things he had done in Rome, this was the freshest. They reached the street of the Hyacinth and walked down its dark center.

"I see you have the sun," he said, looking up.

"Yes; that is the reason we took the top floor. We will go right up. Everything is ready."

He excused himself.

"Some other time."

They had entered the dusky hall-way. She looked at him without replying; then held out her hand for the basket. He gave it to her.

"I suppose you have seen Mr. Jackson?" he said, before taking leave.

She nodded, but did not speak. Then he saw two tears rise in her eyes.

"My dear young lady, you have been doing too much! You are tired. Don't you know that that is very dangerous in Rome?"

"It is nothing. Mother has been sick, and I have been up with her two nights. Then, as she did not like our servant, I dismissed her, and as we have not got any one else yet, I have had a good deal to do. But

I don't mind that at all, beyond being a little tired; it was only your refusing to come up, when it seemed so easy. But, never mind; you will come another day." And, repressing the tears, she smiled faintly, and held out her hand for good-by.

"I will come now," said Noel. He took the basket again, and went up the stairs. He was touched by the two tears, but, at the same time, vexed with himself for being there at all. There was not one chance in five hundred that her work was worth anything; and, in the four hundred and ninety-nine, pray what was he to say?

She brought him everything. They were all in the four hundred and ninety-nine. In his opinion, they were all extremely and essentially bad.

It was one of Raymond Noel's beliefs that, where women were concerned, a certain amount of falsity was sometimes indispensable. There were occasions when a man could no more tell the bare truth to a woman than he could strike her; the effect would be the same as a blow. He was an excellent evader when he chose to exert himself, and he finally got away from the little high-up apartment without disheartening or offending its young mistress, and without any very black record of direct untruth—what is more, without any positive promise as to the exact date of his next visit. But all this was a good deal of trouble to take for a girl he did not know or care for.

Soon afterward he met, at a small party, Mrs. Lawrence.

"Tell me a little, please, about the young lady to whom you presented me at Mrs. Dudley's reception—Miss Macks," he said, after some conversation.

"A little is all I can tell," replied Mrs. Lawrence. "She brought a letter of introduction to me from a far-away cousin of mine, who lives out West somewhere, and whom I have not seen for twenty years; my home, you know, is in New Jersey. How they learned I was in Rome I cannot imagine; but, knowing it, I suppose they thought that Miss Macks and I would meet, as necessarily as we should if together in their own village. The letter assures me that the girl is a great genius; that all she needs is an opportunity. They even take the ground that it will be a privilege for me to know her! But I am mortally tired of young geniuses; we have so many here in Rome! So, I told her at once that I knew nothing of modern art,—in fact, detested it,—but that, in any other way, I should be delighted to be of use. And I took her to Mrs. Dudley's *omnium gatherum*."

"Then you have not been to see her?"

"No; she came to see me. I sent cards, of course; I seldom call. What did you think of her?"

"I thought her charming," replied Noel, remembering the night-vigils, the vegetables, the dismissed servant, and the two tears of the young stranger,—remembering, also, her extremely bad pictures.

"I am glad she has found a friend in you," replied Mrs. Lawrence. "She was very anxious to meet you; she looks upon you as a great authority. If she really has talent—of course *you* would know—you must tell me. It is not talent I am so tired of, but the pretense of it. She struck me, although wofully unformed and awkward, of course, as rather intelligent."

"She is intelligence personified," replied Noel, qualifying it mentally with "intelligence without cultivation." He perceived that the young stranger would have no help from Mrs. Lawrence, and he added to himself: "And totally inexperienced purity alone in Rome." To be sure, there was the mother; but he had a presentiment that this lady, as guardian, would not be of much avail.

The next day he went down to Naples for a week, with some friends. Upon his return he stopped at Horace Jackson's studio one afternoon, as he happened to be passing. His time was really much occupied; he was a favorite in Rome. To his surprise, Jackson seemed to think that Miss Macks had talent. Her work was very crude, of course; she had been brutally taught; teachers of that sort should simply be put out of existence with the bowstring. He had turned her back to the alphabet; and, in time, in time, they—would see what she could do.

Horace Jackson was English by birth, but he had lived in Italy almost all his life. He was a man of forty-five—short, muscular, his thick, rather shaggy, beard and hair mixed with gray; there was a permanent frown over his keen eyes, and his rugged face had marked lines. He was a man of strong individuality. He had the reputation of being the most incorruptibly honest teacher in Rome. Noel had known him a long time, and liked him, ill-tempered though he was. Jackson, however, had not shown any especial signs of a liking for Noel in return. Perhaps he thought that, in the nature of things, there could not be much in common between a middle-aged, morose teacher, who worked hard, who knew nothing of society, and did not want to know, and a man like Raymond Noel. True, Noel was also an artist—that is, a literary one. But he had been highly successful in his own field, and it was under-

stood, also, that he had an income of his own by inheritance, which, if not opulence, was yet sufficiently large to lift him quite above the usual *res angusta* of his brethren in the craft. In addition, Jackson considered Noel a fashionable man; and that would have been a barrier, even if there had been no other.

As the Englishman seemed to have some belief in Miss Macks, Noel did not say all he had intended to say; he did, however, mention that the young lady had a mistaken idea regarding any use he could be to her; he should be glad if she could be undeceived.

"I think she will be," said Jackson, with a grim smile, giving his guest a glance of general survey that took him in from head to foot; "she isn't dull."

Noel understood the glance, and smiled at Jackson's idea of him.

"She is not dull, certainly," he answered. "But she is rather—inexperienced." He dismissed the subject, went home, dressed and went out to dinner.

One morning, a week later, he was strolling through the Doria gallery. He was in a bad humor. There were many people in the gallery that day, but he was not noticing them; he detested a crowd. After a while, some one touched his coat-sleeve from behind. He turned, with his calmest expression upon his face; when he was in an ill-humor he was impassively calm. It was Miss Macks, her eyes eager, her face flushed with pleasure.

"Oh, what good luck!" she said. "And to think that I almost went to the Borghese, and might have missed you! I am so delighted that I don't know what to do. I am actually trembling." And she was. "I have so longed to see these pictures with you," she went on. "I have had a real aching disappointment about it, Mr. Noel."

Again Noel felt himself slightly touched by her earnestness. She looked prettier than usual, too, on account of the color.

"I always feel a self-reproach when with you, Miss Macks," he answered—"you so entirely overestimate me."

"Well, if I do, live up to it," she said, brightly.

"Only an archangel could do that."

"An archangel who knows about Art! I have been looking at the Caraccis; what do you think of them?"

"Never mind the Caraccis; there are better things to look at here." And then he made the circuit of the gallery with her slowly, pointing out the best pictures. During this circuit, he talked to her as he would have talked to an intelligent child who had been put in his charge in order to learn something of the paintings; he used the simplest

terms, mentioned the marked characteristics, and those only of the different schools, and spoke a few words of unshaded condemnation here and there. All he said was in broad, plain outlines. His companion listened earnestly. She gave him a close attention, almost always a comprehension, but seldom agreement. Her disagreement she did not express in words, but he could read it in her eyes. When they had seen everything,—and it took some time,—

"Now," he said, "I want you to tell me frankly, and without reference to anything I have said, your real opinion of several pictures I shall name—that is, if you can remember?"

"I remember everything. I always remember."

"Very well. What do you think, then, of the Raphael double portrait?"

"I think it very ugly."

"And the portrait of Andrea Doria, by Sebastian del Piombo?"

"Uglier still."

"And the Velasquez?"

"Ugliest of all."

"And the two large Claude Lorraines?"

"Rather pretty; but insipid. There isn't any reality or meaning in them."

"The Memling?"

"Oh, *that* is absolutely hideous, Mr. Noel; it hasn't a redeeming point."

Raymond Noel laughed with real amusement, and almost forgot his ill-humor.

"When you have found anything you really admire in the galleries here, Miss Macks, will you tell me?"

"Of course I will. I should wish to do so in any case, because, if you are to help me, you ought to thoroughly understand me. There is one thing more I should like to ask," she added, as they turned toward the door, "and that is that you would not call me Miss Macks. I am not used to it, and it sounds strangely; no one ever called me that in Tuscolee."

"What did they call you in Tuscolee?"

"They called me Miss Ettie; my name is Ethelinda Faith. But my friends and older people called me just 'Ettie'; I wish you would, too."

"I am certainly older," replied Noel, gravely (he was thirty-three); "but I do not like Ettie. With your permission, I will call you Faith."

"Do you like it? It's so old-fashioned! It was my grandmother's name."

"I like it immensely," he answered, leading the way down-stairs.

"You can't think how I've enjoyed it," she said, warmly, at the door.

"Yet you do not agree with my opinions?"

"Not yet. But all the same it was perfectly delightful. Good-by."

He had signaled for a carriage, as he had, as usual, an engagement. She preferred to walk. He drove off, and did not see her for ten days.

Then he came upon her again, and again in the Doria gallery. He was fond of the Doria, and often went there, but he had no expectation of meeting Miss Macks this time; he fancied that she followed a system, going through her list of galleries in regular order, one by one, and in that case she would hardly have reached the Doria on a second round. Her list was a liberal one; it included twenty. Noel had supposed that there were but nine in Rome.

This time she did not see him; she had some sheets of manuscript in her hand, and was alternately reading from them and looking at one of the pictures. She was much absorbed. After a while he went up.

"Good morning, Miss Macks."

She started; her face changed, and the color rose. She was as delighted as before. She immediately showed him her manuscript. There he beheld, written out in her clear handwriting, all he had said of the Doria pictures, page after page of it; she had actually reproduced from memory his entire discourse of an hour.

There were two blank spaces left.

"There, I could not exactly remember," said Miss Macks, apologetically. "If you would tell me, I should be so glad; then it would be quite complete."

"I shall never speak again. I am frightened," said Noel. He had taken the manuscript, and was looking it over with inward wonder.

"Oh, please do."

"Why do you care for my opinions, Miss Macks, when you do not agree with them?" he asked, his eyes still on the pages.

"You said you would call me Faith. Why do I care? Because they are yours, of course."

"Then you think I know?"

"I am sure you do."

"But it follows, then, that you do not."

"Yes; and there is where my work comes in; I have got to study up to you. I am afraid it will take a long time, wont it?"

"That depends upon you. It would take very little if you would simply accept non-combatively."

"Without being convinced? That I could never do."

"You want to be convinced against your will?"

"No; my will itself must be convinced to its lowest depths."

"This manuscript won't help you."

"Indeed, it has helped me greatly already. I have been here twice with it. I wrote it out the evening after I saw you. I only wish I had one for each of the galleries! But I feel differently now about asking you to go."

"I told you you would desert me."

"No, it is not that. But Mr. Jackson says you are much taken up with the fashionable society here, and that I must not expect you to give me so much of your time as I had hoped for. He says, too, that your art-articles will do me quite as much good as you yourself, and more; because you have a way, he says, like all society men, of talking as if you had no real convictions at all, and that would unsettle me."

"Jackson is an excellent fellow," replied Noel; "I like him extremely. And when would you like to go to the Borghese?"

"Oh, will you take me?" she said, joyfully. "Any time. To-morrow."

"Perhaps Mrs.—your mother, will go, also," he suggested, still unable to recall the name; he could think of nothing but "stirrup," and of course it was not that.

"I don't believe she would care about it," answered the daughter.

"She might. You know we make more of mothers here than we do in America," he ventured to remark.

"That is impossible," said Miss Macks, calmly. Evidently she thought his remark frivolous.

He abandoned the subject, and did not take it up again. It was not his duty to instruct Miss Macks in foreign customs. In addition, she was not only not "in society," but she was an art-student, and art-students had, or took, privileges of their own in Rome.

"At what hour shall I come for you?" he said.

"It will be out of your way to come for me; I will meet you at the gallery," she answered, radiant at the prospect.

He hesitated, then accepted her arrangement of things. He would take her way, not his own. The next morning he went to the Borghese Palace ten minutes before the appointed time. But she was already there.

"Mother thought she would not come out—the galleries tire her so," she said; "but she was pleased to be remembered."

They spent an hour and a half among the pictures. She listened to all he said with the same earnest attention.

Within the next five weeks Raymond Noel met Miss Macks at other galleries. It was

always very business-like,—they talked of nothing but the pictures; in truth, her systematic industry kept him strictly down to the subject in hand. He learned that she made the same manuscript copies of all he said, and, when he was not with her, she went alone, armed with these documents, and worked hard. Her memory was remarkable; she soon knew the names and the order of all the pictures in all the galleries, and had made herself acquainted with an outline, at least, of the lives of all the artists who had painted them. During this time she was, of course, going on with her lessons; but, as he had not been again to see Jackson, or to the street of the Hyacinth, he knew nothing of her progress. He did not want to know; she was in Jackson's hands, and Jackson was quite competent to attend to her.

In these five weeks he gave to Miss Macks only the odd hours of his leisure. He made her no promises; but, when he found that he should have a morning or half-morning unoccupied, he sent a note to the street of the Hyacinth, naming a gallery and an hour. She was always promptly there, and so pleased, that there was a sort of fresh aroma floating through the time he spent with her, after all,—but a mild one.

To give the proper position to the place the young art-student's light figure occupied on the canvas of Raymond Noel's winter, it should be mentioned that he was much interested in a French lady, who was spending some months in Rome. He had known her and admired her for a long time; but this winter he was seeing more of her, some barriers which had heretofore stood in the way being down. Madame B—— was a charming product of the effects of finished cultivation and fashionable life upon a natural foundation of grace, wit, and beauty of the French kind. She was not artificial, because she was art itself. Real art is as real as real nature is natural. Raymond Noel had a highly artistic nature. He admired art. This did not prevent him from taking up occasionally, as a contrast to this lady, the society of the young girl he called "Faith." Most men of imagination, artistic or not, do the same thing once in a while; it seems a necessity. With Noel it was not the contrast alone. The French lady led him an uneasy life, and now and then he took an hour of Faith, as a gentle soothing-draught of safe quality. She believed in him so perfectly! Now Madame appeared to believe in him not at all.

It must be added that, in his conversations with Miss Macks, he had dropped entirely even the very small amount of conventional gallantry that he had bestowed

upon her in the beginning. He talked to her not as though she was a boy, exactly, or an old woman, but as though he himself was a relative of mature age—say an uncle of benevolent disposition and a taste for art.

February gave way to March. And now, owing to a new position of his own affairs, Noel saw no more of Faith Macks. She had been a contrast, and he did not now wish for a contrast; or a soothing-draught, and a soothing-draught was not at present required. He simply forgot all about her.

In April, he decided rather suddenly to leave Rome. This was because Madame B— had gone to Paris, and had not forbidden her American suitor to follow her, a few days later. He made his preparations for departure, and these, of course, included farewell calls. Then he remembered Faith Macks; he had not seen her for six weeks. He drove to the street of the Hyacinth, and went up the dark stairs. Miss Macks was at home, and came in without delay; apparently, in her trim neatness, she was always ready for visitors.

She was very glad to see him; but did not, as he expected, ask why he had not come before. This he thought a great advance; evidently she was learning. When she heard that he had come to say good-by, her face fell.

"I am so very sorry; please sit as long as you can, then," she said, simply. "I suppose it will be six months before I see you again; you will hardly return to Rome before October." That he would come at that time she did not question.

"My plans are uncertain," replied Noel. "But probably I shall come back. One always comes back to Rome. And you—where do you go? To Switzerland?"

"Why—we go nowhere, of course; we stay here. That is what we came for, and we are all settled."

He made some allusion to the heat and unhealthiness.

"I am not afraid," replied Miss Macks. "Plenty of people stay; Mr. Jackson says so. It is only the rich who go away, and we are not rich. We have been through hot summers in Tuscolee, I can tell you!" Then, without asking leave this time, as if she was determined to have an opinion from him before he departed, she took from a portfolio some of the work she had done under Mr. Jackson's instruction.

Noel saw at once that the Englishman had not kept his word. He had not put her back upon the alphabet, or, if he had done so, he had soon released her, and allowed her to pursue her own way again. The original faults were as marked as ever. In his opinion all was essentially bad.

He looked in silence. But she talked on hopefully, explaining, comparing, pointing out.

"What does Mr. Jackson think of this?" he said, selecting the one he thought the worst.

"He admires the idea greatly; he thinks it very original. He says that my strongest point is originality," she answered, with her confident frankness.

"He means—ah—originality of subject?"

"Oh, yes; my execution is not much yet. But that will come in time. Of course, the subject, the idea, is the important thing; the execution is secondary." Here she paused; something seemed to come into her mind.

"I know *you* do not think so," she added, thoughtfully, "because, you know, you said,"—and here she quoted a page from one of his art-articles with her clear accuracy. "I have never understood what you meant by that, Mr. Noel; or why you wrote it."

She looked at him questioningly. He did not reply; his eyes were upon one of the sketches.

"It would be dreadful for me if you were right!" she added, with slow conviction.

"I thought you believed that I was always right," he said, smiling, as he placed the sketches on the table.

But she remained very serious.

"You are—in everything but that."

He made some unimportant reply, and turned the conversation. But she came back to it.

"It would be dreadful," she repeated, earnestly, with the utmost gravity in her gray eyes.

"I hope the long summer will not tire you," he answered, irrelevantly. "Shall I not have the pleasure of saying good-by—although that, of course, is not a pleasure—to Mrs.—to your mother?"

He should have made the speech in any case, as it was the proper one to make; but as he sat there, he had thought that he really would like to have a look at the one guardian this young girl was to have during her long, lonely summer in Rome.

"I will tell her. Perhaps when she hears that you are going away, she will feel like coming in," said Miss Macks.

She came back after some delay, and with her appeared a matron of noticeable aspect.

"My mother," she said, introducing her (evidently Noel was never to get the name); "this is Mr. Noel, mother."

"And very glad I am to see you, sir, I'm sure," said Mrs. Spurr, extending her hand with much cordiality. "I said to Ettie that I'd come in, seeing as 'twas you, though I don't often see strangers nowadays on account of poor health for a long time past; rheumatism and asthma. But I feel beholden to

you, Mr. No-ul, because you've been so good to Ettie. You've been real kind."

Ettie's mother was a very portly matron of fifty-five, with a broad face, indistinct features, very high color, and a breathless, panting voice. Her high color—it really was her most noticeable feature—was surmounted by an imposing cap, adorned with large bows of scarlet ribbon; a worsted shawl, of the hue known as "solferino," decked her shoulders; under her low-necked collar reposed a bright blue necktie, its ends embroidered in red and yellow; and her gown was of a vivid dark green. But although her colors swore at each other, she seemed amiable. She was also voluble.

Noel, while shaking hands, was considering, mentally, with some retrospective amusement, his condition of mind if this lady had accepted his invitations to visit the galleries.

"You must sit down, mother," said Miss Macks, bringing forward an easy chair. "She has not been so well as usual, lately," she said, explanatorily, to Noel, as she stood for a moment beside her mother's chair.

"It's this queer Eye-talian air," said Mrs. Spurr. "You see I aint used to it. Not but what I aint glad to be here on Ettie's account—real glad. It's just what she needs and oughter have."

The girl put her hand on her mother's shoulder with a little caressing touch. Then she left the room.

"Yes, I do feel beholden to you, Mr. No-ul. But then, she'll be a credit to you, to whatever you've done for her," said Mrs. Spurr when they were left alone. "Her talents are very remarkable. She was the head scholar of the Young Ladies' Seminary through

four whole years, and all the teachers took a lot of pride in her. And then her paintings, too! I'm sorry you're going off so soon. You see, she sorter depends upon your opinion."

Noel felt a little stir at the edges of his conscience; he knew perfectly that his opinion was that Miss Macks, as an artist, would never do anything worth the materials she used.

"I leave her in good hands," he said.

After all, it was Jackson's responsibility, not his.

"Yes, Mr. Jackson thinks a deal of her. I can see that plain!" answered Mrs. Spurr, proudly.

Here the daughter returned, bringing a little note-book and pencil.

"Do you know what these are for?" she said. "I want you to write down a list of the best books for me to read this summer, while you are gone. I am going to work hard; but if I have books, too, the time wont seem so long."

Noel considered a moment. In one way her affairs were certainly none of his business; in another way they were, because she had thrust them upon him.

"I will not give you a list, Miss Macks; probably you would not be able to find the books here. But I will send you, from Paris or London, some things that are rather good, if you will permit me to do so."

She said he was very kind. Her face brightened.

"If she has appreciation enough to comprehend what I send her," he thought, "perhaps in the end she will have a different opinion about my 'kindness'!"

Soon afterward he took leave. The next day he went to Paris.

(To be continued.)

DROUGHT.

THERE is a drought that lasts so far in May
That buds that waited for the vernal showers,
Mourning their absence long and dreary hours,
Dewless and dusty, wither quite away.
In vain the clouds, atoning long delay,
With wet lips kiss the shrunk, unopened flowers
With steady, soft insistence. Life's full powers,
So strong in spring, not till midsummer stay.
Then were it better that the plant should die,
Sink down to mother earth, and be forgot,
Than drink the rainfall of the summer sky,
Living a life that bloom or fruit has not.
Oh, thou whose love this spring-time me might bless!
Canst thou, beloved, not my meaning guess?

Andrew B. Saxton.

TOPICS OF THE TIME.

The President and the Supreme Court.

It was hardly to be expected that the action of the President in nominating Mr. Conkling to the Supreme Bench would be followed by universal approval of the act. The selection for such a place of any man known chiefly as an active politician inevitably exposed the motives which led to the choice, as well as the choice itself, to severe criticism; but in Mr. Conkling's case the President went a step farther than this. He took a man whose reputation has been that of a bitter partisan, a member of a faction to which he himself, until he reached the White House, had always belonged. It was only natural that the choice of such a candidate should be regarded by the opposite faction with jealousy and distrust, and a striking illustration of this sort of temper was afforded by the criticism of the nomination which appeared in what would a year ago have been termed a leading "Half-breed" newspaper, that 'Guiteau had made a Supreme Judge as well as a President.'

Curious enough, the Stalwart organs did not seem to be overjoyed at the event either, the feeling among them evidently being precisely what Mr. Conkling's probably was, that he was too great a man for the place, and that, as it was in large measure to Mr. Conkling's favor that the President owed his political consequence, it was a case of the creature rewarding his creator with something which each of them, in his secret soul, would smile at as the prize of a great political ambition. It must be said that there was a good deal in this view. A judge of the Supreme Court has no patronage, cannot reward friends or punish enemies, and has consequently no control over conventions or nominations. He can only administer law and dispense justice, and if he does this well, his only reward is gaining the reputation of a good judge. To nominate Mr. Conkling was in a certain sense to shelve him, and looking at it in this way, no Stalwart could really feel that it was the act of a faithful political friend. All Stalwart politicians have an antique and simple way of looking at the art of government as only a more public branch of the struggle for existence, and, in their eyes, the President complimented his too close friend with a seat on the bench much as, in other countries and more barbarous times, he might have sent him a bow-string or signed his death-warrant.

The only class in the community which said nothing about the nomination was the bar—a singular fact, upon which we have seen no comment whatever. A small number of Senators were found ready to vote against Mr. Conkling, and Mr. Hoar, in a very deliberate speech, declared that the nomination was unfit to be made. The unfitness chiefly consisted of a total lack of professional qualifications. His unjudicial, or, to put it more accurately, his fiercely partisan, temper may be passed over, because there is no doubt that the exercise of judicial functions, the imperative

necessity of listening to both sides, and the habit of weighing evidence, always tend to diminish this defect, and often in time to do away with it altogether. Bitter partisans, after being made judges, have grown out of their partisanship in a wonderful way. But a more fundamental difficulty was the doubt as to whether Mr. Conkling had that experience and learning as a lawyer which brought him within the class from which judges of the Supreme Court have been hitherto drawn. This was a doubt on which the bar might have been expected to throw some light. If, as his friends maintained, Mr. Conkling was really one of the first lawyers of the country, in the enjoyment of a professional practice which placed him in the same rank with the other prominent candidates for the place, it would seem to have been very easy for them to establish the fact. A man cannot occupy such a position in secret; those, at least, who meet him in court must know how powerful he is as an advocate, how learned he is as a lawyer. On the other hand, if he had no practice at all, the nomination was manifestly one in which the bar had such a direct interest as to make some remonstrance almost imperative. The bar, however, remained absolutely silent. Confirmation was treated, from the first, as a foregone conclusion, and the Senators who opposed it were left to record their futile protest without any support. Such inaction in a similar case in the last generation would have been impossible; although, indeed, there were then enough lawyers of the first rank in the Senate itself to have settled any question of the professional standing of a candidate for the Supreme Court, from their own knowledge of the leaders of the bar. The divorce between "politics" and the bar, which has been effected to so great an extent since the war, never had a more curious illustration than in the total silence with which this nomination was received by the whole profession.

The investigation which the bar refused to make into the professional standing of Mr. Conkling was, however, pretty thoroughly made by the press, and the facts of his career as a lawyer were, at the time of his selection, accessible to any one who had the slightest desire to know what they were. He had undoubtedly had some practice. As a young man he had been a rural district-attorney for a short time, and this office had given him a sort of experience that must have been useful in familiarizing him with the ordinary routine of the trial of criminal cases—a branch of the law which would, of course, be of little use to him on the Supreme Bench. At an early age he left the regular practice of the law, and went into politics with a zeal and fervor such as have been displayed by few other men in our time, and in twenty years he became a complete master of the art of management through patronage. He had, however, so devoted himself to this, that he had seldom found time to speak in the Senate on any important measure, and never had made himself an authority in that body on matters of law. His system of politics, indeed, compelled him to devote so much

time and attention to men, that he had but little left to spare for measures at all. Occasionally he appeared with a brief in the Supreme Court, retained, as Senators often are retained, chiefly on account of his position. This, however, was of more real value to him in a professional point of view in the Departments, where he sometimes argued points of law before judges who felt that the retention of their places depended, in a measure, on reaching conclusions which might commend themselves to powerful Senators like himself. When he retired from politics last year, it was loudly asserted by his friends that he was "returning" to a lucrative practice at the bar, and stories were published by them with regard to his prospective income which brought a smile to the lips of every lawyer who knows what "returning" to the bar after an absence of twenty years means. That these stories should have been believed at all, shows what a strange effect public position of any kind has on the imagination. It was almost a matter of mathematical demonstration that Mr. Conkling was not "returning" to any practice whatever.

That a politician with a legal career of this sort should have been nominated to the Supreme Bench twice, first as a chief-justice of the United States,—a position held by Marshall and Taney,—and then as associate-justice, and in both cases should have declined the place, almost as beneath his notice, will one of these days be looked upon as a bit of politico-legal burlesque—to which the finishing touch was given by the fact that, in the second instance, the President who selected him was himself a lawyer from his own State, presumably having a full knowledge of his lack of qualification, and who had just shown his appreciation of the qualities really needed in a judge by his selection for another vacancy on the same bench of the chief-justice of the Massachusetts Supreme Court—a lawyer pure and simple, selected solely as such, and having no political backing of any kind. The refusal of Mr. Conkling to take the place does not absolve the President for the part played by him in the farce. The most charitable explanation of his action possible is that he felt sure in advance that the gift would be declined. But it is hardly less a degradation of the nominating power, and hardly less an indication of contempt for the Supreme Court, to make use of judicial patronage for the purpose of complimenting broken-down and discredited partisans, than it would be to pack the bench with them.

It must be said, however, that this explanation has been generally suggested, and that the President is enjoying the benefit of it. If he has made one singularly bad nomination, he has offset it by two singularly good ones. The refusal of Mr. Conkling was followed by the appointment of Judge Blatchford, a lawyer of high standing and long judicial experience, and having almost as little political influence behind him as Judge Gray. The President is, on the whole, more likely to be remembered in connection with the Court for the strength which he has infused into it, than for the harm which he seemed at one time willing to do it. The indignation of the country will, no doubt, prevent the Conkling episode from taking rank as a precedent. Indeed, a repetition may be regarded as impossible, for the country will probably never produce another Conkling.

A Diplomatic Scandal.

NO BETTER proof could be offered of the quiet and pacific condition of politics, since the change of administration, than the good humor with which the exposure of the wonderful diplomatic feats performed in the course of our attempt to mediate between Chili and Peru have been received by the public. When it was discovered some years since that General Schenck, as our minister to London, had made use of his position in connection with a mining venture, the scandal created an uproar from one end of the country to the other. But the Schenck scandal, in magnitude, was a mere bagatelle to the Peruvian scandal. The outline of the chief events which gave rise to it are worth recalling.

The Chilians engaged in a war with Peru, in which we had no earthly interest except as spectators, and as being generally friends of peace. During the Hayes administration, following the usual course in such matters, the State Department offered the mediation of the United States, which, however was not accepted. Chili then prosecuted the war to a successful termination, conquered Peru and her ally Bolivia, occupied the conquered territory, seized the capital, declared martial law, and—the Peruvians having, with one of their rapid constitutional changes, set up a new government under a politician named Calderon—seized Calderon and sent him off to Chili. Under the laws of war which the United States and all other modern countries have been in the habit of acting upon, there was no objection to these proceedings. The right of conquest confers an absolute right upon the conqueror to take such measures for preserving order in the conquered territory as he thinks best. And martial law means nothing more nor less than the will of the commanding general. The conqueror, too, has the right not only to preserve order, but to indemnify himself for the expenses of the war, and the expenditure of blood and treasure, by the annexation of such part of the conquered territory as he considers necessary. We did so after the Mexican war, and the Germans did so after their victory over France, ten years ago. Undoubtedly the Chilians would have now proceeded to annex an important part of Peru, had not new and strange forces appeared on the scene to thwart their designs.

The accession of General Garfield to the presidency brought Mr. Blaine to the State Department, and one of his first acts was to recall our minister to Peru, Mr. Christianity, a lawyer of experience and capacity, and put in his place General Hurlbut, a politician who had done work for Mr. Blaine, or Mr. Blaine's friends, on the stump. The fitness of General Hurlbut for that or any other post under Government may be inferred from his military career. During the war he was in charge of the Department of the Gulf, and made use of his position to fill his pockets with bribes for passing cotton through the lines. His administration of his command was investigated toward the close of the war by a special commission, of which General W. F. Smith and the late James T. Brady were members, and they reported him guilty of this and other serious offenses. Since then the matter has come up in the courts, and, within a few months, the Supreme Court of the United States has decided that General

Hurlbut was guilty of corruption in a very glaring case, in which the cotton was entitled to pass without any action by him, but was stopped in order that toll might be levied on it.

Just before the arrival of this diplomate in Peru, the government of the dictator Pierola had crumbled to pieces, and, partly by the aid of the Chilians, the new Calderon government had been set up in its place. This government was, however, a mere shell, and was not officially recognized by the ministers of the European governments at Lima as a *de facto* government. Suddenly, without any apparent reason, Mr. Blaine sent word to Mr. Christiancy that, if Calderon represented the "character and intelligence" of Peru, his government might be recognized—instructions which Mr. Christiancy thought were equivalent to a direction to recognize him, not so much because he regarded him as representing any "character and intelligence" at all, as because he had been taking a good deal of pains to explain, in his dispatches to Mr. Blaine, that he did not think there were any "character and intelligence" worth mentioning in Peru. The peculiarity of the instruction lay in the fact that it applied an absolutely novel test to determine the existence of a government. When one country "recognizes" a foreign government, what it does is simply to admit that a certain fact exists; what is called a *de facto* government is simply one which, apart from all question of right and authority, preserves order, administers justice, levies and collects taxes throughout a definite extent of territory. It must have physical force behind it, but whether it represents "character" or "intelligence" is no more to the purpose than whether it is a monarchy or a republic.

Mr. Hurlbut now arrived on the scene, and Calderon having been recognized as carrying on a government "based" on character and intelligence, our new minister proceeded to issue proclamations, in the shape of dispatches not unlike the *pronunciamentos* of South American statesmen, in which he announced the hitherto unheard-of principle of international law, that a conquering nation in the position of Chili could not annex the territory of a conquered country like Peru, unless it were first proved impossible for the conquered country to pay a money indemnity. While Mr. Hurlbut was setting forth this principle to the Chilians, the latter, who had declared martial law in Peru, suddenly seized Calderon himself, and brought his government to an abrupt termination by carrying him off to Chili.

Martial law being what it is, and having been declared by the Chilians, our government had as little to do with the arrest of Calderon as it had previously with the disappearance of Pierola. His incarceration really simplified the situation, because it left the Chilian commander the only government in existence. Nevertheless, this treatment of Calderon was bitterly resented by Mr. Blaine, one of whose last acts was to dispatch an envoy to demand an explanation, under instructions which, if executed by Mr. Trescott, would have led Chili and the United States to the verge of, if not into, war. Fortunately, the departure of Mr. Blaine from the State Department led to a modification of the instructions.

Now for the explanation of all this diplomacy. Peru is bankrupt, and has two sets of creditors—one in

Europe, and the other in the United States. The first are mainly *bona fide* creditors—bond-holders; the second are speculators, who have bought up claims against Peru, growing out of alleged discoveries of guano and nitrates a generation ago, swollen them to fabulous amounts, and tried to get the State Department to press them against Peru. French bankers represented the one; an adventurer of our own, named Shipherd, the other. The most valuable assets of Peru consist of the guano deposits and the nitrate beds. Consequently, these speculators and creditors, fearing that Chili would take them, went to work to get the United States to mediate between the two countries, and arrange terms of peace which would secure them against loss. For this purpose the French creditors got up a company, known as the "Crédit Industriel," which undertook to perform the work of mediation on reasonable terms, part of which was to be the concession of the agency for the sale of the guano and nitrate deposits to an American house; and, to advance this project, it entered into a contract with an American house, the chief member of which was the American minister to Paris, by which his pecuniary returns were dependent on his government's carrying the scheme through. Meanwhile, Shipherd appeared in a corporate form as the Peruvian Company, and in this, apparently, Mr. Hurlbut, our minister to Peru, was to be made interested. At any rate, there was some hitherto unexplained connection between this scheme and the indignation expressed over the arrest of Calderon.

Such is the present condition of the Peruvian scandal, the detailed investigation of which has been taken up by Congress. An extraordinary thing in connection with it is the remarkable number of governments, corporations, and individuals who have first and last interfered in the interest of peace of South America, and the very slight effect they have thus far had on the settlement of the quarrel, when compared with the wide-spread scandal of all kinds that their efforts have produced. The United States, Mr. Blaine, Mr. Christiancy, General Hurlbut, Mr. Shipherd, the Peruvian Company, the "Crédit Industriel," Mr. Levi P. Morton, have all "taken a hand" in arranging the terms of peace; yet the peace is actually being settled by Chili herself, while it leaves us, who were originally disinterested spectators, with a Secretary of State and two foreign ministers under a cloud, and a Congressional committee in session to investigate what is already one of the most extensive and curious, and threatens to be one of the most prolific, diplomatic scandals of modern times.

One Parson in Politics.

THE clergy have had to take not a little admonition of late respecting their political duties. They deserve it, and they ought to profit by it. Ministers are not too nice to bear the ordinary burdens of citizenship; they ought to ask no exemptions, and to shirk no obligations. A consecration that ignores the heaviest responsibilities is a snare.

Happily, those who preach this doctrine to the preachers are not without shining examples of the salutary influence of clergymen upon politics. The

kind of work that may be done by men of this profession has been illustrated by Leonard Bacon and Theodore D. Woolsey, and Julius H. Seelye, and James Freeman Clarke, and others like them—clergymen who have maintained the closest relations with the political life of their day, and have often brought the light of a sound morality to bear upon pending issues. This is a kind of work that always needs doing; and if the clergyman has any special function in politics it would seem to be that of standing up for truth and righteousness and a large patriotism, against the trickery and jobbery and paltry partisanship that often infest political organizations.

Now and then, however, we witness the irruption into politics of a member of the clerical profession who, on entering political life, appears to leave his morals where the Mussulman leaves his shoes—outside the door; who seems to suppose that his usefulness in that sphere depends on forgetting the Ten Commandments and the Sermon on the Mount, and on going down into the dirt with the dirtiest of partisans. It is notorious that the most unscrupulous men who have ever appeared in political life have had clergymen among their stanch adherents. Quite a body-guard of clerical retainers have attached themselves to the fortune of Mr. Butler, of Massachusetts; and even Jim Fisk had his ministerial eulogist.

We should be sorry to class the Rev. Dr. Newman, of this city, among political parsons without conscience. But the short speech made by this gentleman at the late dinner of the Lincoln Club was a most surprising performance, and should be carefully read by clergymen who wish to learn how not to go into politics. "I am proud," said this orator, "to belong to that section of the party known as Stalwarts. I do so from religious principle and from intellectual principle." Precisely what this "section of the party" stands for, the reverend doctor does not stop to tell us, but his subsequent remarks throw some light upon the question. Stalwartism, as Dr. Newman understands it, consists in the worship of Roscoe Conkling. "The names of Washington, Lincoln, and Grant have been mentioned," proceeds our Stalwart apostle. "I want to speak another name,—a name that will live when the bronze has melted, and the marble crumbled—a name that will live while the stars shine, and that name is Roscoe Conkling. A majestic model of a man; a man of more than Attic eloquence, of more than Roman logic; a man who can hold up his hand as did Aristides of old, and say there is no stain of bribe there; a man who preferred to go down and out of sight rather than sacrifice a principle."

Something of this is matter of opinion, and more is matter of taste. Dr. Newman may be right in his prediction that the name of Conkling will outlast the bronzes and the marbles; so, for that matter, will the names of Turveydrop and Chadband. That Mr. Conkling is a "majestic model of a man" is a truth concerning which no one who enters into Mr. Conkling's consciousness as intimately as Dr. Newman does could be in doubt; and the panegyric upon this great man's eloquence and logic need not be too sharply challenged. We may cheerfully admit, also, that Mr. Conkling is not suspected of taking

money-bribes: is this virtue so rare as to set its possessor on a pinnacle above all other men?

There is, however, a word or two to be said in this connection, to which we beg leave to call the attention of this clerical expounder of political morality. Mr. Conkling may have received no bribes; is he guiltless of bestowing them? The candidate for Congress who takes out his pocket-book and pays a man ten dollars to vote for him is guilty of bribery. The candidate for Congress who says to his friend, "Get me nominated and elected, and I will secure you the post-office in your town, or a clerkship in the Treasury Department, worth eighteen hundred dollars a year," is equally guilty of bribery. That is a corrupt consideration. And even though there is no express bargain, if the corrupt consideration, suggested or expected, is allowed to influence the political action of the candidate's friend, the moral quality of the transaction is precisely the same. "Bribery," says a high authority, "is the administration of a bribe or reward that it may be a motive in the performance of functions for which the proper motive ought to be a conscientious sense of duty." Whenever offices are distributed in such a way as to reward political workers for personal services, the essence of the transaction is bribery. And it is a meaner and more immoral transaction to bribe a man with a Government office, than to bribe him with your own money. Now, this is a kind of transaction to which Mr. Conkling has devoted the best part of his life. He is not alone in it, but he is one of the most conspicuous of those who have been addicted to it. In view of this fact, a judicious teacher of morality would omit the comparison to Aristides.

Dr. Newman further glorifies his ideal statesman by describing him as "a man who preferred to go down and out of sight rather than sacrifice a principle." We might ask whether Mr. Conkling's prolonged and shameless efforts at Albany to get himself back into the United States Senate were a part of his going down and out. But instead we shall ask what is the "principle," allegiance to which, on the part of Mr. Conkling, kindles all this ardor in the breast of a clergyman? It is the "principle" known as "the courtesy of the Senate." It is the "principle" by which the Administration Senators claim the right of controlling all the appointments made by the President in their several States. The Constitution directs the President to make certain appointments: Mr. Conkling's "principle" takes this power out of his hands. It was for the defense of this gross and outrageous usurpation that Mr. Conkling was willing (?) to "go down and out of sight"—for this, and nothing else. And here is a minister of the gospel applauding him for this monstrous assumption, and finding in it the crowning proof of his greatness!

There is one other exhibition of "principle" which may have inflamed the enthusiasm of Mr. Conkling's clerical eulogist. The man who, in the Chicago Convention, exhausted the adjectives in expressing his detestation of "bolters," goes to Albany and organizes a bolt in his own interest, seeking an alliance with the Democrats to defeat the majority of his own party. The egotism, the babyism, and the inconsistency of this transaction have no parallel on any page of our political history. Mr. Conkling did indeed "go down

and out of sight." From the pity and the scorn of his countrymen he did well to hide himself, even though the hiding was delayed till after he had been well beaten in the senatorial contest. The President who picked him up to place him in the highest judicial position in the land gave a rude shock to those who had begun to believe in Mr. Arthur's discretion; and the clergyman who has ornamented him with tinsel ecology has not adorned his own sacred calling.

Jews and Jew-baiters.

PREJUDICES often survive the reason for their existence, like some ill weeds that grow again after they have been uprooted. In the Middle Ages, the Jews were believed to be an accursed race of deicides. The guilt of Herod and of the chief priests of Pilate's time was supposed to have diffused itself, by a transfer and transmission understood only by the speculative theologian, to the whole Jewish race. It was, therefore, considered most meritorious and well-pleasing to God to make their lives as wretched as possible, in atonement for the suffering of Christ. According to law, distinctive badges were worn by these heirs of perdition, that nobody might mistake them for Christians, and they were required to dwell in separate quarters, that they might not by any chance associate with so-called Christians—an arrangement which, no doubt, saved the Jews from a great deal of bad company.

In some countries, laws were made to keep them from increasing; in others, they were occasionally thinned out by persecution and massacre. When any great drought or other scourge befell a nation, the anger of heaven was appeased by a crusade against the Jews, who were banished or put to death for the sins of high-priest Ananias, as in like manner the Puritans in Boston sought to turn away the wrath of God, disclosed in Philip's War, by fresh severities against the Quakers. There was not much encouragement to people situated as the Jews were to keep visible property, and hence they came to be dealers in money—the financiers of Europe; and since the Jew was destined to perdition anyhow,—damned *ex officio*,—he alone in England was permitted to receive usury for his money.

To justify all this outrage, prejudice easily invented charges against the Jews more injurious than that of taking exorbitant interest. It would have been wonderful, indeed, if the Jew, badgered, beaten, and banished from land to land, did not in turn lay up a store of hatred on his own side that would now and then break out in words and acts. But the wildest stories were set a-going, of children carried off by Jews to be circumcised and even to be crucified. It was under the stimulus of such slanders that, at the close of the thirteenth century, the Jews, after suffering outrage and robbery, were exiled from England, many of them being plundered and pitched into the sea on their passage to the Continent by mariners zealous to promote Christianity.

Not all of Christendom has come out of barbarism yet. There are regions where the Jews still suffer from the folly and fanaticism of their neighbors. In Russia to-day, as in England five hundred years ago, the irresponsible despotism and blind fanaticism that

bear so heavily upon the Jews seek to justify themselves by recounting wrongs, real and imaginary, wrought by the Jew. But all the rest of Christendom has long since found out that the simple remedy for all the wrongs, real or imaginary, wrought by the Jews is the admission of Jews to stand before the law on the same level with other human beings. The Jews are not worse than other people. The rascally Jew is not more villainous than the rascally Christian. The race furnishes, by all account, a larger proportion of eminent men than any other. Dr. Guthrie, the Scotch divine, was accustomed to say that the best brains of modern times were in the heads of Jews. Those who cling tenaciously to a prejudice against the Jewish race will none the less follow the political lead of Disraeli, or the theological leadership of Neander, or admire the philosophy of Spinoza and of Moses Mendelssohn, the poetry of Heine, the music of Mendelssohn-Bartholdy, and in a hundred ways will come under the influence of the Jewish intellect, which plays so large a part in human thought and human affairs.

The greatest paradox of history is the fact that Christendom reveres more than all other literature that which came from the pen of Jews, believing that to them was given a closer communion with God than to other people, while this same Christendom is ready to believe all slanders against the race that gave birth to that greatest of ancient poets—the author of the book of Job, as well as to Isaiah, to Daniel, to John, and to Paul—not to mention a name more deeply revered than all. It is never safe to accept the account given of the downtrodden by those who oppress them. Oppression no doubt degrades the oppressed, as it certainly does the oppressor, but it will not do to take the word of the tyrant for the character of the slave under his heel.

Putting away the "Pathies."

AT the last meeting of the New York State Medical Society, a most important change was effected in the ethics of medical practice. This consisted in the adoption of a new code for the guidance of the faculty, virtually permitting a physician of the "old school" to consult with any physician of the other schools in good standing he may choose. This is a wise and timely measure, and must result in a great improvement in the tone of the profession, raising it in the respect of every one, and divesting it of much that is discreditable. In the eyes of the law, both schools have the same privileges and standing; there are well-conducted State homeopathic as well as allopathic asylums and hospitals; there are regularly chartered colleges of both schools; and it is high time that arbitrary distinctions should be at an end.

The action of the State Society at Albany has naturally drawn forth the adverse criticism of men whose ideas are as narrow and illiberal as those of the most bigoted theologians. It has even been insinuated by one Philadelphia medical journal that the new code was suggested by the specialists of the regular school in New York City, who, knowing that a large number of rich and influential people in that city employed homeopaths, wished for a change that would permit them to meet their "irregular" brethren in consulta-

tion. Equally silly and hastily formed opinions have been expressed by other non-progressive critics, who seem to cling as fondly to the traditional blue laws of their school as the venerable Puritan clung to his iron-bound Bible with one hand, while with the other he piled fagots upon the fire built to consume the unfortunate witch.

After all, the duty of the physician is to relieve human suffering, and whether he does so by the use of the heroic measures of Bishop Berkeley's tar-water, or the infinitesimal doses of the Lilliputs, it matters not. The clever and successful practitioner seizes the best remedy that presents itself, and does not stop to inquire whether he violates any code in so doing. The old school are making daily use of the remedies of the "homeopaths," while the latter do not hesitate to administer remedies not included in their pharmacopœia. In America, Doctor Henry G. Piffard, of New York, and in England, Doctor Sidney Ringer, were among the first of "allopaths" to call attention to the value of the homeopathic use of certain drugs.

What is really needed in medicine is a putting away of the "pathies" which belong to the quacks, to the creatures who thrive on printing-ink and "testimonials," and who prey upon the credulity and superstition of the general public. If such an amalgamation as will probably follow the passage of the new code does occur, it will mark an era in medical progress that must carry with it a more scientific exactness. The weaker men in both schools must be crowded to the wall, and at the bedside of the patient there will be a practical and fair application of what is good in each system.

Under the new *régime*, the public ought to be able to judge more clearly of the character and ability of their physicians. The question will not be so much of the school as of the honorable standing of the individual among his comrades of both schools. When he is called hard names by his fellows, it ought hereafter to mean something more than a difference of opinion on matters of theory. Let the public now be on its guard against supposedly "regular" physicians, who are known among their brethren as "commercial doctors." These men, with the indorsement of titles, or a membership in some respectable medical society, prostitute their learning by indulgence in "clap-trap," by the recommendation of "cures," and by useless and unnecessary operations, performed on every occasion and upon every patient, no matter what may be his disease. One will discover that some particular part of the body is the seat of a morbid process, and will proceed to remove it by a mysterious operation; while another will prescribe a remedy which can be procured only at a certain place, and can be taken only in a certain position. A more matter-of-fact practitioner will suggest the extent and value of his practice by means of a pile of bank-notes of large denominations exposed upon his desk. With these men no code of ethics is of the slightest use, and their more honest and plodding fellow-physicians must bear the disgrace thus brought upon their calling. But if the profession itself finds it difficult to deal technically with such men, the public, as we have said, ought to be better able to discern them now that the allopaths are disposed, in their public attitude and pri-

vate conversation, to reserve their harsh criticisms for real offenders.

New Reasons for Peace.

A GREAT many Englishmen visit America, but a great many more would come over annually if it were not for the English Channel. The general belief of English people who have not crossed the ocean is that, in its effects upon the human system and the human mind, the voyage is just what the effect of the Channel crossing would be if the latter were prolonged for as many days as it is hours. In other words, they look upon the Atlantic Ocean as a larger and more pestilential Channel, and very naturally they refuse to venture upon it. The ingenuity of nature in the production of human misery was never more completely matched by the lack of ingenuity on the part of man to overcome it than in this matter of the Channel crossing. It is not necessary to enter into details concerning a subject which either experience, oral narrative, or literature has made familiar to every intelligent reader.

Of late, however, the scheme has been revived of a submarine tunnel, which, if successful, would effectually and forever abolish what may be said to be one of the greatest evils of civilized life. But along with the news of the revived project—news of the deepest personal interest to every traveling American (and what American does not travel?)—comes the intelligence of an opposition to the scheme, based upon military grounds. It seems that if the tunnel is built—presto! the tight little island is no longer an island! Should *both* ends of the tunnel, by delay, mismanagement, or chance of any kind, fall into the hands of the enemy, and remain therein a single day, the Continental hosts, to the number of one hundred thousand in the twenty-four hours, may pass dry-shod, like the Israelites of old! Then—exit England!

Now, what we have to say is that if this opposition should be successful—if the fear of war should prevent the abatement of this gigantic nuisance—if every tribute paid to Neptune by every Englishman who crosses the Channel is, in reality, a tribute paid to Cæsar, then Cæsar, then war, is doomed! But we do not believe the opposition will be successful. Both England and America are largely ruled by the imagination, but there is something else that has still more power over these kindred nations, and that is common sense. The common sense of America is in favor of the building of a canal to unite the Atlantic and Pacific oceans, by any one who is able to build it, and the country cannot be frightened out of the idea by the fears of imagined wars. If the specter of war is to be called up to oppose such steps in the march of human progress as the Channel Tunnel and the Isthmus Canal, then the military idea is destined to receive a check such as no peace convention has ever yet been able to administer to it. Already the idea of international arbitration is taking firm hold of the minds of men. It will take many a long year, and perhaps more than a single century, for this idea to become a fixed policy—and, still more important, a fixed habit—among nations; but that the time is gradually and surely approaching, there can be no doubt. We do not know who there will be to regret

the advent of the era of peace, unless it be the poets, who will not like to say :

"Farewell the plumed troops, and the big wars,
That make ambition virtue! Oh, farewell!
Farewell the neighing steed, and the shrill fife,
The royal banner; and all quality,
Pride, pomp, and circumstance of glorious war!"

Yet the poets, with the rest of us, must look the facts in the face, and prepare to bid good-by to the soldier type of hero. War has played a great part in human civilization—it has helped along religion, as well as art; but its days of usefulness as an element in human progress are nearly numbered. The world does not yet quite see how it can get along without it. But the world has given up other ideas as firmly held. For many centuries, the Holy Roman Empire and its allied idea of the Papacy seemed the very rocks and foundations of social order and spiritual happiness and progress, but the former has utterly disappeared, and the latter no longer appeals to the human mind as it once did. And still the world moves. It will be found, too, that the world will move when there are no longer armaments, by sea or land, and when every battle will be considered murder in the first degree. We shall then have our inter-

oceanic canals and our submarine tunnels wherever and whenever they are needed, and the poet will still, it is hoped, not lack for heroes. The unbuilt Isthmus canals have already had their heroic victims,—numerous as in battle,—and the engineer who builds the Channel tunnel will require all the pluck, all the resources and energy of a general who conducts a great campaign against a powerful foe.

Communication.

The Weak Point of Mormonism: A Correction.

TO THE EDITOR OF THE CENTURY MAGAZINE.

SIR: In the letter which you did me the favor to insert in the March CENTURY, calling attention to the "weak point in Mormonism," your types would have been justified in crediting me with having enjoyed excellent opportunities for judging of the "point" in question, but went quite beyond the truth in giving me an "experience of several years in Utah." The curtailment made necessary by your lack of space explains the source of an error, the correction of which will serve the public little, but fact and myself much.

Yours truly,

Boston, Mass.

CHARLES R. BLISS.

LITERATURE.

Morley's "Life of Cobden."*

MR. MORLEY'S volume would have been more interesting, though not, perhaps, so permanently valuable, had it been shorter. The political and economic career of Cobden furnishes little material in the way of biographical incident, and the story is a tolerably familiar one. The history of the agitation for the repeal of the Corn Laws, and the negotiation of the commercial treaty with France, which constitute the two great successes of his life, and take up a large number of Mr. Morley's pages, are trite, though Mr. Morley manages, by a sort of *tour de force*, to give even these worn topics a fresh life in allowing us to see them through the glowing atmosphere of Cobden's enthusiasm. The importance of the rest of Cobden's political work Mr. Morley a good deal exaggerates by the detail in which he deals with it. It is, perhaps, yet too early to attempt to estimate the position which the doctrines of the "Manchester school" will take in history; but Cobden's opposition to the Crimean war, and his dream of universal peace through the progress of true economic ideas, had these alone been his title to public recollection, would never have made his name known throughout the civilized world. He was essentially an economic reformer, and, as he seems to have cared little for forms of government provided the work of economic reform was not allowed to lag, so he held in very slight esteem the ordinary political impulses of his day. He has been blamed for his indif-

ference to the moral questions involved in the rise and establishment of the Second Empire in France. How, it was said at the time, could a man filled with the enthusiasm of humanity sit calmly down with a usurper whose hands were still dripping with the blood of his enslaved fellow-countrymen, to discuss the tariff on iron? For precisely the same reason that he wasted years in opposing the settled policy of Palmerston and the entire country, when he knew that opposition was fruitless—because his interest in economical principles, and his view of war as the enemy of economic progress, blinded him to all other considerations. He was no statesman, for the simple reason that statesmanship precludes the idea of an exclusive attention to any one set of political considerations.

His life was, publicly, a splendid success; privately, the impression left by Mr. Morley's account—and it is obvious that he has drawn the picture with as light a hand as possible—is that of a failure. With great talents for business and the certainty of fortune before him, his devotion to the public cause which he took up made a wreck of his worldly affairs, and compelled him, in advanced life, to become the beneficiary of his political following. A buoyant disposition enabled him to face what seemed like ruin with cheerfulness, and, to the reader of Mr. Morley's volume, there is nothing more curious than the fact that he should have suffered so little from what, to most men, would be the torture involved in deliberately shutting his eyes to the wreck he was making of his future for the sake of devoting himself to the advancement

* The Life of Richard Cobden. By John Morley. London: Chapman & Hall. Boston: Roberts Brothers. 1884.

of a remote public end. Nothing but a somewhat irrational optimism could explain the phenomenon.

The mind of Cobden was anything but commonplace, but it is impossible to deny that the tendency of his career of agitation was to make it one-sided. To the end, however, he retained as an orator the great gift of being able to excite the interest, arouse the imagination, and stir the hearts of his audience. He was never dull; the vivacity of his mind shines through his driest statistics. To the generality of mankind there is nothing more tiresome than political economy; Cobden managed to make it interesting.

Cobden's speeches contain a valuable moral lesson, for they show how false is the impression that, for popular oratory, it is necessary to make base appeals to passion and prejudice. Cobden used all the arts, and even the tricks, of rhetoric; he made the most powerful appeals to the emotions of his hearers; but it was to their reason that he always addressed himself in the end, and the sincerity of his rhetoric was, perhaps, its greatest source of strength. His eloquence was a natural gift, and a gift of such great force that it is difficult to repress a regret that the subjects upon which it was employed were so often of a local and temporary character. Perhaps there is no better test of oratorical power than its use in fields to which it seems conventionally ill-adapted. The heroism of self-sacrifice on the battle-field has been, from the time of Isocrates, a favorite oratorical theme; but that of the silent self-sacrifices of philanthropy and religion was, we believe, never presented in a way to stir the blood before Cobden's illustration, drawn from the history of the Irish famine. Impassioned as it is, it was written, and not spoken by him. Mr. Morley refers to it as "one of the most striking passages in English prose, not only for the truth of its feeling, but for the energy, simplicity, and noble pathos of its expression." At the same time, does not the climax—

"And who were these brave men? To what gallant corps did they belong? Were they of the horse, foot, or artillery force? They were Quakers from Clapham and Kingston! If you would know what heroic actions they performed, you must inquire from those who witnessed them. You will not find them recorded in the volumes of reports published by themselves,—for Quakers write no bulletins of their victories"

—does not this climax suggest one of the permanent difficulties of philanthropic eloquence—that the passions, and emotions, and sentiments to which eloquence usually appeals do not include that sentiment of self-devotion to the good of others which religion teaches us as a command of God, and which, in the philosophic jargon of the day, is known as altruism? Rhetoric seems essentially foreign to those deeds of silent benevolence, the doing of which by the right hand is concealed from the left. Perhaps to the natural man the appearance of the Quaker hero may suggest even the possibility of an anticlimax; but, for these very reasons, the passage may fairly be regarded as, in its own line, marking a level which no one in our time but Cobden could have reached. And who could possibly have rivaled the following passage, written not far from fifty years ago, and which the crumbling ruin of the Turkish empire now shows us

to have been something much more than a mere illusion of the fancy:

"Constantinople, outrivaling New York, may be painted, with a million of free citizens, as the focus of all the trade of Eastern Europe. Let us conjure up the thousands of miles of railroads, carrying to the very extremities of this empire—not the sanguinary satrap, but the merchandise and the busy traders of a free state, conveying—not the firman of a ferocious Sultan, armed with death to the trembling slave, but the millions of newspapers and letters which stimulate the enterprise and excite the patriotism of an enlightened people. Let us imagine the Bosphorus and the Sea of Marmora swarming with steam-boats, connecting the European and Asiatic continents by hourly departures and arrivals; or issuing from the Dardanelles, to re-animate once more with life and fertility the hundred islands of the Archipelago; or conceive the rich shores of the Black Sea in the power of the New-Englander, and the Danube pouring down its produce on the plains of Moldavia and Wallachia, now subject to the plow of the hardy Kentuckian. Let us picture the Carolinians, the Virginians, and the Georgians transplanted to the coast of Asia Minor, and behold its hundreds of cities again bursting from the tomb of ages, to recall religion and civilization to the spot from whence they first issued forth upon the world. Alas! that this should only be an illusion of the fancy."

Cobden had the zeal of a religious enthusiast, and this, as is commonly the case, grew upon him with age. He had to deal with a stubborn and perverse generation, though the repeal of the Corn Laws seemed to place him for the time being at the head of a triumphant popular movement. But the success of the League was really won through the Irish famine, and it is easy to see now that, had not that accident brought matters to a crisis, the agitation for free trade might have gone on for many years without producing any decisive effect on legislation. The entire landed interest was as bitterly opposed to it as ever, and it needed the pressure of an actual famine to convince Parliament that the carefully devised sliding scale was a national curse instead of being a national blessing. We have witnessed in our day the experiment of a free-trade agitation in this country, and have seen how little, in the face of great national prosperity and comfort, the arguments of economists affect the popular mind, even with a tariff as grotesque and barbarous as ours. When Cobden came to extend his principles to France, he found the protectionist sentiment of that country so strong that free trade had to be introduced, against the will of the country, by the arbitrary determination of a despotic sovereign.

Cobden and Bright will always be the names associated with the great movement which ended in the repeal of the Corn Laws, and it is a curious illustration of the religious self-devotion of the two leaders to the work that they should have pledged themselves to the cause by a vow, solemnly taken on the occasion of a bitter domestic grief. An interesting and instructive parallel might be drawn between the subsequent careers of the two men. Both were reformers, and both had remarkable gifts of eloquence. Bright, however, was interested primarily in reform by an enlargement of political liberty; like so many other men of the time, he believed in the elevation of the people through the suffrage. To Cobden, on the other

hand, changes in the political machinery, except as engines in the work of economic reform, were meaningless. To get the Corn Laws repealed, he was ready to urge the manufacture of voters by the thousands. But in a general extension of the basis of the suffrage he took little or no interest. But while they started from different points, their aims led them, in the practical questions of their time, to a general unanimity of feeling and opinion. For a long period, during the Crimean war, as Palmerston accurately said, there was on one side the English people and himself, and on the other, "Bright, Cobden & Co." Had Cobden lived longer, he would have seen the ideas of Bright as to the suffrage triumph as his own with reference to the Corn Laws had triumphed, though the immediate agents in the change in the two cases were very different men. The repeal of the Corn Laws was the work of an extremely conscientious politician, to whom observation and argument had actually brought conviction against his will. The popularization of the suffrage was a clever trick of Disraeli, who was equally ready to contract or extend it, as might best serve the interests of his party.

A large part of Mr. Morley's volume is taken up with extracts from Cobden's correspondence, much of which consists of letters from the various countries in which he traveled. Early in life he came to the United States, and the account of his trip is of some interest, as it confirms all the others belonging to the same period on the subject of the traits of character and practical peculiarities then developed here. It is all so far away now, that it is difficult to believe that we ever could have been so puffed up with our own conceit, and so absurdly aggressive toward Englishmen.

Robinson's "Wild Garden."*

THE garden here described is the kind of which we have a vast deal in America and of which they have very little in England, but toward which, apparently, the English are turning with genuine longing—namely, the unkempt garden of Nature,—the garden of which Emerson sings:

"My garden is a forest ledge
Which older forests bound;
The banks slope down to the blue lake-edge,
Then plunge to depths profound";—

the garden that includes the woods, the groves, the swamps, the ditches, hedge-rows, fence-corners, meadows, and barren fields. The Englishman is getting surfeited with his trim borders and flower-plots, and is studying how to make the waste places more attractive without marring their natural wildness and freedom. His plan is to introduce the hardy wild plants and flowers of other countries; to sow their seed or set their roots and bulbs in suitable habitats, and to await for their ultimate naturalization.

In the matter of purely wild flowers—flowers that flee from rather than toward cultivation—England, judging from this work, is much poorer off than America. Her wild flowers are rather stragglers from

the garden; at least, they appear to have little of the shy, delicate, woody character of our native and more characteristic flora. Hence, in planting his wild garden John Bull will do well to study our fields and woods much more closely than he has yet done. Europe, or the Old World, has largely stocked both our vegetable and flower gardens, but when it comes to a wild garden, to the garden of the gods, they must borrow of us. Mr. Robinson recommends a score or more of American plants as suitable for English woods and hedge-rows, but leaves out many of our most charming and prolific. The plants and flowers named are poke, golden-rod, the white trillium, trailing arbutus, blood-root, the asters, bee-balm, spider-wort, pond-lily, bird's-foot violet, Canada violet, milkweed or silkweed (*Asclepias*), birthwort, Virginia creeper, dwarf cornel, moccasin flower, American cowslip (*Dodecatheon*), eupatorium, thalictrum, cardinal flower, dog's-tooth violet, and a few others. Our white pond-lily (*Nymphaea odorata*) the author says is quite as fine as the British species. It is, in fact, much finer, being deliciously fragrant, while the European species is odorless. He also speaks of our Canada violet as being without fragrance, when the truth is it has a sweet perfume. Our earliest and most charming spring flower, the hepatica, which is so well suited to the borders of English woods and the shade of English hedge-rows, is not mentioned. The sharp-lobed species, *Hepatica acutiloba*, is very often sweet-scented, and the rank, dense clusters of them, white and blue and purple, make gay the little sunny knolls as soon as the April snows are gone. Our columbine, too,—“the rock-loving columbine,”—what can be more hardy and beautiful, springing up as by magic on the bare, mossy rocks, and tossing its gold and crimson bells and its delicate foliage in the breeze! There is apparently no rock-flower in Britain that compares with it. As an early field-flower for moist, low meadows, producing broad and beautiful effects, we recommend our early flea-bane (*Erigeron bellidifolium*). It will tinge a field with blue and purple, as the daisy and buttercup will make it white and golden a month later. Or our wild geranium; cold, moist meadows, that are a stranger to the plow, are sometimes completely tinged with its soft, delicate bloom. Does not our wild-gardener know the American dogwood (*Cornus florida*), giving such a dash of snow-white here and there to our under-woods, just as the leaves are unfolding? Or our laurel and our azalea, our meadow-lilies, spotting the July meadows with fire; our hawkweed, rivaling the dandelion in color and richness of effect; our matchless fringed gentian, looking regal amid the coarse September weeds; or our impatiens, hanging its golden jewels by the brook-side? Our large yellow gerardia is a handsome midsummer flower, to be grown in oak woods. The only species of our milkweed (*Asclepias*) that we would recommend for the wild garden are the swamp milkweed (*A. incarnata*), the four-leaved milkweed (*A. quadrifolia*), and the butterfly weed (*A. tuberosa*). None of the above-named flowers are matched in kind in the European flora, and the English wild garden is incomplete without them.

Mr. Parsons's illustrations must have been charming in the original, but they are not engraved with the necessary delicacy.

* The Wild Garden, By W. Robinson, F. L. S. Illustrated by Alfred Parsons. London: "The Garden" Office. New York: Scribner & Welford.

HOME AND SOCIETY.

Notes on Reading.

MR. EDWARD EVERETT HALE tells us that he once knew a young man, who afterward became insane, who was so impressed with his own ignorance that he went to the college librarian and asked him at which end of the library it was customary for students to begin. And Mr. Charles Dudley Warner tells us that a college professor not long ago informed him "that a freshman came to him, after he had been recommending certain books in the literature class, and said he had never read a book in his life. This was literally true. Except his text-books, he had never read a book. He had passed a fair examination, but of reading he knew no more than a Kafir."

The first thing one notices is that very few people read, in the exact sense of the word. "Reading and writing come by nature" is as true of the one as it is of the other; and while an enormous proportion of the people of these United States are capable of the physical act of reading, and do, indeed, practice it now and then, so far as to read the market reports or the deaths and marriages, only a few are habitual readers. And even of these, how many are there who read anything besides cheap fiction—cheap, I mean, in quality,—the ready-made literature turned out by the fiction-mills? In the public libraries, seventy per cent. of the books taken out in the course of a year is cheap fiction; and the cheap fiction which gets itself between the covers of a book and upon the shelves of a library is not one-half of that which runs its course in the columns of some weekly story-paper. Now it is not right to call the consumers of stuff like this readers. Charles Lamb speaks of books which are not books, so these are readers who are not readers. They read with the eye alone, while the brain is inert.

This class is far harder to deal with than the still larger class which, like the collegians Mr. Hale and Mr. Warner tell us about, have never made any use of the power of reading which was hammered into them in the primary school. The man who has rarely opened a book may be induced to do so; and he may be so gratified with his discovery of the pleasure and profit which he found in reading that he will never give it up. Those who do not read can only be got to read by giving them something which will interest them sufficiently to make them want to read it through when they have once begun. And what will interest a man depends altogether on the man. In literature, as in dietetics, what is one man's meat is another man's poison. One thing may be said most emphatically: never give any "improving books" to a man who does not read; to do so is to waste your effort and his. When the reading habit is once formed, you may, perhaps, get him interested in a tract or in a religious biography of the ordinary Sunday-school type. But no such book will ever tempt him to go on reading for its own sake.

The rule is simple: study the man or the woman or the child, and put before him or her the book he or she is most likely to begin, and having begun,

most likely to finish. In all probability, the firemen around the corner, whose little library you are trying to increase and improve, will not take so kindly to Shakspeare; but Tom Hughes's "Alfred the Great," and Higginson's "Young Folk's History of America,"—the best little book of its kind I ever saw,—and Nordhoff's "Politics for Young Americans," and a good collection of miscellaneous poems—these are the books they are likely to look at, and in all probability to read. You cannot cure a boy of reading the "Bold Brigand of the Dead Gulch" by giving him the "Student's Hume,"—one of the driest books which ever made a boy thirsty,—or any of the ordinary old-fashioned text-books of history. But you might get him to give up "Lone-eyed Jim, the Boy Scout," to read one of Mayne Reid's stories; and from those the transition is easy to the sea-tales of Cooper and Marryat—two salt-water romancers far healthier than most of the rose-water novelists of to-day. And after you have got the boy interested in these sea-fighters of fiction, let him have Southey's "Life of Nelson," a good biography of Paul Jones, and, if the size of it does not frighten him, Cooper's "History of the American Navy."

The one essential thing to do, when you are trying to change a man who does not read into a man who does read, is to put yourself in his place. What is his business? What are his tastes? What are his surroundings? The answers to these questions suggest the weak points in his indifference. If he is an artisan who gives his evenings to the reading of a weekly story-paper, and so has the freshness taken out of his mind by its cheap fiction, suggest his trying Charles Reade's "Put Yourself in his Place"; and if this story of strikes interest him, lend him Reade's other novels, most of which are so manly, and touch so closely on questions of history and politics, that the reader is tempted to learn more about what the novelist has thus enticingly alluded to. If a lady has a strong taste for the theater, suggest her reading Dr. Doran's "Their Majesties' Servants,"—the most amusing as it is the most authoritative of stage-histories,—and insist on her reading Lewes's "Actors and Acting," the one good book on a difficult subject. If she like these, then she may begin on the grand line of English histrionic biographies which begins with Colley Cibber's "Apology," and comes down to Macready's "Reminiscences."

A course of reading is like an encyclopedia; it is meant to take in everything. Now, anybody who believes that he can take in everything will be "taken in" himself. The mass of accumulated knowledge is now enormous, and to take even a cursory view of it all is only possible for a very well-educated man. To know something of everything is getting, day by day, to be a harder task. But to know almost everything about something is more nearly within everybody's reach. To know absolutely everything on a given subject is not possible even to the specialist, but to get a good grasp of a subject, be it scientific, or historical, or literary, to know what is best worth knowing about it—this can

be done by almost anybody with good will and a little perseverance. Now, the way to master a subject is to begin at the beginning. Suppose you want to know about Greek literature. You have noted one of Macaulay's or Matthew Arnold's glowing tributes to the noble simplicity of Grecian writing, and you want to read about it. Get Jebb's "Primer of Greek Literature," which is almost as good as Stopford Brooke's "Primer of English Literature"—as high praise as one can give any book of the kind. This will tell you the conditions under which the Greeks worked. Then if you are attracted toward any other writer, and want to know more about him, get the volume in which he and his works are discussed at length in the series of "Ancient Classics for English Readers." By the time you have read that, you will know whether you really want to study this Greek author or not, whether you are capable of appreciating him, and, therefore, whether your time and attention can be given to him with advantage.

As soon as the taste for reading is formed, that taste begins to improve, and its improvement should be sedulously cultivated. Every man who has read a great deal will tell you that he has left far behind him the books he admired when he began. What he admired at twenty is far inferior to what he admires at thirty or forty. He is constantly going up a literary ladder. Now, it makes little matter on what round of the ladder the reader begins, so long as he climbs. It is the act of climbing which is beneficial, not the elevation attained. If you are a boy, and you read for excitement, for adventure, and for this reason take a story-paper, give it up, and try one of Mr. Towle's series of books about the "Heroes of History," or one of Dr. Eggleston's "Lives of Famous Indians." If Mr. Towle's "Pizarro" attracts you, go from that to Prescott's narrative of the conquest of Peru; and from that you may be led to his other histories of the Spanish dominion in America, and Prescott may thus introduce you to Irving and to Motley. And when you have got so far, the whole field of European history is open before you. Get the best—the best, that is, that you can read with satisfaction, and then go onward and upward. One caution may be thrown out here. When you want to know about any man or period and seek a history to tell you, do not take a school-book; they are only too often dry and colorless.

And this brings us to those who know what to read, but desire advice as to how to get the best results from their reading. Having formed the habit of reading, and having thus got your foot on the ladder of literary culture, how are you to get the best result from these? First of all, always think over a book when you have finished it. Criticise it.

Form your own opinion of it. If you liked it, ask yourself why you liked it. If you disliked it, ask yourself why you did not like it. See if the fault was in the book or in you. If you were greatly interested, try to find out whether this was due to the author or to the subject. Then if you can find somebody else who has read the book, talk it over; exchange your impression for his impression; and see whether, on sober second thought, he is more nearly right than you. If you have been reading a great author, see what the great critics have been saying of him. If you have been reading an essay on a great author or a biography of him, take up his own works next, that you may gain the benefit of the interest around about him. If you have been reading any special history, try to see how it fits into the general history of the world: and for this purpose, I know no books to be compared with Mr. Freeman's "Primer of European History," and his "First Sketch of History." These begin at the beginning and tell the march of events to our generation.

Then, as you are reading a book, it is well to mark important passages. If the book is your own, make a light mark with a hard pencil in the margin of the passage. If the book is not yours, put in a slip of paper. When you have ended the book, read over the marked passages, and index those which on this second reading seem worthy of it, or likely in any way to be of use to you. If the book is yours, turn to the blank page at the end and give a hint of the passage and the page it is on; thus:

John Brown, p. 21,

Shakespearean quotation, p. 47,

Anecdote of a wise dog, p. 93,

and so on. If the book is not yours, take a page in a note-book, or a sheet of note-paper, and make your index on that, heading it with the title of the book.

The Rev. Joseph Cook tells us that he marks important passages with a line in the outer margin of the book he is reading, more important with two lines, and most important with three; while passages that he disagrees with or disapproves of, are marked in like manner with one, two, or three lines on the inner margin. He advises the committing to memory of the passages marked with three lines on the outside margin. The reader should also strenuously cultivate the habit of searching diligently in dictionaries and encyclopedias and gazetteers, and in whatever books of reference he can get access to. He should let no allusion pass without an effort to find out what it means. Macaulay bristles with allusions, but there are scarcely any that a quick reader cannot dig out of an encyclopedia in a few minutes. And "when found make a note on,"—as Cap'n Cuttle tells us.

Arthur Penn.

THE WORLD'S WORK.

Progress in Smoke Abatement.

THE necessity of getting rid of the clouds of black smoke that overhang all towns where bituminous coal is used in domestic fires, has led to the invention of a

large number of new stoves and fire-places. In all these inventions the aim is to prevent the formation of smoke by a more complete combustion of the fuel. Smoke is simply a fine dust composed of

carbon. This carbon dust will burn, and the whole art of preventing the formation of the dust is to insure the complete combustion of the fuel. To accomplish this, inventors have tried two apparently different methods. One way is to make a fire-place in which fresh coal may be added in such a way that it may be "cooked" or prepared for burning before it is wholly consumed. As such fire-places are made on the principle of the gas retort, they may be called coking stoves. The other method is called the regenerative system. The idea here is to heat the air needed to maintain the fire, and thus to secure a better combustion of the fuel. A number of these smoke-preventing stoves and furnaces have already been described in this department. One of these inventions on the regenerative plan has proved to be a commercial success, and it has been introduced into a great number of places. At the Smoke Abatement Exhibition, recently held in England, a number of new smoke-preventing appliances were shown. In one stove and open grate there is a small trough at the front of the grate, into which the fresh coal is put, and from this place, when it has been partly coked, it may be passed by means of a small scraper into the fire, and under the coals already burning. In another grate, two Archimedean screws are used to raise the fresh coal into the fire from a holder, or coal-box, under the grate. In another grate, a gridiron, or rake, under the grate-bars rises, and lifts the whole bed of live coals. This makes a small space or cave under the fire, into which fresh coal may be placed. The iron rake is then withdrawn, letting the live coals down on the raw fuel under it. Another invention puts fresh coal under the fire by means of a pivoted box under the grate-bars. This box may be turned on its pivoted support so as to bring it out in front of the fire. In this position a slide covers an opening in the center of the grate. The box is filled with coal, and is returned to its position under the fire. The slide is withdrawn by the same movement, and by means of a false bottom in the box, the coal is lifted through the opening in the grate, into the fire. Another grate is made in the form of a cylinder (already described here), supported on its axis. It is filled with fuel, and when this is partly lighted the grate is turned over, bringing the fire on top. The fire then burns downward till a part of the fuel is consumed, when it is refilled and turned over again. Besides these grates, there is a new shovel in the form of a wedge-shaped box. When filled with coal, the shovel is pushed into the fire, sliding on the grate-bars, and lifting the live coals. When it is fairly under the hot fuel, a lever is moved, the box is opened and the fresh coal pushed out, when the shovel may be withdrawn, leaving the coal under the fire. In other new fire-places, the fresh coal is pushed into the fire from the back or sides by various appliances, so that the fresh coal is exposed to the heat, and is thus coked before it takes fire.

In the other class of smoke-preventing appliances, the unburned carbon that escapes from the fire is met just beyond the grate by streams of highly heated air, and in this hot air it will take fire and burn. Smoke is formed because there is not sufficient air to enable it to burn, and if the smoke, immediately after it has left the fire, meets a fresh supply of air, some of it will burn. If this fresh air is highly

heated it will burn all the more readily, and if the apparatus is properly designed and constructed, all the smoke will be consumed. Among the new appliances shown at the Exhibition, was a grate having hollow grate-bars open at the front end to the air, and communicating with pipes that open into the flue just behind the fire-place. Fresh air is drawn through these hollow grate-bars and is highly heated. It meets the products of combustion, and the unburned gas and smoke take fire and burn with great heat at the ends of the pipes. Various inventions were also shown, wherein the same thing is accomplished by drawing fresh air through sinuous passages at the sides of the fire-place. All these inventions are more or less close imitations of a well-known regenerative furnace for steam-boilers, invented in the United States several years ago, and now in successful operation in many parts of the country.

In the first class of grates and stoves, where the fresh fuel is coked or placed under the live coals, the smoke is burned by passing through or over the hot fuel already burning. There is in all these stoves more or less waste of heat from the escape of the unburned and invisible products of combustion, and for this reason the regenerative plan must be regarded as decidedly the best.

Another apparatus on the regenerative system consists of a steam injector. This is simply two pipes, one within the other, and placed directly over the fire in a steam boiler. The smaller pipe, placed within the larger pipe, is for steam, and the larger pipe is for air. The blast from the steam causes a suction through the larger pipe, and throws a stream of mingled air and steam into the furnace just beyond the fire. The air is heated by the fire and the steam, and assists combustion precisely as in the case of those furnaces where hot air is mingled with the products of combustion, in the regenerative furnaces already described. The use of the steam is, of course, a loss, but in the case of this apparatus it is said to be a loss of only one per cent., whereas the gain of heat from the more complete combustion of the gas and smoke is said to be as high as twenty-five per cent. It must be said, however, that the use of steam in this way appears to be generally regarded as a doubtful economy.

Improved Printing-Plates.

EXPERIMENTS have been made, both here and in Europe, with celluloid as a material for types, and the material has been found to have some advantages over type-metal and wood. It takes clear and sharp impressions under the influence of heat and pressure, and will keep its shape under the hardest usage. The celluloid is used in the form of thin sheets or plates, and is intended to be backed by wood. In nature-printing, as in copying leaves, mosses, laces, and all kinds of raised fabrics, the leaf or fabric is laid on the sheet of celluloid and submitted to heat under considerable pressure. The material will be pressed into the celluloid, and when finished the plate will exhibit the minutest veining or threads of the fabric or leaf. By cutting away the edges of the plate, the leaf may be brought into relief and used as a stereotype plate. These celluloid plates have so far been applied

to the manufacture of large types only, such as are now made of wood, and to the making of small plates containing short notices or advertisements for newspapers. The advantages of the celluloid types and plates consist in their lightness, which saves storage and postage, and in their durability and cheapness. The types resist the action of acids and do not affect the colors of the inks used on them. This makes it possible to use the same type for many colors, which is a great advantage in printing-offices where wood type is used.

The Radiometer in Measuring Light.

THE radiometer bulb, with its white and blackened vanes, is a familiar object in the windows of opticians, but, while it has been the means of making important experiments in physics, it does not appear to have proved of much value in the arts. It has been suggested recently that it can be used as a photometer in testing the power of different lights. The radiometer bulb is placed in a square metallic box having openings opposite the bulb on opposite sides, and closed with glass. The box is filled with water that is raised, by means of a lamp, or other appliance, to a temperature about one hundred degrees higher than the heat that may be given by the two lights to be examined. The beam of light from the candle, or other standard, is then allowed to fall on the vanes of the radiometer through one of the openings in the box. The light to be tested is allowed to fall on the vanes, through the opening on the opposite side. If the two lights are of equal power, the action of the lights on the vanes will balance, and the vanes will stand with one face toward one light and the other toward the other. If the power of the lights is unequal, the stronger light will displace the vanes or cause them to revolve. To measure the photometric power of the light to be tested, it must be moved farther away or nearer to the bulb till the balance is set up. The distance of the lights from the bulb will then give the value of the light, as in any of the photometers now in use. The observation of the action of the vanes is studied through the openings on the opposite sides of the case in which the radiometer is placed.

Hydraulic Dispatch.

A NOVEL form of dispatch-tube for transmitting letters and packages under rivers or harbors has been made the subject of experiment. The plan is the same as in the dispatch-tubes already in use in cities, where light carriers containing letters are blown or drawn through metal pipes by a powerful current of air, except that water is used instead of air. The tube is of thin lead, bound with wire on the outside to give it strength, and covered with tarred hemp to resist the action of the water. The pipe is simply laid on the bottom of the river, the shore ends being placed in a trench for safety. To obtain power, a reservoir is placed at each end of the pipe at a sufficient height to insure a good head of water. The reservoir is connected, by a pipe of equal diameter with the tube, with the top of a box at the shore end. The tube enters the lower side of this box, and there are valves at the end of each pipe, and a water-tight door at the side of the box. The carrier consists of a wire cylinder covered with rubber and closed by a

water-tight cap. The messages are placed in the carrier and it is put in the box with others, and the door is closed. The valves are opened and the water, under the pressure from the reservoir, sweeps or floats the train of carriers through the tube at a speed corresponding with the pressure. At the receiving end the water is discharged through a branch pipe into an open box or sieve, through which the water escapes, while the carriers are caught. The transmitting and receiving apparatus are the same at each end of the tube, and by reversing the current, messages may be sent either way. The chief advantage of such a hydraulic system of transmission will probably be found in the greater distance to which the carriers can be sent. As they float in this tube, there will be less friction than in pneumatic tubes, while leakage in the tube will be of less consequence. The commercial value of the system will depend on the relative cost of pumping air or pumping water through such a dispatch-tube.

Recent Progress in the Application of Electricity to Railroads.

THE experiments that were begun some time ago in this country, in the use of electricity on railroads, have been renewed recently upon a greatly enlarged scale. A new narrow-gauge railroad has been laid down on precisely the same conditions in regard to grade and curvature as would be found on ordinary railroads in the United States. A new locomotor with one car, of the ordinary single-horse pattern used on street railways, has been provided, and it is proposed to run the motor and the car continuously under all weathers for a year, in order thoroughly to test the system under every condition of the weather and the seasons.

The direct motive power is a stationary steam-engine located at the top of a hill, about a thousand meters from the nearest point of the railroad. Three dynamo machines are driven by belting from the engine, and these give the current for operating the road. These machines may be used in one of two ways. They may be joined to the wire to give a current that will cause the locomotor to move at a high rate of speed, or with power at a slower rate. If the current from one dynamo is sent into the next, and so on, in series, the current made available for work gives speed. If the current from each machine is sent direct to the wire, the combined currents give intensity or power. At the time the road was examined they were arranged in this way, as the track was new and a trifle rough. From the central station where the dynamo machines are placed, the wires are laid under-ground to the road. The insulation is secured by inclosing the wires in a wooden box filled with an insulating compound, poured in the box and over the wires while liquid. The track consists of square wooden ties and a light rail, laid in the usual manner. To secure insulation, the ends of each tie are painted with an insulating liquid that, when dry and hard, makes a good non-conductor. In placing the ties on the road-bed, care is taken to leave the ends of the ties exposed, so that the rail will not touch the ground between them. The rails are also painted with or dipped in the insulating compound up to the lower side of the tread. This gives the rails the appearance of being painted black

at the sides and bottom. The sides of each rail at the ends are also filed or brightened so as to leave a clean surface, and when they are in place on the track, short bars of copper are laid from rail to rail across the joint. Each bar bears against this bright or bare spot on the rail, and is securely held in this position by the fish-plates. A little solder is also applied, to insure good electrical connection from rail to rail through these copper bars. To assist the insulation, there is also a small piece of insulating material placed on the tie under the rail. On this is also laid another insulator wherever the heads of the spikes rest on the rail. With such a track the loss of electricity by escape into the ground, per mile of track, is found to be very small. The cables from the central station are connected directly with the track, one to each rail, and at a point near one end of the road. This is, however, not a matter of much consequence, as the central station may be at the middle of the road or at either end, while the cable may be carried under a river or across a hill or valley.

The motor consists essentially of a single dynamo machine, of precisely the same pattern as those used to furnish the current. It is laid down horizontally with the armature at the forward end over the driving-wheel. The motor is supported on four wheels, one pair forward being the drivers, while a trailing pair is placed behind under the cab. There are no trucks, as the motor is supported on a rigid frame-work. As the whole machine is small, the wheel-base is about the same as in the horse-car, and it will pass ordinary curves with ease. Motors of a larger size, and carrying two or more dynamo machines, would be arranged differently, perhaps, with two driving-wheels and one trailing truck. The armature of the magnet is secured to a horizontal shaft at the front of the motor, and from this shaft is a belt to a counter-shaft at the rear under the cab. The counter-shaft carries a friction clutch, controlled by a hand-lever in the cab. From the counter-shaft is taken another belt to the axle of the driving-wheel, and over this belt is a belt-tightener, controlled by a hand-screw in the cab. The four wheels are made of iron, in two parts, with a backing of wood, somewhat after the manner of paper car-wheels. The wood serves as an insulator, and prevents the current that flows from the track into the wheels from taking a short circuit through the axles from rail to rail. On each wheel are fastened brass arms, arranged to support a round brass disk opposite the center of the wheel, but not touching it. On this disk rest copper brushes, supported by a brass rod, that communicates with an insulated wire that connects with the magnet. The current from one rail passes through the tread of the wheels on that side, then through the brass arms to the copper brush, and thence by the wire to the magnet. In like manner the current returns to the rail on the other side. In this way, the motor becomes a bridge or short circuit on the rail that is continually changing its position

while in motion. This is precisely the same as in those electric block signals (already described in this department) where the current is made to pass from rail to rail through the first or last axle of a train moving in the block. In such signal systems, the moving train is merely an electric shunt or switch, and it receives no direct benefit from the current. In this motor the current passing through the apparatus does useful work in moving the train. All the switches for sending the current through the magnet in either direction, or for stopping, starting, and reversing the machine, are placed in the cab, and the whole work of control consists in moving these simple hand-levers, in moving the friction-clutch lever and the belt-tightener. There is also a hand brake.

At the time the road was inspected, the motor pushed the car containing several people, and dragged behind a small flat-car loaded with gravel and carrying two men. The motor was controlled by one engineer and one assistant. In starting, the switch was turned to admit the current to the magnet. The armature, turning idly before, began to revolve swiftly, and in a few seconds was moving at a high speed with a slight whirring sound. On applying the friction clutch, the motor started ahead easily, and in silence. On applying the belt-tightener a good speed was at once attained, and the train ran swiftly over the road for more than a mile without stopping. On taking off the flat-car load, the return trip was made at good speed, and apparently without effort. No attempt was made to display the highest speed possible, but enough was done to show that the motor could be handled with the greatest ease, and with entire precision. When used alone, the motor ran backward and forward, stopped, and started as readily as any locomotive, and without noise, dust, or smoke. While this road has been built for experimental purposes, enough has already been done to prove that it is a practical success. Such a road and motor will, no doubt, prove of great value wherever ordinary locomotives are objectionable, as in mines, tunnels, and city elevated roads. Short spurs or feeders to regular railroads, particularly where water-power is available, could be built on this system to advantage, and there seems no reason why it may not prove of great value. In point of simplicity and directness of means to ends, the motor and its road appear to be superior to the electrical railways already in use.

Improved Chain-Pump.

The chain-pumps, so extensively used in some parts of the country, always had the defect of great wastefulness, both in time and power. The metal buttons used for buckets in the chain tube were too small, and allowed the water to run back too freely. An improved rubber bucket, in the form of an inverted cup, has been introduced, that appears to remedy the defects of this otherwise useful form of pump. The buckets fit the tube closely, and prevent the water from falling back.

BRIC-À-BRAC.

Forfeits.

THEY sent him round the circle fair,
To bow before the prettiest there.
I'm mought to say the choice he made
A creditable taste displayed;
Although—I can't say what it meant—
The little maid looked ill-content.

His task was then anew begun—
To kneel before the wittiest one.
Once more that little maid sought he,
And went him down upon his knee.
She bent her eyes upon the floor—
I think she thought the game a bore.

He circled then—his sweet behest
To kiss the one he loved the best.
For all she frowned, for all she chid,
He kissed that little maid, he did.
And then—though why I can't decide—
The little maid looked satisfied.

"Uncle Remus" in Objibaway.

MOOSE FACTORY, HUDSON'S BAY.

VIA LAKE TEMISCAMINGUE, OTTAWA RIVER, CANADA.

December 12th, 1881.

TO THE EDITOR OF THE CENTURY.

SIR: Apropos of the notice of Mr. Harris's "Uncle Remus" stories in your magazine for April [1881], and especially of the comparison of "How Mr. Rabbit lost his fine bushy tail" with the Norse version of the same fable, it may be of interest to your readers to know that the inclosed similar story is told by the Objibaway Indians. For the last few years I have been in the habit of collecting Indian stories and folk-lore of all kinds, my position as surgeon to this factory giving me a better chance than most enjoy. Of these I may make use on my return to England next year. The period which has elapsed since the publication of your magazine and my note is great, and is due to the fact that in this out-of-the-way part of the world we only get two packets a year.

Yours truly,

WALTER HAYDAN.

THE FOX AND THE BEAR.

A fox was fishing one day, in the depth of winter, through a hole in the ice, using his tail for bait, by which means he caught a great number at first, but as the day went on he was not so successful. His tail becoming numbed, he did not perceive it getting frozen in. By and by, thinking he had got a bite, he gave a smart pull and broke his tail off short, at which he began to weep. The Manitou, coming along, asked him why he wept. The fox told him, and begged to have his tail restored. The Manitou told him he could have it back if he could discover an animal as stupid as himself. The fox started for home, with the result of his sport in his mouth. On the road he met a bear, who asked him how he had managed to catch so many fish. The fox told him it was the easiest thing in the world; all he had to do was to use the same means he had done, which the bear begged to be taught. The fox, nothing loath, took Bruin on the ice, cut a hole for him, and told him to put his tail through and not to pull it out until he called to him, and then to take it out as quickly as possible. The fox waited until he saw it well frozen in, and shouted "Pull!" and snap went the tail. The fox's tail was restored to him, but the bear lost his forever, and this is the reason the bear has a stumpy tail to this day.

Two Plantation Songs.

[If the readers of THE CENTURY who have heard, in concerts or elsewhere, the vocal gymnastics known as the "Swiss Warble," can imagine the volume as well as the melody of that performance increased a thousand-fold, they will be able to form some idea of the thrilling effect of the italicized halloo in the refrain stanzas of the "Hog-Feeder's Song," herewith appended. Harbert, a hog-feeder on the Turner Plantation, in Putnam County, Georgia, could make every inflection of his voice heard at a distance of three miles, but this was not even considered remarkable in a region where the dusky captain of the corn-pile was in the habit of lifting his right hand to his ear, and conveying a most musical invitation to the hands on plantations five miles away.]

I.

HOG-FEEDER'S SONG.

OH, rise up, my ladies! Lissen unter me!
*Gwoop!—Gwoop! * Gee-woop!—Goo-whoee!*
 I'm a-gwine dis night fer ter knock along er you!
Gwoop!—Gwoop! Gee-woop!—Goo-whooh!
Pig-goo! pig-gee! Gee-o-whoee!

Oh, de stars look bright des like dey gwineter fall,
 En 'way todes sundown you year de kildee call:
Stee-woee! Killdee!—Pig-goo! pig-gee!
Pig! pig! pig-goo! Pig! pig! pig-gee!

De blue barrer squeal, kaze he can't squeeze froo,
 En he hump up he back des like niggers do—
 Oh, humpty-umpty blue! *Pig-gee! pig-goo!*
Pig! pig! pig-gee! Pig! pig! pig-goo!

Oh, rise up, my ladies! Lissen unter me!
Gwoop!—Gwoopee! Gee-woop!—Goo-whoee!
 I'm a-gwine dis night a-gallantin' out wid you!
Gwoop!—Gwoopee! Gee-woop!—Goo-whooh!
Pig-goo! pig-gee! Gee-o-whoee!

Ole sow got sense des ez sho's youer bo'n,
 'Kaze she take'n hunch de basket fer ter shatter out
 co'n—

Ma'am, you make too free! *Pig-goo! pig-gee!*
Pig! pig! pig-goo! Pig! pig! pig-gee!

W'en pig git fat, he better stay close,
 'Kaze fat pig nice fer ter hide out en roas'-
 Oh, roas' pig, shoo! *Pig-gee! pig-goo!*
Pig! pig! pig-gee! Pig! pig! pig-goo!

Oh, rise up, my ladies! Lissen unter me!
Gwoop!—Gwoopee! Gee-woop!—Goo-whoee!—
 I'm a-gwine dis night fer ter knock aroun' wid you!
Gwoop!—Gwoopee! Gee-woop!—Goo-whooh!
Pig-goo! pig-gee! Gee-o-whoee!

II.

A NEGRO LOVE-SONG.

TRACK in de paff whar rabbit bin play'n',
 (Hey, my Lily! go down de road!)
 Han' me down my walkin'-cane,
 (Hi, my Lily! go down de road!)
 Hey, my Lily! de cow done lowed,
 (Go down de road—go down de road!)
 Hit's wet on de grass whar de jew bin po'd,
 (Hi, my Lily! go down de road!)

* G hard here and throughout.

Mighty long way froo de narrer lane,
 (Hey, my Lily! go down de road!)
 En kildee holler like he callin' up rain,
 (Hi, my Lily, go down de road!)
 Hey, my Lily! de chicken done crowed,
 (Go down de road—go down de road!)
 Sun gone down en moon done showed,
 (My Lily! my Lily! go down de road!)

Han' me down my walkin'-cane,
 (Hey, my Lily! go down de road!)
 Big owl holler: *No use stay'n'!*
 (Hi, my Lily! go down de road!)
 Big nigger tote de little gal load,
 (Go down de road—go down de road!)
 'Kaze too big a turn make nigger leg bowed,
 (My Lily! my Lily! go down de road!)

Han' me down my walkin'-cane,
 (Hey, my Lily! go down de road!)
 De boys all sing en keep on say'n':
 (Hi, my Lily! go down de road!)
*Nigger will drink fum 'n'er nigger's go'd,**
 (Go down de road—go down de road!)
En some folks git w'at dey aint never growed,
 (My Lily! my Lily! go down de road!)

One man los' w'at 'n'er man gain,
 (Hey, my Lily! go down de road!)
 You git yo' shawl en han' my cane,
 (Hey, my Lily! go down de road!)

Joel Chandler Harris ("Uncle Remus").

The Message of the Rose.

HE.

SHE gave me a rose at the ball to-night,
 And I—I'm a fool, I suppose,
 For my heart beat high with a vague delight.
 Had she given me more than the rose?

I thought that she had, for a little while,
 Till I saw her—fairest of dancers—
 Give another rose, with the same sweet smile,
 To another man, in the Lancers.

Well, roses are plenty and smiles not rare;
 It is really rather audacious
 To grumble because my lady fair
 Is to other men kind and gracious.

Yet who can govern his wayward dreams?
 And my dream, so precious and bright,
 Now foolish, broken, and worthless seems,
 As it fades, with her rose, to-night.

SHE.

I gave him a rose at the ball to-night—
 A deep red rose, with fragrance dim,
 And the warm blood rushed to my cheeks with fright,
 I could not, dared not, look at him.

For the depths of my soul he seemed to scan;
 His earnest look I could not bear,
 So I gave a rose to another man—
 Any one else—I did not care.

And yet, spite of all, he has read, I know,
 My message—he could not have missed it;
 For his rose I held to my bosom, so,
 And then to my lips, while I kissed it.

Bessie Chandler.

No. 2.

AROUND CAPE HORN.

AFTER rambling for several months among the rivers and mountains of California, observing and sketching its scenery and people, I found myself in San Francisco again. This was now to be my starting-point for a journey which was to take me to Europe, where I proposed to continue my art studies. The two most obvious ways which lay open before me for reaching New York, whence I could take steamer for England, were either to go across the Isthmus of Panama,—a pleasant but somewhat tedious route,—or to proceed across the continent by rail. Having already taken this time-saving but wearisome overland journey, I had about decided to cross the Isthmus, when my attention was accidentally attracted to a route, formerly the only one, but now scarcely taken by any passengers except those who seek the most sea air for the least expense. I refer to the passage around Cape Horn. To me the idea had in it something racy and novel, for I always preferred a voyage in a sailing-ship when not pressed for time, and as the ship proposed to me was to sail for Liverpool direct, I engaged passage at once, and, after laying in a supply of winter clothing and sundry knickknacks, was on board with my traps twenty-four hours after.

The voyage proved to be a fairly representative one as regards incident and adventure. As those who merely cross the Atlantic in the superb saloons of the steam-liners running between New York and Liverpool,—who grumble if they are out over eight days, or if the *menu* is ever below the standard of Delmonico's,—know very little about life in a sailing-ship, I make no apology for giving them a *résumé* of the voyage of the clipper ship *Three Brothers* around Cape Horn, the sole passengers being Mrs. Hammond, wife of the captain, and one George Walden,

artist, and seeker after adventure by land and sea. The ship *Three Brothers* was formerly the famous steamer *North Star*, in which the late Commodore Vanderbilt made his trip to Europe in 1853. Presented by him to the United States Government, she was turned into a sailing-ship after the war, and proved to be one of the largest and fastest clippers afloat. It was on the 17th of March that I bade farewell to the hospitable friends I had met at San Francisco. The noble ship was lying out in the stream, well freighted down with grain. The weather was fine, and, with a long "Heave-oh, boys, o-o-o-oh!" the crew brought the anchor atrip. Amid an apparently inexplicable tangle of ropes and blocks and a bewildering confusion of voices and actions, order nevertheless reigned. A controlling mind regulated all, and it was marvelous to see how soon the vast fabric of masts and spars loomed up white against the sky, as sail after sail was cast loose from the yards by the nimble mariners, and unfolded, wing-like, in the rosy light of the setting sun. After slipping gracefully through the Golden Gate and over the bar, the pilot left us, and, heading south, we were alone on the Pacific, with a prospect of perhaps four months of solitude before we should again set foot on land. I confess it seemed very odd to me to be going around such a vast angle to the very ends of the earth, to reach a point exactly as far north of the Equator as Cape Horn is south of it. We passed the Farallon Isles at sunset, and, for some time after the last land we were to look upon for many a long day had faded out of sight, the gleam of the light-house was seen in the gathering gloom of night.

After supper, "sail ho!" rang through the ship, and a dark mass loomed mysteriously

out of the gloom. It was a ship heading north. This was the last vessel we were destined to see for nearly two months. At eight bells all hands were summoned on deck. We had shipped a new crew, and the first and second mates were now to divide them into the starboard and the port or captain's watches. The men before the mast numbered forty-six, and were a motley set, from nearly every quarter of the globe. As their names were yet unknown, the mates called them out rapidly in turn, by some peculiarity they noticed in them. "Step out there, you fatty!" "You fellow with a big jib, come here!" or the like. Including Captain Hammond and his wife, the three mates, the cook and steward and their assistants, the carpenter and his mate, and myself, we numbered fifty-eight souls on board, destined to "share and share" alike whatever fate might have in store for the good ship *Three Brothers*, while she sailed her solitary course of eighteen thousand miles.

A sailing-ship bound across the seas will generally contrive to leave port, as we did, on a Saturday. Sunday is a poor day in port, as no work can be done in loading the vessel; if the cargo is all in on Thursday, the ship will be detained a day on some pretext or other, in order to avoid sailing on the dreaded Friday. The following Sunday is employed in cleaning up the decks, and the crew take an account of stock, as they did on our first Sunday. All performed unusual ablutions, and most of them dressed for the day and idled about in the sun, sleeping, mending their clothes, or chatting in the desultory manner in which a score or two of people who have never known each other before gradually find their affinities, and adjust themselves to the little world in which they are to live together for a few months. The reckless, thriftless character of the sailor is the natural result of the life to which he is doomed. Going to sea before he has the remotest idea of what kind of a career life in the fore-castle must inevitably be, he learns to live in the present, and that fact alone tends to produce recklessness. Every voyage separates him from those he likes and introduces him to a new set of beings, tossed in a hap-hazard fashion in his path, and from whom in a few weeks he is destined to separate, never to see them again. Any storm is likely to be his last; every time he goes aloft he is liable to fall to his death. Deep reflection on the character of his destiny or the prospects of bettering his career can only result in suggestions of suicide or despair. He is, therefore, always like an overgrown boy in his mind, offering strange alternations of simplicity and cunning: now tender as a woman, now

callous and cruel as a tiger—a medley of astounding contradictions of character, moved more by the impulse of the moment than by settled convictions, and easily swayed by a mind or a will stronger than his own.

In the afternoon the crew overhauled their sea-chests. Everything was emptied on deck, and an extraordinary hodge-podge it was of clothing, trinkets, dog-eared dime novels, jack-knives, pipes, ditty boxes, cheap looking-glasses, greasy cards, sou'-westers, photographs, plugs of tobacco, and limp hats and caps without end, the latter being in excess of every other object, because the wind makes sad havoc with head-coverings at sea. The experience one has had in sea-voyaging may be fairly gauged by the number of hats and caps he stows in his baggage when starting on a voyage. With boyish eagerness each of the men now surveyed the stock of the others. An active barter was started, and before it struck six bells half the contents of the sea-chests had changed owners, either by trade or theft. The trading was enlivened by characteristic gibes and jokes, more or less caustic, but generally taken in good part. After supper, in the dog-watches, when a lovely twilight drew its star-embroidered veil over the heaving expanse of ocean, one of the crew produced from his chest an accordion, on which he played with considerable effect. A number of the crew, possessed of full, rich voices, aided the music with a fine chorus. In the meantime, the noble ship was steadily pursuing her majestic, rhythmic march over the billows toward the South Pole, blending the steady sonorous roll of the foam around her bow with the chorus of the crew.

After the music came the spinning of yarns. The "Irish Lad," as he was called, got the deck, and proved to be a very Arabian in imagination and volubility. He developed an inexhaustible capacity for romancing, which, on this evening and many subsequent ones, held the crew spell-bound. But, on a sudden, the course of one of his most startling yarns was broken by the shrill yell of the mate, ringing out: "Stand by the sky-sail halliards!" The men sprang to their feet and to the ropes in a wink; as the rattle of the blocks and canvas broke on the night, the motions of the crew were quickened by the commands following in rapid succession: "Clew up the royals! Sky-sail men, aloft! Lively there, boys! Clew up the mizzen-royal stay-sail! Let go your top-gallant halliards!" As soon as the orders were given they were obeyed; and in a few brief moments the upper spars were stripped of canvas, the top-gallant yards being down on the caps, and the great ship was almost in fighting trim under

DIVERSION IN THE DOG-WATCHES.

top-sails. On the weather-bow an impenetrable blackness could be seen rapidly rising and approaching. From the upper stratum dark, fluffy masses were constantly being detached, blown across the stars in advance by the fury of the hurrying tempest, as the arrows of an army precede the onset of a mailed host. At rapidly increasing intervals the inky gloom of the wall of cloud was riven by the intense glow of a thunderbolt. Across the surface of the sea, like the rolling of vast balls over a cav-

ern, pealed the boom of the aerial battle; and even through the darkness the agitation of the distant water was plainly visible—a wrathful white, hissing as it drew nearer. Around us for the moment reigned a portentous calm; the heaving sea was sullen and glassy. Suddenly a few heavy drops fell on the deck like lead.

“When the rain comes before the wind,
Then your top-sail halliards mind,”

says the sailor. In an instant, as it seemed,

the heavens overhead became livid, and a burst of wind struck the ship with terrific violence. Having no headway to break the force of the blow, the vessel was hove down on her beam-ends. The pale green lightning flashed incessantly, the thunder pealed with appalling rapidity, and the beat of the rain, which fell in a continuous sheet, and the shriek of the wind made it impossible to hear the orders. The sailors groped over the sloping deck, "hanging on by their eyelids," and finding the ropes by instinct. It was a fearful moment. The upper top-sails were taken in, but until the ship began to pay off before the wind, it seemed as if the masts would go or the vessel founder. But there came a moment, in the midst of the uproar, when one was conscious that the squall had reached its extreme limit. Gradually wind, thunder, lightning, and rain ceased, passing off to leeward, to work destruction elsewhere. The stars came forth once more, the sails were set again, the watch turned in, and I sought my bunk to dream of the first day of the voyage.

Variable winds, calms, and strong breezes succeeded during the remaining days of March. The heat grew intense; although rarely over ninety-five degrees Fahrenheit, yet its steadiness, aided by the reflection from the water, made it very exhausting. The crew often went about with nothing on but trowsers. Every day the engineer wet them down with the hose worked by the donkey-engine. The water grew more phosphorescent at night, and the bonitos and sharks which constantly followed us clove the dark deep after nightfall, lambent, like fishes of flame, leaving meteor-like wakes of silver fire. Flying-fish by the million swarmed over the sea, and were washed on deck on the flashing crest of luminous billows. But the steady broiling of the sun as we approached the line, while it weakened one's energies, at the same time exasperated the blood. Fifty men thrown fortuitously together under such circumstances, brutish and unreasoning, without hopes, or aspirations, or lofty motives, or thoughts—without a single bond of union save that of mutual self-preservation, and the awe inspired by the authority of the master, aided by superior intelligence and weapons, are very uncomfortable and inflammable materials to coop under a tropic sun in a narrow ship—especially if one considers that the usual antagonistic elements of a sailing-ship were also at work on board the *Three Brothers*. The officers took every means to prevent the crew from obeying them through any liking or respect. Authority was asserted only by force; a command was often followed by a blow.

The captain and the mate were, as usual, out of harmony; it was the old story of the ins and the outs. The mate, Mr. Evans, was a Herculean Down-easter; his frame was awkward and angular, and the tight muscles were strained down to the hardness of steel. His arms were almost the length of a baboon's, and his enormous paws reached well-nigh to the knees. When he was excited, he swung these ungainly members about like flails. There was, with all this coarseness, a vivid brilliance of imagination combined with great fluency of language, excepting the paucity of adjectives common with seamen and others of the same rank in life, ashore. The elastic adjective which Mr. Evans ingeniously contrived to fit to every condition was the word "bloody." But these gifts had developed in this worthy son of Neptune a capacity for relating episodes in his precious experience which threw the tame annals of Munchausen into the shade.

Entirely lacking in tact, this hard-headed, iron-fisted, limber-jawed worthy contrived to be at loggerheads with the captain and the crew by turns, while he also condescended at times to such familiar terms with them as to bring ridicule upon himself. Then his ponderous wrath would be aroused, and fist, rope, and belaying-pin would be brought into active play.

Signs of insubordination would also crop out sometimes among the crew, hardly to be wondered at, however, under the circumstances. For no apparent cause, one of the men loitered aloft one day, after he was ordered down.

"Come down from there, you — — —!" the mate roared, frantically waving his arms.

"I'll come when I'm ready!" growled the fellow from aloft.

"You'll come when you are ready, will you?" cried the captain. "We'll see about that."

Stepping below for his revolver, he came on deck again, and, taking aim, fired at the man. The ball missed him and lodged in the mast. Another shot also failed to hit, but started the now frightened seaman down the rigging on the run. When he reached the deck, the captain, concluding the man had been sufficiently alarmed, contented himself with hurling a belaying-pin at him, and, as eight bells rang out, sent him below with his watch.

Occasionally a bit of rough horse-play or rollicking fun relieved the monotony and put the crew into good humor for awhile, or the very brutality of the officers was tinged by a certain grim Plutonian humor. One day, the fowls all broke out of their coop and scattered over the deck. Two flew overboard; a boat

was lowered, and, after a long pull, one was brought back. The carpenter was put on short allowance for a week on account of his carelessness in fastening the coop. Another day, "Shavings," the mate of "Chips," the carpenter, had a row with the cook, and flew at him with a block of salt beef. The cook had a plucked goose in his hand, ready to go into the stove. He belabored "Shavings" about the head with it until the belligerents were separated. The goose was then cooked, and the captain declared he never tasted a more tender *morceau*! On another occasion, the cabin-boy stole the steward's plum-duff. The steward larded the boy from head to toe for punishment, but was in turn forced by the captain to pay for the luxury of revenge by having the cost of the lard deducted from his wages. The cook made a pretty little sum selling pumpkin-seeds to the crew, who took a certain pleasure in eating them, like gallery gods feasting on pea-nuts in the old Bowery Theater. But a wag bored holes in the pumpkins and extracted all the seeds; in consequence, for some days the atmosphere around the galley was blue with the blasphemous wrath of the cook. The fun of this protracted "heated term" culminated in the sudden and unexpected demise of a pig, whose fair proportions had aroused the admiration of the crew. That a pig should die a natural death was so remarkable an event, it was universally conceded that it should be marked by appropriate ceremonies. On a serene evening in the dog-watches, the men gathered in the fore-castle and appointed "Slim Joe," a solemn, lantern-jawed, clerical-looking tar, to act the part of clergyman on this melancholy occasion. The ritual services were then performed with the formality and seriousness accorded to a deceased mariner, and the body of the pig, sewed up in canvas shroud and shotted, was consigned to the deep.

Mrs. Hammond, when not overcome by the heat, sometimes interested herself in the welfare of the crew, and repeatedly made them a batch of mince-pies. She also sent them, one Sabbath morning, a supply of religious tracts and stories which had been given to the ship by the Tract Society. But the men's taste had been so pampered by highly seasoned dime novels that they could not relish the homely fare of the church. The books were, therefore, returned to Mrs. Hammond. But the captain regarded this as a slight to his wife, and ordered the men to keep the books. Finding they could not get rid of them otherwise, the crew amused themselves by tearing them to pieces.

During these equatorial days the captain spent his enforced leisure in an occupation

exceedingly common at sea, and in which seamen often display extraordinary skill. He busied himself with joinery work of the most exquisite character, such as making an inlaid chest of mahogany and ivory for his charts; when that was done he began the model of a ship, in which every detail was wrought in hard woods, silver, and brass.

The birds in those latitudes accompanied us in vast multitudes; but it was a singular fact that regularly every afternoon, about four o'clock, they mysteriously and simultaneously disappeared. At ten in the morning they would return. Where did they go during the interval?

On the 5th of April we slipped quietly across the Line. Neptune did not come on board, owing to the extreme heat, nor was there any outward evidence that we had accomplished a great feat in physics. But the mind seemed to acknowledge the fact, and one had a sensation something like the feeling we experience when, after climbing to the crest of a mountain, we begin to descend on the other side. We were now heading directly for Pitcairn's Island, about south-and-by-west. Great anticipations were enjoyed by all on board of soon sighting the island, and obtaining a supply of fresh provisions from the thrifty descendants of the mutineers of the *Bounty*.

"Sooty," the engineer, got up steam on the 10th of April, in order to condense fresh water for the laundry. A sudden escape of steam with a terrible hissing summoned all hands to the engine-room, but the steam rushed forth in such dense volumes no one dared to enter, although the engineer was in there, probably scalded to death.

"Sooty!" cried some one, in a half-inquiring, half-kindly tone.

"Aye, aye, sir!" cheerfully replied this sea salamander, coming on deck with face and arms peeled and parboiled by the steam.

"Shut off the steam!" said the mate.

"Aye, aye, sir!" replied Sooty, and plunged into the hissing steam again apparently with the utmost unconcern. After getting things to rights he went on with his work with a coolness that was almost incredible. There is no question that the extraordinary indifference to physical suffering displayed by seamen, savages, and others hardened by early or constant exposure, enables them to appear to advantage when those of finer organization, but equal temper, suffer excruciating torment.

The albatrosses which followed the ship at this time were a perpetual source of wonder. As if attached to it by invisible cords, with calm, fixed gaze they kept suspended but a few feet over the stern, like the poisoning form of

IN A HEAVY SEA.

Apollo with his mantle protecting the corpse of Hector as Achilles dragged it round the walls of Troy. Their enormous pinions seemed not even to vibrate, and when they chose to beat up against the wind, they would cleave their arrowy course in the very teeth of the raging tempest, without any apparent exertion. The mysterious manner in which the albatross navigates the air has been a matter of much speculation, but as yet no adequate explanation has been found.

As the days of April wore on, preparations were made for the weather we must expect to encounter as we drew toward the Horn. We should be in its vicinity about the season when the sub-equatorial winter begins, and must prepare to encounter very heavy weather. The summer suit of sails was unbent and stowed below, and a new suit was bent on the yards, able to stand the strain of gales and hurricanes. There is something heroic in the determined resolution with which the mariner in the plain exercise of his duty goes forth to battle with the elements, and encounters fearful hardships and perils, without even the expectation of credit or record in return.

Those harbingers of evil, the stormy petrels, the wandering Arabs of the sea, now began to appear constantly, and the wind sang in the rigging with the long, low, requiem wail which always precedes bad weather at

sea. No wonder that they who go down to the sea in ships are superstitious, and fancy wraiths and mermaids riding on the white sea-horses of the storm!

On April 16th we were in the neighborhood of Pitcairn's Island, but the strong breeze then blowing headed us off, and we did not even see that or any other of the neighboring isles, to our great mortification. We had a heavy, jumping sea and fresh, variable breezes, indicating a general disturbance of the elements. Frequent squalls forced us often to clew up the "kites," and the horizon for days at a time had a brooding and uncanny aspect, showing what sailors call a greasy sky. In one squall, the thunderbolts pierced the water within a few yards of the ship. On the 21st of April we struck the north-west trades, and on the night of the 22d the foul weather we had been expecting attacked us "butt-end on," as the sea phrase goes. We shortened sail when the middle watch turned out, and a long, heavy job it was. At dawn—and what a fearful dawn!—a hurricane was tearing the sea to foam. The ship was hove to, under close-reefed fore and main topsails and fore and main stay-sails. A tremendous, tumultuous sea was running, the wind fairly blowing the gray crests of the seas off, and driving the spoon-drift, or salt stinging sleet, in a dense sheet across the ship, almost burning the skin

REEFING THE TOPSAIL.

off one's face. The ship labored heavily, and, notwithstanding her great size, shipped vast quantities of water. The wind shifted frequently with great rapidity, and thus, while we were hove to at one time, we were running on our course at another. This naturally made the waves much more "hubbelly" and dangerous. In a tremendous squall on the second morning, the reefed foresail was blown

out of the bolt-ropes, flying off to leeward like a vapor, and several of the furl'd sails were actually torn out of the gaskets. It was a very anxious time, and for two days Captain Hammond did not dare to leave the deck to eat or sleep. We took a prodigious green sea over the quarter, which swept away the binnacle and washed off one of the men at the wheel. The ship would have broached to

if the captain had not sprung to the wheel and aided in putting the helm up. The "sweet little cherub who sits up aloft to look out for the life of poor Jack" was nodding at the time, and so we lost poor Jim Davis, for he was swept out of sight in a moment, like a feather tossed on the froth of raging billows. As eight bells tolled wildly over the surging waste of waves on the second night of the storm, there came an ominous lull. It was considered the precursor of a shift of the wind, and all hands were sent to the braces, to be ready to meet the emergency in the event of the ship being taken aback. But the lull continued so long that it seemed as if the storm had fairly blown itself out. In the meantime, the ship so rolled on the vast surges that we feared the masts would go out of her. In order to steady her, a reef was cautiously shaken out of the upper topsails. As the calm continued, Captain Hammond served out grog all round, and the first watch were sent to their bunks, exhausted; the captain then went below, but not to sleep, leaving word to be called on the slightest change in the weather. But he was so weary he fell into a deep slumber as soon as he sat down in his arm-chair by the table, notwithstanding the violent lurching of the ship and the thunder of the wet sails as they flapped against the masts.

Suddenly, without warning, there came a flash that whitened the whole ocean, accompanied by an appalling crash, which shook every timber in the ship. The captain leaped to his feet, and on the instant the topsails thrashed against the masts with a burst of wind that caused the vessel to quiver like a frightened steed as she was driven stern on against the mountain walls of water.

"She's taken aback, by God!" yelled the captain, as he made one bound for the deck. The most terrible crisis which can overtake a sailing-ship had arrived.

"Call the watch!" shouted Captain Hammond. "Starboard fore and main braces! Pull for your lives, now, my lads!" rang out in wild frenzy above the storm. The canvas was flattened like boards against the masts, and no effort would avail to get it in before the ship would go down, stern foremost, under the hungry seas that even now towered over the taffrail. Only one maneuver could avail. That was to get the head-yards around—a tremendous task with the pressure on them. Fifty men pulled on the braces as they never pulled before, and aided their efforts by a wild chorus—perhaps their last, like the death-song of an Indian brave. Already the seas had begun to boil over the quarter, as the yards finally yielded to the strain on the

braces. Relieved of the pressure, the ship began to fall off and gather way. For the time, at least, we were saved! But as the noble *Three Brothers* came broadside to the wind, she heeled over to her scuppers, and would have gone on her beam-ends with the terrific pressure of the cyclone, now at its height, if the upper topsails and jib (new canvas) had not split to rags. Toward dawn the fiery horn of the moon, now in its last quarter, clove the scurrying clouds low down near the horizon for a few moments, and tinged the sloping hollows of the sea like liquid flame. Of all the wild aspects of ocean, I know of none more eery and awful than the waning moon in a night like this.

The storm blew itself out before the following evening, and the sun appeared once more, setting glorious in the serene western sky, but it was days before the turbulence of the sea was allayed. It was characteristic of sea-faring life that, beyond an occasional allusion, neither the storm nor the great danger we had escaped were mentioned after they were passed. The sailor's life, like the soldier's in war, would be melancholy indeed if he allowed himself to dwell on his hardships and perils. He meets them heroically when they come, but returns to reckless hilarity when they are over. This is practical philosophy.

But the weather after this continued boisterous, and the cold increased rapidly as we made our southing. On the 15th of April the temperature was ninety-five degrees, and on the 1st of May it was down to zero. This forced the crew to draw largely on the captain's stock of supplies. Every Saturday, Captain Hammond opened what is called a slop-chest, in the cabin, and traded with the men. Improvident or too poor to lay in a supply sufficient for their needs on a long voyage, the crew of a sailing ship must largely depend on the master, who sells to them on account. Until we crossed the Line, tobacco and thin clothes were what they chiefly required. But now they eagerly sought warmer clothing. The cabin, as the goods lay spread out, resembled the cheap clothing and variety shops one sees on the water-streets of a seaport. Saturday was the regular day for the fair, but the cold was so severe on Friday, the 27th of April, they crowded into the cabin and made a general demand for woolen shirts, mittens, stockings, boots, tippets, and sou'-westers, clinching the request with "and two pounds of tobacco, sir."

Captain Hammond sat at the head of the table with his spectacles on, demanding in a peremptory tone which awed his customers, "And what's your name, and what do you

want?" In most cases the men seemed entirely ignorant of the state of their account, relying upon the honesty of the captain. Thus, one inquired for a pair of boots worth twelve dollars, and was surprised to learn that he had only twenty-five cents to his credit. It was also a psychological study to observe the struggle between shrewdness and simplicity, or between vanity and practical sense which alternately swayed these tawny, uncouth sons of the sea. Bill Symes wavered some time between a crimson shirt, which he did not need, but fancied for its color, and a heavy cap and tippet which he needed sorely. Strange fits also resulted from this ill-assorted medley of wares. Thus one of the crew, diminutive in size, purchased an enormous pair of pantaloons. A day or two after, he appeared in a complete suit, including a cap, and double thickness across the knees, made out of the single pair of pantaloons, aided by contributions from an older pair! Another, who stood six feet four in his stockings, was forced to lengthen out his woolen breeches by a strip of canvas four inches wide.

Baffling and variable winds with squalls retarded our progress, as we neared Cape Horn. A sullen sky brooded over the sea day after day, as if the Antarctic Pole, never yet visited by man, was determined not to allow us to approach any nearer to the secrets of its impenetrable domain. The cold was excessively keen, and yet frequent lightning gleamed across the horizon. It was now dark at four and sunrise at eight. The long nights of gloom made the vast solitude oppressive, and we seemed to be wandering alone over the unexplored waters of an uninhabited planet. But on the afternoon of the forty-fifth day out the strange cry "Sail ho!" from aloft called every one on deck. The vessel was so distant, however, it could only be discerned from the mast-head. May 2d, we took a slant from the westward, which bowled us east by south on our course at the rate of twelve knots. We ran three hundred and six knots, or near three hundred and fifty miles, and were then seven hundred miles from the redoubtable Cape. Notwithstanding the exceedingly unwholesome appearance of the weather, the fair wind put every one for the nonce into good spirits. The captain, who had boasted of the extraordinary paces of the clipper ship *Three Brothers*, had been in very bad humor for some days. On one occasion he exhibited it, by throwing the second mate into irons after badgering him into insolence. At another time Gawky Pete was found sleeping in his middle watch and was compelled to sit astride the stanchion beam for eight hours.

Considering the enormity of the misdemeanor, the punishment was not excessive, although this perch was far from comparing favorably with a bed of roses, for the wind and sleet nearly froze him to the marrow. On the 6th, a Cape hen, one of the most important denizens of this hyperborean region, made its appearance. It is a species of gull the color of a raven. On the 7th the glass fell below 28, and a long-threatening gale opened its wrath on our ship. She was reduced to close-reefed topsails and reefed foresail. The night was so dark one could not see his hand at arm's length. Dense, driving snow fell at intervals and the cold was intense. Grog was served out to all hands at six bells. A lull of one day was succeeded by a second and fuller edition of the gale. The violent lurching and heavy seas coming on board caused several casualties. The man on the lookout was dashed into the lee scuppers and broke his leg, and the cook and his assistant were thrown to leeward and suffered severe contusions when bringing the dinner to the cabin. Such accidents, singular as it may seem, are more liable to occur in a large than a small ship. As we came off the pitch of the Cape, the seas became larger and the plunging of the ship proportionately dangerous.

On the morning of the 9th of May the wind had moderated, but the decks were covered with snow and ice, requiring great caution in moving about the ship. Toward noon the wind began to pipe up again, and at six bells in the evening, ocean and sky were rent by the fury of a raging hurricane. During a temporary lull, a green sea, towering twenty feet above the bulwarks, burst over the ship fore and aft, setting the decks afloat. The starboard quarter-boat, the binnacle, the skylight, the man at the wheel, were carried away; the latter, fortunately, caught in the rigging, and was saved. Through the skylight and the doors the deluge of water burst into the cabin and washed above the lower berths, and as it quenched the fire in the stove, the cabin was filled with steam. The after hatch was burst in, and a quantity of provisions were spoiled. A cry arose that the rudder had also been carried away, but happily this proved to be a false alarm.

This was not a very encouraging outlook. And when the wind returned, although it steadied the ship, matters did not improve, for both wind and sea were more violent than any we had yet encountered, and many on board never expected to see another dawn.

We did not see Cape Horn after all, for we passed it in the night of May 10th. But on

the eleventh day, or the fifty-seventh from San Francisco, land was sighted from aloft, dimly discernible twenty miles away. It proved to be the jagged peaks of the Diego Ramirez Islands. Never before was I more impressed with the heroism of the first navigators who dared to penetrate the unknown wastes beyond Cape Horn. After passing the straits which bears his name, Magellan sailed one hundred and ten days in a direct

rolling in a dead calm off the Falkland Islands. The chief phenomena were fogs and whales. The warmer atmosphere thawed the spirits of the crew. Some of them indulged in a Sunday shave; the boatswain bloomed out in a blue velvet smoking-cap, and the first skylarking seen for many a day filled the fore part of the ship with boisterous mirth.

We had a heavy southwest blow on the 18th of May. The wind was for the most

SAILORS SKYLARKING.

line on an unknown sea, before sighting land.

Our course was now changed from east by south to north by east. There was a prodigious, following swell, but the night proved fine, with a fair breeze, and the constellations were seen unclouded in their glory the first time for weeks. The Southern Cross and the Magellan clouds gleamed directly overhead at night. The 12th of May was ushered in with a noble sunrise. Several ships were in sight, one near enough to signal us, and the lofty peak of Cape St. John, on Staten Island, was sighted on the weather-bow in the course of the day. We were now fairly on the Atlantic racing before a ten-knot breeze for the North and Old England. But the weather continued cold and then became thick and a gale came on. Although it was in our favor, Captain Hammond kept the ship under short sail, as we were liable at any moment to encounter ice. On the 17th of May we found ourselves

part free, but attended by a dangerous cross-sea. As the gale moderated we spread all sail, and flew at the rate of fifteen miles an hour for a steady twenty-four hours, reeling off three hundred and sixty miles from dawn to dawn. "The girls at home have got hold of the tow-rope this time, and no mistake," observed the bos'n, hitching up his main backstays, as he called his suspenders. We were now off the Rio de la Plata, where we had to keep our eyes peeled for pamperos, the well-known hot gales which spring out of that region upon passing ships, like the simoon upon the traveler of the desert. We were in the spot where the captain had lost the mainmast out of his ship on a previous voyage. Nor were we to escape without a touch of what a pampero is capable of. It commenced to blow on the evening of the 23d of May, when we were in latitude $34^{\circ} 05'$ and longitude $32^{\circ} 83'$. First came a clear moonlight, then a succession of sou'west

ON THE LOOKOUT.

squalls, each harder than the previous one, as if the gale were pouncing on us with the rapid springs of a beast of prey. Then, with a long, steady scream, the pampero smote us in force, tearing away the foresail and mizzen-topsail, and almost suffocating us with the dry heat of the Pampas from whence it came. Fortunately, the wind was in our favor, and we flew before it at a prodigious rate. But the mountainous seas, whipped to a mass of shapeless foam, grey as a snow-clad waste from horizon to horizon, chased us amain, towered over the taffrail, and boiled over the rail on every side. The sea was all aflame with phosphorus. No language can describe the sight at night. The waves tumbled on

board like masses of white, boiling lava; the men as they waded over the drenched decks walked in molten silver, and when they raised their feet, flakes of white fire dropped from their legs. The spars, meantime, were tipped with phosphorent lights. It was an awful and magnificent sight. The greatest force of the pampero lasted four hours.

On the 24th of May the captain and the mate had a serious controversy, as the latter did not obey orders. However, the quarrel was quieted for the time. Heavy and variable winds accompanied us as we approached the tropics again, but the weather grew warmer every day, and one by one winter garments were discarded for summer linen. On the

LAID UP FOR REPAIRS.

sixty-ninth day out there occurred another difficulty between the captain and the mate. The latter insulted his superior officer, who summoned witnesses to sign a paper he drew up on the subject, and threatened the next time to throw the mate in irons.

Never were the balmy breezes of the tropics more grateful than to us, tossed as we had been over stormy seas, amid the rigors of a polar winter. In less than two months we had passed through a tropical summer into a polar winter, and from that into summer again. Being fairly in the region of good weather once more, the crew were set to the usual task of overhauling the ship before she arrives in port. Boatswain's chairs were rigged out, and the spars and rigging were scraped, oiled, painted, and tarred from the main-truck to the dolphin striker. The standing rigging was set up anew, the shrouds rattled down, and, perched on planks swung over the side of the ship, the men painted the weather-worn sides of the *Three Brothers*.

On the 29th of May a somewhat dramatic and thoroughly nautical scene agitated all on board. It originated in some of the men jeer-

ing the mate when he came on deck. The mate, being unable to ascertain who were the offenders, referred the matter to the "old man," as the captain is called by the crew when he is out of ear-shot. Summoning all hands aft, Captain Hammond addressed the men from the capstan as if it were a pulpit, and laid down the law to them. Either, said he, the men who hooted should stand out manfully and acknowledge the fault, or the whole watch should stay on deck twelve hours without food or sleep. One of the men boldly stepped out and replied that they had heard the mate use insulting language before the crew regarding the captain, and claimed that if he could go unrebuked, they were entitled to the same right. The point was well-taken, and the captain accordingly dismissed the men without further parley. But the breach between the two officers was, after this, irremediable. May 26 we caught the south-east trades, and, on the 31st, were wafted into the south-west trades.

June 8 we entered the Sea of Sargasso, a vortex whither a vast quantity of seaweed collects, floating on the water in such dense quantities sometimes as to impede the prog-

ress of the ship. On the 11th the quarrel between the captain and the mate came to a climax. The insolence and insubordination of the latter reached such a point that Captain Hammond ordered him to his stateroom. He then caused the window to be boarded up and the door locked. Once in four hours the mate was permitted to walk on deck for fifteen minutes under guard, and he was served with the common fare of the crew. Considering the very great and continued provocation he had received, Captain Hammond's conduct on this occasion was remarkably moderate, and could scarcely have been less rigorous without risking his authority.

Passing in the vicinity of the Cape Verd and the Azore Islands, and holding a north-

east course thence for England, attended by southerly and westerly winds, we sighted the coast of Great Britain June 27. It was a welcome sight to all, and the sailors' songs were cheery indeed as they gave the finishing touches towards completing the holiday appearance of the noble ship, drew the cable on deck from the chain-lockers, or rigged out the fish-tackle and swung the anchors from the catheads. We sighted the Skerries light the night of June 28. A pilot-boat loomed up alongside out of the darkness, and a bluff, hearty British pilot sprang aboard and welcomed us to Old England. A tug took us in tow at sunrise, and the good ship *Three Brothers* entered the magnificent docks of Liverpool one hundred and five days out from San Francisco.

JEWESS.

My dark-browed daughter of the sun,
 Dear Bedouin of the desert sands,
 Sad daughter of the ravished lands,
 Of savage Sinai, Babylon,—
 O Egypt-eyed, thou art to me
 A God-encompassed mystery!

I see sad Hagar in thine eyes.
 The obelisks, the pyramids,
 Lie hid beneath thy drooping lids.
 The tawny Nile of Moses lies
 Portrayed in thy strange people's force
 And solemn mystery of source.

The black abundance of thy hair
 Falls like some twilight sad of June
 Above the dying afternoon,
 And mourns thy people's mute despair.
 The large solemnity of night,
 O Israel, is in thy sight!

Then come where stars of freedom spill
 Their splendor, Jewess. In this land,
 The same broad hollow of God's hand
 That held you ever, outholds still.
 And whether you be right or nay,
 'Tis God's, not Russia's, *here* to say.

Joaquin Miller.

HENRY WADSWORTH LONGFELLOW.

I.

"HIGH as my heart!" Orlando answered thus,
 In careless Arden, Arden green to-day,
 Parrying with gallant wit the question gay
 Touching his lady's stature. When of us
 Lips yet to be, in years lying yet before,
 Make question of the stature of thy fame,
 The words that we shall answer are the same:
High as our hearts he stood.

What man would more?

Wide-sunned with love thy last late winter days,
 Whose blue mild morns were memories of the spring.
 To thee spring voices had not ceased to sing,
 Nor ever closed to thee fresh woodland ways
 Where underneath old leaves the violets are,
 And, shy as boyhood's dream, spring beauties like a star.

II.

Thou wast not robbed of wonder when youth fled,
 But still the bud had promise to thine eyes,
 And beauty was not sundered from surprise,
 And reverent, as reverend, was thy head.
 Thy life was music, and thou mad'st it ours.
 Not thine, crude scorn of gentle household things;
 And yet thy spirit had the sea-bird's wings,
 Nor rested long among the chestnut-flowers.
 Spain's coast of charm, and all the North Sea's cold
 Thou knewest, and thou knewest the soul of eld,
 And dusty scroll and volume we beheld
 To gold transmuted—not to hard-wrought gold,
 But that clear shining of the eastern air,
 When Helios rising shakes the splendor of his hair.

Helen Gray Cone.

THE STREET OF THE HYACINTH.

BY CONSTANCE FENIMORE WOOLSON,

Author of "Rodman the Keeper," "Anne," etc.

IN TWO PARTS:—II.

THE events of Raymond Noel's life, after he left Rome that spring, were various. Some were pleasant, some unpleasant; several were quite unexpected. Their combinations and results kept him from returning to Italy the following winter; and the winter after that he spent in Egypt. When he again beheld the dome of St. Peter's, he remembered that it lacked but a month of two full years since he had said good-by to it; it was then April, and now it was March. He established himself in some pleasant rooms, looked about him, and then began to take up, one by one, the old threads of his Roman life, such, at least, as remained unbroken. He found a good many. Threads do not break in Rome. He had once said himself that the air was so soft and historic that nothing broke there,—not even hearts. But this was only one of his little speeches. In reality he did not believe much in the breaking of hearts; he had seen them stretch so!

It may be said with truth that Noel had not thought of Miss Macks for months. This was because he had had other things to think of. He had sent her the books from Paris, with an accompanying note, a charming little note—which gave no address for reply. Since then, his mind had been otherwise occupied. But, as he never entirely forgot anything that had once interested him, even although but slightly (this was in reality a system of his; it gave him many holds on life, and kept stored up a large supply of resources ready for use when wanted), he came, after a while, on the canvas of his Roman impressions to the figure of Miss Macks. When he came to it, he went to see her; that is, he went to the street of the Hyacinth.

Of course, she might not be there; a hundred things might have happened to her. He could have hunted up Horace Jackson; but, on the whole, he rather preferred to see the girl herself first, that is, if she was there. Mrs. Lawrence, the only person among his acquaintances who had known her, was not in Rome. Reaching the street of the Hyacinth, he interrogated the old woman who acted as portress at the lower door, keeping up at the same time a small commerce in

fritters; yes, the Americans were still on the fourth floor. He ascended the dark stairway. The confiding little "Ettie" card was no longer upon the door. In its place was a small framed sign: "Miss Macks' school."

This told a story!

However, he rang. It was the same shrill, ill-tempered little bell, and when the door opened, it was Miss Macks herself who opened it. She was much changed.

The parlor had been turned into a school-room,—at present empty of pupils. But, even as a school-room, it was more attractive than it had been before. He took a seat and spoke the usual phrases of a renewal of acquaintance with his accustomed ease and courtesy; Miss Macks responded briefly. She said that her mother was not very well; she herself quite well. No, they had not left Italy, nor indeed the neighborhood of Rome; they had been a while at Albano.

The expression of her face had greatly altered. The old direct wide glance was gone; gone also what he had called her over-confidence; she looked much older. On the other hand, there was more grace in her bearing, more comprehension of life in her voice and eyes. She was dressed as plainly as before; but everything, including the arrangement of her hair, was in the prevalent style.

She did not speak of her school, and therefore he did not. But after a while, he asked how the painting came on. Her face changed a little; but it was more in the direction of a greater calm than hesitation or emotion.

"I am not painting now," she answered.

"You have given it up temporarily?"

"Permanently."

"Ah,—isn't that rather a pity?"

She looked at him, and a gleam of scorn filtered into the glance.

"You know it is not a pity," she said.

He was a little disgusted at the scorn. Of course, the only ground for him to take was the ground upon which she stood when he last saw her; at that time, she proposed to pass her life in painting, and it was but good manners for him to accept her intentions as she had presented them.

"I never assumed to be a judge, you know,"

he answered. "When I last had the pleasure of seeing you, painting was, you remember, your cherished occupation!"

"When you last had the pleasure of seeing me, Mr. Noel," said Miss Macks, still with unmoved calm, "I was a fool."

Did she wish to go into the subject at length? Or was that merely an exclamation?

"When I last had the pleasure of seeing you, you were taking lessons of Mr. Jackson," he said, to give a practical turn to the conversation. "Is he still here? How is he?"

"He is very well, now. He is dead."

(She was going to be dramatic then, in any case.)

He expressed his regret, and it was a sincere one; he had always liked and respected the honest, morose Englishman. He asked a question or two. Miss Macks replied that he had died here in the street of the Hyacinth; in the next room. He had fallen ill during the autumn following Noel's departure, and, when his illness grew serious, they—her mother and herself—had persuaded him to come to them. He had lived a month longer, and had died peacefully on Christmas Eve.

"He was one of the most honest men I ever knew," said Noel. Then, as she did not reply, he ventured this: "That was the reason I recommended him, when you asked me to select a teacher for you."

"Your plan was made useless by an unfortunate circumstance," she answered, with an evident effort.

"A circumstance?"

"Yes; he fell in love with me. If I did not consider his pure, deep, and devoted affection the greatest honor of my life, I would not mention it. I tell you, because it will explain to you his course."

"Yes, it explains," said Noel. As he spoke, there came across him a realization of the whole of the strength of the love such a man as Horace Jackson would feel, and the way in which it would influence him. Of course, he saw to the full the imperfection of her work, the utter lack of the artist's conception, the artist's eye and touch; but probably he had loved her from the beginning, and had gone on hoping to win her love in return. She was not removed from him by any distance; she was young, but she was also poor, friendless, and alone. When she was his wife, he would tell her the truth, and in the greatness of his love, the revelation would be naught. "He was a good man," he said. "He was always lonely. I am glad that at the last he was with your mother and you."

"His goodness was simply unbounded.

If he had lived, he would have remained always a most faithful, kind, and respectful son to my dear mother. That, of course, would have been everything to me." She said this quietly; yet her tone seemed to hold intention.

For a moment, he thought that perhaps she had married the Englishman, and was now his widow. The sign on the door bore her maiden name; but that might have been an earlier venture.

"Had you opened your school at that time?" he asked. "I may speak of it, since, of course, I saw the sign upon the door."

"Not until two months later; I had the sign made then. But it was of little use; day-schools do not prosper in Rome; they are not the custom. I have a small class twice a week; but I live by going out as day-governess. I have a number of pupils of that kind; I have been very successful. The old Roman families have a fancy for English-speaking governesses, you know. Last summer I was with the Princess C——, at Albano; her children are my pupils."

"Her villa is a delightful one," said Noel; "you must have enjoyed that."

"I don't know that I enjoyed; but I learned. I have learned a great deal in many ways since I saw you last, Mr. Noel. I have grown very old."

"As you were especially young when you saw me last, it does not matter much," he answered, smiling.

"Yes, I was especially young." She looked at him soberly. "I do not feel bitterly toward you," she continued. "Strange! I thought I should. But now that I see you in person, it comes over me that, probably, you did not intend to deceive me; that not only you tried to set me right by selecting Mr. Jackson as my teacher, but again you tried when you sent me those books. It was not much to do! But, knowing the world as I now know it, I see that it was all that could have been expected. At first, however, I did not see this. After I went to Mr. Bellot, and, later, to Mr. Salvati, there were months when I felt very bitterly toward you. My hopes were false ones, and had been so from the beginning; you knew that they were, yet you did not set me right."

"I might have done more than I did," answered Noel. "I have a habit of not assuming responsibility; I suppose I have grown selfish. But, if you went to Bellot, then it was not Jackson who told you?"

"He intimated something when he asked me to marry him; after that, his illness came on, and we did not speak of it again. But I did not believe him. I was very obstinate.

I went to Mr. Bellot the first of January; I wished him to take me as pupil. In answer, he told me that I had not a particle of talent; that all my work was insufferably bad; that I better throw away my brushes and take in sewing."

"Bellot is always a brute!" said Noel.

"If he told the truth brutally, it was still the truth; and it was the truth I needed. But even then I was not convinced, and I went to Mr. Salviati. He was more gentle; he explained to me my lacks; but his judgment was the same. I came home; it was the tenth of January, a beautiful Roman winter day. I left my pictures, went over to St. Peter's, and walked there under its bright mosaics all the afternoon. The next day, I had advertisements of a day-school placed at the bankers', and in the newspapers. I thought that I could teach better than I could sew." All this she said with perfect calm.

"I greatly admire your bravery, Miss Macks. Permit me to add that I admire, even more, the clear, strong, good sense which has carried you through."

"I had my mother to think of; my—good sense might not have been so faithful otherwise."

"You do not think of returning to America?"

"Probably not; I doubt if my mother could bear the voyage now. We have no one to call us back but my brother, and he has not been with us for years, and would not be if we should return; he lives in California. We sold the farm, too, before we came. No; for the present, at least, it is better for us to remain here."

"There is one more question I should like to ask," said Noel later. "But I have no possible right to do so."

"I will give you the right. When I remember the things I asked you to do for me, the demands I made upon your time, I can well answer a few questions in return. I was a miracle of ignorance."

"I always did you justice in those respects, Miss Macks; all that I understood at once. My question refers to Horace Jackson: I see you appreciated his worth—which was rare—yet you would not marry him."

"I did not love him."

"Did any of his relatives come out from England?" he said after a moment of silence.

"After his death a cousin came."

"As heir to what was left?"

"Yes."

"He should have left it to you."

"He wished to do so. Of course, I would not accept it."

"I thank you for answering. My curiosity was not an idle one." He paused. "If you

will permit me to express it, your course has been very brave and true. I greatly admire it."

"You are kind," said Miss Macks.

There was not in her voice any indication of sarcasm. Yet the fact that he immediately thought of it, made him suspect that it was there. He took leave soon afterward. He was smarting a little under the sarcasm he had divined, and, as he was, it was like him to request permission to come again.

For Raymond Noel lived up with a good deal of determination to his own standard of what was manly; if his standard was not set on any very fine elevation of self-sacrifice or heroism, it was at least firmly established where it did stand, and he kept himself fairly near it. If Miss Macks was sarcastic, he had been at fault somewhere; he would try to atone.

He saw her four times during the five weeks of his stay in Rome; upon three other occasions when he went to the street of the Hyacinth, she was not at home. The third week in April he decided to go to Venice. Before going he asked if there was not something he could do for her; but she said there was nothing, and he himself could think of nothing. She was well established in her new life and occupations, and needed nothing, at least nothing that he could bestow.

The next winter he came back to Rome early in the season, before Christmas. By chance, one of the first persons he encountered was Mrs. Lawrence. She began immediately to tell him a piece of American news, in which he, as an American, would of course be interested; the news was that "the brother of the Princess C——,—that is Count L——, you know—is determined to marry Ettie Macks. You remember her, don't you? I introduced you to her at the Dudley reception, three years ago."

Noel thought that probably he remembered her better than Mrs. Lawrence did, seeing that that lady had never troubled herself to enter the street of the Hyacinth. But he did her injustice. Mrs. Lawrence had troubled herself—lately.

"It seems that she has been out at Albano for two summers, as governess to his sister's children; it was there that he saw her. He has announced his determination to the family, and they are immensely disturbed and frightened; they had it all arranged for him to marry a second cousin down at Naples, who is rich,—these Italians are so worldly, you know! But he is very determined, they say, and will do as he pleases in spite of them. He hasn't much money, but of course it's a great match for Ettie Macks. She will be a countess, and now, I suppose, more American

girls will come over than ever before! Of course, as soon as I heard of it, I went to see her. I felt that she would need advice about a hundred things. In the beginning she brought a letter of introduction to me from a dear cousin of mine, and, naturally, she would rely upon me as her chief friend now. She is very much improved. She was rather silent; but, of course, I shall go again. The count is willing to take the mother, too, and that, under the circumstances, is not a small matter; she is a good deal to take. Until the other day I had not seen Mrs. Spurr! However, I suppose that her deficiencies are not apparent in a language she cannot speak. If her daughter would only insist upon her dressing in black! But the old lady told me herself, in the most cheerful way, that she liked 'a sprinkling of color.' And at the moment, I assure you, she had on five different shades of red!"

Noel had intended to present himself immediately at the street of the Hyacinth; but a little attack of illness kept him in for a while, and ten days had passed before he went up the dark stair-way. The maid said that Miss Macks was at home; presently she came in. They had ten minutes' of conversation upon ordinary topics, and then he took up the especial one.

"I am told that you are soon to be a countess," he said, "and I have come to give you my best good wishes. My congratulations I reserve for Count L——, with whom I have a slight acquaintance; he is, in my opinion, a very fortunate man."

"Yes, I think he is fortunate; fortunate in my refusal. I shall not marry Count L——."

"He is not a bad fellow."

"Isn't your praise somewhat faint?" This time the sarcasm was visible.

"Oh, I am by no means his advocate! All I meant was that, as these modern Romans go, he was not among the worst. Of course I should have expressed myself very differently if you had said you were to marry him."

"Yes; you would then have honored me with your finest compliments."

He did not deny this.

"Shall you continue to live in Rome?" he asked.

"Certainly. I shall have more pupils and patronage now than I know what to do with; the whole family connection is deeply obliged to me."

They talked awhile longer.

"We have always been unusually frank with each other, Miss Macks," he said toward the end of his visit. "We have never stopped at conventionalities. I wonder if you will tell me why you refused him?"

"You are too curious. As to frankness, I have been frank with you; not you with me. And there was no conventionality, simply because I did not know what it was."

"I believe you are in love with some one in America," he said laughing.

"Perhaps I am," answered Miss Macks. She had certainly gained greatly in self-possession during the past year.

He saw her quite frequently after this. Her life was no longer solitary. As she had said, she was overwhelmed with pupils and patronage from the friends of the Princess C——; in addition, the American girl who had refused a fairly-indorsed and well-appearing count, was now something of a celebrity among the American visitors in Rome. That they knew of her refusal, was not her fault; the relatives of Count L—— had announced their objections as loud and widely as the count had announced his determination. Apparently neither side had thought of a non-acceptance. Cards, not a few, were sent to the street of the Hyacinth; some persons even climbed the five flights of stairs. Mrs. Spurr saw a good deal of company; and enjoyed it.

Noel was very fond of riding; when in Rome he always rode on the Campagna. He had acted as escort to various ladies, and, one day, he invited Miss Macks to accompany him; that is, if she was fond of riding. She had ridden in America, and enjoyed it; she would like to go once, if he would not be troubled by an improvised habit. They went once. Then a second time, an interval of three weeks between. Then, after a while, a third time.

Upon this occasion an accident happened, the first of Noel's life; his horse became frightened, and, skilled rider though he was, he was thrown. He was dragged, too, for a short distance. His head came against some stones, and he lost consciousness. When it came back, it did not come wholly. He seemed to himself to be far away, and the girl who was weeping and calling his name, to be upon the other side of a wide space like an ocean, over which, without volition of his own, he was being slowly wafted. As he came nearer, still slowly, he perceived that in some mysterious way she was holding in her arms something that seemed to be himself, although he had not yet reached her. Then, gradually, spirit and body were reunited, he heard what she was saying, and felt her touch. Even then, it was only after several minutes that he was able to move and unclose his heavy eyes.

When she saw that he was not dead, her wild grief was at once merged in the thought

of saving him. She had jumped from her horse, she knew not how; but he had not strayed far; a shepherd had seen him, and was now coming toward them. He signaled to another, and the two carried Noel to a house which was not far distant. A messenger was sent to the city; aid came, and before night Noel was in his own rooms at the head of the Via Sistina, near the Spanish steps.

His injuries proved to be not serious; he had lost consciousness from the shock, and this, with his pallor and the blood from the cuts made by the stones, had given him the look of death. The cuts, however, were not deep; the effect of the shock passed away. He kept his bed for a week under his physician's advice; he had a good deal of time to think during that week. Later his friends were admitted. As has been said before, Noel was a favorite in Rome, and he had friends not a few. Those who could not come in person sent little notes and baskets of flowers. Among these, Miss Macks was not numbered. But then she was not fashionable.

At the end of two weeks the patient was allowed to go out. He took a short walk to try his strength, and, finding that it held out well, he went to the street of the Hyacinth.

Miss Macks was at home. She was "so glad" to see him out again; and was he "really strong enough;" and he "should be very prudent for a while;" and so forth and so forth. She talked more than usual, and for her, quite rapidly.

He let her go on for a time. Then he took the conversation into his own hands. With few preliminaries, and with much feeling in his voice and eyes, he asked her to be his wife.

She was overwhelmed with astonishment; she turned very white and did not answer. He thought she was going to burst into tears. But she did not; she only sat gazing at him, while her lips trembled. He urged his point; he spoke strongly.

"You are worth a hundred of me," he said. "You are true and sincere; I am a dilettante in everything. But, dilettante as I am, in one way I have always appreciated you, and, lately, all other ways have become merged in that one. I am much in earnest; I know what I am doing; I have thought of it searchingly and seriously, and I beg you to say yes."

He paused. Still she did not speak.

"Of course I do not ask you to separate yourself from your mother," he went on, his eyes dropping for the moment to the brim of his hat which he held in his hand; "I shall be glad if she will always make her home with us."

Then she did speak. And as her words came forth, the red rose in her face until it was deeply colored.

"With what an effort you said that! But you will not be tried. One gray hair in my mother's head is worth more to me, Mr. Noel, than anything you can offer."

"I knew before I began that this would be the point of trouble between us, Faith," he answered. "I can only assure you that she will find in me always a most respectful son."

"And when you were thinking so searchingly and seriously, it was *this* that you thought of,—whether you could endure her! Do you suppose that I do not see the effort? Do you suppose I would ever place my mother in such a position? Do you suppose that you are of any consequence beside her, or that anything in this world weighs in my mind for one moment compared with her happiness?"

"We can make her happy; I suppose that. And I suppose another thing, and that is that we could be very happy ourselves, if we were married."

"The western girl, the girl from Tuscolee! The girl who thought she could paint, and could not! The girl who knew so little of social rules that she made a fool of herself every time she saw you!"

"All this is of no consequence, since it is the girl I love," answered Noel.

"You do not. It is a lie. Oh, of course, a very unselfish and noble one; but a lie, all the same. You have thought of it seriously and searchingly? Yes, but only for the last fourteen days! I understand it all now. At first I did not, I was confused; but now I see the whole. You were not unconscious out there on the Campagna; you heard what I said when I thought you were dying, or dead. And so you come—come very generously and self-sacrificingly, I acknowledge that—and ask me to be your wife." She rose; her eyes were brilliant as she faced him. "I might tell you that it was only the excitement, that I did not know or mean what I was saying; I might tell you that I did not know that I had said anything. But I am not afraid. I will not, like you, tell a lie, even for a good purpose. I did love you; there, you have it! I have loved you for a long time, to my sorrow and shame. For I do not respect you, or admire you; you have been completely spoiled and will always remain so. I shall make it the one purpose of my life from this moment to overcome the feeling I have had for you; and I shall succeed. Nothing could make me marry you, though you should ask me a thousand times."

"I shall ask but once," said Noel. He had risen also; and, as he did, he remembered the time when they had stood in the same place and position, facing each other, and she had told him that she was at his feet. "I did

hear what you said. And it is of that I have been seriously thinking during the days of my confinement to the house. It is also true that it is what you said which has brought me here to-day. But, the reason is, that it has become precious to me—this knowledge that you love me. As I said before, in one way I have always done you justice, and it is that way which makes me realize to the full now, what such a love as yours would be to me. If it is true that I am spoiled, as you say I am, a love like yours would make me better, if anything can." He paused. "I have not said much about my own feelings," he added; "I know you will not credit me with having any. But I think I have. I think that I love you."

"It is of little moment to me whether you do or not."

"You are making a mistake," he said, after a pause, during which their eyes had met in silence.

"The mistake would be to consent."

She had now recovered her self-possession. She even smiled a little.

"Imagine Mr. Raymond Noel in the street of the Hyacinth!" she said.

"Ah,—I should hardly wish to live here; and my wife would naturally be with me."

"I hope so. And I hope she will be very charming, and obedient, and sweet." Then she dropped her sarcasms, and held out her hand in farewell. "There is no use in prolonging this, Mr. Noel. Do not think, however, that I do not appreciate your action; I do appreciate it. I said that I did not respect you, and I have not until now; but now I do. You will understand, of course, that I would rather not see you again, and refrain from seeking me. Go your way, and forget me; you can do so now with a clear conscience, for you have behaved well."

"It is not very likely that I shall forget you," answered Noel, "although I go my way. I see you are firmly resolved. For the present, therefore, all I can do is to go."

They shook hands, and he left her. As he passed through the small hall on his way to the outer door, he met Mrs. Spurr; she was attired as opulently, in respect to colors, as ever, and she returned his greeting with much cordiality. He glanced back; Miss Macks had witnessed the meeting through the parlor door. Her color had faded; she looked sad and pale.

She kept her word; she did not see him again. If he went to the street of the Hyacinth, as he did two or three times, the little maid presented him with the Italian equivalent of "begs to be excused," which was evidently a standing order. If he wrote to her, as he did more than two or three times, she

returned what he wrote, not unread, but without answer. He thought perhaps he should meet her, and was at some pains to find out her various engagements. But all was in vain; the days passed, and she remained invisible. Toward the last of May he left Rome. After leaving, he continued to write to her, but he gave no address for reply; she would now be obliged either to burn his letters or keep them, since she could no longer send them back. They could not have been called love-letters; they were friendly epistles, not long,—pleasant, easy, sometimes amusing, like his own conversation. They came once a week. In addition he sent new books, and occasionally some other small remembrance.

In early September of that year there came to the street of the Hyacinth a letter from America. It was from one of Mrs. Spurr's old neighbors at Tuscolee, and she wrote to say that John Macks had come home,—had come home broken in health and spirits, and, as he himself said, to die. He did not wish his mother to know; she could not come to him, and it would only distress her. He had money enough for the short time that was left him, and when she heard, it would be only that he had passed away; he had passed from her life in reality years before. In this John Macks was sincere. He had been a ne'er-do-well, a rolling stone; he had not been a dutiful son. The only good that could be said of him, as far as his mother was concerned, was contained in the fact that he had not made demands upon her small purse since the sum he took from her when he first went away. He had written to her at intervals, briefly. His last letter had come eight months before.

But the Tuscolee neighbor was a mother herself, and, doing as she would be done by, she wrote to Rome. When her letter came, Mrs. Spurr was overwhelmed with grief; but she was also stirred to an energy and determination which she had never shown before. For the first time in years she took the leadership, put her daughter decisively back into a subordinate place, and assumed the control. She would go to America. She must see her boy (the dearest child of the two, as the prodigal always is) again. But even while she was planning her journey, illness seized her—her old rheumatic troubles, only more serious than before; it was plain that she could not go. She then required that her daughter should go in her place,—go and bring her boy to Rome; this soft Italian air would give new life to his lungs. Oh, she should not die! Ettie need not be afraid of that. She would live for years just to get one look at him! And so it ended in the daughter's departure, an efficient nurse being left in charge; the physician said

that although Mrs. Spurr would probably be crippled, she was in no danger otherwise.

Miss Macks left Rome on the fifth of September. On the second of December she again beheld the dome of St. Peter's rising in the blue sky. She saw it alone. John Macks had lived three weeks after her arrival at Tuscolée, and those three weeks were the calmest and the happiest of his unsuccessful—unworthy it may be—but also bitterly unhappy life. His sister did not judge him. She kissed him good-by as he lost consciousness, and soon afterward closed his eyes tenderly, with tears in her own. Although he was her brother, she had never known him; he went away when she was a child. She sat beside him a long time after he was dead, watching the strange, youthful peace come back to his worn face.

When she reached the street of the Hyacinth, a carriage was before the door; carriages of that sort were not often required by the dwellers on the floors below their own, and she was rather surprised. She had heard from her mother in London, the nurse acting as amanuensis; at that time, Mrs. Spurr was comfortable, although still confined to her bed most of the day. As she was paying her driver, she heard steps on the stairway within. Then she beheld this: The nurse, carrying a pillow and shawls; next, her mother, in an invalid-chair, borne by two men; and last, Raymond Noel.

When Mrs. Spurr saw her daughter, she began to cry. She had not expected her until the next day. Her emotion was so great that the drive was given up, and she was carried back to her room. Noel did not follow her; he shook hands with the new-comer, said that he would not detain her, and then, lifting his hat, he stepped into the carriage which was waiting and was driven away.

For two days Mrs. Spurr wished for nothing but to hear, over and over again, every detail of her boy's last hours. Then, the excitement and renewed grief made her dangerously ill. After ten days she began to improve; but two weeks passed before she came back to the present sufficiently to describe to her daughter all "Mr. No-ul's kind attentions." He had returned to Rome the first of October, and had come at once to the street of the Hyacinth. Learning what had happened, he had devoted himself to her "most as if he was my real son, Ettie, I do declare! Of course, he couldn't never be like my own darling boy," continued the poor mother, overlooking entirely, with a mother's sublime forgetfulness, the small amount of devotion her boy had ever bestowed; "but he's just done everything he could, and there's no denying that."

"He has not been mentioned in your letters, mother."

"Well, child, I just told Mrs. Bowler not to. For he said himself, frankly, that you might not like it; but that he'd make his peace with you when you come back. I let him have his way about it, and I have enjoyed seeing him. He's the only person I've seen, but Mrs. Bowler and the doctor, and I'm mortal tired of both."

During Mrs. Spurr's second illness, Noel had not come in person to the street of the Hyacinth; he had sent to inquire, and fruits and flowers came in his name. Miss Macks learned that these had come from the beginning.

When three weeks had passed, Mrs. Spurr was back in her former place as regarded health. One of her first requests was to be taken out to drive; during her daughter's absence, Mr. Noel had taken her five times, and she had greatly enjoyed the change. It was not so simple a matter for the daughter as it had been for Mr. Noel; her purse was almost empty, the long journeys and her mother's illness had exhausted her store. Still she did it. Mrs. Spurr wished to go to the Pincio. Her daughter thought the crowd there would be an objection.

"It didn't tire me one bit when Mr. No-ul took me," said Mrs. Spurr, in an aggrieved tone; "and we went there every single time,—just as soon as he found out that I liked it. What a lot of folks he does know, to be sure! They kept him a-bowing every minute."

The day after this drive, Mr. Noel came to the street of the Hyacinth. He saw Miss Macks. Her manner was quiet, a little distant; but she thanked him, with careful acknowledgment of every item, for his kind attentions to her mother. He said little. After learning that Mrs. Spurr was much better, he spoke of her own health.

"You have had two long fatiguing journeys, and you have been acting as nurse; it would be well for you to give yourself entire rest for several weeks, at least."

She replied, coldly, that she was perfectly well, and turned the conversation to subjects less personal. He did not stay long. As he rose to take leave, he said:

"You will let me come again, I hope? You will not repeat the 'not at home' of last spring?"

"I would really much rather not see you, Mr. Noel," she answered, after hesitating.

"I am sorry. But of course, I must submit." Then he went away.

Miss Macks now resumed her burdens. She was obliged to take more pupils than she had ever accepted before, and to work harder. She had not only to support their little house-

hold, but there were now debts to pay. She was out almost the whole of every day.

After she had entered upon her winter's work, Raymond Noel began to come again to the street of the Hyacinth. But he did not come to see her; his visits were to her mother. He came two or three times a week, and always during the hours when the daughter was absent. He sat and talked to Mrs. Spurr, or rather listened to her, in a way that greatly cheered that lady's monotonous days. She told him her whole history; she minutely described Tuscollee and its society; and, finally, he heard the whole story of "John." In addition, he sent her various little delicacies, taking pains to find something she had not had.

Miss Macks would have put an end to this if she had known how. But, certainly, Mr. Noel was not troubling *her*; and Mrs. Spurr resented any attempt at interference.

"I don't see why you should object, Ettie. He seems to like to come, and there's but few pleasures left to me, I'm sure! You oughtn't to grudge them!"

In this way two months passed, Noel continuing his visits, and Miss Macks continuing her lessons. She was working very hard. She now looked not only pale, but much worn. Count L——, who had been long absent, returned to Rome about this time. He saw her one day, although she did not see him. The result of this vision of her was that he went down to Naples, and, before long, the desirable second cousin with the fortune was the sister of the Princess C——.

One afternoon in March, Miss Macks was coming home from the broad, new, tiresome piazza *Indipendenza*; the distance was long, and she walked with weariness. As she drew near the dome of the Pantheon, she met Raymond Noel. He stopped, turned, and accompanied her homeward. She had three books.

"Give them to me," he said, briefly, taking them from her.

"Do you know what I have heard to-day?" he went on. "They are going to tear down your street of the Hyacinth. The Government has at last awakened to the shame of allowing all those modern accretions to disfigure longer the magnificent old Pagan temple. All the streets in the rear, up to a certain point, are to be destroyed. And the street of the Hyacinth goes first. You will be driven out."

"I presume we can find another like it."

He went on talking about the Pantheon until they entered the doomed street; it was as obstinately narrow and dark as ever. Then he dropped his pagan temple.

"How much longer are you going to treat me in this way, Faith?" he said. "You

make me very unhappy. You are wearing yourself out, and it troubles me greatly. If you should fall ill, I think that would be the end. I should then take matters into my own hands, and I don't believe you would be able to keep me off. But why should we wait for illness? It is too great a risk."

They were approaching her door. She said nothing, only hastened her steps.

"I have been doing my best to convince you, without annoying you, that you were mistaken about me. And the reason I have been doing it is that I am convinced myself. If I was not entirely sure last spring that I loved you, I certainly am sure now. I spent the summer thinking of it. I know now, beyond the possibility of a doubt, that I love you above all and everything. There is no 'duty' or 'generosity' in this, but simply my own feelings. I could perfectly well have let the matter drop; you gave me every opportunity to do so. That I have not done it should show you—a good deal. For I am not of the stuff of which heroes are made. I should not be here unless I wanted to; my motive is the selfish one of my own happiness."

They had entered the dark hall-way.

"Do you remember the morning when you stood here, with two tears in your eyes, saying 'Never mind; you will come another time'?" (Here the cobbler came down the stairs.) "Why not let the demolition of the street of the Hyacinth be the crisis of our fate?" he went on, returning the cobbler's bow. (Here the cobbler departed.) "If you refuse, I shall not give you up; I shall go on in the same way. But—haven't I been tried long enough?"

"You have not," she answered. "But, unless you will leave Rome, and—me, I cannot bear it longer."

It was a great downfall, of course; Noel always maintained that it was.

"But the heights upon which you had placed yourself, my dear, were too superhuman," he said, excusingly.

The street of the Hyacinth experienced a great downfall, also. During the summer it was demolished.

Before its demolition, Mrs. Lawrence, after three long breaths of astonishment, had come to offer her congratulations, in a new direction this time.

"It is the most fortunate thing in the world," she said to everybody, "that Mrs. Spurr is now confined to her bed for life, and is obliged to wear mourning."

But Mrs. Spurr is not confined to her bed; she drives out with her daughter whenever the weather is favorable. She wears black, but is now beginning to vary it with purple and lavender.

THE STORY OF THE ALCÁZAR.

It was told by Captain John to a boy from the main-land, who was spending the summer on the Island, as they sat together, one August evening, at sunset, on a broken bowsprit which had once been a part of the *Alcázar*.

It was dead low water in South-west Harbor, a land-locked inlet which nearly cut the Island in two, and was the gate-way through which the fishing-craft from the village at the harbor head found their way out into the great Penobscot Bay. There were many days during the stern winter and bleak spring months when the gate was blocked with ice, or veiled in fog, but nature relented a little toward the Island folk in the fall, and sent them sunny days for their late, scant harvesting, and steady winds for the mackerel-fishing, to give them a little hope before the winter set in, sharp, with the equinoctial. Now, at low tide, the bright gate-way shone wide open, as if to let out the waters which rise and fall ten feet in the inlet. You could look far out beyond the light-house on Greenlaw's Neck, and the islands that throng the mouth of the harbor, to the red spot of flame the sunset had kindled below the rack of smoke-gray clouds. The color burned in a dull gleam upon the water, broken by the dark shapes of shadowy islands; the sail-boats at anchor in the muddy, glistening flats leaned over disconsolately on their sides, in despair of ever again feeling the thrill of the returning waters beneath their keels; and the gray, weather-beaten houses crowded together on the brink of the cliff above the beach looked like a group of hooded old women watching for a belated sail, as if they had caught the expression of their inmates' lives. At high tide the hulk of the *Alcázar* had been full of water, which was now pouring out through a hole in the planking of her side in a continuous, murmurous stream, like the voice of a persistent talker in a silent company. The old ship looked much too big for her narrow grave, at the foot of the green cliff in which her anchor was deeply sunk and half-overgrown with thistles; her blunt bow and the ragged stump of the figure-head rose, dark and high, above the wet beach where Captain John sat, with his absorbed listener, on the bowsprit. There were rifts about her rail where the red sunset looked through. Her naked sides, that for years had been moistened only by the perennial rains and snows, showed rough and

scaly like the armor of some fabled sea-monster. She was tethered to the cliff by her rusty anchor-chain which swung across the space between, serving as a clothes-line for the dragged drift-weed left by the receding tide to dry.

"She was a big ship for these parts," Captain John was saying. "There wa'n't one like her ever come into these waters before. Lord! Folks come down from the Neck, and from Green's Landin', and Nor'east Harbor, and I don't know but they come from the main-land, to see her when she was fust towed in! And such work as they made of her name! Some called it one way and some another. It's a kind of a Cuban name, they say. I expect there aint anybody 'round here that can call it right. However 'twas, old Cap'n Green took and pried it off her star-board quarter, and somebody got hold of it and nailed it up over the blacksmith-shop-door, and there you see it now. The old Cap'n named her the *Stranger* when he had her refitted. May be you could make out the tail of an S on her stern if you could git around there. That name's been gone these forty year. Seem 's if she never owned to it, and it didn't stick to her. She was never called anythin' but the *Alcázar* long as ever I knew her, and I expect I know full's much about her as anybody 'round here. 'Twas a-settin' here, on this very beach, at low water, just's we be now, the old man told me fust how he picked her up. It took a wonderful holt on him; there's no doubt about that. He told it to me more'n once before the time come when he was to put the finish on to it; but, in a gen'ral way, the Cap'n wa'n't much of a talker, and he was shy of this partic'lar business, for reasons that I expect nobody knows much about. But a man most always likes to talk to somebody, no matter how close-mouthed he may be. 'Twas just about this time o' year, fall of '27—the year Parson Flavor was ordained—Cap'n Green had gone a-mack'rel-fishin' with his two boys off Isle au Haut, and they did think o' cruisin' out into Frenchman's Bay, if the weather hel' steady. They was havin' fair luck, hangin' 'round the island, off and on, for a matter of a week, when it thickened up a little and set in foggy, and for two days they didn't see the shore. The second evenin' the wind freshened from the south'ard and east'ard and drove the fog

in shore a bit, and the sun, just before he set, looked like a big yellow ball through the fog, and made a sickly kind of a glimmer over the water. They was a-lyin' at anchor, and all of a sudden, right to the wind'ard of 'em, this old ship loomed up, driftin' in with the wind and flood-tide. They couldn't make her out, and I guess, for a minute, the old Cap'n didn't know but it was the Flyin' Dutchman; but she hadn't a rag o' sail on her, and, as she got nearer, they could see there wa'n't a man on board. The Cap'n didn't like the looks of her, but he knew she wa'n't no phantom, and he and one of his boys down with the punt and went alongside. 'Twan't more'n a quarter of a mile to her. They hailed, and couln't git no answer. They knew she was a furriner by her build, and she must 'a' been a long time at sea, by her havin' barnacles on her nigh as big's a mack'el kit. Finally, they pulled up to her fore-chains and clum aboard of her. I never see a ship abandoned at sea, myself, but I aint no doubt but what it made 'em feel kind o' shivery when they looked aft along her decks and not a soul in sight, and everythin' bleached, and gray, and iron-rusted, and the riggin' all slack and white's though it had been chawed, and nothin' left of her sails but some old rags, flappin' like a last year's scarecrow. They went and looked in the fo'k'sel; there wa'n't nothin' there but some chists—men's chists—with a little old beddin' left in the bunks. They went down the companion-way; cabin-door unlocked; everything in there as nat'ral's though it had just been left, only 'twas kind o' moldy-smellin'. I expect the Cap'n give a kind of a start as he looked around. 'Twant no old greasy whaler's cabin, nor no packet-ship, neither. There wa'n't many craft like her on the seas in them days. She was fixed up inside more like a gentleman's yacht is now. Merchant-men, in them days, didn't have their Turkey carpets, and their colored wine-glasses jinglin' in the racks. While they was explorin' 'round in there, movin' 'round kind o' cautious, the door of the captain's state-room swung open with a creak, just's though somebody was a-shovin' it slow, like, and the ship gave a kind of a stir, and a rustlin', moanin' sound, as if she was a-comin' to life. The old man never made no secret but what he was scared when he went through her that night. 'Twa'n't so much what he said as the way he looked when he told it. I expect he thought he'd seen enough about the time that door blew open. He said he knowed 'twas nothin' but a puff o' wind struck her, and that he'd better be a-gittin' on to his own craft before he lost her in the fog. So he went back and got under way, and sent a line aboard of the

stranger and took her in tow, and all that night, with a good south-east wind, they kept a-movin' toward home. The old man was kind o' res'less and wakeful, walkin' the decks, and lookin' over the stern at the big ship follerin' him like a ghost. The moonlight was a little dull with fog, but he could see her, plain, a-comin' on before the wind, with her white riggin' and bare poles, and hear the water sousin' under her bows. He said 'twas in his mind more'n a dozen times to cut her adrift. You see he had his misgivin's about her from the fust, though he never let on what they were, but he hung on to her as a man will, sometimes, ag'in' feelin' that have more sense in 'em than reason, like as not. He knew everybody at the Harbor would laugh at him for lettin' go such a prize as that just for a notion, and it wa'n't his way, you may be sure. He didn't need no one to tell him what she was wuth. Anyhow, he hung to her, and next day they beached her at high water, right over there by the old ship-yard. He took Deacon S'lvin'e and his brother-in-law, Captain Purse—Pierce, they call it nowadays, but in the Cap'n's time 'twas Purse. That sounds kind o' broad and comfortable, like the Cap'n's wescoat; but the family's thinnin' down a good deal lately, and gettin' kind o' sharp and lean, and may be Pierce is more suitable. But's I was sayin', Cap'n Green took them two—cheerful, loud-talkin' men they was, both of 'em—aboard of her to go through her, for he hadn't no notion o' goin' into that cap'n's state-room alone, even in broad daylight; but 'twasnt *there* the secret of her lay; there wa'n't nothin' in there to scare anybody! She was trimmed up, I tell you, just elegant. Real mahogany—none of your veneerin', but the real stuff; lace-curt'ins to the berth, lace on the pillows, and a satin coverlid, rumpled up as though the cap'n had just turned out, and there was his slippers handy—the greatest-lookin' slippers for a man you ever saw! They wouldn't 'a' been too big for the neatest-footed woman in the harbor! But Lord! they was just thick with mold, and so was everythin' in the place, even to an old gittar with the strings most rotted off of it, and the picters of furrin-lookin' women on the walls—triflin'-lookin' creeturs, most of 'em. They hunted all through his desk, but couldn't find no log. 'Twas plain enough that whoever'd left that ship had took pains that she shouldn't tell no tales, and 'twasn't long before they found out the reason.

"When they come to go below,—there was considerable of a crowd on deck by that time, standin' 'round while they knocked out the keys and took off the fore-hatch,—Cap'n

Green called on Cap'n Purse and the Deacon to go down with him; but they didn't 'pear to be very anxious, and the old man wa'n't goin' to hang back for company with everybody lookin' at him, so he lit a candle and went down, and the folks crowded 'round and waited for him. I was there myself, 's close to him as I be to that fish-barrel, when he come up, his face white's a sheet and the candle shakin' in his hand, and sot down on the hatch-combin'.

"Give me room!" says he, kind o' leanin' back on the crowd. 'Give me air, can't you? She's full o' dead niggers! She's a slaver!'

"Now, 'twas the talk pretty gen'rally that the Cap'n had had a hand in that business himself, in his early days, and that it set uncomfortable on him afterward. It never was known how he'd got his money—he didn't have any to begin with. He was always a kind of a lone bird, and dug his way along up, somehow. Nobody knows what was workin' on him while he sot there; he looked awful sick! It was kind of quiet for a minute, but them that couldn't see him kep' pushin' for'ards and callin' out: 'What d'you see? What's down there?' And them close by wanted to know, all talkin' to once, why he thought she was a slaver, and how long the niggers had been dead. Lord, what a fuss there was! Everybody askin' the foolish questions, and crowdin' and squeezin', and them in front pushin' back, away from the hatchway, as if they expected the dead would rise and walk out o' that black hole where they'd laid so long. They couldn't get much out o' the old man, except that there was skel'tons scattered all over the after hold, and that he knew she was a slaver by the way she was fixed up. 'How'd he know?' folks asked among themselves; but nobody liked to asked the Cap'n. As for how long them Africans had been dead, they had to find that out for themselves, all they ever did find out, for 'the Cap'n wouldn't talk about it, and he wouldn't go down in her again—it 'peard 's if he was satisfied.

"Wal, it made a terrible stir in the place; as I tell you, they come from fifty mile around to see her; they had it all in the papers; some had one idea and some another about the way she come to be abandoned, all in good shape, and them human bein's in her hold. Some said ship-fever, some said mutiny; but when they come to look her over and found there wa'n't a water-cask aboard of her that hadn't s'runk up and gone to pieces, they settled down on the notion that she was a Spanish or a Cuban slaver, or may be a Portagee; got short o' water in the horse-latitudes; cap'n and crew left her in

the boats, and the niggers— Lord! it makes a body sick to think o' them! That was always my the'ry 'bout her—short o' water; but some folks wa'n't satisfied 'thout somethin' more excitin'—'twa'n't enough for 'em to have all them creeturs dyin' down there by inches; they stuck to it about some blood-stains on the linin' in her hold, but I tell you the difference between old blood-stains and rust that's may be ten or fifteen years old's might' hard to tell.

"Nobody knows what the old Cap'n was thinkin' about in them days. 'Twas three months or more 'fore he went aboard of her ag'in: he let it be known about that he wanted to sell her, but he couldn't git an offer even; nobody seemed to want to take hold of her. Winter set in early, and the ice blocked her in, and there she lay—the loneliest thing in sight! You never see no child'n climbin' 'round on her, and there was a story that queer noises, like moanin' and clankin' of chains, come out of her on windy nights; but it might 'a' been the ice, crowdin' as she careened over and back with the risin' and fallin' tide. But when spring opened, folks used to see the old Cap'n hangin' 'round the ship-yard, and lookin' her over at low tide, where the ice had cut the barnacles off of her.

"One night in the store, ne figgered up how much lumber she'd carry from Bangor, and 'twa'n't long 'fore he had a gang o' men at work on her. It seemed as if he was kind o' infatuated with her—he was 'fraid of her, but he couldn't let her alone. And she was a mighty well-built craft! Floridy pine and live-oak, and mahogany from the Mosquito coast—built in Cadiz, most likely. Look at her now—she don't look to home, here, does she? She never did. She's as much like our harbor craft as one o' them big, yellow-eyed, bare-necked buzzards is to one o' these here little sand-peeps. But she was a handsome vessel! Them live-oak ribs'll outlast your time if you was to live to be old."

The two faces looked up at the hulk of the *Alcázar*. The blanched, wave-worn messenger sent by the tropic seas into the far North, with a tale that had never been uttered—as if its horror had struck dumb the gray lips which were rotting with their secret untold—its shadow spread broad upon the beach, made the gathering twilight deeper. Out on the harbor the pale saffron light lingered, long after the red had faded. How many tides had ebbed and flowed since the old ship, chained at the foot of the cliff, had warmed in the waters of the Gulf her bare, corrugated sides, warped by the frosts, stabbed by the ice of pitiless northern winters!

Where were the fallow, dark-bearded faces that had watched, from her high poop, the brief twilights die on that "unshadowed main" which, a century ago, was the scene of some of the wildest romances and blackest crimes in maritime history—the bright, restless bosom that warmed into life a thousand serpents, whose trail could be traced through the hot, flower-scented Southern plazas and courts into the peaceablest white villages of the North!

"Sho! I'd no idee 'twas a-gittin' on so late!" said Captain John. "There aint anybody watchin' out for me. I kin put my family under my hat; but I don' know what your folks'll think's 'come o' you! Wal, the rest on't wont take long to tell: The old man had her fitted up in good shape by the time the ice was out of the river, and run her up to Bangor in ballast and loaded her there for New York. He had an ugly trip down the coast—lost his deck-load and three men overboard in a south-easter off Nantucket Shoals. It made the whole ship's company feel pretty solemn, but the old man took it the hardest of any of 'em, and from that time seems as if he lost his grip—the old scare settled back on him blacker'n ever. There wa'n't a man aboard of her that liked her. They all knew her story, and that she was the *Alcázar*, from nobody knows where, instead of the *Stranger*, from Newburyport,—the Cap'n had Newburyport put on to her because he was a Newburyport man, and all his vessels was built there,—and she hadn't more'n touched the dock in New York before every one on 'em left her, even to the cook. "No better than a floatin' coffin, anyway," they said of her, and I guess the Cap'n would 'a' left her right there, too, if it hadn't been for the money he'd put into her. I expect he was a little too fond of money, may be; but I've knowed others, just as sharp's the old Cap'n, that didn't seem to have his luck! The mate saw him two or three times while he was a lyin' in New York, and noticed he was drinkin' more'n usual. He come home light, and anchored off the bar, just as a south-easter was a comin' on. It wouldn't 'a' been no trouble for him to have laid there, if he'd had good ground-gear—but there 'twas ag'in, he'd been a little too savin'! He'd used the old cables he found in her. The new mate didn't know nothin' about her, and put out one anchor. The Cap'n had taken a keg o' New England rum aboard, and been drawin' on it pretty reg'lar all the way up, and as the gale come on he got kind o' wild, and went at it harder'n ever. About midnight, the cable parted. They let go the other anchor,

but it didn't snub her for a minute, and she swung, broadside to, on to the bar. The men climbed into the riggin' before she struck, but the old Cap'n was staggerin' 'round decks, kind o' dazed and dumb-like, not tryin' to do anythin' to save himself. The mate tried to git him into the riggin', seein' he wa'n't in no condition to look out for himself; but the old man struck loose from his hold, and cried out to him through the noise:

"'Let me alone! I've got to go with her!'

"The mate just had time to swing himself back into the mizzen-shrouds before the sea broke over her, and left the decks bare. The old ship pounded over the bar in an hour or so, and drifted up here on the beach, where she is now. Every man on board was saved except the Cap'n. He went 'with her,' sure enough.

"There was talk enough about that thing before they got done with it, to 'a' made the old man roll in his grave! They raked up all the stories about his cruisin' on the Spanish main when he was a young man,—they wa'n't stories *he'd* ever told; he wa'n't much of a hand to talk about what he'd seen and done on his v'yages. They never let him rest, 'till 'twas pretty much the gen'ral belief—and is to this day,—that he knew more about that slaver from the first than he ever owned to.

"I never had much to say about it, but 'twas plain enough to me. I had my suspicions the mornin' he towed her in. He looked terrible shattered. It 'peared to me he wa'n't ever the same man afterward. 'I've got to go with her!' Them was his last words. He knew that ship and him belonged together, same as a man's sins belongs to him. He knew she'd been a-huntin' him up and down the western ocean for twenty year, with them dead o' his'n in her hold,—and she'd hunted him down at last."

Captain John paused with this peroration; he dug a hole in the wet sand with the toe of his boot, and watched it slowly fill.

"'Twas a bait most any one would 'a' smelt of,—a six-hundred-ton ship, and every timber in her sound,—but you'd 'a' thought he'd been more cautious, knowin' what he did of her. She was bound to have him, though!"

"Captain John," said the boy, a little hoarse from his long silence, "what do you suppose it *was* he did? Anything except just leave them—the negroes, I mean?"

"Lord! Wa'n't that *enough*? To steal 'em, and then leave 'em there—battered down

like rats in the hold! However, I expect there aint anybody that can tell you the whole of that story. It's one of them mysteries that rests with the dead. The new mate—the young fellow he brought on from New York—he married the Cap'n's daughter. None o' the Harbor boys ever seemed to jibe in with her; I always had a notion that she was a touch above most of 'em; but she and her mother was as good as a providence to them shipwrecked men when they was thrown ashore—strangers in the place and no money; and it ended in Rachel's takin' up with the mate, and the whole family's leavin' the place. It was long after all the talk died away that the widow came back, and lived here in the same quiet way she always had, till she was laid alongside the old Cap'n. There wa'n't a better woman ever walked this earth than Mary Green, that was Mary Spofford!"

Captain John rose from the bowsprit, and rubbed his cramped knees before climbing the hill. He parted with his young listener at the top, and took a lonely path across the shore-pasture to a little cabin, where no light

shone, built on the edge of high-water mark, like the nest of a sea-bird.

On the gray beach below, a small, dingy yawl, with one sail loosely bundled over the thwarts, leaned toward the door-latch, as if listening for its click. It had an almost human expression of patient, though wistful, waiting. It was the poorest boat in the harbor; it had no name painted on its stern, but Captain John, in the solitude of his watery wanderings among the islands and channels of the bay, always called her the *Mary Spofford*. The boy from the main-land went home slowly, along the village street, toward the many-windowed house in which his mother and sisters were boarding. There were voices, calling and singing, abroad on the night air, reflected from the motionless, glimmering sheet of dark water below, as from a sounding-board. Cow-bells tinkled away among the winding paths along the low, dim shores. The night-call of the heron from the muddy flats struck sharply across the stillness, and from the outer bay came the murmur of the old ground-swell, which never rests, even in the calmest weather.

Mary Hallock Foote.

IN A CHINESE THEATER.

Of the objects of interest in the Chinese "quarter" of San Francisco which appeal most strongly to the stranger's curiosity, the theaters occupy a foremost place. Formerly play-houses were numerous, but an internecine strife among the rival companies lately reduced the number to two. These were installed in ordinary houses which had none of the appointments of an American theater. It occurred to an enterprising manager to build a spacious new house with a large auditorium, and to import "stars" from the Royal Theater of Peking. The venture was a success: these fresh dramatic attractions ruined one of the old play-houses, and brought the other to the verge of bankruptcy. As a last resort, one of the conservative managers also brought out a troupe of high-salaried actors and covered the dead walls with flaming placards, but his efforts were unavailing: his doors were closed, and his leading men went over to the hated rival. Dire threats of vengeance were uttered, and one night, when the new house was crowded, pots of burning phosphorus were thrown upon the stage from the sky-light, and fires were lighted in all corners of the place. Audience and actors vanished like magic, and the fire was only

extinguished with much effort. There was intense excitement for several days, but soon the theater was opened again, and now quiet reigns once more in this dramatic world.

The front of the new Chinese theater on Washington street resembles the gable end of a Pennsylvania Dutch barn. It is three stories in height, and has the architectural finish of a country variety store. In the front, on a level with the sidewalk, is a small room shut off with glass doors and windows. Here sit several delicate-featured Chinese repairing watches and jewelry, while about the window, where massive gold rings and ornaments for the hair are displayed, several sight-seers are always gathered, flattening their noses against the panes—metaphorically, of course, for the Mongol nose is beyond the power of man to flatten. To the left of the shop is the main entrance, over which is the sign in gilt letters, "Grand Theater," with four hieroglyphics a foot tall, which express the same thing in more florid style. It is Saturday night, and business is "booming." The box-office is besieged. The foreign barbarian pays "two bits" (twenty-five cents) to the American door-keeper. Opposite is the Chinese ticket-taker, who attends to

the moon-eyed patrons. Pass up a short flight of steps, push aside a thick cloth curtain, and one suddenly emerges into the theater itself. An ancient smell of things Chinese greets the nose before a glimpse is caught of a single pig-tail. Here is a moderate-sized amphitheater, with an open stage at the farther end, and the intervening space packed with Chinese. Packed is the proper word, for they are sitting on low benches, and each bench accommodates as many persons as the seats of a horse-car when the rush for home and dinner has set in. It is a dark-looking crowd, covered with black, low-crowned hats. Only four white hats may be counted, and these are the huge, umbrageous, cream-colored *sombreros* for which the Yuba Bills of California mountain roads show so strong a partiality. No line separates orchestra from dress-circle. The floor rises by regular gradations, and at the rear of the room two flights of steep stairs lead to the balcony. This is also packed, and with a crowd as like to the one below as one Chinese is to another—a strong comparison, for Dromios are numerous, and a "Comedy of Errors" could be arranged from Chinese life with very little trouble. On a level with the balcony, and running forward to the stage, are two narrow galleries, the private boxes. One of these is reserved for the women, of whom several are always in attendance, usually accompanied by venerable-looking children. To-night they are out in great force, and their bright dresses furnish the only relief to the prevailing somberness. One damsel is conspicuous by her position. She half reclines on the hard bench, with her bare feet tilted on the front rail and visible to the entire house, which gazes with approval upon the nonchalance of her attitude and the grace with which she throws out rings of cigarette smoke. It is a broad oriental caricature of the foreign conception of the American in dignified repose.

The upper balcony is a good place for a view of the house, but a bad place for comfort. The temperature is like that of the second hot room in a Turkish bath. The odor is more powerful than below; but by this time the sense of smell has become blunted, temporarily paralyzed. The manager says there are three thousand people in the house. They sit in stolid quiet, the greater number smoking cigars or cigarettes. In among them moves an old man with a tin dish on his head, its many compartments filled with oranges, limes, nuts, sweetmeats, bits of sugar-cane, and pea-nuts. He worms his way in and out between the rows of men, occasionally finding a customer, and shows by his skill that he is several grades above

the awkward species of the same nuisance who haunts the galleries of American variety theaters. There is continual conversation among the audience in a low tone, and continual restlessness among those standing at the rear of the room, while two streams of incoming and outgoing patrons keep pouring through the narrow door-way.

But over all the murmur of conversation and the shuffling of shoes on the bare floor rises the unearthly noise of the orchestra. The musicians, seven in number, are placed along the back of the stage, facing the audience. In the middle is the leader, a tall, gaunt Chinese, who plays a diminutive fiddle with one string. This string is composed of many strands of horse-hair, and over it is drawn a bow of similar material. The sound produced is as shrill and ear-piercing as the high notes of a bagpipe. The leader is usually the sole accompanist to a mournful chant. When the sad and sentimental "business" is on, he devotes himself to this instrument. When the action begins, he drops his fiddle and seizes a pair of cymbals as big as a wash-tub, and brings them together with a crash which shakes the theatrical firmament. Next to him sits a melancholy-looking man, who pounds mechanically a brazen gong, pendent by a wire cord and on a level with his head. Beyond him one musician beats a disk of burnished brass with a small metal drumstick, while another sits astride of a small hobby-horse and plays a tattoo upon its head of polished wood. On the other side of the leader are three men who "pick" diminutive banjos, and alternate this discord with performances on a species of horn. The latter produces the only sound that, to English ears, bears the remotest kinship to melody. The devoted musicians remain through the entire performance of six hours, unbroken by a single "wait," and for the greater part of the time they work like galley-slaves. The speeches are delivered to slow music; all the combats, counter-marching, and pantomime which fill out their interminable dramas have their musical accompaniments. The stormy tirades of rival potentates are emphasized by the clash of cymbals and the clangor of gongs, while in mortal combat the entire band aids in spurring on the warriors to deeds of valor. The orchestra smokes almost to a man. It is separated from the actors on the stage by a long table, which serves as a convenient block for decapitating an enemy after a ferocious combat. Both sides of the stage are fringed with spectators, who stand about, as was the custom in Shakspeare's time, and until Garrick asserted the right of actors to undisputed pos-

session of the stage. Occasionally the Russian who acts as stage-manager comes on the boards and forces back the eager crowd, in order to give the "supers" a better opportunity to go through with their evolutions.

There is no scenery, no stage illusion, save what may be effected by picturesque costumes. The actors enter at the right by a door-way which is covered with a curtain, and make their exits on the opposite side. All the female characters are personated by men, and the green-room and the dressing-rooms are comprised in one apartment, about thirty feet long by ten feet wide. The narrow space is half-filled with huge, iron-banded trunks, packed with many choice properties, while the walls are hung with costumes. High up on a row of pegs are hung the helmets and head-dresses of the "stars" who play the parts of mandarins and governors of provinces. Many of these look like the burnished copper kettles of the careful New England housewife. The flowing robes of rich silks and satins are heavily embroidered with beads, gilt, and spangles. The room is crowded with performers in all stages of undress. Near the right-hand door stand the actors who are soon to receive their cues, while a file of guards is ready to move upon the stage at the word of command. Other performers are naked to the waist, and are rummaging in the chests to find their costumes. Cigarette-smoking is general, and all seem to be talking at once to no one in particular. The din is tremendous, and is only exceeded by that of the orchestra, which makes the thin partition tremble. The leading tragedian is smoking a cigarette and indulging in some good-natured badinage with my American companion, who speaks Chinese like a native of the Flowery Kingdom. Suddenly, an actor bursts in, there is a wailing cry from the man at the stage door, the guards file upon the stage, with the cigarette-smoking hero at their head, and a moment after we hear his strong, resonant voice, between the crashes of the cymbals, breathing threats of vengeance against his foes.

The drama that was presented on this occasion is known as "The Dragon Disputing Pearls." It is a play of intrigue, in which diplomacy takes the place of love. In fact, the tender passion, which lends the main interest to the dramatic literature of other nations, is almost wholly ignored by the Chinese playwrights. The majority of the national dramas turn upon the quarrels of petty dignitaries, and the arbitration by which these differences are settled. The mimic combats on the stage form a delicate travesty of the national method of warfare—full of sound and fury, signifying nothing. They also serve to show

another Chinese trait, common also to Homer's warriors—the braggadocio of the combatants, the unconscionable amount of brave words exchanged before a blow is struck.

In the drama referred to, the scene opens on the household of an Emperor, who is blessed with two wives. Each spouse represents a favored province that has shared in the honors and rewards of the royal choice. Each wife has borne a son, but to the son by the first wife belongs the inheritance of the throne. The fierce jealousy between the partisans of the two wives is communicated to the two brothers, and in a quarrel the younger slays his elder brother, throws the body into the river, and gives out the report of an accidental drowning. The truth of this domestic tragedy reaches the ears of the Emperor. He summons the younger wife and her son. In the mother's presence he kills her boy, but not before she has bruised his forehead in her struggle to save the youth. Injury to the Emperor's person is a capital offense, and the wife escapes death only by declaring that she is with child. A short time after she gives birth to a boy. The Emperor has a great desire to get possession of this infant heir to the throne. He succeeds in palming off a spurious infant on the nurse. The mother detects the fraud, ascertains where the genuine child is hidden, dons male attire, and at the head of an armed force (six "supers") marches to the province and demands her child. A long parley is held with the governor of the province, but when the imperial flag is shown, this functionary delivers up the infant, and the militant mother returns in triumph. The Emperor is struck with her ability, recognizes the child as his heir, and peace broods over the imperial household.

The performance of this play—one of the shortest in the theatrical repertory—was begun at six o'clock and ended at midnight. It was relieved by not a single sparkle of wit, not a solitary gleam of humor. The nearest approach to pleasantry was furnished by the speech of the Emperor when he killed his child. The mother exclaimed, "Alas! you have slain our son." To which his answer is: "Well, console yourself: I'm not going to kill him again." This brought out a burst of laughter from the audience; all seemed to regard it as a finished bit of humor. They looked on unmoved, however, when the gory corpse rose and retired from the stage, while a member of the orchestra handed to the murderer a false head, which he apostrophized in blood-curdling terms. The only other expression of enjoyment was elicited by the disguise of the mother in man's attire. When she stroked her long false beard, several of the spectators

laughed heartily, while a ripple of smiles passed over the stolid faces of the others. The rôles of the two wives were played by Chinese men with fine soprano voices. One was a skillful actor, and imitated many peculiar feminine traits and gestures with much nicety. The leading man, who was brought over from Peking, and whose salary is \$10,000 a year, has a face brim-full of fun. He succeeds in leavening with a comic element some of the heavy plays, and his command of all the stage "business" is consummate. When engaged in combat with a foe he whirls about like a spinning dervish, crosses long spears with marvelous rapidity, and, at the end, accompanies his triumphal song with a jig that would do credit to the burnt-cork brethren.

The amount of exertion required of the leading actor is amazing. He plays seven days in the week, and the performance each day lasts from six to eight hours. The theater is open at two o'clock every day, and short farces and comedies are given during the afternoon to audiences largely made up of women and children. At seven o'clock begins the regular evening performance, which does not end until after midnight. Frequently the same actors appear in both performances. Chinese actors evidently do not believe in the effectiveness of subdued intensity in histrionic art. They rant like a Bowery tragedian in a "b-loody" border drama, filling the stage with bluster and braggart airs. Nearly all their speeches are delivered in sing-song chant, enforced with facial contortions and lavish gestures. Defiance is hurled against an adversary to the full power of the speaker's voice; his distended eye and ferocious frown typify the workings of inward rage; his mouth betrays a capacity undreamed of at a casual glance. After this tension of the facial muscles has been carried on for some time, one fears that the actor will never be able to

regain command of his features. But though he may disappear in a whirlwind of wrath, his face showing demoniac rage and his voice husky with strident bellowing, he will come back in a few moments with a placid smile on his flat face, gay, jaunty, debonair. A horrible expression is given to some faces by a coat of white paint, streaked with black, while others are covered with equally hideous masks. All the grades of official life are represented by costume or head-dress. Governors of provinces are provided with small flags fastened by sticks to their shoulders, which give them a resemblance to martial cherubs. From their helmets also hang two long, drooping plumes, looking as though they were the antennæ of some gigantic cricket. The American who attempts to learn the significance of all these decorations soon gets lost in a hopeless tangle.

The theatrical customs of Peking, dear to the heart of the exiled Chinese, are sadly restricted by the local authorities of San Francisco. It was the fashion several years ago to begin performances at nine o'clock at night, and protract them far into the small hours of the morning. But the Americans who live in the vicinity of the theaters did not relish this method of making night hideous. Their slumbers were rendered fitful and uneasy by the penetrating squeak of the one-stringed fiddle and the clamor of the gongs and cymbals. An ordinance was passed closing the doors of the theaters at midnight, to the deep disgust of the fashionable Chinese. For the American, however, two or three hours of the noisy spectacle are enough. One emerges from the smoke-laden atmosphere into the fresh night-air with the same sense of relief felt in escaping from a railway-car, after an entire day spent amid the dust and grime and clatter of the train. The confused sound of that awful orchestra still rings in the ears, and its barbaric strains tyrannize over one's dreams.

George H. Fitch.

WILHELMINA.

A PORTRAIT.

A PATIENT sadness in the lovely face,
That melts to tenderness within the eyes,
Now dark, now bright, as in the dew-drop lies
A shadow brightening in a sunny place;
Deep dimples in the cheeks that overflow
When laughter rises from the brimming heart;
Soft folds of lustrous hair; lips half apart,
As if a kiss escaped and left them so;
One fair hand thrown aside in careless gesture,
To grasp the rose down-fallen in her vesture:
The rose is passing sweet, yet lacks it grace
To keep me longer from that sweeter face!

Clifford Lanier.

OPERA IN NEW YORK. IV.

MARIO.

IN the season of 1854, after some miscellaneous performances of opera, by miscellaneous companies at miscellaneous places, New York was called upon to welcome two artists whose reputations had been more widely known, for ten or fifteen years, than those of any other two in the world. On the 4th of September, 1854, Grisi and Mario made their first appearance in America at Castle Garden, in "Lucrezia Borgia." Susini, who had a noble bass voice, and who looked as if he were what he had been, a colonel of cavalry, was the *Duke Alfonso*. The price of seats had been raised to three dollars, and the choice of them was put up at auction. The advent of these distinguished artists produced a very perceptible ripple upon the surface of society; but there was no great excitement. The audience was large, but the Castle was not thronged, as it had been for Jenny Lind. Grisi was very warmly welcomed; but there was a queer little misunderstanding between her and her audience. *Lucrezia* enters upon the scene

masked, and, as often as Grisi attempted to go on with the performance, such applause broke forth as made it impossible for her to do so. She had to curtsy again and again profoundly before her audience ceased this demonstration of welcome. The case was that the people who gave her such an unusual welcome thought that courtesy would dictate to her the removal of her mask one moment, that she might receive and acknowledge their greeting in her own person. The *début* was undeniably successful; but no very profound impression was produced on the musical public until, in the second week, Grisi appeared as *Norma*. The performances of the two distinguished artists were undeniably very fine. Grisi, although showing in person and in voice that she was past her prime, was superb, and Mario, who was in his prime, both of voice and person, sang exquisitely; but there was a certain degree of disappointment. This was due, in a great measure, to the fact that Grisi and Mario brought to the New Yorkers nothing remarkably new or striking, either in music or in its performance. They sang the old operas very admirably in the received style, and according to the received models, which they, indeed, had largely contributed to form. But for that very reason they gave their New York public no fresh sensation. Of Grisi's *Norma*, in which part she appeared on the 11th of September, I find the following appreciation in the "Courier and Enquirer" of the next morning:

"Madame Grisi's *Norma* differs in no respect, as to its conception, from several others that we have enjoyed before; it is only, in some respects, better in execution. We cannot remember a situation in the opera which she treated in a spirit at all new to us, except the scene in which she listened to *Adalsina's* relation of the birth and growth of her love. Grisi stood with her back to the girl, and, as the tale was told, and the memory of the dawn of her own passion was awakened by the timid confession of her companion in guilt, the face of the Arch-Druidess beamed with tender joy; she clasped her trembling fingers timidly; her breathing was as gentle as a child's; her eyes were bright with the light of youthful love; and then, for the first time, we saw how lovely Grisi must have been. The scene which follows this was as grand as wrath and scorn hurled from female lips can be. The woman towered above her towering passion, which did not make her repulsive, but the object of it pitiable. Her eye flashed his doom upon him; her arms waved the vengeance of heaven down to him; she spurned him with her voice, as a man spurns with his foot the thing that he most loathes; she looked a beautiful Fury. Her vocalization of the passage which the composer has assigned to this situation was in-

GRISI.

comparably fine—brilliant, powerful, impetuous. Her voice seemed unrestrained by consciousness, and abandoned to the sway of her all-controlling rage. The notes flashed out like lightning, and when they were arrested with the same suddenness with which lightning vanishes into darkness, there was just an appreciable instant of utter silence; and then the thunder shook the house. Few who saw it will forget that scene. The finale, the pathos of which is so grand and so touching, she gave with all the dramatic power of which she is supreme mistress. One action was new, and may possibly have been a happy inspiration of the moment. As *Pollione* knelt at her feet repentant, and again her lover, but too late, there was a silent moment; one hand fell from her averted face upon his shoulder. She drew it gently but firmly away, and, as it passed across his head, it lingered for an instant, and its mute fingers told an agony of love and grief beyond the utterance of words. Her singing of 'Casta Diva' was valuable more as an indication of her conception of the music than as a remarkable execution of it. And yet, even thus rendered, it was a study for the lovers of art. The woman's style is so incomparably fine, so unexceptionably correct. As a mere vocalist, we are inclined to doubt her preëminence, even in the plenitude of her powers."

(Sontag, always kind and generous in her criticisms, said to me once: "Madame Grisi cannot sing"; and, judged by Sontag's standard, Grisi could not sing.)

After a few more performances, including "I Puritani," which was received with great favor, these eminent artists were withdrawn from Castle Garden, which had become most inconveniently remote from the habitat of opera-going New Yorkers, who then were obliged to drive between three and four miles down to the opera, and back again at a late hour. It had been happily thought that their

assistance would give distinction to an event of some importance in the musical annals of New York, one which brings me near to the end of my task—the opening of the Academy of Music. This took place on the 2d of October, 1854, the opera being "Norma." I find to my surprise, on referring to my contemporary record of the occasion, published the next morning, that the audience was neither very large nor very brilliant. At the Academy, Grisi and Mario repeated the operas which they had performed before; and added to them "La Favorita," "Don Giovanni," and "Lucia di Lammermoor." *Edgardo* is such a test part for a great operatic tenor that I shall not apologize for repeating here a criticism written when I was fresh from Mario's performance of it:

"Signor Mario, though not in perfect voice, vocalized the charming music of the two airs in the finale in a style quite worthy of his great reputation. His tones were full of tenderness and sorrow. He had tears in his voice,—gentle tears, however, discreetly measured, and daintily poured out. He sang '*Fra poco a me recupero*' with such exquisite appreciation of light and shade, such a sustained and symmetrical flow of voice, such delicate inflections and modulations, and withal such a lachrymose expression, that it seemed as if nothing audible could be more exquisitely shaded, more symmetrical, delicate, or lachrymose, until he sang '*Tu che a Dio*,' which was the climax of his complainings, and of his vocal skill. But we confess that in the recitative which introduces this scene we missed that expression of the emotions of *Ravenswood* which it may be made to embody, and which, considering the dramatic requirements of the situation, is of far greater value than any exhibition of skill and taste in vocalization. Signor Allegri's pencil, charged with the hues of passion and of sadness, had in a measure performed the office of the two acts of the drama which find in this scene their culmination, and we looked for the entrance of a man whose visage and whose very gait told utter wretchedness, and the tones of whose voice were modulated by despair, and hate, and love. When he uttered:

'Tombe degli avi miei, l'ultimo avanzo
D'una stirpe infelice,
Deh raccogliete voi,'

our ears were eager for the accents of one who felt that he *was* the last of an unhappy race, and who came deliberately to lay himself and his weight of woe among those who were akin to him no less in fortune than in blood. When the next phrase fell from his lips,

'Cessa dell' ira
Il breve fuoco:—sul nemico acciario
Abbandonar mi vo,'

we longed for the inflections and the tones of one who was so utterly bowed down with manly grief, so lonely and abandoned in his crushing sorrow, that he met his mortal enemy only to seek death from his sword. When he continued,

'Per me la vita
E' orrendo peso:—l'universo intero
E' un deserto per me senza Lucia!'

we wanted a voice that, whether we would or no, pierced our very heart of hearts, to make us feel that

to him life was in very deed a burthen, and that all the beauty of the earth and the glory of the heavens was naught to him: Above all did we demand that when he uttered '*Ingrata donna!*' he should do it in the tones and with the manner of a man who was stung to the soul by a cruel wrong; who was not merely grieving the loss of a beloved mistress, but who thought with bitterness that the last pang of a life of suffering was inflicted by the 'ungrateful lady' to whom he had sacrificed even the revenge which he had sworn upon his father's ashes. We looked for a *Ravenswood* the intensity of whose grief and wrath was tempered and dignified by manliness of mien and severe simplicity of manner; who bore about him the consciousness that he was the last of a proud and fallen race; and therefore when Signor Mario begged *Lucia* so pathetically to respect at least the ashes of him who died for her, we were not satisfied; we demanded an utterance which amid all its grief was less a prayer which she could not refuse to grant than a mandate which she would not dare to disobey. Nay, even in pathos, when pathos should have been grand, we found the great Mario wanting. We listened in vain for the heart-rending tones in which *Edgardo*, knowing by premonition the answer he will receive, should exclaim:

'Di chi mai, di chi mai, di chi piangete?'

and in vain for that cry of anguish which is wrung from him when the question is answered. The one was a beautifully vocalized phrase, the other an exquisitely diminished note; but they were nothing more. Signor Mario has the sweetest tenor voice in the world, and is supreme master of all the delicate mysteries of *nuance*; he is the prince of romance singers; but there are effects that cannot be compassed by a sweet voice and *nuance*, and which are beyond, we will not say above, the reach of the romance singer. So at least we think; and we find that our demands are not altogether the requirements of an ideal standard, but reminiscences of past delights. Shall we ever see or hear a *Ravenswood* again—fierce, gloomy, passionful; abandoned alternately to his haughty pride, his implacable revenge, and his devoted love? Is it because we have grown a few years older and more world-worn that 'the music and the doleful tale' can thrill our hearts no longer! Or is it true that the breath from no other lips can so make music with our heart-strings?"

This criticism is filled with a reminiscence of *Edgardo* as performed by Benedetti, of whom I have spoken in the second of these sketches. As a vocalist he was no more to be compared to Mario than a garnet is to a diamond; but he was red with warm blood. In the concert-room he appeared to little advantage; but on the stage his accents and his action alike stirred the heart to its very depths. After seeing and hearing his *Edgardo* and Antognini's, Mario's was tame and puppet-like. He married Truffi, the magnificent, and took her to Italy.

And here, at the opening, by the two most distinguished artists in the world, of our fourth, and, as it has proved, our permanent opera-house, let us pause a moment. I have passed, lightly of necessity, and unsystematically by design, but with reasonable attention to the order of time, over a period of hardly

more than a quarter of a century; and we are still eight years from that landmark, the war. And yet we have seen, as the musical experience of New York in that remote twenty-five years, the enjoyment of the performances of such artists of the highest rank as Malibran, Signor Garcia, Caradori, De Begnis, Bosio, Jenny Lind, Alboni, Sontag, Grisi, and Mario; while of artists of the second and third rank, who yet were not without notable European reputations, there had been enough to make a chorus. The intelligent appreciation of all of these, shown equally by the complete and unhesitating recognition of such unknown artists as Malibran and Bosio, and the partial and discriminating admiration of such celebrities as Sontag, Grisi, and Mario, shows in New York audiences of former days a capacity of musical apprehension and an independence of judgment which, joined to the rich experience of those past years, should teach some critics, at home as well as abroad, whose acquaintance with New York was made "since the war," that neither her musical culture nor her familiarity with great operatic artists began with the dawning of their knowledge of the world and of music.

The opportune presence in New York of two such eminent artists as Grisi and Mario when the Academy of Music was finished was, however, due not to the managerial powers that ruled the destinies of the Academy, but to a speculative enterprise of the distinguished actor, Mr. James H. Hackett (father of the late Recorder Hackett), who brought the pair to the United States to make money by them. In this Mr. Hackett was successful; but it is probable that he and the great soprano and the great tenor were the only persons who profited by the undertaking. He received, as he admitted, some sixty thousand and odd dollars above all his expenses, including of course the sum which he had guaranteed to Madame Grisi and Signor Mario, without which guarantee they would not have crossed the Atlantic. It has been thus for more than a hundred years. Artists who have attained a position on the operatic stage will always find managers or speculators ready to engage their services, pay all their expenses and guarantee them large salaries. They do not sing without security; and whoever may lose—and somebody generally loses—by their performances, they do not. Mr. Hackett, making his contract with the managers of the Academy (a few New York gentlemen who had stepped in to sustain and conduct the new enterprise) was both the representative and the proprietor of Grisi and Mario, and therefore, like them, he was secured against loss. But notwithstanding the celebrity of the

LOUISA PYNE.

artists, the money received at their performances was not sufficient to meet the expense involved. It was found that even with a continued succession of the largest audiences which had yet been gathered in the Academy (and they had been large as well as brilliant), the management would be loser at the rate of *about two thousand dollars weekly*. Such losses are not uncommon in the conduct of opera. They fall upon the manager, the owners of the opera-houses, the tradesmen, and the artisans employed by them, and sometimes upon the poor chorus singers, and the orchestral performers; never, or very rarely, upon the principal artists.

The inevitable result of this condition of financial things at the Academy was that its managers closed their engagement with Mr. Hackett as soon as possible. The Academy was opened with Grisi and Mario on the 2d of October, 1854, with much flourish and high expectations; by the middle of December the virtual bankruptcy of the management was admitted, if not announced, and Mr. Hackett withdrew with his forces. After a brief visit to Boston, they returned to New York, and appeared at the Metropolitan Theater. Here they gave only three or four performances before they took their departure for Europe. The operas were "Norma," "La Favorita," "Don Giovanni," and "Semiramide." Grisi appeared to great advantage in all of these operas. She was, indeed, not quite equal to the lofty vocal style required for the style of "Don Giovanni"; and in "Non mi dir" and the trio in masks, her singing was of coarser quality than her music. And not only was she a notably mature-looking *Donna Anna*, but the costume of the part enhanced a certain defect in her carriage which that of other

parts palliated, and which at worst, strange to say, was not without its charm—a peculiarity in her gait which was certainly the most alluring awkwardness that ever caught the eye of man. Mario distinguished himself as *Don Ottavio* (a part in which great tenors are reluctant to appear, as they are in that of *Pollione*), and he sang "Il mio tesoro" with a purity and grace which seemed the perfection of vocalization. But Grisi never appeared to such advantage, in New York at least, as in "Semiramide." Her port and person suited the character of the semi-barbarous Assyrian queen, and the splendid costume with its trailing robes suited her. Indeed, the performance of "Semiramide" by the Grisi and Mario company was for several reasons an event of some mark in the history of opera in New York.

This, however, was less because of the intrinsic merit of the work than because of certain incidents of the occasion, as it was remarked immediately after the performance. Rossini's genius has rarely, indeed, found more brilliant manifestation than in some passages of "Semiramide"; and yet it is, both as a drama and as a musical composition, so incongruous, so monstrous, that, regarded in its entirety as a work of art, it is laughably absurd—only less so than "Die Zauberflöte," that mine of gems of melody and harmony. Its libretto treats a grand and tragic theme in a style which would justly provoke disparaging criticism in the nursery; and its music, never rising

BRIGNOLI.

even to true dignity, although sometimes to pompousness, vibrates between sensuous splendor and sensuous triviality. To situations truly awful, as, for instance, the scene immediately succeeding the apparition of

Ninus, the composer has awarded strains which ought to set the whole Assyrian court dancing, led off by Semiramis and the chief of the Magi, and brought up with the vigor

RONCONI.

and unction of their race by the sable youths who bear the presents of the King of India; and for others dignified and solemn, as where the principal personages swear obedience to the Queen, he has written only graceful and pleasing melodies which can hardly be saved by a sustained pomp of utterance from dwindling into prettiness. But it was not Rossini's fault that he could not write tragic music; and, if the world must needs have tragic dramas furnished with lyric utterance by the popular composer of the day, the world must sometimes be content to hear the voice of Thalia issuing from the mask of Melpomene.

Grisi did all that could be done by mature beauty, by queenly bearing, and by singing which was grandiose, if not simply grand, to set off this music, and Mario appeared unwontedly in the minor tenor part, charming the female half of his audience by the beauty and quaint richness of his costume, one noted item of which was a pale green India shawl, so fine that it could have been drawn through a lady's bracelet, which he wore as a girdle.

On this occasion Signorina Vestvali burst upon the astonished gaze of New York, which as *Arsace*, the Assyrian commander-in-chief, she might have expected to take by storm. And rarely, indeed, had a more formidably handsome woman made that attack. Her contralto voice was fresh, full, sympathetic, and of unusual compass, but it had the happiness to dwell in a body of such entire and stately symmetry, and to be aided by a countenance so blooming with healthful beauty,

so radiant, and so expressive, that her singing could not be judged with exact and impartial justice, until her judges were smitten with blindness. She was the tallest woman that I ever saw upon the stage; I believe the tallest woman I ever encountered; but she was also one of the most beautifully formed. Indeed, as she moved so superbly about as the martial *Arsace*, her helmed head overtopping that of every woman on the stage, it seemed as if Britomart had stepped out of the pictured pages of the "Faerie Queen," or, "so proud were her looks yet sweet," as if, Argante-like, we saw the vision of Tasso's Clarinda in her panoply. For, in his own words, as they were translated two hundred and fifty years ago, by Fairfax:

"Like her it was in armor and in weed,
In statue, beauty, countenance, and face,
In looks, in speech, in gesture, and in pace."

She made, for the moment, a tremendous sensation; but it was soon discovered by her eye-charmed New York audience that this magnificent singing animal was a very incomplete artist; that her voice, although equal in all its register, had not been sufficiently worked to conceal its breaks, as it passed from one register to another, that her method was imperfect, that her style was always declamatory, and that she frequently sang out of tune. Moreover, magnificent as she was, she was too large. Of all which the consequence was that she soon disappeared from the opera boards of New York, and was no more heard of.

This performance of "Semiramide" was also graced by the appearance of another woman, the dark splendor of whose beauty still lights up the memory of those who had the good fortune to see her; and whose grace was

MARIA PICCOLOMINI.

not less charming than her beauty. This was the Señorita Soto, a young Spanish dancer, who united in their perfection all the personal charms which are assumed to be characteristically Spanish, but which are rarely seen in Spanish women. The alluring charm natural to her face was enhanced by a lazy coquetry, which ever and anon was enlivened by the flashes of her dark, bright eyes. She was as supple as a greyhound, and as lithe as a serpent. Her grace of carriage and of movement was so remarkable and so peculiar, that one morning, some weeks after she had left New York and was supposed to be in Mexico or Cuba, I, walking down Broadway with a friend, and observing a female figure somewhat in advance of us on the other side of the street, dressed in a rumpled brown linen traveling suit, with a fan in her hand, said, after looking a moment, "That is Soto." My friend laughed at my confident assertion of the identity of a woman of whose back only we had had a glimpse; but when we had quickened our pace a little and crossed the street, his laugh was changed to expressions of admiration of the beautiful Spaniard; for Soto it was. I think that I was aided in my diagnosis by the turn of her wrist as she opened and shut her fan. A well-trained Spanish woman performs this little feat with an unconscious, languid grace attainable by no other sort of woman in the world. On the evening in question the attractions of Grisi and Mario and Vestvali were supplemented by those of this splendid dancing woman, which made the occasion one of mark. For although it was somewhat at variance with the truth of history, about which there is so much talk of late years, for Semiramis and all the rank and fashion of Nineveh to stay a solemn ceremony, Anno 2180 B. C., that a handsome Spanish girl in a crimson bodice and short and flimsy skirt might dance "La Zingarella" before the image of Belus; still under the circumstances the severest critic had not the heart to find fault with the fair Iberian, either for being a trifle of three thousand years out of place or for not conforming her costume to the fashion of the country and the period in which she found herself.

The Academy of Music was reopened on the 19th of February, 1855, under the management of the very distinguished Norse violinist, Ole Bull, who leased that vast and splendid void for a short season. Among his artists were Clotilde Patti, Vestvali, Brignoli, and Badiali; and he offered a prize of one thousand dollars for the best original grand opera by an American composer on an American subject; the copyright to be retained by the author—a vain proposal and an unwise

limitation. Music is not cultivated thus; neither by prize-giving, nor by efforts to elevate art and encourage native artists, and still less by insisting upon native subjects. The whole history of literature and of the fine arts is a rebuke to such folly. It was in keeping with this project that Ole Bull should go to ruin as a manager with greater speed than any of his predecessors. He did not last two months; and his short managerial career is worthy of this brief warning notice only because of his distinction as a violin virtuoso, and because in that capacity he had shown no less skill in manipulating public curiosity than in handling his instrument.

And now we pause for a while in following the course of Italian opera to glance backward briefly upon the career of an English prima donna of distinction who visited New York about this time. Miss Louisa Pyne made her first appearance in America at the Broadway theater, on the 9th of October, 1854, in "La Sonnambula." She came of a family which had already produced an artist of some note, the well-known English tenor Pyne being her father's brother. After singing in concerts she made her *début* in opera at Boulogne, in 1849, and from that time continued to grow in public favor. Her voice was a light soprano, of delicious quality, more than common compass, and very flexible. Her method was unexceptionally good, no Italian vocalist of her day being her superior in this respect except Alboni, if a discrimination can be made between two perfections of the same sort. Her intonation was singularly certain, and her execution delicate and finished to the highest degree. Her style was good; never in violation of taste; but it was somewhat tame and colorless. In person, she was a little below the middle height, with light blue eyes and pale brown hair; but although this made her not a very effective figure on the stage, these rather negative traits were strengthened and enlivened by the intelligence and expressiveness of her countenance. Although her New York audience had been accustomed to see handsomer, or at least more impressive, women as primadonnas on their operatic boards, they were not slow to recognize the fine musical abilities of the new-comer, who at once took a high place in public favor. She added "The Bohemian Girl" and Wallace's "Maritana" to "Sonnambula," the composer himself conducting "Maritana." She remained in America two years and more, and left the country not only profited by her pecuniary success but benefited by the discipline of her American audiences. Her country-woman, Miss E. C. Clayton, who wrote a sketch of her life, re-

FAREPA ROSA.

marks that "it was noticed that Miss Pyne's transatlantic experiences had given her confidence and knowledge of the stage, both in singing and acting, while her voice, though it had lost somewhat of its power, had gained in mellowness and richness." In fact, Louisa Pyne was the great English vocalist of her day; and had she been more impressive in person and in manner, and the possessor of a more powerful voice, she would have been a great prima donna. In vocalization she had no superior but Jenny Lind and Alboni. She did much to cultivate the taste of the English opera-going public in America.

This sketch does not profess to give a complete list of performers or of performances, to read which would be as toilsome and barren a task as to write it; but the appearance of such an artist as the baritone Amodio must not be passed over, coincident as it was, too, with the first performance in America of Verdi's "Il Trovatore." This took place at the Academy of Music on the 30th of April, 1855. The opera at once became a favorite; and so, also, did the singer whom it introduced to the New York public. Amodio had one of the most beautiful baritone voices ever heard. It was of almost unexampled richness and sweetness,—a large, free-flowing voice, and seeming almost as flexible as that of a *tenore di grazia*. His vocalization was remarkably good and his style pleasing,—a serene, very simple, *cantabile* style. But he had little dramatic power, and his deficiency in this respect was emphasized by the unfitness of his person for the stage. He was fatter than Alboni, and no taller. He was *Falstaff* sing-

ing in Italian. When he appeared in a close and antique costume, with a little round hat upon his little head, he looked like a plum-pudding set upon sausages. And yet so beautiful was his voice and so pleasing his style, that he was the favorite baritone in New York for some years.

On the occasion of the production of "Il Trovatore," the *Leonora* was Signora Steffanone, the *Azucena*, Signorina Vestvali, who have been particularly spoken of before. The *Maurice* was Signor Brignoli, a tenor who took Benedetti's place for some years in New York, where he was a great favorite, chiefly with very young ladies. For the temper and the constitution of the New York audiences had changed; and the young woman of the period had elbowed her way much nearer the front as an arbiter in art and elegance. Her admiration of Brignoli was not greatly to the credit of her taste. He had one of those tenor voices that seem like the bleating of a sheep made musical. His method was perfectly good; but he sang in a very commonplace style, and was as awkward as the man that a child makes by sticking two skewers into a long potato; and he walked the stage, hitching forward first one side and then the other, much as the child would make his creature walk. But he was a very "nice" young man, was always ready to sing, and, *faute de mieux*, it became the fashion with very young ladies to like him. But there never was a tenor of any note in New York whose singing was so utterly without character or significance, and who was so deficient in histrionic ability. His high and long-continued favor is one of those puzzling popular freaks not uncommon in dramatic annals.

In the spring of 1855 there was "fat in the fire" at the Academy of Music. Incompetent management, jealousy between rival singers, furious strife between rival musical agents, and interference of influential newspapers combined to make Italian opera at that time in New York the most inharmonious and, indeed, actively discordant institution that could be found in the country. There was a three-cornered kind of duel in which, however, each party desired to destroy the other two, and for the moment it seemed as if each one would succeed in its wishes, with the disappearance of all as a consequence, and the closing of the Academy for an indefinite period. The details of such squabbles are utterly without interest when they have subsided; and it is only necessary to say here that this one was quieted by an arrangement for the appearance at the Academy of the La Grange company, so called from the name of its prima donna and principal artist. Madame

CLARA LOUISE KELLOGG, IN AIDA.

de La Grange's voice was a soprano of extraordinary compass and very pleasing quality. It was not notably powerful, but it was very telling even in concerted music, and was heard through and above the din and clang of a finale, so penetrating were its vibrations. Withal she vocalized the most intricate passages with such delicately perfect execution as is attained only by the few among the leading singers of a generation. It is very rarely that the possessor of a voice and a vocal style of this kind has dramatic style or histrionic ability; but Madame La Grange possessed both. She did not, however, take a position among the great prima donnas—mainly, I am inclined to think, because of deficiencies purely personal. She was not an ugly woman, nor an ungraceful one; but her lean and lady-like figure was not attractive, nor was her voice or her manner what is called "sympathetic." Such various qualities

go to the making of that complex captivating creature, a great prima donna, and of this variety so much is purely personal—pertaining, that is, to the woman irrespective of the artist. Grisi, one of the most admired and petted among prima donnas, and one of those who reigned longest, was a notable instance of the superiority of the feminine to the artistic element of attraction.

With Madame de La Grange appeared a notably good tenor named Mirate. He was one of the handsomest men seen upon the New York operatic stage since the time of Fornasari. His voice was a pure, robust tenor, fresh and of a delicious sympathetic quality, and well delivered. His presence was noble, the very ideal of what a manly tenor should be; and his manner, although somewhat artificial, commanded attention if not always admiration. His defect was a heaviness of style in singing, and a lack of lightness and

ADELINA PATTI.

spirit upon the stage. He was much admired at first; but before long he began to be admired reluctantly, because he was found dull; and dullness is the one thing that dullness never can forgive. I do not remember (for I am

now writing from my own memory of musical events), nor discover that the favor of this tenor with the noble person and the noble voice lasted more than one season; and I believe that it endured hardly so long. I

remember how his singing was as *Don Ottavio* in "Don Giovanni"; and that he gave us the air "*Dalla tua pace*," which is rarely heard even in Europe, because first-rate tenors do not take the part; and even among first-rate tenors not all can easily compass this beautiful air which requires the most perfect cantabile style, and also a power of *sostenuto* in the upper register which is very rare.

On the 31st of December, 1855, the Academy was closed after a moderately successful season, in which Madame de La Grange, Amodio, and Brignoli were the principal attractions, and it was not opened again until March 1856, when the same artists re-appeared, reinforced at times by the always admirable and always admired Badiali, who had not yet won his European reputation nor even thought of going to London. As to the operas performed about this time, it is needless to specify them. They were the same that were performed all over the operatic world, in Paris, London, St. Petersburg, etc.,—Verdi, Bellini, Donizetti, Meyerbeer, with once in a while Rossini.

The winter season of 1857-58 introduced two artists of distinguished ability to the audiences at the Academy—Madame D'Angri and Carl Formes. Madame D'Angri was a contralto, endowed by nature with a full, rich voice and impassioned manner, which gave her, in a large degree, a certain kind of dramatic power. She had also a fine artistic sense. She was not attractive personally, and she made her principal success as the gipsy mother, *Azucena*, in "*Il Trovatore*." Yet, such are the demands of the stage and such the versatility, real and supposed, of artists, and such their ambition, that this large, strong, middle-aged woman appeared also as *Zerlina* in "Don Giovanni." To see her play the coquette, and hear her sing "*Vedrai carino*," was like eating tough mutton with mint sauce.

Carl Formes lacked but two of the qualifications for a great lyric artist,—tact as an actor and true intonation as a singer. He had a grand stage presence, a voice noble in quality and in volume, a fine dramatic style of singing, with tragic power, and humor, too, although these were rather Germanish; and to all this he added, or rather into all this he inspired, that unnamable quality which interests, irrespective of skill and art, or even of personal appearance. He was very impressive, both as *Bertrand* in "Robert le Diable," and as *Leporello* in "Don Giovanni." But he sang out of tune so much that he as often gave as much pain as pleasure to sensitive hearers; and in his acting, with all its spirit and force, he so frequently passed the limits prescribed by the reserves of art that his brief career in America

resulted in failure, notwithstanding his European reputation.

This season of 1857-8, which was declared by the management to be "the longest and most prosperous season ever given at the Academy of Music," was closed by the production of Mr. William H. Fry's grand opera, "*Leonora*," the libretto of which was written by his brother, Mr. J. R. Fry. This opera had been previously produced in Philadelphia with great success. It was on the whole much admired in New York, and some of its airs became popular. Its composer was not only an accomplished musician and critic, but a man born with the creative musical faculty and also with fine perceptions in musical rhetoric and the requirements in this respect of the lyric drama. His opera, like the early work of all artists, was so colored by the tone of his predecessors as to seem almost an imitation, now of one and now of another; but it also showed a constructive power and a mastery of the resources of the opera, vocal and instrumental, which promised, with encouragement and time, to produce something of which musical Americans might have been proud. But he did not have encouragement, nor yet time; he soon fell ill of a decline, which went on steadily until his death.

In the spring of 1858, the Italian opera bloomed out again in its humble old nook in a very remarkable manner. At Burton's theater in Chambers street, (the old Palmo's Opera house,) there was a very short season, in which Ronconi made his first appearance in New York. It was as *Dr. Dulcamara* in "*L'Elisire d'Amore*." The *Adina* was Madame de La Grange; but the interest of all the more intelligent lovers of the lyric drama, was concentrated upon Ronconi. With them he at once took place as the greatest artist that had been seen on the operatic stage of New York, since a time whereof their memory ran not to the contrary. He appeared also in "*Il Barbiere*" and in "*Linda di Chamouni*." It might be said that he was equally great in all these dissimilar parts, if he had not been greatest in the last. *Dr. Dulcamara* is a part which pertains to broad farce; *Figaro* carries light comedy to the extreme possible on the lyric stage; *Antonio* is tragic, and in Ronconi's hands it became grandly tragic. He had performed *Dulcamara* with a rankness which would have passed the limits of the permissible but for the richness of his humor and his artistic tact; his *Figaro* was a ceaseless bubbling, sparkling flow of gaiety and fun; and with the memory of these performances in the minds of his audience, he came before them to simulate the woes of a bereaved and

shame-stricken father in humble life, and it proved that he came to achieve the success of a great tragedian. From no tragic actor that had been seen in New York for twenty years, or that has been seen since, saw and heard we such an overpowering expression of love, and grief, and woe, and manly dignity as from Ronconi in the second act of "*Linda*," in which he finds his way into his lost daughter's chamber. Here he burst into a passion that was heroic; here he rose into grandeur. His singing and his action were alike in the largest, noblest style; his every accent, his every gesture was simply and nobly pathetic. When throwing upon the ground his daughter's alms, he cried out:

"L'elemosina a suo padre
La mia Linda non può far,"

the anguish in the tone of his voice, the horror in his countenance, and the wounded dignity of his bearing, surpassed in pathos and in noble passion anything that I ever heard and saw upon the stage;—I will not except the performances of Salvini, nor even those of Rachel. The only approach to it that I ever saw on the lyric stage was by that grand torso of a tenor Antognini. It must have been by an intuitive dramatic sense that Ronconi attained his great effects. His voice was not remarkable, even among voices of the second grade; his vocalization was good, but it would not have attracted attention in itself; he sometimes sang out of tune; in person he was not striking either as to face or figure; and yet he was—Ronconi, greatest among the lyric artists of his day.

In the autumn of 1858 the Academy reopened with a company which demands no special consideration; and at Burton's a rival company performed, among the members of which were Madame Gazzaniga, Madame Patti-Strakosch, and Signor Brignoli. The conductor was Maurice Strakosch, who had become a personage of importance among the musicians of New York, because of his musical and managerial ability no less than because of his connection with the musical Barili-Patti family which was to produce the most admired prima-donna of her time.

In the autumn of this year, 1858, there appeared at the Academy a young Italian lady who had risen within two years into what may be called a favorable musical notoriety, for it was not fame. Before the spring of 1856, no one beyond the circle of her own family and friends had heard of Maria Piccolomini; and yet in the winter of 1856, and in 1857, she was singing and making a sensation in London and Paris. She was of the well-

known noble Italian family, the Piccolomini, and was connected with others of the same quality. Nevertheless, she appeared on the stage when she was but sixteen years old, and made a great success—of a certain sort. After two seasons more of this success in Europe, she came to reap her share of the golden rewards which America bestows upon its favorites.

Signorina Piccolomini first sang before a New York audience on the 20th of October, 1858, in Verdi's "*La Traviata*." This opera had been much heard in New York just before that time; but it was well selected for Signorina Piccolomini's *début*; for the part of *Violetta* was one in which she had attained not only a great but a peculiar distinction. On this occasion there appeared upon the programmes the following "Particular Notice," the first of its kind that I remember having seen: "As Mlle. Piccolomini appears immediately on the rising of the curtain, visitors are particularly requested to be in their seats before eight. Those who should arrive later can be conducted to their seats only on the conclusion of the *Brindisi* by Mlle. Piccolomini." The lesson and the purpose of the latter sentence are better than its language, and after this good beginning a like restraint was frequently placed upon the disturbing powers of late comers both at operas and at concerts.

When the curtain did rise it showed a childish, over-dressed figure, almost like a great show-doll. When the little prima donna sang, it was, if not in a doll-like, almost in a childish way. Her voice was quickly recognized as a fresh, light soprano, of good compass, flexible, and quite pleasant in quality. As to her singing, it was well enough; but New York had amateurs who were her superiors both in vocalization and in dramatic power. Between her singing and that of Mrs. R —, or Miss G —, there could be no hesitation as to preference. Nor was she either beautiful or a good actress. And yet, when the curtain which had been lifted with such unusual precaution came down, she had again achieved her peculiar success. The truth about Mlle. Piccolomini was that she was the most perfectly lady-like coquette that had been seen on the lyric stage of her generation. She played the coquette on the stage; she played the coquette with her audience: her very grief was coquettish; she was tragic with an alluring glance; and she died in the most piquant manner. She sang always prettily, and sometimes brilliantly. But what was her singing to the way in which she tripped across the stage, and flirted her handkerchief so that every

CHRISTINE NILSSON.

man in the house thought that he had a personal interest in the maneuver? And yet she always impressed her audiences with the sense that she was a gentlewoman. Indeed, seeing Piccolomini was, to the public, like getting a glimpse of private theatricals of the very highest grade, socially and artistically. This was the secret of Piccolomini's brief success, and this was all. As a vocalist or as an actress she demands no particular consideration. She appeared in "La Figlia del

Reggimento," "La Zingara," "Don Pasquale," as *Susanna* in "Le Nozze di Figaro," and as *Zerlina* in "Don Giovanni." Had she been a true artist, the last-named part would have been a triumph for her. But it was not so. She was very charming to the superficial eye; she flirted about in the prettiest manner possible, and played the coquette with a relish that communicated itself to her audience; nor was her singing without grace. But both in conception and in execution her *Zerlina* was poor, thin, very second-rate, and intellectually vulgar. She produced no serious impression in New York, and she soon returned to Europe, where, after a brief struggle, she sank into obscurity.

The season of 1859 was remarkable for two musical events—one the first complete performance in America of Mozart's "Zauberflöte," the other the first appearance of a new and very young prima donna. On one of my visits some years before to Madame Barilli-Patti, before mentioned, whom I found to be a very motherly looking, if not matronly seeming, woman, who showed all of her forty-five or fifty years, I observed a slender, swarthy, bright-eyed little girl, in short skirts, who ran into the room and chirped at her mother, and ran out of it, caroling as she went through the passage-way, and then ran in and out again in the same fashion, until the middle-aged prima donna with whom I was talking called out, rather sharply :

PAULINE LUCCA.

ANNIE LOUISE CARY.

"*Adelina, tacete! e venite a me, o andate via.*"

The child chose to come, but soon she left her mother's side for mine, and then, with the freedom of Italian childhood, she who was to be the "*diva Patti*" of the present day half sat upon my knee, swinging one little red-stockinged leg as she glanced from her mother's face to mine. I asked Madame Barili-Patti if her little daughter promised to be a singer like her sisters and her mother, to which she replied: "*Lo spero; lo credo.*" And then, "*Canta uno poco, Adelina, per il signore*"; and she suggested something, whereupon the girl, without leaving her perch, sang, like a bird, a little Italian air that I did not know, and soon ran away on some childish errand. I did not see her again before she made her appearance, on the 24th of November, 1858, as *Lucia*—of course, Donizetti's *Lucia*.

Meantime she had been taught by Maurice Strakosch, who had married her eldest sister, and I suppose by her half-brother, too, Antonio Barili, an excellent master, who "formed" many of the best amateurs in New York. But to be with her mother must have been "a liberal education" in music; and the examples before her night and day, the very atmosphere she breathed, tended to

foster her musical talents. All that she had to furnish was voice, intelligence, and practice. Her *début*, it need hardly be recorded, was a very remarkable performance considering her age;—she was then but sixteen years old. Her voice was a flute-like, flexible soprano, which she delivered with purity and managed with great skill and taste. Still, she was not even in vocalization a *prima donna*; moreover, her voice lacked amplitude, richness, power, and her manner, although not awkward or constrained, was that of a very young girl. But her capabilities were at once recognized by her audiences, and her future was foretold by her critics, although, at that time, musical criticism in New York was fallen very much below the point at which it stood five years before, and that to which it has risen since. The attention of American newspaper-readers was concentrated upon other topics. John Brown had just been hanged. The mutterings of the great civil war in the not remote distance were of more interest than the chanting of heavenly cherubs would have been. Of *Adelina* it was remarked, however, that she was "one of those rare singers who appear at long intervals on the musical horizon, to revive not only the hopes of managers but the enthusiasm of the public." This was im-

MINNIE HAUK.

mediately upon her singing *Lucia* and *Amina* for the first time, after which she went on from triumph to triumph.

Nevertheless, I do not hesitate to express my doubts of her claims to the position of a great prima donna. She is the best of her time; but her time is barren of great singers. There is, for example, not one great contralto, or one great tenor, or one great baritone now before the world—not one whom even managers, with all their pretensions and all their needs, will venture to call great. What is it to be the greatest in a day of such dearth? The boy was next to head in his class; but, as it proved, the class consisted of him and a little girl. That Adelina Patti sings with perfect method, the highest finish, and in unexceptionable taste, is not to be disputed. What, then, does she lack to be a great prima donna? Two things of the very first importance—a great voice and a rich, impassioned nature. Adelina Patti, like her sisters, is the daughter, musically, of her father, not of her mother. Signor Patti was a respectable tenor singer, with a smooth, soft, piping voice, a correct style of singing,

and very good stage manner. He was so plump, so like a middle-aged belle advanced into *embonpoint*, and in voice and person so generally suggestive of pinguidity, that when I laughingly called him *Patti de foie gras*, the name stuck to him for a long time. Now, this man was not only Adelina Patti's father, but her musical begetter. Neither she nor either of her sisters has a first-rate voice. Hers is much the best, but it lacks largeness, power, nobility, sympathy. Nor is her style the grand style. Her method is perfect, almost beyond criticism; she is brilliant, she is exquisitely delicate in finish; but she is little. It may be said of her, as Pasta said of Sontag: She is the best of her school, but her school is not the best. As I write now, I have not heard Adelina Patti since she made her great European success; and I therefore may have to modify my opinion hereafter.* But of this I have not a very troubling apprehension. Her qualities are too essential, too inherent, to be changed by time and culture. The Adelina Patti who sang

* These articles were written in the summer of 1881.

in New York in 1859 and 1860 was not to be made into a great prima donna by being raised to the hundredth power. For that she needed a new voice and a new nature, physical and mental.

The year 1860 was distinguished by the operatic *début* of the most distinguished artist that any one of the United States has yet given to the lyric stage. In the autumn of that year Miss Clara Louise Kellogg, a New York girl, whose vocal gifts and musical intelligence had been discovered and cultivated through the encouragement of New York friends, appeared at the Academy of Music as *Gilda* in Verdi's "Rigoletto." I was present on the occasion, and I confess that the impression that I received was not one that led me to look forward to the success that, in the course of a few years, the fair young *débutante* achieved. Her chief deficiency seemed to be in strength—strength of voice, strength of body, strength of emotional expression. And on all these points she not only was, but still remains, somewhat lacking. Nor was her vocalization better than tolerable. But on two other points she was amply furnished: she had strength of character and strength of will. She persevered. Her voice grew stronger by exercise, as also did her body; she improved herself very much in her singing, and although she never became an effective dramatic vocalist, she had the power of revealing dramatic conceptions of great delicacy, purity, and sweetness. This she showed first in the *Margherita* of Gounod's "Faust," which still remains her finest impersonation. It was in 1864, and as she was soon succeeded in this opera by two distinguished European prima donnas Nilsson and Lucca, it may be well to remark here upon all the three comparatively.

Miss Kellogg's voice is a high soprano, very clear, very pure, very fine, close and firm in quality, and capable of the most exquisitely delicate and tender inflections. Her intonation is remarkably correct. Her dramatic power is suited to her voice; and all that she does is marked by a fine and pure intelligence which has a certain sweet homeliness in its mode of manifestation. Hence her performance of *Margherita*—toward her conception of which she had no help nor even any model—was ideal, and purely poetical in its character. It had no marked individuality, and very little local color; but it was feminine, lovely, tender, and, above all, pure. There was a simplicity about it, too, that gave it character—such character as the tint and the perfume of the lilac shows among roses and lilies. I remember one striking exhibition of the delicacy and discipline

of Miss Kellogg's vocal powers, my telling of which I hope that she will pardon. I was sitting by her side at a private theatrical performance at Mr. Jerome's private theater, and between the acts I spoke to her of the "Faust," and of the beautiful music of the garden scene. "What, this?" she said, smiling. And, as I bent my head toward her, she, smiling still, sang into my ear, in a voice which, amid the buzzing of tongues around us, was unheard except by me, the greater part of that enchanting passage, and sang it with what seemed to me all the expression which she gave to it in full voice upon the stage. I was delighted, of course, and much flattered by her frank kindness; but I was also astonished, for it was a remarkable feat of vocalization. She has probably forgotten this; but I shall never forget it; nor how I then felt a sort of conviction of sin in that I had greeted her so coldly when she made her *début* four years before. But what may not four years of hard work do for a vocalist who has the capacity of improvement?

Mlle. Nilsson was a prima donna of richer vocal endowment and higher academic training. She came here puffed as a second Jenny Lind; but she was nothing of the sort. She was, however, a very gifted and highly finished vocalist of the second rank, standing in its fore front. She, too, had a high soprano voice, but it had a very considerable breadth, and a strength of vibration which was almost like that of a clarinet. The tone of it was singularly firm. Her singing was never either very astonishing or very touching, but it was always correct in expression, always in good taste. So with her performances dramatically: they always pleased, if they did not satisfy, the most exacting taste, and never offended the most fastidious. Her *Margherita* had more character than Miss Kellogg's. She was more a creature of flesh and blood, but not so tender, not so ideal, not so expressive of that moral *aura* of the character which Goethe himself suggests but fails to express. Mlle. Nilsson's finest performance—that which showed her powers at their highest and her finish at its greatest—was that of *Elsa* in "Lohengrin," which was produced at the Academy of Music on her second visit to New York. Her conception of this character was notable for its elevation, and her performance of it, both vocal and dramatic, for sustained power. Mlle. Nilsson had a fine, intelligent Norse face, well suited to such parts as *Margherita* and *Elsa*, but not so to the strongly emotioned heroines of most of the modern operas. In "Lohengrin" she was ably seconded by Signor Campanini, a tenor who was the best of his time, and who,

ETELKA GERSTER.

for several seasons, was a great favorite in New York, notwithstanding a voice which seemed, with all its strength, to be very much worn, and never to have been rich or sympathetic in quality. He was, however,—I should rather say he is,—a fine dramatic singer, and deserves the favor in which he is held; for he is now the great tenor of the present generation of opera-goers.

Pauline Lucca was as unlike Miss Kellogg as one singing woman can be unlike another—unlike in person, unlike in voice, unlike in manner, unlike in character; or, rather, as unlikeness may exist among those of the same sort, I should say opposed—totally and absolutely opposed—to Miss Kellogg on all these points. She was a strong, not to say a coarse, peasant woman, whose inherent rudeness of fiber was softened and enriched by a warmly emotional nature, and by something that Miss Kellogg and Mlle. Nilsson both

lacked entirely—humor. Her voice was large and luscious, and full of warmth; but it was altogether lacking in the capability of expressing elevation of feeling or serenity. Her performance of the saucy *Cherubino* was charming, although even here we might have welcomed a little more refinement. Her *Margherita* was as real as Miss Kellogg's was ideal. She was merely a strong-bodied, simple-minded, warm-hearted peasant girl, who had fallen desperately in love with a handsome fellow who captivated her eye, stirred her emotional nature, and flattered her vanity by sending her fine presents. It would have been impossible to have more local color and less of poetic feeling and of sentiment in Lucca's presentation of Goethe's heroine. Her singing was of a piece with her acting. It was of the flesh, fleshly.

In the autumn of 1865—perhaps earlier, but I find no other record—Mlle. Parepa

came before the New York public in the concert-room, and was received with joyous acclamation; for she was a joyous woman. An ample dame, copious of voice and of person; standing truly somewhat tun-wise upon the stage, yet brightly handsome withal, and tightly girt with elegantest hooping of silk and satin. She soon sang in opera, in which her conductor was always a young violinist named Carl Rosa, much to her pleasing, as the end showed, as well as to the public's. She had voice and vocal skill to delight her audiences, although she offered them nothing new or great, nor taught them anything. Singing and smiling with a certain sumptuousness, she was always received as if she brought more than she really had to give. After a year or two, she kindly took Carl Rosa to husband; and after three or four years more she went with him to Europe, where she lived not long. She left such a feeling behind her, that her admirers would have mourned less a greater artist.

Miss Kellogg is the only prima donna of celebrity that may be properly called "American"; and if to her we add those excellent and popular contraltos Miss Phillips and Miss Cary, we have fairly summed up the contribution of the United States to the higher department of vocal art. But Canada has given the world one prima donna who, making her operatic *début* in New York, rose rapidly afterward in Europe to a position second only to that of Adelina Patti. She made her first appearance at the Academy of Music, in December, 1874, quite unknown and unheard of; and here follows a critical sketch of her written at the time:

"She stands behind the foot-lights, smiling and courtesying, so living an embodiment of her real name, La Jeunesse, that it seems a pity that she should have changed it for the Italianized form of the name of the place, Albany, where she happened to be born. Under any name, however, this last-born daughter of song is welcome. Not a great prima donna, she is a very charming singer; not an actress of remarkable powers, she is yet a very pleasing one; not a beauty, she has yet an exceedingly attractive and captivating person—one that brings up an old word that our grandfathers used when they spoke of our grandmothers before they married them—engaging. She glides across the stage, her dark blue eyes swimming in liquid light, and her full, alluring lips and white, shapely throat promise just the delicious tones that issue from them. Her voice is clear, sound, and pure, and is delivered with a freedom that is rare in a singer born on this side of the Atlantic, or it may be said, on this side of the British Channel. Inferior singers, badly taught or unteachable, have almost always some awkwardness in the action of the throat or the lips that half chokes or distorts the sound—gives an impression of conscious effort in its utterance and mars pure musical vibration. Nilsson, with all her finish of vocalization, was not wholly without this; Albani has none of it, but is in this respect as unimpeachable as Jenny Lind or even

Alboni. In quality, her voice is like a sweet A clarinet above the *chalumeau*—clear, vibrating, smooth, and of an evenness rare and admirable. So fitted by nature were its registers to blend, and so well has she been trained, that it seems as if they were but one. From the lowest note to the top of her compass there is but one quality, one even, unbroken gradation of delicious sound. She is in the first bloom of her youth, and consequently in the fullness of her inexperience. Should she continue to study as she has begun, and keep her health, she will be a better singer five years hence than she has yet become. Even now, the delicacy of her musical articulation is admirable; and her style, that is her musical elocution, is both graceful and impressive. More elegant phrasing, or so good, we have not had here for a long time. This charming, but not very moving, style suits perfectly well with her voice, which flows as clear, as equal, as fresh and bright as a running spring, and almost as cold—no, not cold, but cool, and without a tear-drop in it. Yet she is not impassive on the stage, but seems to express the feelings of a very sensitive nature; and she makes love divinely.

"If I were to assign Albani a place among singers, I should rate her, as a mere vocalist, in the middle of the second rank, with the capability of taking a foremost place in that rank. First-rate, of course, she can never become, for she has not a first-rate voice."

This was the opinion passed upon Mlle. Albani on her first appearance in New York. She has since then reached the high position which was expected for her, and, although not a great artist, is one of the few who are recognized as the notable singers of the world.

In the autumn of 1878, the Academy season was opened with much flourish of trumpets by Mr. Mapleson, who announced a double company from "Her Majesty's Theater." And, although the performance did not come quite up to promise, the stage and the orchestra were well filled by artists of ability. Signor Ardit, most skillful and painstaking of conductors, wielded the baton, and there was a rich variety in the programmes. The season was chiefly remarkable for the production of Bizet's opera, "Carmen," for the return of Miss Minnie Hauk to New York, and for the first appearance here of Madame Gerster. Miss Hauk, a young German girl, born in New York, had, after receiving much encouragement in her native place, gone to Europe to study. She studied to advantage, appeared there in opera with very considerable applause, and returned to the public which she had left merely a gifted but imperfectly taught girl, in the fullness of her powers, to achieve her first great success. She opened the season as *Violetta* in "La Traviata," but the delicacy of the character was not suited to her strong and highly characteristic style. Her performance of *Carmen*, however, soon displayed her peculiar qualities to the great delight of her audiences. The music of this opera is not of a high order, but it has a character of its own—a rhythm and a swing

which, although undeniably vulgar, are captivating, for a time at least, to the general ear. *Carmen* herself is an insufferable creature; and yet as she is represented by Minnie Hauk we follow her actions with interest, and even mourn the death that she deserves. Miss Hauk took this character to herself; she seemed to have been born to play it. In America and in Europe there was but one *Carmen*. Miss Hauk's success was rather that of an actress than that even of a dramatic vocalist.

Madame Gerster made her first appearance at the Academy on the 11th of November, 1878, as *Amina*. She had been much "puffed" in Europe, and, on the other hand, her eminence as a vocalist had been stoutly disputed by critics of acknowledged good judgment. Much interest and unusual curiosity was manifested in her New York *début*. She had not sung many bars of "*Come per me sereno*" before she showed that she was a vocalist of no mean powers. Her voice was—we may rather say is—a true soprano, which, if not remarkably brilliant, sympathetic, or powerful, has a bewildering flexibility well suited to arouse popular musical enthusiasm; and her vocalization is of a corresponding character. She triumphs over difficulties with great ease.

In the midst of a passage of no remarkable interest, she will suddenly dazzle the musical perceptions of her audience by some dextrous feat of vocalization, which astonishes and pleases quite as much by the perfect ease and careless certainty with which it is accomplished as by its intrinsic beauty, or even its difficulty. Her special excellence is an exquisitely delicate and sharply brilliant *staccato* in the upper register of her voice. She will suddenly rise an octave, and almost an octave above the staff, and touch a note with exquisite lightness and certainty; or she will dot the air with brilliant points of sound, flinging them out like stars from a bursting rocket. It is rather in such bewildering feats of vocalization than in a pure and sustained cantabile that she shines. She had a very great popular success as *Amina*, as *Lucia*, as *Elvira* ("I Puritani"), and also as the *Queen of Night* in "*Die Zauberflöte*." She was not an actress; she had not an impressive manner; she was as awkward as a clothes-horse: she was simply a vocalist of wonderful capacity and skill. She is the last prima donna and the last artist of distinction that has appeared on the New York operatic boards; and upon her success we drop our curtain.

Richard Grant White.

IN THE HAUNTS OF BREAM AND BASS.

I.

DREAMS come true and everything
Is fresh and lusty in the spring.
In groves, that smell like ambergris,
Wind-songs, bird-songs never cease.
Go with me down by the stream,
Haunt of bass and purple bream;
Feel the pleasure, keen and sweet,
When the cool waves lap your feet;
Catch the breath of moss and mold,
Hear the grosbeak's whistle bold;
See the heron all alone
Mid-stream on a slippery stone,
Or, on some decaying log,
Spearing snail or water-frog,
Whilst the sprawling turtles swim
In the eddies cool and dim!

II.

The busy nuthatch climbs his tree,
Around the great bole spirally,

Peeping into wrinkles gray,
Under ruffled lichens gay,

Lazily piping one sharp note
From his silver-mailed throat,

And down the wind the catbird's song
A slender medley trails along.

Here a grackle chirping low,
There a crested vireo;

Every tongue of Nature sings,
The air is palpitant with wings!

Halcyon prophesies come to pass
In the haunts of bream and bass.

III.

Bubble, bubble flows the stream,
Like an old tune through a dream.

Now I cast my silken line;
See the gay lure spin and shine—

While, with delicate touch, I feel
The gentle pulses of the reel.

Halcyon laughs and cuckoo cries,
Through its leaves the plane-tree sighs.

Bubble, bubble flows the stream,
Here a glow and there a gleam,

Coolness all about me creeping,
Fragrance all my senses steeping,

Spicewood, sweetgum, sassafras,
Calamus and water-grass,

Giving up their pungent smells
Drawn from Nature's secret wells;

On the cool breath of the morn
Fragrance of the cockspur thorn.

IV.

I see the morning-glory's curl,
The curious star-flower's pointed whorl.

Hear the woodpecker, rap-a-tap!
See him with his cardinal's cap!

And the querulous, leering jay,
How he clamors for a fray!

Patiently I draw and cast,
Keenly expectant, till, at last,

Comes a flash, down in the stream,
Never made by perch or bream,

Then a mighty weight I feel,
Sings the line and whirs the reel!

V.

Out of a giant tulip-tree,
A great gay blossom falls on me;

Old gold and fire its petals are,
It flashes like a falling star.

A big blue heron flying by
Looks at me with a greedy eye.

I see a striped squirrel shoot
Into a hollow maple-root;

A bumble-bee, with mail all rust,
His thighs puffed out with anther-dust,

Clasps a shrinking bloom about,
And draws her amber sweetness out.

Bubble, bubble flows the stream,
Like an old tune through a dream!

A white-faced hornet hurtles by,
Lags a turquoise butterfly,

One intent on prey and treasure,
One afloat on tides of pleasure!

Sunshine arrows, swift and keen,
Pierce the maple's helmet green.

VI.

I follow where my victim leads,
Through tangles of rank water-weeds,
O'er stone and root and knotty log,
And faithless bits of reedy bog.

I wonder will he ever stop?
The reel hums like a humming top!

A thin sandpiper, wild with fright,
Goes into ecstasies of flight,

Whilst I, all flushed and breathless, tear
Through lady-fern and maiden's-hair,

And in my straining fingers feel
The throbbing of the rod and reel!

Bubble, bubble flows the stream,
Like an old tune through a dream!

VII.

At last he tires, I reel him in;
I see the glint of scale and fin.

I lower rod—I shorten line
And safely land him; he is mine!

The belted halcyon laughs, the wren
Comes twittering from its brushy den,

The turtle sprawls upon his log,
I hear the booming of a frog.

Liquidamber's keen perfume,
Sweet-punk, calamus, tulip-bloom,

Glimpses of a cloudless sky
Soothe me as I resting lie.

Bubble, bubble flows the stream,
Like low music through a dream.

Author of "That Lass o' Lowrie's," "Haworth's," "Louisiana," "A Fair Barbarian," etc., etc.

CHAPTER XVI.

FROM that day until they separated, there was no change in her. It was scarcely two weeks before their paths diverged again; but in looking back upon it afterward, it always seemed to Tredennis that some vaguely extended length of time must have elapsed between the night when he dismounted at the gate in the moonlight, and the morning when he turned to look his last at Bertha, standing in the sun. Each morning when she gave him his breakfast in the old-fashioned room, and he watched her as she moved about, or poured out his coffee, or talked to Meg and Jack, who breakfasted with them; each afternoon when Janey was brought down to lie on the sofa, and she sat beside her singing pretty, foolish songs to her, and telling her stories; each evening when the child fell asleep in her arms, as she sang; each brief hour, later on, when the air had cooled, and she went out to sit on the porch, or walk under the trees,—seemed an experience of indefinite length, not to be marked by hours, nor by sunrise and sunset, but by emotions. Her gentle interest in his comfort continued just what it had been the first day he had been so moved by it, and his care for her she accepted with a gratitude which might have been sweet to any man. Having long since established his rank in Janey's affections, it was easy for him to make himself useful in his masculine fashion. During her convalescence his strong arms became the child's favorite resting-place; when she was tired of her couch he could carry her up and down the room without wearying; she liked his long, steady strides and the sound of his deep voice, and his unconscious air of command disposed of many a difficulty. When Bertha herself was the nurse he watched her faithfully, and when he saw in her any signs of fatigue, he took her place at once, and, from the first, she made no protest against his quietly persistent determination to lighten her burdens. Perhaps, through the fact that they were so lightened, or through her relief from her previous anxiety, she seemed to grow stronger as the child did. Her color became brighter and steadier,

and her look of lassitude and weariness left her. One morning having been beguiled out of doors by Jack and Meg, Tredennis heard her laugh in a tone that made him rise from his chair by Janey, and go to the open window.

He reached it just in time to see her run like a deer, across the sun-dappled grass after a bright ball Meg had thrown to her, with an infantile aimlessness, which precluded all possibility of its being caught. She made a graceful dart at it, picked it up, and came back under the trees, tossing it in the air, and catching it again with a deft turn of hand and wrist. She was flushed with the exercise, and, for the moment, almost radiant; she held her dress closely about her figure, her face was upturned and her eyes were uplifted, and she was as unconscious as Meg herself.

When she saw him, she threw the ball to the children, and came forward to the window.

"Does Janey want me?" she asked.

"No. She is asleep."

"Do you want me?"

"I want to see you go on with your game."

"It is not my game," she answered, smiling.

"It is Jack's and Meg's. Suppose you come and join them. It will fill them with rapture, and I shall like to look on."

When he came out she sat down under a tree leaning against the trunk, and watched him, her eyes following the swift flight of the ball high into the blue above them, as he flung it upward among the delighted clamor of the children. He had always excelled in sports and feats of strength, and in this simple feat of throwing the ball, his physical force and grace displayed themselves to decided advantage. The ball went up, as an arrow flies from the bow, hurtling through the air, until it was little more than a black speck to the eye. When it came back to earth he picked it up and threw it again, and each time it seemed to reach a greater height than the last.

"That is very fine," she said. "I like to see you do it."

"Why?" he asked, pausing.

"I like the force you put into it," she answered. "It scarcely seems like play."

"I did not know that," he said; "but I

am afraid I am always in earnest. That is my misfortune."

"It is a great misfortune," she said. "Don't be in earnest," with a gesture as if she would sweep the suggestion away with her hand. "Go on with your game. Let us be like children, and play. Our holiday will be over soon enough, and we shall have to return to Washington and effete civilization."

"Is it a holiday?" he asked her.

"Yes," she answered. "Now that Janey is getting better, I am deliberately taking a holiday. Nothing rests me so much as forgetting things."

"Are you forgetting things?" he asked.

"Yes," she replied, looking away, "everything."

Then the children demanded his attention, and he returned to his ball-throwing.

If she was taking a holiday with deliberate intention, she did it well. In a few days Janey was well enough to be carried out and laid on one of the two hammocks swung beneath the trees, and then far the greater part of the day was spent in the open air. To Tredennis it seemed that Bertha made the most of every hour, whether she swung in her hammock with her face upturned to the trees, or sat reading, or talking as she worked with the decorous little basket, at which she had jeered, upon her knee.

He was often reminded in these days, of what the Professor had said of her tenderness for her children. It revealed itself in a hundred trifling ways, in her touch, in her voice, in her almost unconscious habit of caring for them, and more than all, in a certain pretty inconvenient fashion they had of getting close to her, and clinging about her, at all sorts of inopportune moments. Once when she had run to comfort Meg who had fallen down, and had come back to the hammock, carrying her in her arms, he was betrayed into speaking:

"I did not think ——," he began, and then he checked himself guiltily.

"You did not think?" she repeated.

He began to recognize his indiscretion.

"I beg your pardon," he said, "I was going to make a blunder."

She sat down in the hammock with the child in her arms.

"You were going to say that you did not think I cared so much for my children," she said gently. "Do you suppose I did not know that? Well, perhaps it was not a blunder. Perhaps it is only one of my pretenses."

"Don't speak like that," he implored.

The next instant he saw that tears had risen in her eyes.

"No," she said. "I will not. Why should I? It is not true. I love them very much. However bad you are, I think you must love your children. Of course, my saying that I loved them might go for nothing; but don't you see," she went on with a pathetic thrill in her voice, "that they love *me*? They would not love me, if I did not care for them."

"I know that," he returned remorsefully. "It was only one of my blunders, as I said. But you have so bewildered me sometimes. When I first returned, I could not understand you. It was as if I found myself face to face with a creature I had never seen before."

"You did," she said. "That was it. Perhaps I never was the creature you fancied me."

"Don't say that," he replied. "Since I have been here, I have seen you as I used to dream of you, when I sat by the fire in my quarters in the long winter nights."

"Did you ever think of me like that?" she said slowly, and with surprise in her face.

He had not thought of what he was revealing, and he did not think of it now.

"I never forgot you," he said. "Never."

"It seems very strange—to hear that now," she said. "I never dreamed of your thinking of me—afterwards. You seemed to take so little notice of me."

"It is my good fortune," he said, with a touch of bitterness, "that I never *seem* to take notice of anything."

"I suppose," she went on, "that you remembered me because you were lonely at first, and there was no one else to think of."

"Perhaps that was it," he answered.

"After all," she said, "it was natural—only I never thought——"

"It was as natural that you should forget, as that I should remember," he said.

Her face had been slightly averted, and she turned it toward him.

"But I did not forget," she said.

"You did not?"

"No. At first, it is true, I scarcely seemed to have time for anything, but to be happy and enjoy the days, as they went by. Oh! what bright days they were, and how far away they seem! Perhaps, if I had known that they would come to an end really, I might have tried to make them pass more slowly."

"They went slowly for me," he said. "I was glad when they were over."

"Were you so very lonely?" she asked.

"Yes."

"Would it have pleased you, if I had written to you when papa did?"

"Did you ever think of doing it?" he asked.

The expression dawning in her eyes was a

curious one—there was a suggestion of dread in it.

"Once," she replied. "I began a letter to you. It was on a dull day, when I was restless and unhappy for the first time in my life. And suddenly I thought of you, and I felt as if I should like to speak to you again. And I began the letter."

"But, you did not finish it."

"No. I only wrote a few lines, and then stopped. I said to myself that it was not likely that you had remembered me in the way I had remembered you, so I laid my letter aside. I saw it only a few days ago among some old papers in my trunk."

"You have it yet?"

"I did not know that I had it, until I saw it the other day. It seems strange that it should have lain hidden all these years, and then have come to light. I laid it away thinking I might find courage to finish it sometime. There are only a few lines,—but they prove that my memory was not so bad as you thought."

He had been lying on the grass a few feet away from her. As she talked he had looked not at her, but at the bits of blue sky showing through the interlacing greenness of the trees above him. Now, he suddenly half rose and leaned upon his elbow.

"Will you give it to me?" he said.

"Do you want it? It is only a yellow scrap of paper."

"I think it belongs to me," he said. "I have a right to it."

She got up without a word and went toward the house, leading Meg by the hand. Tredennis watched her retreating figure in silence, until she went in at the door. His face set, and his lips pressed together, then he flung himself backward and lay at full length again, seeing only the bright green of the leaves, and the bits of intense blue between. It was well that he was alone. His sense of impotent anguish was more than he had strength to bear, and it wrung a cry from him.

"My God!" he said. "My God!" He was still lying so when Bertha returned. She had not been away many minutes, and she came back alone with the unfinished letter in her hand.

He took it from her without comment, and looked at it. The faint odor of heliotrope he knew so well, floated up to him as he bent over the paper. As she had said, there were only a few lines, and she had evidently been dissatisfied with these, and irresolute about them, for several words were erased as if with girlish impatience. At the head of the page was written first: *Dear Philip*, and then *Dear Captain Tredennis*, and there were two or

three different opening sentences. As he read each one through the erasures, he thought he understood the innocent unconscious appeal in it, and he seemed to see the girl-face bending above it changing from eagerness to uncertainty, and from uncertainty to the timidity which had made her despair.

"I wish you had finished it," he said.

"I wish I had," she answered, and then she added vaguely,—"if it would have pleased you."

He folded it, and put it in his breast pocket and laid down once more, and it was not referred to again.

It seemed to Tredennis at least, that there never before had been such a day as the one which followed. After a night of rain the intense heat subsided, leaving freshness of verdure, skies of the deepest, clearest blue, and a balmy, luxurious sweetness in the air, deliciously pungent with the odors of cedar and pine.

When he came down in the morning, and entered the breakfast room, he found it empty. The sunlight streamed through the lattice work of vines, and the cloth was laid, with the pretty blue cups and saucers in waiting; but Bertha was not there, and fancying she had risen later than usual, he went out into the open air.

The next morning he was to return to Washington. There was no absolute need of his remaining longer. The child had so far recovered that, at the doctor's suggestion, in a few days she was to be removed to the sea-side. Nevertheless, it had cost him a struggle to arrive at his decision, and it had required resolution to announce it to Bertha. It would have been far easier to let the days slip by as they would, and when he told her of his intended departure, and she received the news with little more than a few words of regret at it, and gratitude for the services he had rendered, he felt it rather hard to bear.

"If it had been Arbuthnot," he thought, "she would not have borne it so calmly." And then he reproached himself bitterly for his inconsistency.

"Did I come here to make her regret me, when I left her?" he said. "What a fool a man can make of himself, if he gives way to his folly."

As he descended the steps of the porch he saw her, and he had scarcely caught sight of her before she turned and came toward him. He recognized at once that she had made a change in her dress, that it was no longer such as she had worn while in attendance upon Janey, and that it had a delicate holiday air about it, notwithstanding its simplicity.

"Was there ever such a day before?" she said as she came to him.

"I thought not, as I looked out of my window," he replied.

"It is your last," she said. "And I should like you to remember it as being pleasanter than all the rest, though," she added thoughtfully, "the rest have been pleasant."

Then she looked up at him, with a smile.

"Do you see my gala attire?" she said. "It was Janey who suggested it. She thinks I have not been doing myself justice, since you have been here.

"That," he said, regarding her seriously, "is a very beautiful gown, but—" with an entirely respectful sense of inadequacy of expression—"you always wear beautiful gowns, I believe."

"Did Mr. Arbuthnot tell you so?" she said—"or was it Miss Jessup?"

They breakfasted together in the sunny room and after breakfast they rambled out together. It was she who led, and he who followed, with a curious dreamy pleasure in all he did, and in every beauty around him, even in the unreal passiveness of his very mood itself. He had never been so keenly conscious of things before, everything impressed itself upon him, the blue of the sky, the indolent sway of the leaves, the warmth of the air, and the sweet odors in it, the broken song of the birds, the very sound of Bertha's light tread as they walked.

"I am going to give the day to you," she had said. "And you shall see the children's favorite camping-ground on the hill. Before Janey was ill, we used to go there almost every day."

Behind the house was a wood-covered hill, and half way up was the favored spot. It was a sort of bower formed by the clambering of a great vine from one tree to another, making a canopy, under which, through a break in the trees, could be seen the most perfect view of the country below, and the bend of the river. The ground was carpeted with moss, and there was a moss-covered rock to lean against, which was still ornamented with the acorn cups and saucers with which the children had entertained their family of dolls on their last visit.

"See," said Bertha, taking one of them up when she sat down. "When we were here last, we had a tea-party, and it was poor Janey's headache which brought it to a close. At the height of the festivities, she laid down her best doll, and came to me to cry, and we were obliged to carry her home."

"Poor child," said Tredennis. He saw only her face upturned under the shadow of the

white hat,—a pretty hat with small, soft downy plumes upon it, and a general air of belonging to the great world.

"Sit down," said Bertha, "or you may lie down, if you like, and look at the river, and not speak to me at all." He lay down, stretching his great length upon the soft moss, and clasping his hands beneath his head. Bertha clasped her hands about her knee and leaned slightly forward, looking at the view as if she had never seen it before.

"Is this a dream?" Tredennis said languidly, at last. "I think it must be."

"Yes," she answered, "that is why the air is so warm and fragrant, and the sky so blue, and the scent of the pines so delicious. It is all different when one is awake. That is why I am making the most of every second and am determined to enjoy it to the very utmost."

"That is what I am doing," he said.

"It is not a good plan, as a rule," she began, and then checked herself. "No," she said, "I won't say that. It is a worldly and Washingtonian sentiment. I will save it until next winter."

"Don't save it at all," he said, "it is an unnatural sentiment. It isn't true, and you do not really believe it."

"It is safer," she said.

He lay still a moment, looking down the hillside through the trees at the broad sweep of the river bend and the purple hills beyond.

"Bertha," he said, at last; "sometimes I hate the man who has taught you all this."

She plucked at the red-tipped moss at her side for a second or so before she replied, but she showed no surprise or hurry when she spoke.

"Laurence Arbuthnot!" she said. "Sometimes I hate him, too, but it is only for a moment—when he tells me the simple, deadly truth, and I know it is the truth, and wish I did not."

She threw the little handful of moss down the hill as if she threw something away with it.

"But this is not being happy," she said. "Let us be happy. I *will* be happy. Janey is better, and all my anxiety is over, and it is such a lovely day, and I have put on my favorite gown to celebrate it in. Look at the color of the hills over there—listen to those doves in the pines. How warm and soft the wind is, and how the scent of my carnations fills the air! Ah! what a bright world it is after all."

She broke into singing softly, and half under breath, a snatch of a gay little song. Tredennis had never heard her sing it before, and thought it wonderfully sweet. But she sang no

more than a line or two, and then turned to him with a smile in her eyes.

"Now," she said, "it is your turn. Talk to me. Tell me about your life in the West—tell me all you did the first year, and begin—begin just where you left me, the night you bade me good-bye at the carriage door."

"I am afraid it would not be a very interesting story," he said.

"It would interest me," she answered. "There are camp fires in it, and scalps, and Indians, and probably war-paths." And, her voice falling a little, "I want to discover why it was that you always seemed to be so much alone,—and sat and thought in that dreary way by the fire in your quarters. It seems to me that you have been a great deal alone."

"I have been a great deal alone," he said, "that is true."

"It must have been so even when you were a child," she went on. "I heard you tell Janey once that, when you were her age you belonged to no one. I don't like to think of that. It touches the maternal side of me. It makes me think of Jack. Suppose Jack belonged to no one, and you were not so old as Jack. I wonder if you were at all like him, and how you looked. I wish there was a picture of you, I could see."

He had never regarded himself as an object likely to interest in any degree, and had lost many of the consolations and excitements of the more personal kind thereby, and to find that she had even given a sympathetic thought to the far-away childhood whose desolateness he himself had never quite analyzed, at once touched and bewildered him.

"I have not been without friends," he said, "but I am sure no one ever gave much special thought to me. Perhaps it is because men are scarcely likely to give such thought to men, and I have not known women. My parents died before I was a year old, and I don't think any one was ever particularly fond of me. People did not dislike me, but they passed me over. I never wondered at it, but I saw it. I knew there was something a little wrong with me, but I could not understand what it was. I know now: I was silent, and could not express what I thought and felt."

"Oh!" she cried, "and was there no one to help you?"

There was no thought of him as a full-grown person in the exclamation, it was a womanish outcry for the child, whose desolate childhood seemed for the moment to be an existence which had never ended.

"I know about children," she said, "and what suffering there is for them if they are left

alone. They can say so little, and we can say so much. Haven't I seen them try to explain things when they were at a disadvantage and overpowered by the sheer strength of some full-grown creature; haven't I seen them make their impotent little struggle for words and fail, and look up with their helpless eyes and see the uselessness of it, and break down into their poor little shrieks of wrath and grief. The happiest of them go through it sometimes, and those who are left alone — Why didn't some woman see and understand; some woman ought to have seen and cared for you."

Tredennis found himself absorbed in contemplation of her. He was not sure that there were not tears in her eyes, and yet he could hardly believe it possible.

"That is all true," he said, "you understand it better than I did. I understood the feeling no better than I understood the reason for it."

"I understand it because I have children," she answered. "And because I have watched them and loved them, and would give my heart's blood for them. To have children makes one like a tiger, at times. The passion one can feel through the wrongs of a child is something *awful*. One can feel it for any child—for all children. But for one's own —"

She ended with a sharply drawn breath. The sudden uncontrollable fierceness which seemed to have made her in a second, in her soft white gown and lace, and her pretty hat with its air of good society—a small, wild creature, whom no law of man could touch, affected him like an electric shock; perhaps the thrill it gave him revealed itself in his look, and she saw it, for she seemed to become conscious of herself and her mood, with a start. She made a quick, uneasy movement and effort to recover herself.

"I beg your pardon," she said, with a half laugh. "But I couldn't help it. It was —" and she paused a second for reflection, "it was the primeval savage in me." And she turned and clasped her hands about her knee again, resuming her attitude of attention, even while the folds of lace on her bosom were still stirred by her quick breathing.

But though she might resume her attitude, it was not so easy to resume the calmness of her mood. Having been stirred once, it was less difficult to be stirred again. When he began, at last, to tell the story of his life on the frontier, if his vanity had been concerned he would have felt that she made a good listener. But his vanity had nothing to do with his obedience to her wish. He made as plain a story as his material would allow, and also

made persistent, though scarcely successful, efforts to avoid figuring as a hero. He was, indeed, rather abashed to find, on recurring to facts, that he had done so much to bring himself to the front. He even found himself at last taking refuge in the subterfuge of speaking of himself in the third person as "one of the party," when recounting a specially thrilling adventure in which he discovered that he had unblushingly distinguished himself. It was an exciting story of the capture of some white women by the Indians at a critical juncture, when but few men could be spared from the fort, and the fact, that the deadly determination of "one of the party" that no harm should befall them, was not once referred to in words, and only expressed itself in daring and endurance, for which everyone but himself was supposed to be responsible, did not detract from its force. This "one of the party," who seemed to have sworn a silent oath that he would neither eat nor sleep nor rest until he had accomplished his end of rescuing the captives, and who had been upon the track almost as soon as the news had reached the fort, and who had followed it night and day, with his hastily gathered and altogether insufficient little band, and at last had overtaken the captors, and through sheer courage and desperate valor had overpowered them, and brought back their prisoners unharmed—this "one of the party," silent and would-be insignificant, was in spite of himself a figure to stir the blood.

"It was *you* who did that?" she said, when he had finished.

"I was only one of the company," he answered, abashed, "and obeyed orders. Of course a man obeys orders."

CHAPTER XVII.

WHEN he took her hand to assist her to rise he felt it tremble in his own.

"It was not a pleasant story," he said. "I ought not to have told it to you."

They scarcely spoke at all as they descended. He did not understand his own unreasoning happiness. What reason was there for it, after all? If he had argued the matter, he was in the mood to have said that what he gained in the strange sweetness of the flying moments could only hurt himself, and was enough in itself to repay him for any sense of pain and loss which might follow. But he did not argue at all. In Laurence Arbuthnot's place he would scarcely have given himself the latitude he was giving himself now.

"It is safe enough for *me*," was the sharp-

edged thought which had cut through all others once or twice. "It is safe enough for *me* to be as happy as I may."

But he forgot this as they went down the hill, side by side. For the time being he only felt, and each glance he turned upon Bertha's downcast face gave him cause to realize what intensity his feelings had reached, and wakened him to that sudden starting of pulse and heart which is almost a pain. When they reached the house Bertha went in search of Janey. She remained with her for about half an hour, and then came out to the hammock with her work-basket. The carnations at her waist were crushed a little, and something of the first freshness of her holiday air was gone. She held a letter in her hand which she had evidently been reading. She had not returned it to its envelope, and it was still half open.

"It is from Richard," she said, after she had taken her seat in the hammock. "It was brought in from the post-office at Lowville about an hour ago."

"From Richard?" he said. "He is coming home, I suppose."

"No," she answered, looking down at the closely written sheets,—*"he is not coming yet. He was wise enough not to take a serious view of Janey's case. He is very encouraging, and expresses his usual confidence in my management."*

There was nothing like bitterness in her voice, and it struck him that he had never seen so little expression of any kind in her face. She opened the letter and looked over the first page of it.

"He has a great many interesting things to say," she went on; "and he is very enthusiastic."

"About what?" Tredennis asked. She looked up.

"About the Westoria lands," she answered. "He finds all sorts of complications of good fortune connected with them. I don't understand them all by any means. I am not good at business. But it seems as though the persons who own the Westoria lands will be able to command the resources of the entire surrounding country,—if the railroad is carried through: of course it all depends upon the railroad."

"And the railroad," suggested Tredennis, "depends upon——"

"I don't know," she replied. "On several people, I suppose. I wish it depended on me."

"Why?" said Tredennis.

She smiled slightly and rather languidly.

"I should like to feel that anything so important depended on me," she said. "I

should like the sense of power. I am very fond of power."

"I once heard it said that you had a great deal of it," Tredennis said,—“far more than most women."

She smiled again, a trifle less languidly.

"That is Laurence Arbuthnot," she observed. "I always recognize his remarks when I hear them. He did not mean a compliment exactly, either, though it sounds rather like one. He has a theory that I affect people strongly, and he chooses to call that power. But it is too trivial. It is only a matter of pleasing or displeasing, and I am obliged to exert myself. It does not enable me to bestow things, and be a potentate. I think that to be a potentate might console one for a great many things,—and for the lack of a great many. If you can't take, it must distract your attention to be able to give."

"I do not like to hear you speak as if the chief thing to be desired was the ability to distract one's self," Tredennis said.

She paused a second.

"Then," she said, "I will not speak so now. To-day I will do nothing you do not like." Then she added: "As it is your last day, I wish to retrieve myself."

"What have you to retrieve?" he asked.

"Myself," she answered, "as I said."

She spread the letter upon her lap, and gave her attention to it.

"Isn't it rather like Richard," she said, "that when he begins to write, he invariably writes a letter like that? Theoretically he detests correspondence, but when he once begins, his letter always interests him, and even awakens him to a kind of enthusiasm, so that instead of being brief he tells one everything. He has written twelve pages here, and it is all delightful."

"That is a wonderful thing to do," remarked Tredennis, "but it does not surprise me in Richard."

"No," she replied, "Richard can always interest himself; or, rather, he does not interest *himself*,—it is that he is interested without making an effort; that is his strong point."

She replaced the letter in the envelope and laid it in the basket, from which she took a strip of lace-work, beginning to employ herself with it in a manner more suggestive of graceful leisure than of industrious intention. It seemed to accentuate the fact that they had nothing to do but let the day drift by in luxurious idleness.

But Tredennis could not help seeing that for a while the tone of her mood, so to speak, was lowered. And yet, curiously enough, nothing of his own dreamy exaltation died away. The

subtle shadow which seemed to have touched her, for a moment, only intensified his feeling of tenderness. In fact, there were few things which would not have so intensified it; his mental condition was one which must advance by steady, silent steps of development to its climax. He was not by nature a reckless man, but he was by no means unconscious that there was something very like recklessness in his humor this last day.

As for the day itself, it also advanced by steady steps to its climax, unfolding its beauties like a perfect flower. The fresh rain-washed morning drifted into a warm, languorous noon, followed by an afternoon so long and golden that it seemed to hold within itself the flower and sun, shade and perfume of a whole summer. Tredennis had never known so long an afternoon, he thought, and yet it was only lengthened by the strange delight each hour brought with it, and was all too short when it was over. It seemed full of minute details, which presented themselves to his mind at the time as discoveries. Bertha worked upon her lace, and he watched her, waiting for the moment when she would look up at him, and then look down again with a quick or slow droop of the lids, which impressed itself upon him as a charm in itself. There was a little ring she wore which made itself a memory to him—a simple turquoise, which set upon the whiteness of her hand like a blue flower. He saw, with a new sense of recognition, every fold and line of her thin, white drapery, the slight, girlish roundness of her figure, the dashes of brightness in the color of her hair, the smallness of the gold thimble on her finger, her grace when she rose or sat down, or rested a little against the red cushions in her hammock, touching the ground now and then with her slender slipper and swaying lightly to and fro.

"Do you know," he said to her once, as he watched her do this,—“do you know,” with absorbed hesitation, “that I feel as if—as if I had never really seen you until to-day—until this afternoon. You seem somehow to look different."

"I am not sure," she answered, "that I have ever seen you before—but it is not because you look different."

"Why is it?" he asked, quite ready to relinquish any idea of his own in the pursuit of one of hers.

She looked down a moment.

"To-day," she said, "I don't think you have anything against me."

"You think," he returned, "that I have usually something against you?"

"Yes," she answered.

"Will you tell me what you think it is?"

"I do not need to tell you," she said. "You know so well—and it would rather hurt me to put it into words."

"Hurt you?" he repeated.

"I should be harder than I am," she returned, "if it had not hurt me to know it myself—though I would not tell you that at any other time than now."

"I dare say I shall repent it to-morrow," she said.

"No," he answered, "you won't repent it. Don't repent it."

He felt the vehemence of his speech too late to check it. When he ended, she was silent, and it was as if suddenly a light veil had fallen upon her face, and he felt that, too, and tried to be calmer.

"No," he repeated, "you must not repent. It is I who must repent that I have given you even a little pain. It is hard on me to know that I have done that."

The afternoon stretched its golden length to a sunset which cast deep, velvet shadows upon the grass and filled the air with an enchanted mellow radiance. Everything took a tinge of gold—the green of the pines and the broad-leaved chestnut trees, the gray and brown of their trunks, the red of the old house, the honeysuckle and Virginia creeper clambering about it, the birds flying homeward to their nests. When the rich clearness and depth of color reached its greatest beauty, Bertha folded her strip of lace and laid it in the little basket.

"We ought simply to sit and watch this," she said. "I don't think we ought even to speak. It will be all over in a few minutes, and we shall never see it again."

"No," said Tredennis, with a sad presence; "nor anything at all like it."

"Ah!" was Bertha's rejoinder, "to me it has always seemed that it is not the best of such hours that one *does* see others like them. I have seen the sun set like this before."

"I have not," he said.

As he stood silent in the stillness and glow a faint, rather bitter, smile touched his lips and faded out. He found himself, he fancied, face to face with Laurence Arbuthnot again. He was sharing the sunset with him—there were ten chances against one that he had shared the day with him also.

Bertha sat in the deepening enchanted light with a soft dreamy look. He thought it meant that she remembered something, but he felt that the memory was one to which she yielded herself without reluctance, or that she was happy in it. At last, she lifted her eyes to his, and their expression was very sweet in its entire gentleness and submission to the spell of the moment.

"See!" she said, "the sun has slipped behind the pines already. We have only a few seconds left."

And then even as they looked at the great fire, made brighter by the dark branches through which they saw it—it sank a little lower, and a little lower, and with an expiring flame was gone.

Bertha drew a quick breath, there was a second or so of silence, and then she stirred.

"It is over," she said. "And it has been like watching some one die, only sadder."

She took up the little work-basket and rose from her seat.

"It seems a pity to speak of mundane things," she said, "but I think we must go in to tea."

When the children were taken up-stairs for the night, Bertha went with them. It had been her habit to do this during their sojourn in the country, and naturally Janey had been her special care of late.

"I cannot often do such things, when I am in Washington," she had explained once to Tredennis. "And I really like it as much as they do. It is part of the holiday."

As he sat on the porch in the starlight, Tredennis could hear her voice mingling with the children's. The windows were wide open, she was moving from one room to the other, and two or three times she laughed in answer to some childish speech.

It was one of these laughs which, at last, caused Tredennis to leave his seat and go to the place under the trees where the hammocks were swung, and which was far more the place of general rendezvous than the parlor windows. From this point he could see the corner of the brightly lighted room, near the window where it was Bertha's custom to sit in her low chair, and rock Janey to sleep when she was restless.

She was doing it to-night. He could see the child's head lying on her bosom, and her own bent so that her cheek rested against the bright hair. In a few moments all was quiet, and she began to sing, and as she sang, swaying to and fro, Tredennis looked and listened without stirring.

But though it was gay no longer, he liked to hear her song, and to his mind the moments in which he stood in the odorous dark looking upward at the picture framed by the vine-hung window were among the tenderest of the day. It was his fate to be full of a homely sentiment, which found its pleasure in unsophisticated primary virtues and affections. Any deep passion he might be moved by, would necessarily have its

foundation in such elements. He was slow at the subtle analysis, whose final result is frequently to rob such simplicities of their value. His tendency was to reverence for age, tenderness to womanhood and childhood, faithfulness to all things. There was something boyish and quixotic in his readiness to kindle in defense of any womanly weakness or pain. Nothing he had ever said, or done, had so keenly touched and delighted Professor Herrick, as his fiery denunciation one night of a man who was the hero of a scandalous story. There had been no qualifications of his sweeping assertion that in such cases it must be the man who had earned the right to bear the blame.

"It is *always* the man who is in the wrong," he had cried, flushing fiercely, "coward and devil. It is in the nature of things that he should be. Let him stand at the front and take what follows, if he has ever been a man for an hour?" And the Professor had flushed also—the fainter flush of age, and had given some silent moments to reflection afterwards, as he sat gazing at the fire.

It was these primitive beliefs and sentiments which stirred within him now. He would not have lost one low note of the little song for the world, and he had left his seat only that he might see what he saw now,—her arm about her child, her cheek pressed against its hair.

It was not long before her little burden fell asleep he saw, but she did not rise as soon as this happened. She sat longer, and her song went on, finally dying away into brooding silence, which reigned for some time before she moved.

At length she lifted her face gently. She looked down at the child a few seconds, and slowly changed the position in which she lay, with an indescribably tender and cautious movement. Then she rose, and after standing an instant, holding her in her folding arms, crossed the room and passed out of sight.

Tredennis turned and began mechanically to arrange the cushions in the hammock. He felt sure she would come to-night and talk to him for a little while at least.

It was not very long before he recognized her white figure in the doorway, and went toward it.

"They are all asleep," she said, in a voice whose hushed tone seemed to belong half to the slumber she had left and half to the stillness of the hour.

"Will you come out to the hammock?" he said, "or will you sit here?"

She came forward and descended the steps.

"I will sit in the hammock," she replied. "I like the trees above me."

They went down the path together, and reaching the hammock she took her usual seat among its cushions, and he lay upon a rough rustic bench near her.

"I was thinking before you came," he said, "of what you said this afternoon of my having something against you. I won't deny that there has been something in my thoughts of you that often has been miserable, and you were right in saying it was not in them to-day. It has not been in them for several days. What I was thinking just now was that it could never be in them again."

She did not stir.

"Don't you see," he went on, "I can't go back. If there had been nothing but to-day, I could not go back—beyond to-day. It would always be a factor in my arguments about you. I should always say to myself when things seemed to go wrong: 'There was no mistake about that day,—she was real then,' and I should trust you against everything. To-day—and in the other days too—I have seen you as you are, and because of that, I should trust you in spite of everything."

"Oh!" she cried. "Don't trust me too much!" There was anguish in the sound and he recognized it.

"I can't trust you too much," he answered with obstinacy. "No honest human being can trust another honest human being too much."

"Am I an honest human being?" she said.

"I shall believe you one until the end," he returned.

"That is saying a great deal," was her reply.

"Listen," he said. "You know I am not like Arbutnot and the rest. If I were to try to be like them, I should only fail. But though you have never told me that I could be of any use to you, and you never will, I shall know if the time should come—and I shall wait for it. Have we not all of us, something that belongs to ourselves and not to the world—it may be a pleasure or a pain—it does not matter which?"

"No," she put in, "it does not matter which."

"It does not matter to those on the outside," he went on, "it only matters to us, and I think we all have it to bear. Even I —"

"What," she said, "you, too?"

"Yes," he answered, "I, too; but it does not matter, if no one is hurt but ourselves."

"There are so many things that 'do not matter,'" she said. "To say that, only means that there is no help."

"That is true," was his reply, "and I did not intend to speak of myself, but of you."

"No," she said, "don't speak of me,—don't speak of me!"

"Why not?" he asked.

"Because I tell you that you are trusting me too much."

"Go on," he said.

She had covered her face with her hands, and held them so for a little while, then she let them fall slowly to her lap.

"If I tell you the truth," she said, "it will not be my fault if you still trust me too much. I don't want it to be my fault. The worst of me is that I am neither bad nor good, and that I cannot live without excitement. I am always changing and trying experiments. When one experiment fails, I try another. They all fail after a while, or I get tired of them."

"Poor child!" he said.

She stirred slightly; one of the flowers fell from her belt upon her lap, and she let it lie there.

"It does not matter," she answered. "All that matters is, that you should know the truth about me—that I am not to be depended upon, and that, above all, you need not be surprised at any change you see in me."

"When we meet again in Washington?" he suggested.

She hesitated a moment and then made her response.

"When we meet again in Washington, or at any time."

"Are you warning me?" he inquired.

"Yes," was her reply, and he recognized that in spite of her effort it was faintly given.

"I am warning you."

He looked down at the grass and then at her. The determined squareness of chin, which was one of the chief characteristics of his face, struck her as being more marked than she had ever seen it.

"It is unnecessary," he said. "I won't profit by it."

He rose abruptly from his seat, and there was meaning in the movement, and in his eyes looking down upon her deep and dark in the faint light.

"You cannot change *me*," he said. "And you would have to change me before your

warning would carry weight. Change yourself as you like—try as many experiments as you like—you cannot change the last ten days."

Even as the words were uttered, the day was ended for them as they had never once thought of its ending. There fell upon the quiet the sound of horses' feet approaching at a rapid pace and coming to a stop before the gate. The dogs came bounding and baying from the house, and above their deep-mouthed barking a voice made itself heard calling to some one to come out—a voice they both knew.

Tredennis turned toward it with a sharp movement.

"Do you hear that?" he exclaimed.

"Yes," said Bertha; and suddenly her manner was calm almost to coldness; "it is Laurence Arbuthnot, and papa is with him. Let us go and meet them."

And in a few seconds they were at the gate and the Professor was explaining their unexpected appearance.

"It is all Mr. Arbuthnot's fault, my dear," he said; "he knew that I wished to see you, and having an idea that I was not strong enough to make the journey alone, he suddenly affected to have business in this vicinity. It was entirely untrue, and I was not in the least deceived, but I humored him, as I begin to find it best to do, and allowed him to bring me to you."

Arbuthnot had dismounted and was fastening his horse to the gate, and he replied by one of the gayest and most discriminatingly pitched of the invaluable laughs.

"It is no use," he said; "the Professor does not believe in me. He refuses to recognize in me anything but hollow mockery."

Bertha went to him. There was something hurried in her movement; it was as if she was strangely, almost feverishly, glad to see him. She went to his horse's head and laid her hand on the creature's neck.

"That takes me back to Washington," she said—"to Washington. It was like you to come, and I am glad, but—you should have come a little sooner."

And as she stood there, faintly smiling up at him, her hand was trembling like a leaf.

(To be continued.)

THE BEE-PASTURES OF CALIFORNIA.

IN TWO PARTS:—I.

WHEN California was wild, it was one sweet bee-garden throughout its entire length, north and south, and all the way across from the snowy sierra to the ocean.

Wherever a bee might fly within the bounds of this virgin wilderness—through the redwood forests, along the banks of the rivers, along the bluffs and headlands fronting the sea, over valley and plain, park and grove, and deep leafy glen, or far up the piney slopes of the mountains—throughout every belt and section of climate, bee flowers bloomed in lavish abundance. Here they grew more or less apart in special sheets and patches of no great size, there in broad, flowing folds hundreds of miles in length, zones of polleny forests, zones of flowery chaparral, stream-tangles of rubus and wild rose, sheets of golden *compositæ*, beds of violets, beds of mint, beds of *bryanthus* and clover, and so on, certain species blooming somewhere around all the year.

But of late years plow and sheep have made sad havoc in these glorious pastures, destroying tens of thousands of the flowery acres like a fire, and banishing many species of the best honey-plants to rocky cliffs and fence corners, while, on the other hand, culture thus far has given no adequate compensation, at least in kind—acres of alfalfa for miles of the richest wild pasture, ornamental roses and honeysuckles around cottage doors for cascades of wild roses in the dells, and small, square orchards and orange-groves for broad mountain-belts of chaparral.

Only ten years ago, the Great Central Plain of California, during the months of March, April, and May, was one smooth, continuous bed of honey-bloom, so marvelously rich that, in walking from one end of it to the other, a distance of more than four hundred miles, your feet would press more than a hun-

dred flowers at every step. Mints, gillias, *nemophilas*, *castilleias*, and innumerable *compositæ* were so crowded together that, had ninety-nine in every hundred been taken away, the plain would still have seemed extravagantly flowery to any but Californians. The radiant, honeyful corollas, touching and over-lapping, and rising above one another, glowed in the living light like a sunset sky—one glorious blaze of purple and gold. Down through the midst flowed many a river, the Sacramento from the north, the San Joaquin from the south, with noble tributaries sweeping in at right angles from the mountains, dividing the plain into sections fringed with trees.

Along each river and tributary there is a strip of bottom-land, countersunk beneath the general level, and wider toward the foot-hills, where magnificent oaks, from three to eight feet in diameter, cast grateful masses of shade over the open, prairie-like level. And close along the water's edge there is a fine jungle of tropical luxuriance, composed of wild rose and bramble bushes and a great variety of climbing vines, wreathing and interlacing the branches and trunks of willows and alders, and swinging across from summit to summit in heavy festoons. Here the wild bees revel in fresh bloom long after the flowers of the drier plain have withered and gone to seed. And in midsummer, when the "blackberries" are ripe, the Indians come from the mountains to feast—men, women, and babies in long, noisy trains, oftentimes joined by the farmers of the neighborhood, who gather this wild fruit with commendable appreciation of its superior flavor, while their home orchards are full of ripe peaches, apricots, nectarines, and figs, and their vineyards are laden with grapes. But, though these luxuriant bottoms are thus distinct from the smooth, treeless plain, they make no heavy dividing lines in general views. The whole appears as one continuous

sheet of bloom, bounded only by the mountains.

My first view of this central garden, the most extensive and best defined of all the bee-pastures of the State, was obtained from the summit of the Pacheco pass, about the middle of April, 1868, when it was rejoicing in all its glory. Along the eastern horizon rose the mighty sierra, white and jagged with snowy peaks along the top, dark with forests in the middle region, and purple with grasses and flowers and chaparral at the base, and blending gracefully in smooth hill undulations into the glowing yellow plain, which, like a cloth of gold, was seen flowing away to north and south as far as the eye could reach: hazy and vanishing in the distance, distinct as a new map along the foot-hills at my feet—the sunny sky arching over all.

Descending the eastern slopes of the coast range, through beds of gilias and lupines, and around many a breezy hillock and bush-crowned headland, I at length waded out into the midst of the glorious field of gold. All the ground was covered, not with grass and green leaves, but with radiant corollas, about ankle-deep next the foot-hills, knee-deep or more five or six miles out. Here were bahia, madia, madaria, burrielia, chrysopsis, corethrogyne, grindelia, etc., growing in close social congregations of various shades of yellow, blending finely with the purples of clarkia, orthocarpus, and ceanotha, whose delicate petals were drinking the vital sunbeams without giving back any sparkling glow.

Because so long a period of extreme drought succeeds the rainy season, most of the vegetation is composed of annuals, which spring up simultaneously and bloom together at about the same height above the ground, the general surface being but slightly ruffled by the taller phacelias, pentstemons, and groups of *Salvia carduacea*, the king of the mints.

Sauntering in any direction, hundreds of these happy sun-plants brushed against my feet at every step, and closed over them as if I were wading in liquid gold. The air was sweet with fragrance, the larks sang their blessed songs, rising on the wing as I advanced, then sinking out of sight in the pollen sod, while myriads of wild bees stirred the lower air with their monotonous hum—monotonous, yet forever fresh and sweet as every-day sunshine. Hares and spermophiles showed themselves in considerable numbers, and small bands of antelope were almost constantly in sight, gazing curiously from some slight elevation, and then bounding swiftly away with unrivaled grace of motion.

Yet I could discover no crushed flowers to mark their track, nor, indeed, any destructive action of any wild foot or tooth whatever.

The great yellow days circled by uncounted, while I drifted toward the north, observing the countless forms of life thronging about me—lying down almost anywhere on the approach of night. And what glorious botanical beds I had! Oftentimes on awaking I would find several new species leaning over me and looking me full in the face, so that my studies would begin before rising.

About the first of May I turned eastward, crossing the San Joaquin between the mouths of the Tuolumne and Merced, and by the time I had reached the Sierra foot-hills, most of the vegetation had gone to seed and become as dry as hay.

All the seasons of the great plain are warm or temperate, and bee-flowers are never wholly wanting; but the grand spring-time—the annual resurrection—is governed by the rains, which usually set in about the middle of December or the beginning of January. Then the seeds, that for six months have lain on the ground dry and fresh as if they had been gathered into barns, at once unfold their treasured life. The general brown and purple of the ground, and the dead vegetation of the preceding year, give place to the green of mosses and liverworts and myriads of young leaves. Then one species after another comes into flower, gradually overspreading the green with yellow and purple, which lasts until May.

The “rainy season” is by no means a gloomy, soggy period of constant cloudiness and rain. Nowhere else in North America, perhaps in the world, are the months of December, January, February, and March so full of bland, plant-building sunshine. Referring to my notes of the winter and spring of 1868–9, every day of which I spent out of doors, on that section of the plain lying between the Tuolumne and Merced rivers, I find that the first rain of the season fell on the 18th of December. January had only six rainy days—that is, days on which rain fell; February three, March five, April three, and May three, completing the so-called rainy season, which was about an average one. The ordinary rain-storm of this region is seldom very cold or violent. The winds, which in settled weather come from the north-east, veer round into the opposite direction, the sky fills gradually and evenly with one general cloud, from which the rain falls steadily, often for several days in succession, at a temperature of about 45° or 50°.

More than seventy-five per cent. of all the rain of this season came from the south-east. One magnificent storm from the north-west fell on the 21st of March. A massive, round-browed cloud came swelling and thundering over the flowery plain in most imposing majesty, its bossy front burning white and purple in the full blaze of the sun, while warm rain poured from its ample fountains like a cataract, beating down flowers and bees, and flooding the dry water-courses as suddenly as those of Nevada are flooded by "cloud-bursts." But in less than half an hour not a trace of the heavy mountain-like cloud-structure was left in the sky, and the bees were on the wing as if nothing more gratefully refreshing could have been sent them.

By the end of January four plants were in flower, and five or six mosses had already adjusted their hoods and were in the prime of life, but the flowers were not sufficiently numerous to affect greatly the general green of the young leaves. Violets made their appearance on the first week of February, and toward the end of this month the warmer portions of the plain were already golden with myriads of the flowers of rayed *compositæ*.

This was the full spring-time. New species bloomed every day. The sunshine grew warmer and richer. The air became more tuneful from day to day with humming wings, and sweeter with the fragrance of the opening flowers. Ants were getting ready for their summer work, rubbing their benumbed limbs, and sunning themselves on the husk-piles before their doors, and spiders were busy mending their old webs or weaving new ones.

In March, vegetation was more than doubled in depth and splendor; claytonia, calandrinia, a large white gilia, and two nemophilas were in bloom, together with a host of yellow *compositæ*, tall enough to bend in the wind and show wavering ripples of shade.

In April, plant-life as a whole reached its greatest height, and the plain over all its varied surface was mantled with a close furred plush of purple and golden corollas. By the end of this month most of the species had ripened their seeds, but undecayed, still seemed to be in bloom from the numerous corolla-like involucre and whorls of chaffy scales of the *compositæ*. In May the bees found only a few deep-set liliaceous plants and *erigonums* in flower.

June, July, August, and September was the season of rest and sleep,—the winter of dry heat,—followed in October by a second outburst of bloom at the very driest time of the year. Then, after the shrunken mass

of leaves and stalks of the dead vegetation crinkle and turn to dust beneath the foot, as if it had been baked in an oven, *Hemizonia virgata*, a slender, unobtrusive little plant, from six inches to three feet high, suddenly makes its appearance in patches miles in extent, like a resurrection of the bloom of April. I have counted upward of three thousand flowers, five-eighths of an inch in diameter, on a single plant. Both leaves and stems are so slender as to be nearly invisible amid so showy a multitude of flowers. The ray and disk flowers are both yellow, the stamens purple, the texture of the rays being rich and velvety, like the petals of garden pansies. The prevailing wind turns all the heads round to the south-east, so that in facing north-westward we have the flowers looking us in the face. In our estimation, this little plant, the last-born of the brilliant host of *compositæ* that glorify the plain, is the most interesting of all. It remains in flower until November, uniting with two or three species of wiry *erigonums*, which continue the floral chain around December to the spring flowers of January. Thus, although the main bloom and honey season is only about three months long, the floral circle, however thin around some of the hot, rainless months, is never completely broken.

How long the various species of wild bees have lived in this honey-garden nobody knows; probably ever since the main body of the present flora gained possession of the land, toward the close of the glacial period. The first brown honey-bees brought to California are said to have arrived in San Francisco in March, 1853. A bee-keeper by the name of Shelton purchased a lot, consisting of twelve swarms, from some one at Aspinwall, who had brought them from New York. All the hives contained bees when landed at San Francisco, but they finally dwindled to one hive, which was taken to San José. The little emigrants flourished and multiplied in the bountiful pastures of the Santa Clara valley, sending off three swarms the first season. The owner was killed shortly afterward, and in settling up his estate, two of the swarms were sold at auction for one hundred and five and one hundred and ten dollars respectively. Other importations were made, from time to time, by way of the Isthmus, and, though great pains were taken to insure success, about one-half usually died on the way. Four swarms were brought safely across the plains in 1859, the hives being placed in the rear end of a wagon, which was stopped in the afternoon to allow the bees to fly and feed in the floweriest places that were within

reach until dark, when the hives were closed.

In 1855, two years after the time of the first arrivals from New York, a single swarm was brought over from San José, and let fly in the Great Central Plain. Bee-culture, however, has never gained much attention there, notwithstanding the extraordinary abundance of honey-bloom and the high price of honey. A few hives are found here and there among settlers who chanced to have learned something about the business before coming to the State. But sheep, cattle, and grain raising are the chief industries, as they require less skill and care, while the profits thus far have been greater. In 1856, honey sold here at from one and a half to two dol-

lars per pound. Twelve years later the price had fallen to twelve and a half cents. In 1868, I sat down to dinner with a band of ravenous sheep-shearers at a ranch on the San Joaquin, where fifteen or twenty hives were kept, and our host advised us not to spare the large pan of honey he had placed on the table, as it was the cheapest article he had to offer. In all my walks,

however, I have never come upon a regular bee-ranch there like those so common and so skillfully managed in the southern counties of the State. The few pounds of honey and wax produced are consumed at home, and are scarcely taken into account among the coarser products of the farm. The swarms that escape from their careless owners have a weary, perplexing time of it in seeking suitable homes. Most of them make their way to the foot-hills of the mountains, or to the trees that line the banks of the rivers, where some hollow log or trunk may be found. A friend of mine, while out hunting last winter on the San Joaquin, came upon an old coon-trap hidden among some tall grass, near the edge of the river, upon which he sat down to rest. Shortly afterward his attention was forced upon a crowd of angry bees that were flying excitedly about his head, when he discovered that he was sitting upon their hive, which was found to contain more than two hundred pounds of honey. Out in the broad,

A BEE-RANCH
IN LOWER
CALIFORNIA.

swampy delta of the Sacramento and San Joaquin the little wanderers have been known to build their combs in a bunch of rushes or stiff, wiry grass, scarcely protected from the weather, and in danger every spring of being carried away by floods. They have the advantage, however, of a vast extent of fresh pasture, accessible only to themselves.

The present condition of the Grand Central Garden is very different from that we have sketched. About ten years ago, when the gold placers had been pretty thoroughly exhausted, the attention of fortune-seekers—not home-seekers—was in great part turned away from the mines to the fertile plains, and many began experiments in a kind of restless, wild-cat agriculture. A load of lumber would be hauled to some spot on the free wilderness where water could be easily found, and a rude box-cabin built. Then a gang-plow was procured, and a dozen mustang ponies, worth ten or fifteen dollars apiece, and with these hundreds of acres were stirred as easily as if the land had been under cultivation for years, tough perennial roots being almost wholly absent. Thus, a ranch was established, and from these bare wooden huts, as centers of desolation, the wild flora vanished in ever-widening circles. But the arch destroyers are the shepherds, with their flocks of hoofed locusts, sweeping over the ground like a fire, and trampling down every rod that escapes the plow as completely as if the whole plain were a cottage garden-plot without a fence. But notwithstanding "a' that," a thousand swarms of bees may be pastured here for every one now gathering honey. The greater portion is still covered every season with a repressed growth of bee-flowers, for most of the species are annuals, and many of them are not relished by sheep or cattle, while the rapidity of their growth enables them to develop and mature their seeds before any foot has time to crush them. The ground is, therefore, kept sweet, and the race is perpetuated, though only as a suggestive shadow of the magnificence of its wildness.

The time will undoubtedly come when the entire area of this noble valley will be tilled like a garden, when the fertilizing waters of the mountains, now flowing to the sea, will be distributed to every acre, giving rise to prosperous towns, wealth, arts, etc. Then, I suppose, there will be few left, even among botanists, to deplore the vanished primeval flora. In the meantime, the pure waste going on—the wanton destruction of the innocents—is a sad sight to see, and the sun may well be pitted in being compelled to look on.

The bee-pastures of the coast-ranges last longer and are far more varied than those of the great plain, on account of differences of soil and climate, moisture and shade, etc. Some of the mountains are upward of four thousand feet in height, and small streams and springs, oozy bogs, etc., occur in great abundance and variety in the wooded regions, while open parks flooded with sunshine, and hill-girt valleys lying at different elevations, each with its own peculiar climate and exposure, possess the required conditions for the development of species and families of plants widely varied.

Next the plain there is, first, a series of smooth hills, planted with a rich and showy vegetation that differs but little from that of the plain itself—as if the edge of the plain had been lifted and bent into flowing folds with all its flowers in place, only toned down a little as to their luxuriance, and a few new species introduced, such as the hill lupines, mints, and gillias. The colors show finely when thus held to view on the slopes—patches of red, purple, blue, yellow, and white blending around the edges, the whole appearing at a little distance like a map colored in sections.

Above this lies the park and chaparral region, with evergreen oaks planted wide apart, and blooming shrubs from three to ten feet high—manzanita and ceanothus of several species, mixed with rhamnus, cercis, pickeringia, cherry, amelanchier, and adenostoma, in shaggy, interlocking thickets, with many species of *hosackia*, clover, *monardella*, *castilleja*, etc., in the openings.

The main ranges send out long spurs somewhat parallel to their axes, inclosing level valleys, many of them quite extensive, and containing a great profusion of sun-loving bee-flowers in their wild state; but these are, in great part, already lost to the bees by cultivation.

Nearer the coast are the giant forests of the redwoods, extending from near the Oregon line to Santa Cruz. Beneath the cool, deep shade of these majestic trees the ground is occupied by ferns, chiefly woodwardia and aspidiums, with only a few flowering plants—oxalis, trientalis, erythronium, fritillaria, smilax, and other shade-lovers. But all along the redwood belt there are sunny openings on hill-slopes looking to the south, where the giant trees stand back and give the ground to the small sun-flowers and the bees. Around the lofty redwood walls of these little beeches there is usually a fringe of chestnut-oak, laurel, and madroña, the last of which is a surpassingly beautiful tree, and a great favorite with the bees. The trunks of the largest

specimens are seven or eight feet thick, and about fifty feet high, the bark crimson and chocolate, the leaves plain, large, and glossy, like those of *Magnolia grandiflora*, while the flowers are white and urn-shaped, in well-proportioned panicles from five to ten inches long. When in full bloom, a single tree seems to be visited at times by a whole hive of bees at once, and the grand hum of such a multitude of wings makes the listener guess that more than the ordinary work of honey-winning must be going on.

How perfectly enchanting and care-obliterating are these withdrawn gardens of the woods—long vistas opening to the sea—sunshine sifting and pouring upon the flowery ground in a tremulous, shifting mosaic, as the light-ways in the leafy wall open and close with the swaying breeze—shining leaves and flowers, birds and bees, mingling together in spring-time harmony, and nectarous fragrance exhaled from a thousand thousand fountains! In these balmy, dissolving days, when the deep heart-beats of Nature are felt thrilling rocks and trees and everything alike, common business and friends, children and wives, are happily forgotten, and even the natural honey-work of bees, and the care of birds for their young, seems slightly out of place.

To the northward, in Humboldt and the adjacent counties, whole hill-sides are covered with rhododendron, making a glorious melody of bee-bloom in the spring. And the western azalea, hardly less flowery, grows in massy thickets three to eight feet high around the edges of groves and woods as far south as San Luis Obispo, usually accompanied by manzanita, while the valleys, with their varying moisture and shade, yield a rich variety of the smaller honey-flowers, such as mentha, lycopus, micromeria, audibertia, trichostema, and other mints, with vaccinium, wild strawberry, geranium, calais, and golden-rod; and in the cool glens along the stream-banks, where the shade of trees is not too deep, spiræa, dog-wood, photinia, and calycanthus, and many species of rubus, form interlacing tangles, some portion of which continues in bloom for months.

Though the coast region was the first to be invaded and settled by white men, it has suffered less from a bee point of view than either of the other main divisions—chiefly, no doubt, because of the unevenness of the surface, and because it is owned by individuals, instead of lying exposed to the flocks of the "sheep-man." These remarks apply more particularly to the north half of the coast. Farther south there is less moisture, less forest shade, and the honey flora is less varied.

The sierra region is the largest of the three main divisions of the bee-lands of the State, and the most regularly varied in its subdivisions, owing to their gradual rise from the level of the Central Plain to the alpine summits. The foot-hill region is about as dry and sun-ful, from the end of May until the setting in of the winter rains, as the plain. There are no shady forests, no damp glens, at all like those lying at the same elevations in the coast mountains. The social composite of the plain, with a few added species, form the bulk of the herbaceous portion of the vegetation up to a height of fifteen hundred feet or more, shaded lightly here and there with oaks and Sabine pines, and interrupted by patches of ceanothus and buckeye. Above this, and just below the forest region, there is a dark, heath-like belt of chaparral, composed almost exclusively of *Adenostoma fasciculata*, a bush belonging to the rose family, from five to eight feet high, with small, round leaves in fascicles, and bearing a multitude of small white flowers in panicles on the ends of the upper branches. Where it occurs at all, it usually covers all the ground with a close, impenetrable growth, scarcely broken for miles.

Up through the forest region, to a height of about nine thousand feet above sea-level, there are ragged patches of manzanita, and five or six species of ceanothus, called deer-brush or California lilac. These are the most important of all the honey-bearing bushes of the sierra. *Chamaebatia foliolosa*, a little shrub about a foot high, with flowers like the strawberry, makes handsome carpets beneath the yellow pines, and seems to be a favorite with the bees; while the pines themselves furnish unlimited quantities of pollen and honey-dew. The product of a single tree, ripening its pollen at the right time of year, would be sufficient for the wants of a whole hive. Along the streams, there is a rich growth of lilies, larkspurs, pedicularis, castillejas, and clover. The alpine region contains the flowery glacier meadows, and countless small gardens in all sorts of places full of potentilla of several species, spraguea, ivesia, epilobium, and golden-rod, with beds of bryanthus and the charming cassiope covered with sweet bells. Even the tops of the mountains are blessed with flowers,—dwarf phlox, polemonium, ribes, hulsea, etc. I have seen wild bees and butterflies feeding at a height of thirteen thousand feet above the sea. Many, however, that go up these dangerous heights never come down again. Some, undoubtedly, perish in storms, and I have found thousands lying dead or benumbed on the surface of the glaciers, to which they had perhaps been attracted by the white glare. From

A SHEPHERD'S CABIN.

sheep nor cattle care to feed on the manzanita, spiraea, or adenostoma; and these fine honey-bushes are too stiff and tall, or grow in places too rough and inaccessible, to be trodden under foot. Also the cañon walls and gorges, which form so considerable a part of the area of the range, while inaccessible to domestic sheep, are well fringed with honey-shrubs, and contain thousands of lovely bee-gardens, lying hid in narrow side-cañons and recesses fenced with avalanche taluses, and on the top of flat, projecting headlands where only the bees would think to look for them.

But, on the other hand, a great portion of the woody plants that escape the feet and teeth of the sheep are destroyed by the shepherds by means of running fires, which are set everywhere during the dry autumn for the purpose of burning off the old fallen trunks and underbrush, with a view to improving the pastures, and making more open ways for the flocks. These destructive sheep-fires sweep through nearly the entire forest belt of the range, from one extremity to the other, consuming not only the underbrush, but the young trees and seedlings on which the permanence of the forests depends; thus setting in motion a long train of evils which will certainly reach far beyond bees and bee-keepers.

swarms that escaped their owners in the lowlands, the honey-bee is now generally distributed throughout the whole length of the sierra, up to an elevation of eight thousand feet above sea-level. At this height, where the snow falls to a depth of fifteen or twenty feet, they flourish without care. Even higher than this several bee-trees have been cut which contained over two hundred pounds of honey.

The destructive action of sheep has not been nearly so universal on the mountain pastures as on those of the great plain, but in many places it has been more complete, owing to the more friable character of the soil, and its sloping position. The slant digging and downraking action of hoofs on the steeper slopes of moraines has uprooted and buried many of the tender plants from year to year, without allowing them time to mature their seeds. The shrubs, too, are badly bitten, especially the various species of ceanothus. Fortunately, neither

herds by means of running fires, which are set everywhere during the dry autumn for the purpose of burning off the old fallen trunks and underbrush, with a view to improving the pastures, and making more open ways for the flocks. These destructive sheep-fires sweep through nearly the entire forest belt of the range, from one extremity to the other, consuming not only the underbrush, but the young trees and seedlings on which the permanence of the forests depends; thus setting in motion a long train of evils which will certainly reach far beyond bees and bee-keepers.

The plow has not yet invaded the forest region to any appreciable extent, neither has it accomplished much in the foot-hills. Thousands of bee-ranches might be established along the margin of the plain, and up to a height of four thousand feet, wherever water could be obtained. The climate at this elevation admits of the making of permanent homes, and by

moving the hives to higher pastures as the lower pass out of bloom, the annual yield of honey would be nearly doubled. The foot-hill pastures, as we have seen, fail about the end of May, those of the chaparral belt and lower forests are in full bloom in June, those of the upper and alpine region in July, August, and September. In Scotland, after the best of the Lowland bloom is past, the bees are carried in carts to the Highlands, and set free on the heather hills. In France, too, and in Poland, they are carried from pasture to pasture among orchards and fields in the same way, and along the rivers in barges, to collect the honey of the delightful vegetation of the banks. In Egypt, they are taken far up the Nile, and floated slowly home again, gathering the honey-harvest of the various fields on the way, timing their movements in accord with the seasons. Were similar methods pursued in California, the productive season would extend nearly all the year.

The average elevation of the north half of the sierra is considerably less than that of the south half, and small streams, with the bank and meadow gardens dependent upon them, are less abundant. Around the headwaters of the Yuba, Feather, and Pitt rivers, there are extensive table-lands of lava, sparsely planted with pines, through which the sunshine

reaches the ground with little interruption, and here flourishes a scattered, tufted growth of golden applopappus, linosyris, bahia, wytheia, arnica, artemisia, and similar plants; with manzanita, cherry, plum, and thorn in ragged patches on the cooler hill-slopes. At the extremities of the Great Plain, the sierra and coast ranges curve around and lock together in a labyrinth of mountains and valleys, throughout which the coast and sierra floras are mingled, making at the north, with its temperate climate and copious rain-fall, a perfect paradise for bees—though, strange to say, scarce a single regular bee-ranch has yet been established in it. Cultivation, however, is making rapid headway over all the State, and before long the wild honey-bloom of the mountains will vanish as completely as that of the fertile lowlands.

WOOD-ENGRAVING AND THE CENTURY PRIZES.

READERS of this magazine will remember that in March, 1880, a series of prizes were offered, to be competed for by students of the wood-engraver's art. In April, 1881, the award of the committee was made public in the pages of the magazine, and the best cuts among those that had been submitted were published, with appropriate criticisms. At the same time it was announced that the competition would be repeated. Three prizes, of one hundred, seventy-five, and fifty dollars respectively, were offered to young engravers who had not yet been commercially employed, with a supplementary reward of fifty dollars to be competed for by the prize-takers of 1881. A large number of blocks have been sent to THE CENTURY office in reply to these announcements, and the results of this second contest are now presented to the public. They are, I think, better and more interesting in their collective quality than the specimens of last year, and more than fulfill the hopes of those who believed that much good would come from these competitions—good to the student in the shape of earnest work incited, and good to the magazine in the shape of reinforcement for the ranks of its engravers. For, while these ranks are already populous, there is not only room in them for capable recruits, but an urgent need thereof. Some remarks upon the prize blocks will be made later on, and the reasons which have guided the judges in their decisions will be stated. First, however, it will be well, as a prelude to their intelligent examination by the reader, to sketch very hastily the recent development of wood-engraving in general, and to mark what are the questions of the hour regarding it.

Every reader knows, most probably, that, for the past two or three years, a rather sharp controversy has been going on with reference to the "new school" of American wood-engraving. Every reader ought to know, in addition, that whatever strictures may have been passed upon it at home, it has been almost universally praised abroad. In England as in France critics have been lavish of their commendation. When we find, for example, "L'Art" reprinting a series of cuts from the "Scribner Portfolio," and even the "Saturday Review" ranking American work above all that is done in other countries, we cannot be blamed for feeling a responsive

glow of self-approval.* But foreign praise, even from competent pens, should not serve us in the stead of a personal examination of our work, based upon a knowledge of the theories which lie behind it, as well as of the specimens

* As the most recent example of the estimation in which foreign critics hold American work, I may quote the following passages from Mr. Philip Gilbert Hamerton's "Graphic Arts":

"The development of delicate and versatile wood-engraving in America is due to the managers of SCRIBNER'S MAGAZINE, who worked resolutely with this definite end in view, and gradually reached perfection by paying for many cuts which were never published, and by forming a school of wood-engravers animated by the same spirit. Now, whatever may be the differences of opinion about the desirableness of this imitative art, there can be no question that the Americans have far surpassed all other nations in delicacy of execution. The manual skill displayed in their wood-cuts is a continual marvel, and it is accompanied by so much intelligence—I mean by so much critical understanding of different graphic arts—that a portfolio of their best wood-cuts is most interesting. Not only do they understand engraving thoroughly, but they are the best printers in the world, and they give an amount of care and thought to their printing which would be considered uncommercial elsewhere.

"The two superiorities in American wood-engraving are in tone and texture—two qualities very popular in modern times in all the graphic arts which can attain them. Tone in wood-cutting depends entirely upon the management of grays. In etching there are half-a-dozen different qualities of black—all black, yet producing quite different effects upon the eye; in wood-cut there is only one black. In painting there are many different whites, all of them equally called 'whites,' yet bearing little relation to each other; in wood-cut there is only a single white, and it is always got in the same way—by excavating the wood. This being so, white and black are settled for the wood-engraver, and he has not to think about them; but it is not so with intermediate shades, and I cannot but heartily admire the almost unlimited ingenuity with which the Americans vary not only the tone, but the very quality, of these intermediates, getting not one gamut only but several, with the faculty of going from one to another on occasion, as if changing the stops of an organ. Some of their grays are pure and clear, others cloudy; others 'like veils of thinnest lawn'; others, again, are semi-transparent, like a very light wash of body-color, and whatever may be their quality it is always surprising how steadily a delicate tone is maintained in them. As for texture, these engravers seem able to imitate anything that is set before them. It would be an exaggeration to say that they get the exact textures of an oil-painting, but they come near enough to recall them vividly to our minds. To appreciate the technical advance, we must always remember that tone and texture are simply absent from the school of Holbein, and that whilst the engravers of the present day can produce an exact fac-simile of old work, the old engravers had not even begun that course of experiment and of study which has trained such consummate workmen as Jüngling, Speer, Kingsley, Closson, Muller, and Cole."

themselves. Within a few months an unrivaled opportunity for examining it has been afforded us. The exhibition of wood-engravings which was held last autumn at the Boston Museum of Fine Arts has already been noticed in these pages. While it was chiefly made up of contemporaneous American work, it contained enough examples of past epochs and of the foreign practice of our own day to afford us terms of comparison. Viewed collectively and in the light of such comparison, the band of young engravers which, to some eyes, had previously seemed to consist but of individual experimenters with no very lucid ideal before them, now appeared homogeneous to a surprising extent, and to a surprising extent clear in its aims and tendencies—working collectively toward a common goal, though with large diversities in the ways employed to reach it. And as each man's work was arranged by itself, we were enabled, on the other hand, to gain a better idea of a given talent than had been possible when we knew it merely through cuts appearing at intervals of time, in all sorts of quarters, and often uncredited to any hand.

Preparatory to understanding the peculiar aims of our recent American work the reader will desire to understand the aims of wood-engraving in former days. It is impossible, however, here to pause over the earlier developments of the art. I have no space in which to speak of the grand work done on the side of a plank with knives alone—work which reached its culminating point in the sixteenth century, but which at all times was more remarkable for the talent of the original draughtsman than for the skill of the engraver who had reproduced him. The work of the latter was admirable in its own way, but this was a mechanical way, devoted to the literal rendering of the lines that had been set him by the draughtsman. For a history of these earlier periods of wood-engraving, of its decline after the sixteenth century, and of its regeneration in a new shape by Bewick at the beginning of our own century, the reader is referred to Jackson and Chatto's "*History of Wood-Engraving*."* It is not an ideal history of the art, even within the periods to which it is confined. But it is the only one existing, and until a new one shall have been prepared by some competent hand,—rewritten from the beginning and carried down from 1838 to the present day,—it is absolutely indispensable to the student. The

cuts were laboriously copied on the block by Mr. Jackson, for in his day reproductive "processes" were not employed. Of course the repetition by another hand, and the reduction necessary to bring them within the compass of an octavo page, have often greatly detracted from the effect of the specimens, especially in the case of the splendid big blocks of the sixteenth century. Yet they will be found most useful to the student who has not access to their originals. The chapter on technical processes is very clear and instructive; but here especially the reader must remember that many changes have taken place since Chatto's day, and that the conditions under which the engraver works have greatly altered. If the student reads this book, however,—and it is a most interesting as well as a most instructive one,—he will acquire a knowledge of the craft not otherwise to be gained. Since the date of its publication little has been written save in the way of scattered articles, usually of a controversial character. Mr. Linton has, it is true, prepared a "*History of Wood-Engraving in America*," which appeared in the "*American Art Review*" in 1880, and will shortly be issued in book form. Instructive and interesting though it is, and full of acute and suggestive criticisms, it is yet written from the point of view of an engraver distrustful of innovations; and it is therefore less valuable to the beginner than to one who has some knowledge of the questions mooted.

Bewick, as I have said, was the father of modern wood-engraving—the first to make a practice of cutting on the *end* of the wood, using engravers' tools instead of knives, and developing his design chiefly by white lines on black instead of by black lines on a white ground. The men who worked with or immediately after him were consummate masters of their craft as it was then understood—not such artists by nature, perhaps, as Bewick himself, but better technical engravers. Their cuts have never been excelled by similar examples made since their day, and are the *ne plus ultra* of the critic who still defends elder as against newer aims and processes. After their time the art steadily declined, owing—at least in England, we are told—in greater part to a wide commercial demand for average work being met by the creation of large engraving establishments where it was turned out by wholesale, the personality of the workman being completely sunk from sight. This, at all events, was the proximate cause of decline. The ultimate cause—as of all such minor phenomena—is probably to be sought in the generally inartistic temper of the day. A few strong and well-trained men were not submerged by the current of something worse than commonplace which

* A Treatise on Wood-Engraving, Historical and Practical. By William Andrew Chatto. With upwards of four hundred illustrations, engraved on wood by John Jackson. A new edition, with an additional chapter by Henry G. Bohn. New York: J. W. Bouton.

FIRST PRIZE. MILK-CARRIER. ENGRAVED FROM A PHOTOGRAPH (BY PERMISSION OF AD. BRAUN & CO., PARIS) OF THE PAINTING BY J. F. MILLET. ENGRAVER, FLORENCE W. RICHARDSON. TIME OF PRACTICE, THREE YEARS.

swept over the art, among them perhaps the strongest being Mr. Linton, who brought the traditions of good and clever work with him to this country, and who still does good and clever work—none better in its own way. Ten years ago, however, average American was not very different from current English engraving, or, rather, was inferior to it. About that time a more general interest in art of all kinds sprang up among us, following

by a short interval a similar revival among the English. One consequence of this awakening was that the managers of this magazine, then just projected, tried to put better work into their pages, feeling that the time had come when the public demanded—or, at least, might appreciate—its presence. The needs of this magazine, and of others which were obliged to follow in its wake, and the introduction of the gift-book profusely illustrated

with wood-cuts, in place of the old-fashioned "annual" and its steel engravings, originated the new development of wood-engraving in this country. For not only was more and better work required, but work of quite a novel sort. There were no guides, past or present, to help the young engravers who tried to answer these demands. They were obliged to experiment each one for himself—a lucky fact, perhaps, since it has given us the most original

completed work was sufficient unto itself, valued for what it was—not for what it suggested about another work of art. He labored usually on designs made expressly for his use. But if called upon to reproduce a painting he was only expected to give its most palpable facts—its theme, its design, and the broad contrasts of its color. To do this it was necessary that he should be an admirable draughtsman, that he should follow the lines of his original with

THIRD PRIZE. THE MORNING SONG. ENGRAVED FROM A PHOTOGRAPH OF THE PAINTING BY MARAK.
ENGRAVER, JOHN S. MARQUAND. TIME OF PRACTICE, TWO YEARS AND ONE MONTH.

development of which American art as yet can boast. What, we must now inquire, were these new demands? What are the special aims which present themselves to the engraver of to-day, and which could not have been realized by the best workmanship of a former time?

The elder engraver worked chiefly to make a good line-drawing with his graver. His

intelligence, or supply good lines where none had been provided for him. This "drawing with the graver" is the excellence which finds its highest examples in the work of Bewick's immediate successors—of Thompson, Nesbit, and Clennell. This is the excellence proper to Mr. Linton's work, the excellence upon which he insists so strongly in the work of others. It is indeed and beyond question one

LAUGHING GIRL. ENGRAVED FROM A PHOTOGRAPH (BY PERMISSION OF BROCKMANN, DRESDEN) OF THE PAINTING BY REMBRANDT. ENGRAVER, HERBERT F. LYOUNS.

of the highest attainments of the engraver, and one without which he can do little worth the doing. But alone it cannot serve all the needs of the modern workman, who must make something more of his print than an admirable black-and-white drawing, who must do more than produce a fine engraving in and for itself considered, who must also—such is the demand of the hour—reproduce the most characteristic, most peculiar, and most subtle qualities of his model. If this is a painting, for example, he must not only tell us what is on the canvas but exactly how it has been put there. What, we may ask, is the reason why this demand upon the engraver has been made of late, though it was never made before? The answer to this question is to be found, I think, partly in the growth of new ideas with regard to art in general, and partly in new ideas that have worked upon wood-engraving consciously and directly. About ten years ago, painting itself took a new start among us. Certain elements in its practice which had been almost entirely overlooked by our artists came, under the influence of foreign training, to be universally respected, and, perhaps, even a little overrated. One of these elements was the actual technical method of a

painter. Another was the insistence upon tone and “values” as distinct from local color. The artist whose painting was copied wished these qualities preserved. And the reader whose eye was trained to love them hailed with delight the first prints in which even an effort was made to reproduce them.

But, one may say, there have been epochs in the past when these and similar refinements of the brush were as highly prized in other countries as they are to-day with us, yet when their reproduction was not demanded from the engraver of any sort. Artists and the public were content if he gave—with beautiful engraver’s work—the forms and outlines and the general color scheme of his original. What is the reason we now ask for more? I think it may be discovered, partly at least, in the introduction of photography as a popular multiplying process. Until photographs taken immediately from paintings met his eye, the student had never dreamed of a reproduction which should give the manner as well as the matter of its original. In such photographs the color scheme of a painting is often seriously maligned, and its “values” are not always correctly given. But often they are so given, and always the artist’s method reveals itself, line for line and touch for touch. To-

day a steel engraving, for example, is valued as highly as ever for its own artistic sake; but the photograph is absolutely essential to a knowledge of any painter's peculiar qualities.

Thus to a great extent was incited, I believe, the effort made by our editors and responded to by our young engravers—the effort to combine the distinctive qualities of a good photograph with those of an engraving, to reproduce as far as possible all the idiosyncrasies of an original while securing a work of art valuable for its own artistic sake, truer than a photograph in its rendering of color, and capable of being cheaply printed in the pages of a book. Similar excellences were demanded, also, when the work was done after originals of a different sort—after drawings made in pen-and-ink, or pencil, or charcoal, or washed tints, or after photographs from nature. In landscape work, especially, tone and gradation and atmospheric effects were looked for as they had never been before.

These, then, were the problems which the young engraver set himself; these were the problems which the old engraver denounced as degrading his art to the level of an imitative handicraft, as sinking the creative entirely in the interests of the reproductive artist. Photography on the block, which has enabled our workmen to realize their aims as they never could had an intermediary drawing been required, was included in the indictment. And, moreover, certain faults which undoubtedly existed in much of the pioneer work were pointed out as of necessity belonging to such efforts, and as disfiguring them beyond indulgence. The first-named of these objections

will not, I think, be sustained by many voices. It must, indeed, be abandoned by its firmest upholders when the new school shall have shown that it can realize its aims with no detriment to the art of wood-engraving in itself considered—nay, rather, with an absolute increase of its beauty. Already it has shown this to a remarkable extent. The first work of our young artists was, I repeat, experimental, and experimenters must run to extremes if they would learn the limits of their possibilities. In their first eager efforts to render faithfully the qualities to which their attention had been directed, they forgot occasionally the claims of their own art. In striving to give us a good reproduction they sometimes neglected to secure a beautiful wood-cut. And even in their reproductive essays proper they have been known to secure “values” and technical effects only with some loss of color and of definition. But each year such mistakes become less frequent. The engraver is rapidly learning that he can accomplish his new aim only within certain limits—that when he has given as much of his original as can be put into a *good* wood-cut, he must hold his hand. It should be said, however, that this amount is almost coincident with that for which he strove in his first ardor. He has not so much altered his aim as learned to work for it with a more cunning hand, with more self-restraint and modesty, with a less palpable show of effort. The handling of our best workmen to-day is vastly more varied, more flexible, and more individual than was that of former masters. But it is coming back

LANDSCAPE. ENGRAVED FROM THE ORIGINAL PAINTING BY FRANK A. WHITE.

ON THE THRESHOLD. ENGRAVED FROM A PHOTOGRAPH (BY PERMISSION OF GOUPIL & CO.)
OF THE PAINTING BY C. BRUN. ENGRAVER, MISS ADA BAMPTON.

very rapidly from the excessive wildness or excessive minuteness which inflamed the wrath of the elder generation. Nor, I must repeat, is the fact that it passed through its earlier and less well-balanced stage to be regretted; for only by such bold experiments, such even reckless attempts to find new ways of expressing his new intentions on the block, could the young practitioner prove what might be allowed to him and what might not. Now he has discovered, I think, the limitations of his art. They are not, by a great distance, the limitations prescribed for it by disciples of an elder day. Yet anywhere within them it is possible to secure as much of technical beauty in the wood-cut as of fidelity to the original. No wood-cuts so faithful to the subtlest facts of nature's handiwork or of an artist's brush are produced to-day as those which come from our younger men; and, I may safely

say, none so beautiful. It was not, for example, their faithfulness to originals unknown in Paris which secured an "honorable mention" for the cuts of Mr. Closson and Mr. Juengling at the last *Salon*, but their absolute excellence as samples of the wood-engraver's art. Nor, in thus praising the newest methods, is it necessary to depreciate the old. The art is wide in its range, and old and new developments may alike be valued, each for its own distinctive sort of excellence. We appreciate the plank cuts of the sixteenth century in spite of our admiration for Bewick and his followers. Nor need this admiration be lessened by an equal or even greater love for still more recent things.

The difference between our individual workmen has grown to be as remarkable as the collective individuality of the school; and this could only result, of course, from self-development unfettered by the tyranny

FIRST PRIZE FOR BEST WORK BY FORMER COMPETITORS. AFTER A PHOTOGRAPH FROM LIFE. ENGRAVED BY WM. H. MACKAY.

of custom or authority. That our students were enabled freely to pursue their investigations, and each to develop in his own way his artistic conscience and his technical skill, is the great benefaction for which we should thank our American magazines.

As yet, however, it must be confessed, our new school is accomplished only within certain limits. Few if any of our young men have yet done large, frank, bold, simple work as well, for example, as it has been done by Mr. Linton in such examples as his "Raft," after Harvey.

But this fact is probably to be traced to the working of the law of supply and demand, the call for the best work being usually to fill pages of a small size. When our illustrated papers shall take the same stand that was taken a few years ago by our magazines, they may encourage our young men to be bold as well as refined, free as well as delicate, and frank as well as subtle. And if, moreover, the art is to be developed *on all sides* to its full capacity, we must have a new school of skillful and intelligent illustrative designers, willing to work with special reference to the needs of the engraver, and of the printer also.

Turning now to the cuts submitted to the judgment of *THE CENTURY* in this second competition, I may begin a brief consideration of their merits by stating what were the qualities especially looked for by the judges who passed upon them. These were (quoting from their report of last year):

1. Truthfulness in reproduction of the artist's design.
2. Originality in line or texture.
3. General effect.
4. Management of color.

The length of time spent in practice, the rendering of fac-simile, and the selection of subject were also given some weight. The degrees of merit reached in each quality were marked in numerical order by figures, upon a scale in which ten stood for the maximum. The first prize went to him who had the highest aggregate of marks.

The first prize of this year (\$100) is awarded to:

Florence W. Richardson, of Concord, Mass. Time of practice, three years—fourteen months with F. Juengling and eight months with W. B. Closson. Original, photograph from painting of "Milk-Carrier," by J. F. Millet. Characteristics of work: Truth to the manner of a very difficult original. The character of the face is not especially well given, but the effect of the whole is well rendered.

The second prize (\$75) is awarded to:

W. F. McGrath, of Boston, Mass. Age, seventeen years. Time of practice, twenty-three months. Pupil of A. D. Crombie. Original, photograph from painting of "Othello," by Carl Becker. Characteristics of work: Fidelity to a complicated subject, and rendering of various textures. Especially to be noted is the treatment of the two masculine faces, and of the distant background. This has been an unusually difficult theme, owing to the variety of matter given on a small scale.*

* On account of the inability of the publishers of *THE CENTURY* to obtain permission to print this engraving of a copyrighted picture, the cut must be omitted. To avoid similar difficulty, competitors for future prizes are requested to select American originals which are not copyrighted.

The third prize (\$50) is awarded to:

John S. Marquand, of New York. Age, seventeen years. Time of practice, two years and one month. Pupil of Victor L. Chandler. First essay in book illustration, previous work having been commercial merely. Original, photograph from Marak's "The Morning Song." Characteristics of work: Very delicate treatment, and good tone—in this latter a great improvement on the photograph.

Honorable mention is awarded to:

Herbert F. Lyouns, of Boston, pupil of Russell and Richardson. Original, photograph from drawing of Rembrandt's painting of "Laughing Girl." Characteristics: Good management of line, and skill in use of transparent shadow. This face, has been very difficult to render with the proper expression, and though the engraver has not been absolutely successful his effort is more than creditable. The third prize might have been awarded him, indeed, had there not been doubts as to the "printability"—if a useful word may thus be coined—of his block.

F. J. L. McCann, of Boston, Mass., pupil of Geo. E. Johnson. Original, photograph from cattle-painting by Voltz. Characteristics: Faithfulness to original, and great delicacy of treatment—too great, perhaps, for good printing in magazine. The foliage is given in an especially charming manner.

Frank A. White, of Jersey City, N. J. Self-taught, with suggestions from Wm. Scott. Original, a landscape picture. Characteristics: Directness of method, fine rendering of color, and silvery-like quality of line. The simplicity of the treatment is noteworthy as well as its originality.

Mrs. E. M. A. Heth, of Richmond, Va. Original, a photograph of landscape subject from nature. Characteristic: Effective work.

General mention, furthermore, is awarded to:

Miss Ada Bampton, of New York, pupil of Cooper Union school, under J. P. Davis. Original, photograph from painting, "Sur le Pas de la Porte," by C. Brun. Characteristic: Very careful work.

Charles P. Marshall, of Lafayetteville, N. Y. Entirely self-taught, without acquaintance with any engraver or advice of any kind, and study pursued under great difficulties. Original, drawn on block from painting of landscape subject.

Miss Edith M. Harte, of New York, pupil of Cooper Union school under J. P. Davis, but chiefly self-taught. Original, drawn on block from landscape sketch by engraver.

Turning now to the prize of \$50 offered for competition to those who took part in the contest of 1881, we find that it has been given to the student who secured the first reward on that occasion:

William H. Mackay, of Boston. Age, seventeen. Original, photograph from life. Characteristics: Excellent management of line, good treatment of varying textures, directness of method, and good tone. The handling of the background is notably strong and simple. If a fault is to be found it is with the drawing of the face, which is not strictly accurate. This cut shows great improvement upon Mr. Mackay's essay of last year. The subject is very difficult, a fact which may not be appreciated by the casual observer. But there is no greater test of an engraver's skill than such steady line-work as is shown in Mr. Mackay's portrait.

SHEEP. ENGRAVED FROM A PHOTOGRAPH (BY PERMISSION OF GOUPIL & CO., PARIS) OF THE PAINTING BY JACQUE. ENGRAVER, C. H. LATHAM.

Honorable mention in this class is awarded to:

C. H. Latham, who took the third prize of last year. Original, photograph from painting of sheep by Jacque. Treatment very delicate, but might have been a little more forcible. Some doubts as to "printability."

Hiram P. Barnes, of Waltham, Mass. Self-taught. Originals, photographic portraits.

M. L. Brown, of Brookline, Mass. Original, photograph after Hamon's "Twilight."

J. E. Provine, of Chicago, Ill. Original, photograph after Richter's "Seraglio." Complicated subject treated with much skill in the textures. Some doubts as to "printability."

Miss M. L. Owens, of New York. Has worked for THE CENTURY since last year, and sends several cuts that have appeared in its pages—for example, the first illustration for the recent article on the "Tile Club Ashore."

P. Aitkin, of Brooklyn, N. Y. Has also worked for THE CENTURY, and sends excellent cuts, such as La Farge's "Victory" from the article on the "Union League Club House," and Burns's "Taking Observations."

It will be noted that, in criticising the above-mentioned cuts, I have laid especial stress upon a quality not cited in the list first given. This is the quality of "printability,"—one which does not strike the observer who considers the submitted proofs for their intrinsic beauty only, but which is of equal impor-

tance with any other in the eyes of art-manager and printer. A deficiency in this quality, indeed, may be so serious as to vitiate all other merits. Strictly speaking, in fact, a cut is *not* good if it is not adapted for the purpose to which it must be put,—if it is so delicate, or so shallow, or so super-refined, that it cannot be printed to advantage on the steam-press. Many a block which gives a beautiful proof on the hand-press is a sad disappointment to its author when used in the pages of book or periodical. As the tendency of our wood-engraving is just in this direction—toward too great minuteness and subtlety—it will be well for all young artists to bear these facts in mind, and, while making their blocks as delicate as necessary, not to make them "too good to use."

Looking once more over all the contributions, successful and non-successful, it may be added that more attention might well be paid to simplicity of treatment—to securing the desired result with the least possible show of effort. A mastery of strong and simple lines is the best, the only thorough, preparation for every sort of work, even for that where the complicated or characteristic effects of an original must be reproduced in complicated and characteristic ways.

M. G. van Rensselaer.

For the announcement of the terms of the third competition, see "Topics of the Time," in the present number.

MARBLE-MINING IN CARRARA.

LOWERING THE BLOCKS FROM THE QUARRY.

CARRARA marble is an article well known the world over. It is reputed to be unquestionably the best marble for the use of sculptors, grave-stone builders, architects, and other marble-workers, and inasmuch as it has enjoyed this reputation without dispute for over nineteen centuries, it is fair to presume that it is justly entitled to its good name. The ancient Romans of the time of Augustus could find no other marble equal to that of Carrara, and they used it freely in making statues, and in building monuments, temples, and various other public edifices. The judgment of the statuaries and architects of the "year one" has been reënforced by that of their successors in each succeeding generation, and to-day Carrara marble is in such demand in every civilized nation of the world that nearly one hundred and fifty thousand tons of it are quarried every year. Of this the United States use about twenty-five thousand tons annually, notwithstanding the fact that, duty paid, the rough blocks are worth about two dollars and a half a foot, or almost two cents a pound, as they are landed from the vessel.

Carrara is situated on the west coast of Italy, forty-five miles from Leghorn and twice as far from Genoa, and, counting in the

villages which are dependencies of Carrara, it is a city of twenty thousand inhabitants. The city stands in a niche of the Appenine Mountains, which in its rear rise in barren, rocky cliffs, varying in height from three thousand to five thousand feet, and on two sides of the town soften into earth-covered hills, from three hundred to a thousand feet high, cultivated to their very tops by the growers of the grape. These side-hills lack but an eighth of a mile of coming together on the fourth side of the town. If they met, Carrara would be like a very small bit of gentian in a very large mortar. As it is, this break of an eighth of a mile affords an outlook into the world, and looking through it, one's horizon is bounded by the Mediterranean.

Carrara is entirely given up to the trade in marble. The sojourner in the city is not slow to learn this fact, nor likely to forget it. He is awakened in the morning by the clicking of the marble-cutters, and the last sound of which he is aware at night is that of the swearing teamsters, pounding their marble-laden oxen into greater speed. The ground floor of almost every house is turned into a studio, in which tombstones, cemetery and lawn figures, architectural ornaments, and occasionally a fine piece of statuary are produced.

Wonderful to relate, and much to the surprise of people who come to Carrara with no foreknowledge of the place, the houses are not built of marble, but of rough stones cemented together, and covered on the outside with a smooth coating of plaster. There is, however, marble enough in the inside work. The door-posts, the window seats and caps, the stairs, the mop-boards, and generally the floors are of marble, and a new-comer to Carrara can enjoy a very active month of sneezing if his chambers do not afford additional facilities, especially as it is customary to throw in a few marble-topped tables and stands, a half-dozen marble statues, and now and then an elaborate marble mantel-piece.

Terrible as it would be to spend a life-time in Carrara, it is a very interesting city to the few tourists who stop over a day or two on their way from Genoa to Pisa and Florence. The Carrara marble quarries are certainly one of the sights of the world. In Vermont, the workmen grovel in the earth for their marble; in Carrara they go up hundreds, sometimes thousands, of feet into the sky for theirs. Fancy a range of mountains, as high as the highest of the White Mountains of New Hampshire, rising almost perpendicularly—mountains of somber gray rock, bare of trees and of every other sort of vegetation. At the foot of these mountains, upon a plateau of a few hundred acres, place a dingy, dirty, crowded little Italian city; upon the sides of the mountains, at heights varying from five hundred to thirty-five hundred feet, place the marble quarries. Seen in a clear day, at a distance of half a dozen miles, the Carrara mountains seem to rise at an angle of ninety degrees, and the profile of their sharp peaks is so positive and clean, that one can think of nothing more effective in the way of description than to say that they look like the teeth of a magnified wood-saw. And as for the quarries, some of them seem to be patches of snow obstinately refusing to succumb to the sun's warm rays; others look like cascades dashing down the mountain sides; while others seem to be mammoth sheets of paper stuck upon an immense stone wall.

There are upward of four hundred marble quarries, large and small, in Carrara, which are worked by about five thousand men, and the annual production is about one hundred and fifty thousand tons. To procure this amount of marble, probably five hundred thousand tons are quarried, the difference between the figures which represent the annual production and those which represent the amount quarried, being waste. The reason for this is that nobody has yet been ingenious enough to de-

vise a method of quarrying adapted to Carrara which will yield more than one available foot of marble to every four feet quarried. Fortunately, the stock of Carrara marble is inexhaustible, and two thousand years of steady and constantly increasing production have not sensibly affected the supply. The mountains of beautiful white stone seem only to have been touched here and there by the miners.

About half of the quarries are located on the sides of an immense ravine called Ravaccione. A railroad has been built up into this ravine, and tourists who desire to inspect the quarries generally go to Ravaccione by rail, saving a walk of three miles. Arriving at the terminus of the railroad they are about five hundred feet higher than the city of Carrara, and are in sight of as many as two hundred quarries, of which some are not more than two hundred feet above the railroad terminus, while others are very high up the mountain-sides. Very few people undertake to explore the loftier quarries, as the feat requires a deal of hard climbing, and in places an amount of nerve which people unaccustomed to mountaineering do not possess. There are some quarries into which the workmen are lowered by ropes, and still others in which the men do the drilling, and, in fact, all the other work, while suspended by ropes in mid-air, hundreds of feet above the quarry landing.

No machinery of any kind is used in the Carrara quarries. The men of to-day quarry after the fashion of their grandfathers. A common hand-drill, a few jugs of nitric acid, and a plentiful supply of gunpowder complete the outfit of the marble-miners. Slowly and painfully the drill is forced into the mountain-side to the necessary depth; into the hole made by the drill the nitric acid is poured through a tin tube; and when the acid has penetrated every crevice leading from the base of the drill-hole, and has eaten space for the gunpowder, the charge is placed, the slow-match is lighted, the quarrymen betake themselves to places of safety, and in due course of time there is an explosion. After the explosion the quarrymen come back to ascertain the result. It frequently happens that they find nothing as a reward for their labor except a quantity of small rocks. Having blasted the marble out from the mountain, the producer's next step is to put the available blocks into tolerably regular shapes. This is done with the chisel and hammer, by men who receive from twenty-five to thirty-five cents a day. Very large blocks are divided by sawing. The marble-saw is a piece of heavy sheet-iron four or five inches wide, fixed in a cumbrous buck-saw frame, and it is worked by two men. The saw is made to

cut by putting sand beneath the blade, the sand being carried down into the saw-path by a small stream of water trickling from a tub. Working from sunrise to sunset, marble-sawyers can earn as much as thirty-five or forty cents.

When the marble has been squared up it is still a hundred feet, sometimes half a mile, up in the air. It is the custom to lower it with enormous cables. The block to be lowered is put upon a sledge composed of two timbers bolted fast together, and sledge and marble are slowly and laboriously lowered down the mountain-side, pieces of wood rubbed with soap being placed under the sledge in places where the descent is not steep. Sometimes the ropes break, the block escapes from the workmen, and a terrible accident ensues. Carrara is full of cripples, the victims of such accidents.

Occasionally the quarrymen are saved the trouble of lowering the marble. It not infrequently happens that the blast is so strong that the detached pieces do not stop at the quarry landing, but go tumbling to the foot of the mountain. A few days ago, in one of the ravines, I saw a block of marble weighing at least two thousand tons, which, when it was blasted, had slid over a thousand feet from the quarry. In blasting this block the miners were very careful in the use of powder, in the hope that the block would not be driven from the mountain with sufficient force to set it rolling. Fortunately, their calculations were well made. When the blast was fired the block fell forward upon its face, and slid a comparatively short distance down the mountain-side. A very little more powder would have sent it rolling to the bottom of the ravine, and the consequences might have been very serious.

In one of the ravines, it happens perhaps a dozen times a day that workmen and visitors are obliged to take to their heels to escape destruction by some boulder that has started down-hill. If one could take a safe position and witness the descent of a two-thousand-ton block of marble, the spectacle would be a grand one. But to be chased out of the ravine by this same boulder would be an altogether different experience. Nothing can be more terrifying than to be in the track of one of these rocks, with hardly a second to spare in which to choose the path of flight. You hear the tooting of a horn, which is a signal that in a few minutes a blast will be set off. Casting your eye about the ravine, you discover that the blast is to be made in a quarry perhaps two thousand feet above you. Anticipating no danger, you keep on calmly crunching your

lunch. (Everybody who visits the quarries is supposed to have a lunch with him.) Presently the explosion takes place, and you look up in the direction of the sound. At first you see nothing. A second later, an enormous rock comes bounding out from one of the recesses of the ravine. You fancy that the rock will come to a stop at a certain point which you have marked with your eye, when you are startled by the cries of a hundred quarrymen, and almost at the same time by a sound which, if you have had experience in the quarries, tells you that the boulder is already dangerously near you. You give one glance at the approaching danger and run for your life, praying as you run. Your flight is to the side of the ravine, and just as you reach a place of safety the boulder goes thundering past, enveloped in a cloud of dust, and hurling about on all sides fragments of itself and of the rocks which it crushes in its path.

In old times, all of the marble quarried at Carrara was transported from the quarries by oxen. That intended for consumption at Carrara was taken over the rough mountain road a distance of from three to five miles, while that intended for shipment was hauled five miles farther to the sea-shore. The railroad has superseded the wagon service to a large extent, but there are still hundreds of oxen engaged in carting marble from remote quarries to the railroad, and from all of the quarries to saw-mills and studios which are not reached by the railroad. Tourists invariably leave Carrara with the belief that the Carrara teamsters are the most cruel men in the world, and to this belief the writer gives his full adherence. The work which the oxen do would be hard enough under the most favorable circumstances, for the roads are indescribably rough. But the circumstances are not favorable for the poor brutes. They are under-fed and over-loaded, and upon the road are subjected to the most outrageous cruelty. There may be a dozen pairs of oxen attached to the cart. Twelve brutal men, each armed with a heavy goad, are in attendance. The drivers of the eleven leading pairs ordinarily ride, each man seated on the yoke of his own pair, facing the cart, and steadying himself by a hand on the horn of one of the oxen. From the time the team starts from the quarries until it leaves its load there is no cessation of cruelty. It is not to be wondered at that the life of an ox terminates ordinarily within three years of the day on which he makes his first journey to the quarries.

Carrara laborers, and especially those who are engaged in quarrying and transporting marble, certainly have a very hard time of it. Like the oxen, they work much and eat little. For

a day's work, beginning at sunrise and lasting to sunset, the compensation is not more than forty-five cents. It seems almost impossible that a single man can live on such wages, to say nothing of men who count their children by fives, tens, and twenties. Some of the quarrymen live five or six miles from the scene of their labor, and they have, therefore, in addition to a day of severe toil, to take a daily walk of ten or twelve miles. Many of them are obliged to leave their beds at three o'clock in the morning in order to reach the quarries in season to do a full day's work. They take with them in their coat or trowsers pocket the food for the day, which consists of a small loaf of bread. When they return home at night they eat the principal meal of the day, a dish of boiled mush, or a sort of soup made of bread, water, and oil. In the summer they are able to garnish their tables

with a dish of vegetables, into which the aromatic garlic is sure to be strongly infused. Meat and fish are luxuries which are indulged in on rare occasions. Most of the marble intended for export is taken to the sea-shore, five miles away, and is unloaded from the cars or ox-wagons upon the sandy beach. Thousands of blocks of marble are to be seen at this depot, each block bearing the initials of its owner and the number by which it is recorded in the owner's books. Here the final preparation for shipment is made. The work of squaring or shaping the block, which was begun at the quarries, is completed here, and the edges of the blocks receive what might be called a "rough smoothing." This done, Carrara having no good harbor, the marble is put into small vessels and sent to Leghorn or Genoa, for shipment to foreign ports.

Robert W. Welch.

ROSE-GERARDIA.

ON my small farm, where rocks and weeds contend
Which shall possess the more its barrenness,
In spring, among the very earliest flowers,
Almost untimely, is the saxifrage—
The season's dear, though humble, harbinger,
Rearing on fragile stem its clustered head,
Between the seams of rocks, by east winds blown,
And with a feeble root and few low leaves,
As if it needed neither earth nor sun,
But grew by that exhilarating sense
Of winter past and far-off breath of spring
That likewise man, by his own tokens, knows.

But when all summer's lush and favored flowers,
Fed on the highest suns and richest dews,
Rooted in mellow soil and sheltered nooks,
Are blighted with the year's autumnal change,
Then once again in thin, unfertile lands,
Along the beach-side and the meadow marge,
The rose-gerardia swings its little bell
And will not let the season go too soon.
Its very leaves do deprecate the frost,
Already brown, so not to tempt his touch,
And as the thought of spring, and not spring's self,
Drew from its crevices along the ledge,
The sweet, presaging herald, saxifrage,—
So, now, the latest flower at autumn's end
Grows by the memory of summer days,
Dreams of the rose, and blushes at its dreams.

John Albee.

CARLYLE IN IRELAND.

REMINISCENCES OF MY IRISH JOURNEY. II.

Wednesday, 11th July.—[Let me see what I can now looking back string together of Dublin reminiscences.]

Dublin, Wednesday, 4th July.—Car and letters, Stokes, Sir D. Macgregor,—coming home by Larcom (I forget who else): and as I was stepping out, Dr. E. Kennedy: Off finally with him to dine; home with Snuffy Taylor in K's Car. * * *

Let me *note* henceforth more diligently; and now *shave*. Alas there is no more "Noting" at all; and I must now scrape it together out of memory and letters, the best I can! 2nd Octr 1849.

[I did not *look* on this side while putting down any of the foregoing; had quite forgotten this, or didn't know clearly I ever had such a thing. 7th Octr. (*finished*)]

Addenda (7th Octr.) to the two foregoing entries.—Hideous crowds of beggars at Glendalough—offering guideship, &c. No guide needed. Little black-eye boy, *beautiful* orphan beggar, forces himself on us at last; ditto grey-eyed little girl, with fish her uncle had caught. Scarecrow boatman, his clothes or rags hung on him like *tapestry*, when the wind blew he expanded like a tulip: *first* of many such conditions of dress. "King O'Toole's tomb." Tim Byrne (Burn they pronounced), spoken to—he, the one whole-coated farmer of the place; many *Byrnes* hereabouts. Could not make out the meaning or origin of Glendalough; at last found St. Kevin (natural in St. K) to be the *central* fact; the "Kings" O'Toole, O'Byrne, &c., &c., had dedicated chapels to him, bequeathing their own bodies to be buried there, as unspeakably advantageous for them; straight road to Heaven for them perhaps. Many burials *still* here; tombstones, all of mica-slate, slice off into obliteration within the century. One arch (there still remains another) of entrance to "cathedral" had fallen *last* year (or year before?) Fount, and miracles in "Patron-time"; "Patterun" is Kevin himself; "St. Kevin be your bed!" Brought heath and ivy from Glendalough; grimmest spot in my memory. * * *

Kildare railway; big blockhead, sitting with his dirty feet on seat opposite, not stirring them for me, who wanted to sit there: "One thing we're all agreed on," said he "we're very *ill governed*; Whig, Tory, Radical,

Repealer, all admit we're very ill governed!"—I thought to myself "Yes indeed: you govern yourself. He that would govern you well, would probably surprise you much, my friend,—laying a hearty horsewhip over that back of yours." "*No smoking allowed*"; passengers had erased the "No." Coarse young man entering, took out his pipe, and smoked without apology. Second class; went no more in *that*. Carlow, "Hungry Street:" remember it still well, and the few human figures stalking about in it: red, dusty-looking evening, to *us* (in rail) dusty and windy. Of Bagnalstown, saw nothing but Stations (railway is still in progress), and some streak of distant housetops, behind (westward) of that; and one little inn at the extremity where our car halted and the beggars were. Dusty, dusky evening to Kilkenny.

Wednesday, 11th July.— * * * [At Kilkenny.]

Workhouse; huge chaos, *ordered* "as one could;"—O'S. [O'Shaughnessy] poor light little *Corker* (he is from Cork, and a really active creation), proved to be the *best* of all the "orderers," I saw in Ireland in this office; but his establishment, the first I had ever seen, quite shocked me. Huge arrangements for eating, baking, stacks of Indian meal stirabout; 1000 or 2000 great hulks of men lying piled up within brick walls, in such a country, in such a day! Did a *greater* violence to the law of nature ever before present itself to sight, if one *had* an eye to *see* it? Schools, for girls, rather goodish; for boys, clearly bad; forward, impudent *routine*—scholar, one boy, with strong Irish physiognomy,—getting bred to be an impudent superficial pretender. So; or else sit altogether stagnant, and so far as you can, *rot*. Hospital: haggard ghastliness of some looks,—literally, their eyes grown "colorless" (as Mahomet describes the horror of the Day of Judgment); "Take me home!" one half-mad was urging, a deaf-man; ghastly *flattery* of us by another, (*his* were the eyes): ah me! boys drilling, men still piled within their walls: no hope but of stirabout; swine's meat, swine's *destiny* (I gradually saw): right glad to get *away*. Idle people, on road to castle; sitting on street curbstones, &c.; numerous in the summer afternoon; idle old city; can't well think

how they live. Castle "superb" enough but no heart for it; no portraits that I care about,—not even a *certain* likeness of the Duke James, the *Great* of Ormond; *pay* my half-crown; won't write in the album;—home dead-tired; and O'S. is to come and dine. Of dinner little rememberable at all. Strange dialect of Mrs. Dr. Cane, a Wicklow lady,—made a canvas case for my writing case this day, good hostess! came of Scotch people; rings with such a *lift* in speaking as is unexampled hitherto; all is *i's*, *oi's*, &c.;—excellent mother and wife, so far as heart goes, "sure-ly." Snuffy editors, low bred but not without energy, *once* "all for repale," now out of that;—have little or no memory of what they said or did. Dr. Cane himself, lately in prison for "repale," now free and Mayor again, is really a person of superior worth. Tall, straight, heavy man, with grey eyes and smallish globular black head; deep bass voice, with which he speaks slowly, solemnly, as if he were preaching. Irish (moral) Grandison—touch of that in him; sympathy with all that is good and manly however, and continual effort towards that. Likes me, is hospitably kind to me, and I am grateful to him. Up stairs about 8 o'clock (to smoke, I think), lie down on rough ottoman at bed's end, for 5 minutes;—fall dead asleep, and Duffy wakes me at one o'clock! We are to go to-morrow morning towards Waterford—I slept again, till towards six, and then wrote to my mother; as well as looked into "Commercial Reading rooms," &c. opposite me in the ancient narrow street. Jackdaws and lime-pointed old slate roofs were my prospect otherwise fore and aft. Crown of the year now in regard to *heat*.

Thursday 12th July.—Off by rail with Duffy * * * At length under steep cliffs we come to the end of Waterford long wooden bridge; rattle over to the bright trim-looking long quay with its high substantial row of houses on the other side, rattle along the same, and at last are shoved out, very dusty and dim, at Commercial Hotel, where it, not far from ending, is intersected by a broad street at right angles; Hotel as I afterwards found, where "Meagher" (the now convict) lived, and where his father still lives.

Mem. On the Friday morning at Dublin I had seen a big flaring lithograph portrait (whose I didn't know, like *Lockhart* somewhat) with the people murmuring sympathy over it, in a shop window near the end of Sackville Street: it was now removed; must have been M.'s — *This* (Thursday afternoon), was it now that I argued with Duffy about Smith O'Brien; I infinitely vilipending, he hotly eulogizing the said Smith?

At Waterford it was Assize time and the Cl. Hotel was rather in an encumbered state: two small bed-rooms, without fire-places, in third floor; mine looks out seaward, over clean courts, house roofs, and I think sees a bit of country, perhaps even of sea. Letters; one from Lord Stuart de Decies, (volunteer thro' poor-law Ball), to whom I write that I *will* come, and enclosing Lord Monteagle's letter. Duffy's Father Something was also not at home: so we returned to the hotel for tea.—Father Something, a silly, fluctuating free-spoken priest, joined us in that meal; we to breakfast with him to-morrow.—Smoke cigar along the quay—the southermost part of it beyond our Hôtel; talk with shopkeeper kind of man there, leaning over the balustrade, looking at the few ships and boats; Waterford's Commerce ruined,—this was the sum of *all* my enquiries,—2,000 hands acquainted with curing bacon had left the place, bacon (owing to potatoe failure) having ended. Butter do., Cattle do.; all has ended "for the time." Good many warehouses, *three* in one place on the quay you may now see shut.—Walk *late* up to the Post Office, big watchman, with grappling hook for drunk men, patrolling the Dock quay;—"accidents may happen, sir!" Wretched state of *my* poor clay carcase at that time * * *

Friday, 13th July.—Breakfast with the Father Something; steepish street far back in the City; other younger Father with him;—clever man this, black-eyed, florid man of thirty this, not ill informed, and appears to have an element of real zeal in him, which is rare among these people. Priest's breakfast and equipment nothing special; that of a poor schoolmaster or the like, living in lodgings with a rude old woman and her niece or daughter: talk also similar,—putting Irish for Scotch, the thing already known to me.—To see some Charitable Catholic Schools; far off, day hot, I getting ill: Irish monk (pallid, tall, dull-looking Irishman of 50) takes us hospitably; 40 or 50 boys, all Catholic, with good apparatus—these he silently *won't* set agoing for us ("holiday" or some such thing); we have to *look* at them with what approval we can. To the hôtel, I with younger priest; totally sick and miserable when I arrive, take refuge up stairs on three chairs, and there lie, obstinate to speak to no man till our car go off. * * *

Dust, dust, wind is arear of us (or some *dusty* way it blows) on the car; and there is no comfort but patience, distant *view* of green, and occasionally a cigar. The wind, dusty or not, refreshes, considerably cures my sick nerves, as it always does. Strait dusty places:

goats chained together with straw rope. "Repale would be agreeable!" Scrubby ill-cultivated country; Duffy talking much, that is, making me talk. Hedges mostly of *gorse*, not one of them will turn any kind of cattle, —alas I found that the universal rule in Ireland, not one fence in 500 that will *turn*. Even they are almost all, and *without* attention paid: emblematic enough. Kilmac-thomas, clear white village hanging on the steep declivity. Duffy discovered; enthusiasm of all for him, even the (Galway) policemen. Driver privately whispers me "he would like to give a cheer for that gent."—"Don't, it would do him no good." Other policeman *drunk*, not *michevous*, but babbling-drunk; didn't see another in that or any such condition in all my travels. * * * Cappelquin at last, in the thickening dusk, 8½ I suppose; leave Duffy at the Inn, and get a car for Dromana, in a most dusty, stiffened, petrified, far from enviable condition. Dromana draw-bridge—(over some river tributary of the Blackwater), Dromana park, huge square grey house and deep solitude; am admitted, received with real hospitality and a beautiful quiet politeness (tho' my Waterford letter *has* not been received); and, once entirely stript, washed, and otherwise refreshed, commit myself to the new kindly element, pure element that surrounds me. Sleep,—O the beautiful big old English bed! and bedroom big as a ballroom, looking out on woody precipices that overhang the Blackwater. Begirt with mere silence! I slept and again slept, a heavy sleep; still remembered with thankfulness.

Saturday, 14th July.—Beautiful breezy sunny morning; wide waving wooded lawn, new crop of *hay*; huge square old grey mansion hanging on the woody brow or (Drom, *Drum*) over the river with steps, paths &c. cut in the steep;—grand silence everywhere, huge *empty* hall like a Cathedral when you entered;—all the family away but Ld Stuart and a stepdaughter Baroness, semi-german, and married to a German now fighting against the Hungarians (Baroness *zealous* for him). The pleasantest morning and day of all my Tour.—Quiet simple breakfast; all in excellent *order* (tea *hot* &c. as you find it rarely in a great house); my letter comes *now* and we have a nice quiet hour or two, we three, over this and other things; ride with Lord Stuart to gardens, thro' woods to village of Dromana; clean slated hamlet with church; founded by predecessor (70 or 80 years ago) for *weaving*. Ulster weavers have all *ceased* here; posterity lives by country labour, reasonably well, you would say. This was the limit of our ride. All trim, rational, well ordered here; Ld Stuart

himself good, quite English in style, and with the good-natured candid-*drawling*-dialect (*à la* Twistleton) that reminds you of England. Talent enough too, and a sensibility to fun among other things; man of fifty, smallish black eyes, full cheeks, expression of patience with *capability* of action, with the most perfect politeness at all points. Will drive me to Mount Meillaraye "Monastery;" does so; off about one. Other side of Cappelquin; road wilder, mounting towards Knockmoldown mountains, which had made figure last night, which make a great figure, among the other fine objects, from Dromana Park; arrive at Meillaraye in an hour or so.

Hooded monks,—actually in brown coarse woolen sacks, that reach to the knee, with funnel shaped hood that can be thrown back; Irish physiognomy in a new guise! Labourers working in the field at hay &c; *country* people they, I observe, *presided* over by a monk.—Entrance, squalid hordes of beggars sit waiting; *accent* from beneath the hood as a "brother" admits us; learning the Lordship's *quality* he hastens off for "the prior": a tallish, lean, not very prepossessing Irishman of 40, who conducts us thenceforth. * * * Excellent brown bread, milk and butter, is offered for viaticum; Lord Stuart, I see, smuggles some gift of money; and with blessings we are rolled away again. The new "Monastery" must have accumulated several 1000 pounds of *property* in these 17 or more or fewer years, in spite of its continual charities to beggars; but this itself, I take it must be very much the result of public *Charity* (Catholic Ireland much approving of them); and I confess the whole business had, lurking under it for me, at this year of grace, a certain *dramatic* character, as if they were "doing it." Inevitable at this year of grace, I fear! Hard work I didn't see monks doing: except it were one young fellow who was actually forking hay; food, glory, dim notion of getting to Heaven, too, I suppose these are motive enough for a man of average Irish insight? The saddest fact I heard about these poor monks was, that the Prior had discovered some of them surveying the Youghal-and-Cappelquin steamer, watching its arrival, from their high moor as the event of *their* day; and had reprovingly taken away their telescope: ah me!—potatoe failure had sadly marred *them* too; they had sold their fine organ (a *pious* gift) lately, and even, as I heard, their "whole stock of poultry" in the famine year.

One Sir — Shaw, fine Ayrshire man, an old Peninsula soldier, Lord S's agent here, to dinner with us; fine hearty, hoary old soldier, rattles pleasantly away: "Napier used to say, 'If you would be a soldier learn to *sleep*!'"

Few can do it: Napoleon could. Snatch sleep whenever and wherever there is a chance. About 10 I had to tear myself up, and with real pathos snatch myself away from these excellent people; their car waits for me, in the dim summer night, an *English* driver: and thro' Cappoquin I am hurried to Lismore smoking, and looking into the dark boscaige. into the dark world.—Bridge building at Cappoquin, old bridge at Lismore Castle, steepish ascent, old gatehouse, passage, silent court; and at one of the corners (left hand, or river, side), Currey [Duke of Devonshire's agent] having done the impossible, *posted*, namely, in bespoken relays of cars all the way from Waterford, is here some minutes ago to receive me; Duke of Devonshire's impulse,—strange enough,—on *me*. Across the court, or through long silent passages to an excellent room and bed, fitted up as for persons of quality; and there, bemurmured by the Blackwater, quite happy had I not been so dyspeptic, incurable a creature, I once more dissolve in grateful sleep under the clouds and stars.

Sunday, July 15th.—Bright sunny morning again; day too hot; and I, alas, internally too hot. Noble old Castle, all sumptuous, clean, dry, and utterly vacant (only a poor Irish housekeeper, old, lame, clean, loitering on the stairs, with an appetite for shillings),—all mine for a few hours; like a palace of the fairies. Drive toward the mountains; to a school-house, to be developed into *Agricultural* school by "the Duke": Currey, kind active man, having his gig ready. Duke's property *ends* at the very peak of the very highest Knockmeldown, a cone that had been conspicuous to me these two days; well shaded country, up the clearest of little rivers; schoolhouse atop, very windy; two girls alone in the house.—Cy salutes the people in Irish (which he has learned) as we drive down again; meet many "coming from chapel," or hanging about the road; a certain "squire." Something is in talk with certain common people, nods to Currey, we turn to the right when near Lismore; get into the Park of some *anarchic* squire (has been shot at, I think); bars and obstacles, high plantations *dying* for long want of the axe; ugliest of houses, with its back to us, or ugly posterior to us; anarchy reigns *within* (I am told) as without. Down at last toward Blackwater side; where C's. messenger, that was to row us, slightly *fails*; Currey, leaving horse, leaving message with somebody on the road, takes me thro' the fat rough meadows; get into the boat, rows me himself (good man), I steering; fat rough meadows, scraggy border of trees or woods, continues for a mile or two; messenger *appears* on bank, mildly re-

buked and re-instructed: otter bobs up, have never seen another: fine enough river, most obliging *passage* thereon: we step out, thro' a notable decayed squire's mansion, now genteel farm; find gig in messenger's hands on road; roll home; dine, and get packed and mounted again, over the moor to Youghal, the hospitable Currey still driving, still in all senses carrying me along. Much talk with him: about the unquestionable confusion of leases; unreasons, good-efforts or otherwise of neighbour landlords; general state of men and things hereabouts; on all which he talks well, courteously, wisely. "Old Deer-park" (Duke's) on the height, bare enough of look; somnolent Sunday hamlet, yet with people in Sunday clothes, some of them; somnolent bridge-keeper over muddy river, pleasantish road hitherto,—mount now to the moor-top, and ragged barrenness with many roofless huts is the main characteristic; wind rising to a proper pitch—Blackwater side very beautiful. Dromana &c seen over it. Squire's house hanging close with its lawnlet upon the edge of the high (seamed, precipitous) river bank; fantastic-pretty in the sunny wind. Currey leaves letter there, meet Squire and ladies walking in the grounds, Irish voices, pretty enough Irish ways of theirs. And so along, by deep woody dells, and high declivities, wild, variegated, sometimes beautiful, sometimes very ugly road; emerge at last upon the *final* reach of the Blackwater; a broad, smooth now quite *tidal* expanse, and along the north shore of this by swift, level, often shady, course, to Youghal—"Yawal"—as they name it: a town memorable to my early heart—poor brother Alick's song of "*Yoogal* harbour" still dwelling with, bringing whom now from *beyond* the ocean! Sun has about sunk: grey wind is cold. * * * Bridge over Blackwater at Lismore; general style of management; here too, I found what was before visible, that the English Absentee generally far surpasses the native as an owner of land; and that all *admit* the fact indeed. What "scale of worth" tho', must it be! Dingy scattered houses along a dingy waste, hungry, main-street full of idle Sundayers; turn sharp to right up a lane close past a school founded by first Earl of Cork, past corner of "Sir Walter Raleigh's house" (now a Quaker's), and in the cold, dusty dusk we dismount in a little grassy court,—court of "Youghal College" (a kind of religious foundation, nobody could well tell me what); where, better or worse, an ancient pair of domestics, received the tired travellers, light fire, get tea for them; and so taking leave of Currey, who is to start at 2 a. m. and do the impossible again to be at his grand jury work

in Waterford, I mount to a big dim old room, the inner of two, and tumble into bed. * * *

Monday, 16th July.—After two sleeps, awoke to a bright day, in my welcome seclusion here at the back of Youghal dingy town. Strange place, considerable park, with old rugged trees, with high old walls, with rough grass and a kind of walk kept gravelly thro' and round it; leans up against the rapidly rising ground; roofs of the town and some quiet clean houses in the back street visible from the higher hillward part of the walk.—What can be the use of such a place? very mysterious; to me in my present humour very useful; most still forenoon passed wholly there. Servant, gruff but good, is an old English soldier, wife an old Youghal woman, who is much taken up with "Methodist Missions" in Ireland, for one thing; will have me to subscribe; I won't. Dim, half dilapidated, old house; my big room, big windows that shove up and give egress into the Park: still time, writing there; but about noon, (coach is to go about one or two); walk westward nearly the whole length of Ya'al; dingy semi-savage population; rough, fierce-faced, ragged, in the market place (or Quay) where the wares are of small mercantile value; ballad singer there. "Clock-gate" before that; and washed old humble citizen guides me into this square space of quay, or market, (if it were anything but some huckstering ragfair, with a few potatoes &c. in it); Post Office "no stamps;" home by the upper or northward range of lane, high on the hill edge, looking quite down upon the main street, to which again I descend. Wooden bridge, seen hastily yesternight, I hardly recollect at all. * * *

Killeigh; poor village, brook at this end, remember little of it; poor woman, who had got up beside me, takes to crying; her son, driving her *last* time she was here, is now buried in that churchyard "God's will"—she gradually quieted herself; "bad times for poor &c." yes, but could or would tell me almost nothing about the details. Weltering wet black bogs *before* Killeigh; and sea getting distant, with crops, and scrogs and bogs between us and it. Little memorable to Castle Martyr: broad trim little street of that, Ld. Shannon's gate and park at west end. Ragged boys, brown as berries; tattered people everywhere in quantity, but I had now grown used to them. "Middleton" I really thought they called it. "*Milltown*"—remember its long broad street of good houses, its stream or two streams at west extremity, with big mills; (distillery I think) in the distance, now a subsidiary poorhouse, a frequent phenomenon in these parts. Coun-

try not quite bare, otherwise scraggy, bushy, weedy, dusty, full enough of ragged people, not now memorable to me at all. Cork harbour, a long irregular Firth, *indenting* the land in all manner of irregularities for 10 or 12 miles, now begins to shew some of lagoons and muddy creeks, *not* beautiful here; various castles &c. are on the left; on the left lies or lay Cloyne, (Bp Berkley's), but "we don't pass thro' it, sir." Evening is getting cloudy, coldish, windy; carts met, some air of *real trade*; alas! if you look, it is mostly or all meal-sacks, Indian corn sacks,—poorhouse trade. I didn't in all Ireland meet one big-piled carrier's cart, not to speak of carrier's waggon, such as we see here! "Barry's Court," somebody names for me on the left; square old pile Raleigh, in Desmond's war of 1580; remember "Foaty" also, which looked rather like a sentry box in the wide flat, now opening *grey* in the windy evening, with the muddy meanders of Cork harbour labyrinthically indenting it. Cold, dusty, windy: steep height now on our left, clothed with luxuriant wood, nice citizen's boxes nestled there, miles of it (perhaps near 3); looks very well; and Cork itself, white-housed, through the twilight vapour, is now visible ahead. Long street of suburb; goodish houses; at last Cork itself. Lea bridge sharp to left; fine wide crowded street like a small *Cork* "Pootland Place," with fine shops &c.; to left again a little of this. "Wo-hp!" porter of Imperial Hotel is waiting—*has* heard of Duffy. I get letters, washing, mutton chop for dinner; young Englishman—middies as I gradually discover; are rather loudly dining near me.—Then gradually dining in the wholesomest way attainable, I read my letters (Duffy, out to dinner, not yet visible); and endeavour to enjoy, or failing that to endure. Walk on the streets with cigar; loud song of the Blind Beggar on Lea bridge; gave him a penny and stoppt silently to listen, "Oah Kehristins may the Lard protec ye from the dangers av the night, and guide yer sowls &c. &c. and may ye never know what it is forever dark, and have no eyes—and for Kehrist's sake, lave a penny for the blind that can never see again!" All this, or something similar in expression, he *chaunted* in a loud deep voice, strange enough to hear for the first time in the streaming thoroughfare in the dusk. Rain slightly beginning now, I return; take to writing: near 11 o'clock,—announces himself "Father O'Shea!" (who I thought had been *dead*); to my astonishment enter a little grayhaired, intelligent-and-bred looking man, with much gesticulation, boundless loyal welcome, *red* with dinner and some wine, engages that we are to meet to-morrow,—and again with ex-

plosion of welcomes, goes his way. This Father O'Shea, some 15 years ago, had been, with Emerson of America, one of the *two* sons of Adam who encouraged poor bookseller Fraser, and didn't discourage him, to go on with "*Teufelsdröckh*." I had often remembered him since; had not long before re-enquired his name, but understood somehow that he was dead;—and now! To bed, after brief good night to Duffy; and, for rattling of window (masses of pamphlets will not still it) cannot, till near 5 a.m., get to sleep at all.

Tuesday, 17th July.—"Seven o'clock, sir!"—Seven o'clock, sir!" this I wove for some time into my deep dreams; then had to awake to see a little bottle-brush head and "boots" with thimble full of "warm water," who had marked me *wrong* "on his slate"—accursed "boots!"—Dismiss him, almost like to assassinate him; but no sleep more; a miserable day for health, that; especially unfit to *walk* (ah me!) round by the Post Office (I suppose), by streets and quays after breakfast. Shallow stream (tide out) with high walls, somewhere off the main river, Statue of George II close by; market-place, rather squalid, miscellaneous; home and write till 2, when Duffy with "Denny Lane" enters. Happily I had *missed* all the forenoon's sights (schools, monasteries, &c.); am to go down the river by steam, and dine with Denny and a company, to sleep too—but that was altered at last—fine brown Irish figure, Denny; distiller—ex-repealer; frank, hearty, honest air; like Alfred Tennyson a little; goes and I write again till near four. Steamer then, and *our* company gathering amid the crowd on deck;—obliged to talk to this and the other: much rather *sit* and *look*. Beautiful white city, Cork, at the foot of its steep woody slope; at the head of its *indentive* narrow Frith, cutting its way thro' the hollows, making hills into *Islands*, for 10 miles up or more.

Dinner [at Denny's cottage on return] hospitable, somewhat hugger-mugger; much too crowded, old mother of Dr. Lane, sat by me, next her, Father O'Something (*Sullivan*, I discover in my letters). Shea's *Curate*, a Cork *wit*, as the punch soon shewed him; opposite me was Father Shea, didactic, loud spoken, courteous, good every way—a true gentl. priest in the Irish style, my *only* good specimen of that. One Barry, editor of songs, of newspapers, next him; Duffy and two, nay 3 or 4 more, to left of me at the other end. O'Sullivan, in yellow wig, man of fifty, with *brick*-complexion, with inextinguishable good humour, caught at all straws to hang some light wit on them; really did produce much shallow

laughter (poor soul) from me as from others; merry all; worth seeing for once, this scene of "Irish life." Out after sunset, take a boat, to Fort Carlisle, land at Cove; beautifullest still twilight: walk about Cove, which seems much larger than I expected. Duffy recognized, "Mr. Duffy there!" said some lad or girl, in the back or *upper* narrow Street. "Black thorn stick!" Phantasm in straw hat and rags, amid a small group of inhabitants, all gone to black *shadows* at this hour, singing or acting some distraction, the burden of which was "Black thorn stick!" Some Irish modern Hercules, who helps himself divinely out of all difficulties by that. "Sure the craithurs are sick!" says he once, on some phenomenon or other turning up; then follows babblement quite unintelligible to me; but it is all cleared and cured soon as appears, by his "Black thorn stick!" Sootiest, most phantasmal piece of nonsense I ever heard;—to our boat again, Denny (ashamed of "Black thorn") dragging me off. Dark now; sea beautiful, and light still in it. Songs from two persons, editor Barry one of them; Father O'Sullivan, still witty, steering; (Father O'Shea had staid on land). "In hopes to harbour in thy arms!" was one of Barry's songs. "I-a-n ho-opes to ha-arbour in thy a-a-arms!" reiterates always some much enduring mortal of the sailing class;—and does get married, I think:—with a round of applause from us, and low joining in the burden. Round of applause done, Father O'S with a confidential business tone: mentions, "tho' joining faintly in the chorus, in the name of the Church I beg leave to protest!" this, with the tone, and yellow wig, &c. did well enough; a specimen of Father Sn. All priests almost, except Shea, surprise me by their seeming *carelessness* about religion, a matter of military drill with them, you would say. This cheery O'Sullivan, with his vulgar but real good humour was amongst the best I can remember, after the good O'Shea, who I hear labours diligently among a large poor flock; 3 or 4 curates: and though nothing of a bigot, seems truly a serious man. Home in 2 cars, O'Shea in mine; jolty, dark, late, about 2 a.m. at Imperial Hotel (when a begging *idiot* starts up to *assist* us in ringing bell); we all part: sleep with difficulty 2 hours again; not the *happiest* of men, no!

Wednesday, 18th July.—Damp morning, yet with struggling sunshine; rejected contributor of Duffy's, sits at back table while we breakfast; speaks of Ld. Limerick, of Dolly's Brae affair (quite new)—baddish fellow; forgotten all but his *voice*. Three coaches in the road; immense packing, get under way at

last, towards Killarney and Shine Lawlor. Longish row of fellows *sitting* against the walls of houses on quay at the bridge end; very ugly in their lazzarone aspect under the sunshine. Spacious but half-waste aspect of streets as we roll upwards towards the hill country out of Cork. Windy, and ever more so; country bare. Put off *hat* (owing to head wind) at first stage, and took out *cap* from my carpet bag.—Bare commonplace country,—plenty of inequalities and “natural features,” but culture, and elegance of taste in possessors, much wanting. Blarney Castle, I remember it, among its bit of wood at the foot of dingy uncultivated heights in dingy bare country; a grey square tower mainly, visible in its wood which the big waste seemed to reduce to a patch of wood. Country getting barer, wilder; *forgotten* now, all details of it. Meet criminals, in long carts escorted by police; young women many of them, a kind of gypsey beauty in some of the witches, keen glancing black eyes with long coarse streams of black hair; “To Cork for trial”—*eheu!* Saw at another point of the road, large masses of people camped on the wayside, (*other* side of Mallow I think?) “waiting for out-door relief;” squalid, squalid, not the *extremity* of raggedness seen at Kildare, however. * * *

At “Millstreet” dine or lunch; pleasant village among woods on the hill-slope, as seen from the distance; interior, one man of mendicancy, ruined by the “famine,” by the potato-failure. All towns here seem to depend for their trade on mere produce of the earth; mills, distilleries, bacon, butter,—what of “respectability with gig” could be derived from that has taken station in towns, and all is wrecked now. After lunch, street filled with beggars; people in another coach threw halfpence; the population ran at them like rabid dogs, *dogs* of both sexes, and whelps; one oldish fellow I saw *beating* a boy, to keep at least him out of the competition. Rain; “Hay-y-p!” down hill at a rapid pace, happily we get away. Duffy has taken refuge inside; and the rain now for about an hour becomes furious;—lasts in furious occasional showers, but briefer, till near the end of the journey. Desolate, bare, moory country; hanging now in clear wet; much bog, mainly bog; treeless and swept over by a harsh moist wind.

Mangarton, streak of Killarney evening smoke, and Macgillicuddy serrated ridge, front of the mountain-country, handsomely fringed too with some wood, were now getting very visible; the moor changes itself into drained cultivated land, with gentlemen’s seats, and human or *more* human farmhouses:

—decidedly rather beautiful, by contrast especially. * * * High avenues, Lord Kenmare’s; steepish descent; paved street at last, and square-built open street (town of 6,000 you would have said, 12,000 I was *told*); chaos of hungry porters, inn agents, lodging-agents,—beggars, storming round you, like ravenous dogs round carrion; this is Killarney. Swift, O swift into the car for “Roche’s,” for anybody’s; and let us off! Roche’s, I find is a mile and-a-half distant; at the lake side or near it; fine avenues all the way, and we go fast—the inn itself, a kind of general lodging house rather, did, in my experience, by no means correspond to our hope. Funeral overtaken by us; the—“Irish howl;”—totally disappointing, there was no sorrow whatever in the tone of it. A pack of idle women, mounted on the hearse as many as could, and the rest walking; were hoh-hoh-ing with a grief quite evidently hired and not worth hiring. Swift, thro’ it! Here is “Roche’s,” a long row of half-cottage looking buildings: in the middle part is the inn proper and we get admitted *taliter qualiter*. * * *

Thursday, 19th July.—Bedroom reminds me of being tied up in a sack; clean quiet little cell, however; smoke out of the window, and look at the early sun and moon.—Moon turned away from Killarney. Shine Lawlor appear at breakfast: polite, quick, well-bred-looking, intelligent little fellow, with Irish-English air, with little bead-eyes, and features and *repale* feelings, Irish altogether. We are to come after breakfast, he will “shew us the lake,” regrets to have no bed &c.—polite little man;—and we are to bring the *inn* car for ourselves and him. Poor S. L., perhaps he *had* no car of his own in these distressed times! The evident poverty of many an Irish gentleman and the struggle of his hospitality with that, was one of the most touching sights—inviting, and even commanding respectful *silence* from the great surely; Shine Lawlor’s “Castle-lough” (I think he calls it) is a beautiful little place, in thick woods, close to “Roche’s,” and looking over the very lake, —though not from this parlour where we now were. *Shea* Lawlor there too, a kinsman from Bantry; tallow-complexioned, big, erect man, with sharp-croaking Irish voice, small cock-nose, stereotype glitter of smile, and small, hard blue eyes,—explodes in talking over Duffy; ex-repaler, talks *much*, half-wisely, whole-foolishly, (I find) in that vein. “Revd. Dr. Moor, Principal of Oseot,” high heavy man in black (catholic) gaiters; Catholic Harmonious Blacksmith,—really very like Whewell. Young Shine Lawlor’s brother a *medicus* from Edinburgh; pleasant idle youth with cavendish tobacco: these are the

party; Shine, Duffy, and I, off in car for "Gap of Dunlooe," the others, all but Shea,—are to meet us in boat. Killarney workhouse; 3000 strong, the old *abominable* aspect of "human swinery"—managed as handsomely as they could. Rain has begun; Duffy turns, prefers to talk all day with Shea at Castle Lough: Shine and I alone; swift pleasant-enough colloquy; sensible, shifty man, has done his best in famine-time, with wretched tenants; still above water, thanks to "lying money" he had. Farm of his, "will you enter?" Yes. *Bare*, very bare, new cottage; built by farmer himself, who has a long lease; docks, puddles, with rubbish all round; kitchen place empty of furniture, except a stool or two, and some vestige of perhaps one table by the back-wall; sod roof visible from within; bearded, dirty, big farmer there, who stutters and is civil; worn little old wife, who is reluctant "to shew me her milk-house." How she keeps her milk? "I kape it in *keelers*!"—with a haggard glance from the corner of her old black eyes. Daughter and she conduct us nevertheless; over wet cowhouse spaces from stepping stone to stepping stone; an ancient *cowhouse*, windows walled up with mortarless stones, no cows in *it*, milk in "*keelers*" (wooden *coolers*, shallow pails), standing two rows on the floor; sod-roof visible above has once had some smear of lime-wash, transient rat has rained down clay into some of the dishes; alas, alas! They supply the Killarney workhouse with milk; have 40 cows (they say,—perhaps 40 *head*;) that is their farm industry. Fat stuttering farmer escorts us through spongy dock-field civilly to the road; and we mount again, and roll. "National School here, walk in?" A most somnolent dusty establishment: perhaps some sixteen little scholars; unshaven sleepy schoolmaster, "*has* no best class," he says;—and indeed it is all a shrine of dusty sleep, among the worst of "National Schools;" not at all without rivals and even surpassers (victors in that bad race) as I found. "Out-door relief" next; at a wretched little country shop; Shine's frank swift talk to the squalid crowd: dusty squalor, full of a noisy hum, expressing greed, suspicion, and *incarnated nonsense* of various kinds. Ragged wet hedges, weedy ditches; nasty ragged, spongy-looking flat country hereabouts;—like a *drunk* country fallen down to sleep amid the mud.

To left, up narrow hard moor-road here, hard like Craigmputtock country; beggars waiting at solitary corners, start with us, run sometimes miles,—get nothing, Lawlor doesn't mind them in the least. We are mounting fast into the stony hills; Macgillicuddy, not

always very conspicuous, lies still further to the west (I think); this route is wholly westward of the lake. One beggar ran for 2 or perhaps 3 miles: he, on the dismissal of our car, does get coats &c. to carry, and a shilling I suppose. *Ex-repale* Shine does agree with me that a Parliament,—any Parliament in these times, is a mere talking-machine; that "Parliament on College-green," even if it could be had, is moonshine. Pass is getting straiter, high rocky brows on left hand. We dismiss our car, take to walking; mount now thro' the "Gap" itself; high rugged black cliffs, of slaty or *flag* structure lower overhead on both hands; with tumbled masses of the same below, and bright fat grass bordering them,—"*grass which kills cattle*" (when they get too *much* of it suddenly, I suppose!) Melancholy small farm (with clean straw-roof however), where the gap *opens* into a kind of craggy wide-pit, and we are now at the summit of the place; wild grey damp sky, and showers still scudding about. In front of the farmhouse is "Dunloe *hôtél*," so Shine laughingly names it. Squalid, dark, empty cottage, where with a dirty table and bench, without fire visible, food, or industry of any kind, sit two women to press upon you the "*dainty of the country*"—"whisky and goat's-milk." Taste it; a greasy abomination; gave the wretches sixpence; and get away. Poor wretches, after all; but human *pity* dies away into stony misery and disgust in the excess of such scenes. One of these women is the farmer's sister; "he won't let me enter *his* house," she said or hinted; the other *mistress* of the vendible dainty, I learned afterwards, (at least if Irish carman's observation could teach) was "Kate Carney's" niece; "Carney" she too, but not of the song,—tho', if lifted from her squalor, she might be a handsome woman. * * *

Lake clear, blue,—almost black; slaty precipitous islets rise frequent; rocky dark hills, somewhat fringed with native *arbutus* (very frequent all about Killarney), mount skyward on every hand. Well enough;—but don't bother me with *audibly* admiring it: Oh! if you but wouldn't! Come once or twice aground with our boat, in muddy creeks seeking the picturesque too eagerly; otherwise a pleasant sail. "Ornamental cottages," deep shrouded in *arbutus* wood, with clearest cascades, and a depth of *silence* very inviting, abound on the shores of these lakes; but *something* of dilapidation, beggary, human fatuity in one or other form, is painfully visible in nearly all. * * * Stag-hunts have been; *yonder* (west side of the lake); most silent, solitary, with a wild beauty looking thro' the squalor of one's thoughts; that is the impression of the scene; moist, soft weather too harmonized. Boat-

man sings us, by order, "repale songs;" deep bass voice, and business tone, songs obscurely *emblematic*, clearly of most ignorant character; a fine Roman-nosed steel-complexioned fellow, the singer; who also awoke *echoes*, worth not much. I remember a most rapid *strait*, between black rocks, sometimes reckoned dangerous; item, an old black bridge (beggar-girls at it, "we been waiting for ye all day!"). Boatman steered—(song—boatman chiefly) and *shot* the lightened boat, we passing on foot, along the rapid rock-walled channel here. Dangerous this truly; especially in floods; gentleman (young Lawlor's acquaintance) drowned there, in spite of best swimming skill. We waited, in rain, below some other bridge (I remember till boat came up;) passed also below a wooden bridge (woody, wild, but pleasant country all this); and now we are in the *lower* lake, bigger but not so interesting. Land at some ornamental cottage called —, where the people being understood to be at dinner we do not call; go on to "Lady Kenmare's cottage;" and return. Beautiful little cottage, "which her Ladyship never inhabits;" in the sweetest little woody bay or cove; * * * Big lake is rather windy, even rough; some religious island with edifice (name forgotten) is visible in it to left or *north-west*. Mucross House (Herbert's) indistinctly, Mucross Abbey hardly at all, with woods and those bare Mangartons and mountains in front; pale brassy sky glitters cold on us, boat pitches, wind blows; —one is hungry, and glad enough to reach Castle-Lough. * * * Dinner was noisy-Irish, not unpleasant, not anywhere unpolite; nor was intelligence or candour (partly got up for me it might be, yet I think was not) amid the roughish but genial mirth a quite missing element. Shea talked largely, wanted *me* to open on O'Connel that he might hear him well denounced; but I wouldn't; Shine talked, workhouse labour &c., and Mr. Pooble O'Keefe talked; bad tea in fireless parlour; finally we emerge in pitch dark night, with escort thro' the woods; and bid our kind Irish entertainers a kind adieu. Good be with them, good struggling people; that is my hearty feeling for them now.

Friday, 20th July.—* * * We are for Limerick road now; uncertain rather how. One Crosbie of Tralee has written inviting me, to whom I have written appointing notice from him *hither*; none has yet come. Public-car starts from Killarney at 11. Off we; meet postboy, no letter *yet*,—Crosbie of Tralee, is off then. Drive on to Shea Lawlor's in Killarney main-street, and consult about "King William's Town," and the possibilities of that. Quite possible;—start on car for that; will

make "Castle-Island" after it to night, and wait there for Limerick car or coach to-morrow. Jolt, jolt, (bad car); away, away! * * *

Road ("made by Queen Elizabeth") runs straight as an arrow, over hill, over hollow; steep and rough, and unspeakably dreary; bare, *blue*, bog without limit, ragged people in small force working languidly at their scantlings or peats, no other work at all; look hungry in their rags; hopeless, air as of creatures sunk beyond hope, look into one of their huts under pretence of asking for a draught of water; dark, narrow, *two* women nursing, other young women on foot as if for work; but it is narrow, dark, as if the people and their life were covered under a tub, or "tied in a sack"; all things smeared over too with a liquid *green*;—the cow (I find) has her habitation here withall. No water; the poor young woman produces butter-milk; in real pity I give her a shilling. Duffy had done the like in the adjoining cottage. Ditto, ditto in Charcuty, with the addition then a man lay in a fever there. These were the wretchedest population I saw in Ireland. "Live, sir? The Lord knows; what we can beg, and rob," (rob means *scrape up*; I suppose?); Lord Kinmare's people, he never looks after them, "hates," worthless bog and I know not what. Bog all reclaimable, lime everywhere in it; swift exit to Lord Kinmare and the leases, or whatever the accursed *incubus* is! The people, as I surmise, do *live* by "butter-milk;" wretched produce of a lean cow here and there, still alive upon the bog; pound or two of butter (precious stuff it must be in these huts!) Indian-meal, and there is sour milk over and above.

Good road at last, broader one, and down swiftly by it to "King William's Town," where are slated cottages, hedges, and little fields, with crops and even cabbages in them; a blessed change indeed. Sad dilapidated inn,—potatoe-failure, and farther the poor landlady's broken heart (we find), "hardly in her mind since loss of her son." Here, at police barrack produce Mc Gregor's circular; and all is made handy for us; and before we have dinner done, "Mr. Boyne," a jolly effectual-looking man of fifty, waits civilly upon us, has his car on the road, and will "shew us everything."

Poole O'Keefe's country was confiscated in the rebellion of 1641; this huge tract of moor (part or whole of his territory) was, clandestinely at length let on many-lived leases to the O'Keefe representative (i. e. nominally to some other, in reality to him), of which the present specimen ("slightly squinting") had dined with us last night. Some 18 years ago, the many-lived lease

ran out; rent had been some £45; question is, Let it again? Griffith of Irish Board of Works, backed by Lords Besborough and Monteagle (Spring Rice) then in office, got an answer, "No, try to improve it," and a grant, or successive grants, which have now run to £24,000 under the guidance of this Boyne, a Meath man, Land-surveyor's son, who had already "cut the Gatty mountains in four" by roads thro' them and was known by Griffith for an excellent "colonel of spademen" which he is. Boyne has now been 17 years there: a most solid, eupeptic, energetic, useful-looking man; whose *mark* stands indelible on this bog. "Couldn't stand without sinking here, when I first came"—excellent rye and oats growing now, hedges of thorn, bright copious green of grass, 100 head of "specimen cattle" (among others), clean cottage-farms; a country beautiful to eye and mind as we drove thro' it in the bright fresh evening. Boyne has a farm of (I think?) three hundred acres, or was it £150 a year; first-rate farm, first-rate dairy, &c., as we ourselves saw. His rent goes into the Government Grants; for he is yearly taking in new moor, only some 750 acres out of (5 or 6000?) being yet under plough and scythe. His cottagers, perhaps 30 or 40 with *farms*, had none of them quarreled with him, tho' all had been *shifted* from their lots; they had brimless hats, even of dirty tanned skin, and had incidental tatters on their coarse clothing; but they looked healthy, hearty, swift and brisk, and even joyful, as we saw them at their labours,—decidedly the pleasantest aspect, or the only "pleasant" one, I can remember in Ireland. Brimless man, for example, issuing from the lime-kiln, dust wholly, but a pair of inextinguishably brisk healthy-eager eyes,—to solicit, with impetuous rapid eloquence, "some little of the ould turf to mix with the new," that it might burn better: granted! Other man near Boyne's potatoe-field; cottagers all, of still *better* expression. Boyne's own farm; his dairy the *best* (or equal practically to the best) I ever saw. Excellent "*rye*," "walk through it, gentn., you wont hurt it!" as high as one's chin, thick, clean and regular, tho' the soil below seemed mere pieces of *peat*, which would have burnt still. Tea with Mrs. Boyne and him; excellent Dandie-Dinmont parlour personal and entertainment altogether. But the expense, £24,000? B. admitted that it was immense; urged, however, what was true, that most of it had been laid out on *roads*, "being road to Kantuck," road to &c., &c., which was raising the value of *other* properties, of all properties; and that what he had laid out on this

specially was *partly* returned to him—almost *wholly*, as we computed from his *data*; though B. himself was candid enough to admit that if this moor were *his*, he would not take quite that method of reclaiming it, he would "get good farmers and let it with improving leases."—"But if you had 2000 labourers already fed and clothed to your hand (such as sit in the Killarney workhouse idle at this moment)?"—Boyne's eyes sparkled; but his practical solid soul refused to admit so transcendent a speculation, and he did not dwell on that outlook. Moor enough nevertheless, worth little to any creature, *is* lying hereabouts for all the paupers in Cork county this half century to come; Lord Kenmare or whatever lord or mortal obstructs that result, ought to be informed that he musn't!—positively! Anecdote of the late "Land Improvement Society." Bull about Limerick: "What price?" asked B. "£20"—"Pooh! will give you £8"—"Secy of Land Impt. Society gave us £30 for the very fellow of it." "If you like to send it down from Limerick to King William's Town within a week, I will give you £8";—and it was *sent*. Land Improvement Society is now, naturally, *extinct* in bankruptcy. Remarkable Triptolemus, this Boyne.—Heavy broad man, fat big cheeks, gray beard well shaven; clean enough; smallish but honest kindly intelligent hazel-eyes and nice brows to his big round head, which he flings slightly back in speaking and rather droops his eyelids; Irish accent, copious *bubbling* speech in querulous-genial tone, wholly *narrative* in character. Simplicity, energy, eupepticity; a right healthy thick-sided Irish soul; would one knew of 1000 such. Catholic, I should think, but we didn't ask. Wife, a timidly-polite, yet sufficiently energetic-looking, rather beautiful woman of the due age; was recorded (by B. with oblique politeness) as admiring Duffy; had excellent *scones*, tea, cream and butter;—which ended we, really with emotion and admiration, quitted Boyne-dom. Police-serjt was there, who brought up our car for us; many thanks (*money*, said Duffy, will insult): and so off,—not now to Castle-Island and the Limerick coach or car; but to Kantuck (of like distance, and of more certain *inn*), by which from Mallow the Limerick *rail* would receive us. * * *

Saturday, 21 July * * * I have decided now to go by Lady Beecher's and Ballygiblin; Duffy, in route to Mallow, can set me down at their gate; and we are to rendezvous in Limerick, at the chief hotel. Newspaper vendors, curious-impertinents;—after various delays we do depart. Pleasant country, hill and hollow and no longer moory; culture toler-

able in general. Horse's saddle needs *repair*; beggar-woman; clean cap, sincere-looking creature.—Duffy's shilling. "Lady Beecher's schoolhouse," then Ballygiblin gate; soon after noon I think; and there I am left; walking pensive, in a grey genial day, thro' a fine park, half a mile, towards this unknown mansion. Two letters I had, one from Gn. Sterling to Lady, one from Lord Monteagle to Sir W., and these, for I think I was hardly known otherwise, except by alarming rumour (heterodoxy, &c.) procured me handsome admittance.

Lady B. a tall stately leanish figure of 55; of strict, hard aspect, high-cheek bones, and small blue eyes,—expression of vigour, energy, honesty; tone of voice, and of talk, dry, stunted-practical. Luncheon with two of her youths just setting off for Killarney, a do. that was to stay, and her two young ladies—handsome, fair-skinned, fine-featured people all; quite English in type and ways. House and grounds beautiful; school, cottages, peasants, all in perfect order;—walk with Lady B.,—and then with Sir W's brother ("Wrixon" is the original name, "Beecher" was adopted for *heritable* reasons). All things trim and nice, without doors and within; as in the best English or Scotch houses of the kind. A strict religionist, Lady B., really wholesome and worthy, easy enough to talk with, nor quite unproductive; her *boudoir* by the side of the hall, father and mother's portraits in it; and all manner of lady-elegancies; people meeting her "mylady-ing, the boy is better-ing:" everything has been subdued to herself, I find, and carries the image of her own strict methodic vigorous character, and perfect Church of Englandism, which I find she zealously adopts as the exponent of this universe, and struggles continually to make serve her as a complete rule of life. Very well indeed.—Sir W. much lamed now (by some fall from his horse) appears towards dinner; fine mildly dignified old gentleman, reminds me of Johnstone of Grange. Evening pleasant enough; one young lady plays me innumerable Jacobite tunes; rest of the party playing whist; Lady B. herself ended by singing me "Bonnie Prince Charlie." To sleep, in excellent room and bed; a place where one *can* sleep,—infinitely grateful to me.

Sunday, 22 July.—Dim breezy morning. Train doesn't run to Limerick to-day; must stay, am as well pleased!—Decide to give Duffy leave to go himself,—and do so in the afternoon; one of the various notes I wrote there. To church in the meanwhile; walk with Mr. Wrixon, Sir W. B's brother, a farmer on his own account, and general manager, as I can gather, at Ballygiblin; Lady and Sir are

in the big old carriage by some circuitous road. Sudden change, in passing a hedge as we walk along the highway: what is this? Lord Limerick's estate; ground untilled some of it, thistles, docks, dilapidated cottages, ragged men; two years troublous insolvency, and now they are *evicted*: "Here is one of them; I will just set him going for you; turn the spigot, and he will run all day!" Middle-aged farmer-peasant, accordingly, takes off his hat, salutes low, walks hat in hand, wind blowing his long thick hair, black with a streak of gray. His woes, his bad usages. I distinguish little but at all turns "tham vago-bonds!" he has been fellow sub-lessee of lands along with various other "vagabonds;" he paid always to the nail, they not; all are now turned out into the road together, the innocent along with the guilty; kind neighbor has taken *him* in, with wife and children, for the time. A reasonably good kind of man, to appearance, and in the truest perplexity, with laws of the truest injustice. "And have you any notion what you are to do now?" "Not a ha'p'orth, yer honour!" Mr. W. can give no work, wishes he could; the poor man will write to Mr. Somebody (the agent) at Cork, begging passage to America, begging something or other. W. will ratify his respectability;—and so we make away, and leave him to clap on his hat again. Sad contrast continues; ugly cottages, unploughed lands, all gone to savagery;—poor-house alone like to reap much produce from this kind of culture. Lord Limerick's method, and his father's before him. Loud and very just complaint that a Beecher should be tied to a Limerick in this way; not left to swim the gulph of pauperism separately, but obliged to do it together! A universal complaint; quite tragic to see the justice of, everywhere;—Larcom and his men are doing what they can to help it; which practically is but little hitherto.

Church service; clean congregation of 40; redhaired young Irish parson, who is very evidently "performing" the service. Decency everywhere; poor little decent Church with the tombs round it, and a tree or two shading it, (on the top of a high rough-green bank with a brook at the bottom): service here, according to the natural English method, "decently performed." I felt how decent English Protestants, or the sons of such, might with zealous affection like to assemble here once a week, and remind themselves of English purities and decencies and gospel ordinances, in the midst of a black howling Babel of superstitious savagery—like Hebrews sitting by the streams of Babel:—but I feel more clearly than ever how *impossible* it was

that an extraneous son of Adam, first seized by the terrible conviction that he had a soul to be saved or damned, that he must rede the riddle of this universe or go to perdition everlasting, could for a moment think of taking this respectable "performance" as the solution of the mystery for him! Oh, Heaven, never in this world! Weep ye by the stream of Babel, decent clean English-Irish; weep for there is cause, till you can do something *better* than weep; but expect no Babylonian or any other mortal to concern himself with that affair of yours! And on the whole I would recommend you rather to give up "weeping,"—to take to working out your meaning rather than weeping it. No sadder truth presses itself upon one than the necessity there will soon be, and the call there everywhere already is, to *quit* these old rubrics and give up these empty performances altogether. All "religions" that I fell in with in Ireland seemed to me too irreligious; really, in sad truth, doing mischief to the people in place of good!—Our ladies joined zealously in the responses, the gentlemen too kept up a form of following, but were passive rather. Home in the carriage, good "moral talk" with Lady B. whose hard eyes have a good deal softened towards me. Note-writing,—then I think an hour of sleep (the afternoon proved showery, with high breezes); at half past six to dinner: * * * What the latter part of our evening was I hardly recollect at all: autobiography came on the carpet; I spoke with Lady B. now quite softened to me, and her fears hushed, about writing down *her* life; dry feeble laugh of gratification in reply, and talk enough, (though in quite general terms) about her life as an actress. The big picture of Juliet (of which I remembered engravings from my boyhood) hung conspicuous in the drawing-room. * * *

Monday, 23 July.—Some difficulty about a car for me to railway at 2. Sir W. and brother at length take me in their carriage; 8 miles, not unattended with rain-showers. Commonplace green country, with weedy fields, ragged hedges, many brooks and boggy places; here and there a big mill,—the only kind of efficient manufactory one sees in Ireland, that of corn into meal. The meal too is *bad*, not well made generally but quite ill; the mill however is *large* enough;—there is surely a potentiality of good meal! To the station just in time; amid fierce scuds of wet, kind and polite farewell; and the steamhorse snorts away for Limerick; * * * Symptoms of Limerick at last, in the blessed showery afternoon.

Long low street, paralled to our rail; exotic in aspect, *Limk.* plebs live there.—

Station, strait confused; amid rain;—and poor Duffy stands there, with sad loving smile, a glad sight to me after all. * * * Richd. Bourke has at once followed me into my bedroom, an old London acquaintance busy here in Poor-law; am to join him at Lisnagry to-morrow for dinner. * * *

Wet chief street of Limerick, glimpse of harbour, with poor turf-craft, mainly thro' an opening on the other side. Sickly, weary; Duffy reads *choice* Irish ballads to me,—unmusical enough. Priest O'Brien, he that roused the mob against Mitchell last year; a brandy-faced, pock-marked, very ugly man, of Irish physiognomy, comes in, with wild-eyed, still more Irish younger priest, and some third party of the editorial sort whom I do not recollect at all—Tea with these; and copious not pleasant talk. * * *

Tuesday, 24 July.—* * * Have walked about Limerick what I could; broad, level, strong new bridge, *better* kind of ships lying below it; Government Grants, and works, hear enough about there in reference to this Shannon concern! River broad, deep I suppose, drab-colored, by no means over-beautiful. Back street, on hill top, parallel to main one; here all the *natives* seem to congregate. Ragged turf-burning, turf-dealing long narrow street.—*Irish name* of it forgotten. * * * Adieu to Limerick by a broad open road * * * Lisnagry, "Blind farmer" (only docks and nettles, pay no rents); one Browne's, who *will* turn them away now: "no fear of being shot" —*was* shot at; got policeman, humour fallen now and less fear. Very ugly this particular spot. How a man "prints his image" here on the face of the earth; and you have beauty alternating with sordid disordered ugliness, abrupt as squares in a chess-board! So, all over Ireland. Sir Richard, nor any Bourke, not here, polite young Englishman visitor, in dish hat, steps out to do the honours; at length young Bourke himself, Old Bourke, two ladies (Mrs. and Miss,—Scotch one of them, immemorable both); and the evening, in small polite parlour and dining room, passes tolerably enough. Card from Engineer de Vere. Yes; no matter now. Settle to abide *here* over the morrow, and if I *can*, sleep, or at least lie horizontal all day; next day with Bourke to Gort, and thence Galway [to meet Duffy].

Wednesday, 25 July.—Sir Richd. Bourke, a fine old soldier, once Govr. of New South Wales, man of 75 or 80; rises at 6, but is not visible, has his own hours &c. Something still military, mildly arbitrary, in his whole household-government (I find), and ways of procedure. Interesting kind of old Irish-British figure. Lean, clean face hacked with sabre scars and bullet scars; inextinguishably

lively, grey bead-eyes, head snow white; low-voiced, steady, methodic and practical intelligence, looks thro' his existence here. Bought this place on his return, 30 years ago; a black bare bog then; beautifully improved now, shaded with good wood, neat little house and offices, neat walks, sunk-fences, drains and flourishing fields; again the "stamp of a man's image." Dispensary, chapel near the gate,—already bare and unbeautiful there; the "image" of the country and people, there, not Sir Rs. image. I smoke, and lounge about the grounds, all morning, having breakfasted with "Master Richard" who is off for Limerick for the day. Welcome enough solitude. The two ladies kind and polite, do. the young Englishman:—solitude is preferable.

In the afternoon, Sir Rd, I beside him on the box, drives us. Lord Clare's place, the chief object;—large park, haymaking; big block of a house; gardens very greatly taken care of,—women washing the greenhouse, (Lordship just *expected*); quincunques, foreign books, whirligigs; thought of his Lordship what he *was*, and felt all this to be a kind of painful *mockery* for a soul so circumstanced. First Earl Clare (father) a Fitzgibbon, lawyer, Chancellor did the "union;" a sorry jobber (I supposed); son of a do., some squireen of trading talent; and now it has come to this, as the finale!—Old soldier as gatekeeper; Sir

R. and he salute, as old friends. To O'Brien's bridge (by the low road,—woody with occasional glimpses of the river); village, white; lower end of it pretty, in the sunshine; upper part of it squalid, *deserted* mostly: relief-work road,—*half* breadth cut away, and so left: duckwood ditches, drowned bog, inexpressibly ugly for most part, some cleared improved spot, abruptly alternating with the drowned squalor which produces only bad brown stacks of peat. Sir Rd. in mild good-humour trots gently along. Two drunk blockheads, stagger into a cross road to be alone; are seen *kissing* one another as we pass,—just Heaven, what a kiss, with the drowned bog, and gaping full ditches on each hand! Long meagre village, hungry single street "Castle Connell"? Sir Richard's man has been at a fair with sheep ("Six-mile-bridge?"), is met or overtaken here: "prices so and so, rather bad."—Home; wait for "master;" dinner and evening have much sunk with me into the vague, and are not much worth recalling. Talk from sir Richard about wonderful viaducts, canals, and industrial joint-stock movements, seen and admired by himself, done during Louis Philippe's time. Good for something, then, that royal Ikey-Solomon's? Most things are good for *something*:—out of a slain hero you will at least, if you manage his remains at all, get a few cartloads more of turnip-fodder * * *

(To be continued.)

Thomas Carlyle.

LONGFELLOW.

O GENTLE minstrel! songs of thine can start
In eyes of stony calm the boon of tears;
The thoughts that swell the current of the years
Vex not the placid sweetness of thine art;
But whoso goeth from the fray apart
To weep away his wounds, while in his ears
Still rankle cruel taunts and sullen sneers,
Will bless thee—healer of the bruised heart!

The clamorous day heeds not thy plaintive notes,
But when the night with wand of darkness stills
The strife of bustling hands and blatant throats,
And twilight's last gray lingers on the hills,
Then through my reverie thy music floats,
As through the dusk the song of whip-poor-wills.

Wilbur Larremore.

A MODERN INSTANCE.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "The Undiscovered Country," etc.

XIX.

Now that Bartley had got his basis, and had no favors to ask of any one, he was curious to see his friend Halleck again; but when, in the course of the "Solid Men Series," he went to interview the "Nestor of the Leather Interest," as he meant to call the elder Halleck, he resolved to let him make all the advances. On a legitimate business errand it should not matter to him whether Mr. Halleck welcomed him or not. The old man did not wait for Bartley to explain why he came; he was so simply glad to see him that Bartley felt a little ashamed to confess that he had been eight months in Boston without making himself known. He answered all the personal questions with which Mr. Halleck plied him; and in his turn he inquired after his college friend.

"Ben is in Europe," said his father. "He has been there all summer; but we expect him home about the middle of September. He's been a good while settling down," continued the old man, with an unconscious sigh. "He talked of the law at first, and then he went into business with me; but he didn't seem to find his calling in it; and now he's taken up the law again. He's been in the law school at Cambridge, and he's going back there for a year or two longer. I thought you used to talk of the law yourself when you were with us, Mr. Hubbard."

"Yes, I did," Bartley assented. "And I haven't given up the notion yet. I've read a good deal of law already; but when I came up to Boston, I had to go into newspaper work till I could see my way out of the woods."

"Well," said Mr. Halleck, "that's right. And you say you like the arrangement you've made with Mr. Witherby?"

"It's ideal—for me," answered Bartley.

"Well, that's good," said the old man. "And you've come to interview me. Well, that's all right. I'm not much used to being in print, but I shall be glad to tell you all I know about leather."

"You may depend upon my not asking anything that will be disagreeable to you, Mr. Halleck," said Bartley, touched by the

old man's trusting friendliness. When his inquisition ended, he slipped his note-book back into his pocket, and said with a smile:

"We usually say something about the victim's private residence, but I guess I'll spare you that, Mr. Halleck."

"Why, we live in the old place, and I don't suppose there is much to say. We are plain people, and we don't like to change. When I built there, thirty years ago, Rumford street was one of the most desirable streets in Boston. There was no Back Bay, then, you know, and we thought we were doing something very fashionable. But fashion has drifted away, and left us high and dry enough on Rumford street; though we don't mind it. We keep the old house and the old garden pretty much as you saw them. You can say whatever you think best. There's a good deal of talk about the intrusiveness of the newspapers; all I know is that they've never intruded upon me. We shall not be afraid that you will abuse our house, Mr. Hubbard, because we expect you to come there again. When shall it be? Mrs. Halleck and I have been at home all summer; we find it the most comfortable place; and we shall be very glad if you'll drop in any evening and take tea with us. We keep the old hours; we've never taken kindly to the late dinners. The girls are off at the mountains, and you'd see nobody but Mrs. Halleck. Come this evening!" cried the old man, with mounting cordiality.

His warmth, as he put his hand on Bartley's shoulder, made the young man blush again for the reserve with which he had been treating his own affairs. He stammered out, hoping that the other would see the relevancy of the statement:

"Why, the fact is, Mr. Halleck, I—I'm married."

"Married!" said Mr. Halleck. "Why didn't you tell me before? Of course we want Mrs. Hubbard, too. Where are you living? We won't stand upon ceremony among old friends. Mrs. Halleck will come with the carriage and fetch Mrs. Hubbard, and your wife must take that for a call. Why, you don't know how glad we shall be to have you both! I wish Ben was married. You'll come?"

"Of course we will," said Bartley. "But you mustn't let Mrs. Halleck send for us; we can walk perfectly well."

"You can walk if you want, but Mrs. Hubbard shall ride," said the old man.

When Bartley reported this to Marcia,

"Bartley!" she cried. "In her carriage? I'm afraid!"

"Nonsense! She'll be a great deal more afraid than you are. She's the bashfullest old lady you ever saw. All that I hope is that you won't overpower her."

"Bartley, hush! Shall I wear my silk, or —"

"Oh, wear the silk, by all means. Crush them at a blow!"

Rumford street is one of those old-fashioned thoroughfares at the west end of Boston, which are now almost wholly abandoned to boarding-houses of the poorer class. Yet they are charming streets, quiet, clean, and respectable, and worthy still to be the homes, as they once were, of solid citizens. The red brick houses, with their swell fronts, looking in perspective like a succession of round towers, are reached by broad granite steps, and their doors are deeply sunken within the wagon-roofs of white-painted Roman arches. Over the door there is sometimes the bow of a fine transom, and the parlor windows on the first floor of the swell front have the same azure gleam as those of the beautiful old houses which front the Common on Beacon street.

When her husband bought his lot there, Mrs. Halleck could hardly believe that a house on Rumford street was not too fine for her. They had come to the city simple and good young village people, and simple and good they had remained, through the advancing years which had so wonderfully—Mrs. Halleck hoped, with a trembling heart, not wickedly—prospered them. They were of faithful stock, and they had been true to their traditions in every way. One of these was constancy to the orthodox religious belief in which their young hearts had united, and which had blessed all their life; though their charity now abounded perhaps more than their faith. They still believed that for themselves there was no spiritual safety except in their church; but since their younger children had left it, they were forced tacitly to own that this might not be so in all cases. Their last endeavor for the church in Ben's case was to send him to the college where he and Bartley met; and this was such a failure on the main point, that it left them remorsefully indulgent. He had submitted, and had foregone his boyish dreams of Harvard, where all his mates were going; but the sacrifice seemed to have put

him at odds with life. The years which had proved the old people mistaken would not come back upon their recognition of their error. He returned to the associations from which they had exiled him too much estranged to resume them, and they saw, with the unavailing regrets which visit fathers and mothers in such cases, that the young know their own world better than their elders can know it, and have a right to be in it and of it, superior to any theory of their advantage which their elders can form. Ben was not the fellow to complain; in fact, after he came home from college, he was allowed to shape his life according to his own rather fitful liking. His father was glad now to content him in anything he could, it was so very little that Ben asked. If he had suffered it, perhaps his family would have spoiled him.

The Halleck girls went early in July to the Profile House, where they had spent their summers for many years; but the old people preferred to stay at home, and only left their large, comfortable house for short absences. Their ways of life had been fixed in other times, and Mrs. Halleck liked better than mountain or sea the high-walled garden that stretched back of their house to the next street. They had bought through to this street when they built, but they had never sold the lot that fronted on it. They laid it out in box-bordered beds, and there were clumps of hollyhocks, sunflowers, lilies, and phlox in different corners; grapes covered the trellised walls; there were some pear-trees that bore blossoms and sometimes ripened their fruit beside the walk. Mrs. Halleck used to work in the garden; her husband seldom descended into it, but he liked to sit on the iron-railed balcony overlooking it from the back parlor.

As for the interior of the house, it had been furnished, once for all, in the worst style of that most tasteless period of household art which prevailed from 1840 to 1870; and it would be impossible to say which was most hideous, the carpets or the chandeliers, the curtains or the chairs and sofas; crude colors, lumpish and meaningless forms, abounded in a rich and horrible discord. The old people thought it all beautiful, and those daughters who had come into the new house as little girls revered it; but Ben and his younger sister, who had been born in the house, used the right of children of their parents' declining years to laugh at it. Yet they laughed with a sort of filial tenderness.

"I suppose you know how frightful you have everything about you, Olive?" said Clara Kingsbury, one day after the Eastlake movement began, as she took a comprehensive

survey of the Halleck drawing-room through her *pince-nez*.

"Certainly," answered the youngest Miss Halleck. "It's a perfect chamber of horrors. But I like it, because everything's so exquisitely in keeping."

"Really, I feel as if I had seen it all for the first time," said Miss Kingsbury. "I don't believe I ever realized it before."

She and Olive Halleck were great friends, though Clara was fashionable and Olive was not.

"It would all have been different," Ben used to say, in whimsical sarcasm of what he had once believed, "if I had gone to Harvard. Then the fellows in my class would have come to the house with me, and we should have got into the right set naturally. Now, we're outside of everything, and it makes me mad, because we've got money enough to be inside, and there's nothing to prevent it. Of course, I'm not going to say that leather is quite as blameless as cotton, socially, but taken in the wholesale form it isn't so very malodorous; and it's quite as good as other things that are accepted."

"It's not the leather, Ben," answered Olive, "and it's not your not going to Harvard altogether, though that has something to do with it. The trouble's in me. I was at school with all those girls Clara goes with, and I could have been in that set if I'd wanted; but I didn't really want to. I saw, at a very tender age, that it was going to be more trouble than it was worth, and I just quietly kept out of it. Of course, I couldn't have gone to Papanti's without a fuss, but mother would have let me go if I had made the fuss; and I could be hand and glove with those girls now, if I tried. They come here whenever I ask them; and when I meet them on charities, I'm awfully popular. No, if I'm not fashionable, it's my own fault. But what difference does it make to you, Ben? You don't want to marry any of those girls as long as your heart's set on that unknown charmer of yours." Ben had once seen his charmer in the street of a little Down-East town, where he met her walking with some other boarding-school girls; in a freak, with his fellow-students, he had bribed the village photographer to let him have the picture of this young lady, which he had sent home to Olive, marked, "My Lost Love."

"No, I don't want to marry anybody," said Ben. "But I hate to live in a town where I'm not first chop in everything."

"Pshaw!" cried his sister, "I guess it does n't trouble you much."

"Well, I don't know that it does," he admitted.

Mrs. Halleck's black coachman drove her to Mrs. Nash's door on Canary Place, where she alighted and rang with as great perturbation as if it had been a palace, and these poor young people to whom she was going to be kind were princes. It was sufficient that they were strangers; but Marcia's anxiety, evident even to meekness like Mrs. Halleck's, restored her somewhat to her self-possession; and the thought that Bartley, in spite of his personal splendor, was a friend of Ben's, was a help, and she got home with her guests without great chasms in the conversation, though she never ceased to twist the window-tassel in her embarrassment.

Mr. Halleck came to her rescue at her own door, and let them in. He shook hands with Bartley again, and viewed Marcia with a fatherly friendliness that took away half her awe of the ugly magnificence of the interior. But still she admired that Bartley could be so much at his ease. He pointed to a stick at the foot of the hat-rack, and said, "How much that looks like Halleck!" which made the old man laugh, and clap him on the shoulder, and cry: "So it does! so it does! Recognized it, did you? Well, we shall soon have him with us again, now. Seems a long time to us since he went."

"Still limps a little?" asked Bartley.

"Yes, I guess he'll never quite get over that."

"I don't believe I should like him to," said Bartley. "He wouldn't seem natural without a cane in his hand, or hanging by the crook over his left elbow, while he stood and talked."

The old man clapped Bartley on the shoulder again, and laughed again at the image suggested.

"That's so! that's so! You're right, I guess!"

As soon as Marcia could lay off her things in the gorgeous chamber to which Mrs. Halleck had shown her, they went out to tea in the dining-room overlooking the garden.

"Seems natural, don't it?" asked the old man, as Bartley turned to one of the windows.

"Not changed a bit, except that I was here in winter, and I had n't a chance to see how pretty your garden was."

"It is pretty, is n't it?" said the old man. "Mother—Mrs. Halleck, I mean—looks after it. She keeps it about right. Here's Cyrus!" he said, as the serving-man came into the room with something from the kitchen in his hands. "You remember Cyrus, I guess, Mr. Hubbard?"

"Oh, yes!" said Bartley, and when Cyrus had set down his dish, Bartley shook hands

with the New Hampshire exemplar of freedom and equality; he was no longer so young as to wish to mark a social difference between himself and the inside man who had served Mr. Halleck with unimpaired self-respect for twenty-five years.

There was a vacant place at table, and Mr. Halleck said he hoped it would be taken by a friend of theirs. He explained that the possible guest was his lawyer, whose office Ben was going into after he left the law school; and presently Mr. Atherton came. Bartley was prepared to be introduced anew, but he was flattered and the Hallecks were pleased to find that he and Mr. Atherton were already acquainted; the latter was so friendly that Bartley was confirmed in his belief that you could not make an interview too strong, for he had celebrated Mr. Atherton among the other people present at the Indigent Surf-Bathing entertainment.

Mr. Atherton was put next to Marcia, and after a while he began to talk with her, feeling with a tacit skill for her highest note, and striking that with kindly perseverance. It was not a very high note, and it was not always a certain sound. She could not be sure that he was really interested in the simple matters he had set her to talking about, and from time to time she was afraid that Bartley did not like it; she would not have liked him to talk so long or so freely with a lady. But she found herself talking on, about boarding, and her own preference for keeping house; about Equity, and what sort of place it was, and how far from Crawford's; about Boston, and what she had seen and done there since she had come in the winter. Most of her remarks began or ended with Mr. Hubbard; many of her opinions, especially in matters of taste, were frank repetitions of what Mr. Hubbard thought; her conversation had the charm and pathos of that of the young wife who devotedly loves her husband, who lives in him and for him, tests everything by him, refers everything to him. She had a good mind, though it was as bare as it could well be of most of the things that the ladies of Mr. Atherton's world put into their minds.

Mrs. Halleck made from time to time a little murmur of satisfaction in Marcia's loyalty, and then sank back into the meek silence which she only emerged from to propose more tea to some one, or to direct Cyrus about offering this dish or that.

After they rose, she took Marcia about and showed her the house, ending with the room which Bartley had had when he visited there. They sat down in this room and had a long chat, and when they came back to the parlor they found Mr. Atherton already gone. Marcia

inferred the early habits of the household from the departure of this older friend, but Bartley was in no hurry; he was enjoying himself, and he could not see that Mr. Halleck seemed at all sleepy.

Mrs. Halleck wished to send them home in her carriage, but they would not hear of this; they would far rather walk, and when they had been followed to the door, and bidden to mind the steps as they went down, the wide open night did not seem too large for their content in themselves and each other.

"Did you have a nice time?" asked Bartley, though he knew he need not.

"The best time I ever had in the world!" cried Marcia.

They discussed the whole affair; the two old people; Mr. Atherton, and how pleasant he was; the house and its splendors, which they did not know were hideous.

"Bartley," said Marcia at last, "I told Mrs. Halleck."

"Did you?" he returned, in trepidation; but after a while he laughed. "Well, all right, if you wanted to."

"Yes, I did; and you can't think how kind she was. She says we must have a house of our own somewhere, and she's going round with me in her carriage to help me to find one."

"Well," said Bartley, and he fetched the sort of sigh, half of pride, half of dismay.

"Yes, I long to go to housekeeping. We can afford it now. She says we can get a cheap little house, or half a house, up at the South End, and it wont cost us any more than to board, hardly; and that's what I think, too."

"Go ahead, if you can find the house. I don't object to my own fireside. And I suppose we must."

"Yes, we must. Aint you glad of it?"

They were in the shadow of a tall house, and he dropped his face toward the face she lifted to his, and gave her a silent kiss that made her heart leap toward him.

xx.

WITH the other news that Halleck's mother gave him on his return, she told him of the chance that had brought his old college comrade to them again, and how Bartley was now married, and was just settled in the little house she had helped his wife to find.

"He has married a very pretty girl," she said.

"Oh, I dare say!" answered her son. "He isn't the fellow to have married a plain girl."

"Your father and I have been to call upon them in their new house, and they seem very

happy together. Mr. Hubbard wants you should come to see them. He talks a great deal about you."

"I'll look them up in good time," said the young man. "Hubbard's ardor to see me will keep."

That evening Mr. Atherton came to tea, and Halleck walked home with him to his lodgings, which were over the hill, and beyond the Public Garden.

"Yes, it's very pleasant, getting back," he said, as they sauntered down the Common side of Beacon street, "and the old town is picturesque after the best they can do across the water."

He halted his friend, and brought himself to a rest on his cane, for a look over the hollow of the Common and the level of the Garden, where the late September dark was keenly spangled with lamps. "'My heart leaps up,' and so forth, when I see that. Now that Athens and Florence and Edinburgh are past, I don't think there is any place quite so well worth being born in as Boston." He moved forward again, gently surging with his limp, in a way that had its charm for those that loved him. "It's more authentic and individual, more municipal, after the old pattern, than any other modern city. It gives its stamp, it characterizes. The Boston Irishman, the Boston Jew, is a quite different Irishman or Jew from those of other places. Even Boston provincialism is a precious testimony to the authoritative personality of the city. Cosmopolitanism is a modern vice, and we're antique, we're classic, in the other thing. Yes, I'd rather be a Bostonian, at odds with Boston, than one of the curled darlings of any other community."

A friend knows how to allow for mere quantity in your talk, and only replies to the quality; separates your earnest from your whimsicality, and accounts for some whimsicality in your earnest.

"I didn't know but you might have got that bee out of your bonnet on the other side," said Atherton.

"No, sir; we change our skies but not our bees. What should I amount to without my grievance? You wouldn't have known me. This talk to-night about Hubbard has set my bee to buzzing with uncommon liveliness; and the thought of the law school next week does nothing to allay him. The law school isn't Harvard; I realize that more and more, though I have tried to fancy that it was. No, sir, my wrongs are irreparable. I had the making of a real Harvard man in me, and of a Unitarian, nicely balanced between radicalism and amateur episcopacy. Now, I am an orthodox ruin, and the undutiful step-son of

a Down-East *alma mater*. I belong nowhere; I'm at odds. Is Hubbard's wife really handsome, or is she only country-pretty?"

"She's beautiful,—I assure you, she's beautiful," said Atherton, with such earnestness that Halleck laughed.

"Well, that's right, as my father says. How's she beautiful?"

"That's difficult to tell. It's rather a superb sort of style; and—What did you really use to think of your friend?" Atherton broke off to ask.

"Who? Hubbard?"

"Yes."

"He was a poor, cheap sort of a creature. Deplorably smart, and regrettably handsome. A fellow that assimilated everything to a certain extent, and nothing thoroughly. A fellow with no more moral nature than a base-ball. The sort of chap you'd expect to find, the next time you met him, in Congress or the house of correction."

"Yes, that accounts for it," said Atherton, thoughtfully.

"Accounts for what?"

"The sort of look she had. A look as if she were naturally above him, and had somehow fascinated herself with him, and were worshipping him in some sort of illusion."

"Doesn't that sound a little like refining upon the facts? Recollect, I've never seen her, and I don't say you're wrong."

"I'm not sure I'm not, though. I talked with her, and found her nothing more than honest and sensible and good; simple in her traditions, of course, and countrified yet, in her ideas, with a tendency to the intensely practical. I don't see why she mightn't very well be his wife. I suppose every woman hoodwinks herself about her husband in some degree."

"Yes; and we always like to fancy something pathetic in the fate of pretty girls that other fellows marry. I notice that we don't sorrow much over the plain ones. How's the divine Clara?"

"I believe she's well," said Atherton. "I haven't seen her, all summer. She's been at Beverly."

"Why, I should have supposed she would have come up and surf-bathed those indigent children with her own hand. She's equal to it. What made her falter in well-doing?"

"I don't know that we can properly call it faltering. There was a deficit in the appropriation necessary, and she made it up herself. After that, she consulted me seriously as to whether she ought not to stay in town and superintend the execution of the plan. But I told her she might fitly delegate that. She was all the more anxious to perform her

whole duty, because she confessed that indigent children were personally unpleasant to her."

Halleck burst out laughing.

"That's like Clara! How charming women are! They're charming even in their goodness! I wonder the novelists don't take a hint from that fact, and stop giving us those scaly heroines they've been running lately. Why, a real woman can make righteousness delicious and virtue piquant. I like them for that!"

"Do you?" asked Atherton, laughing in his turn at the single-minded confession. He was some years older than his friend.

They had got down to Charles street, and Halleck took out his watch at the corner lamp.

"It isn't at all late yet; only half-past eight. The days are getting shorter."

"Well?"

"Suppose we go and call on Hubbard now? He's right up here on Clover street."

"I don't know," said Atherton. "It would do for you; you're an old friend. But for me, —wouldn't it be rather unceremonious?"

"Oh, come along! They'll not be punctilious. They'll like our dropping in, and I shall have Hubbard off my conscience. I must go to see him sooner or later, for decency's sake."

Atherton suffered himself to be led away.

"I suppose you won't stay long?"

"Oh, no; I shall cut it very short," said Halleck.

And they climbed the narrow little street where Marcia had at last found a house, after searching the South End quite to the Highlands, and ransacking Charlestown and Cambridgeport. These points all seemed to her terribly remote from where Bartley must be at work during the day, and she must be alone without the sight of him from morning till night. The accessibility of Canary Place had spoiled her for distances; she wanted Bartley at home for their one-o'clock dinner; she wanted to have him within easy call at all times; and she was glad when none of those far-off places yielded quite what they desired in a house. They took the house on Clover street, though it was a little dearer than they expected, for two years, and they furnished it, as far as they could, out of the three or four hundred dollars they had saved, including the remaining hundred from the colt and cutter, kept sacredly intact by Marcia. When you entered, the narrow staircase cramped you into the little parlor opening out of the hall; and back of the parlor was the dining-room. Overhead were two chambers, and overhead again were two chambers more; in the basement was the kitchen. The

house seemed absurdly large to people who had been living for the last seven months in one room, and the view of the Back Bay from the little bow-window of the front chamber added all outdoors to their superfluous space.

Bartley came himself to answer Halleck's ring, and they met at once with such a "Why, Halleck!" and "How do you do, Hubbard?" as restored something of their old college comradery. Bartley welcomed Mr. Atherton under the gas-light he had turned up, and then they huddled into the little parlor, where Bartley introduced his old friend to his wife. Marcia had on a sort of dark wrapper, trimmed with bows of crimson ribbon, which she had made herself, and in which she looked a Roman patrician in an avatar of Boston domesticity; and Bartley was rather proud to see his friend so visibly dazzled by her beauty. It quite abashed Halleck, who limped helplessly about, after his cane had been taken from him, before he sat down, while Marcia, from the vantage of the sofa and the covert of her talk with Atherton, was content that Halleck should be plain and awkward, with close-cut drab hair and a dull complexion. She would not have liked even a man who knew Bartley before she did to be very handsome.

Halleck and Bartley had some talk about college days, from which their eyes wandered at times; and then Marcia excused herself to Atherton and went out, re-appearing after an interval at the sliding doors, which she rolled open between the parlor and dining-room. A table set for supper stood behind her, and, as she leaned a little forward, with her hands each on a leaf of the door, she said, with shy pride, "Bartley, I thought the gentlemen would like to join you," and he answered, "Of course they would," and led the way out, refusing to hear any demur. His heart swelled with satisfaction in Marcia; it was something like, having fellows drop in upon you, and be asked out to supper in this easy way. It made Bartley feel good, and he would have liked to give Marcia a hug on the spot. He could not help pressing her foot under the table, and exchanging a quiver of the eyelashes with her, as he lifted the lid of the white tureen, and looked at her across the glitter of their new crockery and cutlery. They made the jokes of the season about the oyster being promptly on hand for the first of the R months, and Bartley explained that he was sometimes kept at the "Events" office rather late, and that then Marcia waited supper for him, and always gave him an oyster stew, which she made herself. She could not stop him, and the guests praised the oysters, and then they praised the dining-room and the parlor. And when they rose

from the table Bartley said, "Now we must show you the house," and persisted, against her deprecations, in making her lead the way. She was, in fact, willing enough to show it; her taste had made their money go to the utmost in furnishing it; and, though most people were then still in the period of green reps and tan terry, and of dull black-walnut movables, she had everywhere bestowed little touches that told. She had covered the marble parlor-mantel with cloth and fringed it, and she had set on it two vases in the Pompeian colors then liked; her carpet was of wood colors and a moss pattern; she had done what could be done with folding carpet chairs to give the little room a specious air of luxury; the center-table was heaped with her sewing and Bartley's newspapers.

"We've just moved in, and we haven't furnished *all* the rooms yet," she said of two empty ones which Bartley perversely flung open.

"And I don't know that we shall. The house is much too big for us; but we thought we'd better take it," he added, as if it were a castle for vastness.

Halleck and Atherton were silent for some moments after they came away, and then:

"I don't believe he whips her," suggested the latter.

"No, I guess he's fond of her," said Halleck, gravely.

"Did you see how careful he was of her, coming up and down stairs? That was very pretty; and it was pretty to see them both so ready to show off their young housekeeping to us."

"Yes, it improves a man to get married," said Halleck, with a long, stifled sigh. "It's improved the most selfish hound I ever knew."

XXI.

THE two elder Miss Hallecks were so much older than Olive, the youngest, that they seemed to be of a sort of intermediary generation between her and her parents, though Olive herself was well out of her teens, and was the senior of her brother Ben by two or three years. The elder sisters were always together, and they adhered in common to the religion of their father and mother. The defection of their brother was passive, but Olive, having conscientiously adopted an alien faith, was not a person to let others imagine her ashamed of it, and her Unitarianism was outspoken. In her turn she formed a kind of party with Ben inside the family, and would have led him on in her own excesses of independence if his somewhat melancholy indifferentism had con-

sented. It was only in his absence that she had been with her sisters during their summer sojourn in the White Mountains; when they returned home, she vigorously went her way, and left them to go theirs. She was fond of them in her defiant fashion; but in such a matter as calling on Mrs. Hubbard, she chose not to be mixed up with her family, or in any way to countenance her family's prepossessions. Her sisters paid their visit together, and she waited for Clara Kingsbury to come up from the sea-side. Then she went with her to call upon Marcia, sitting observant and non-committal while Clara swooped through the little house, up stairs and down, clamoring over its prettiness, and admiring the art with which so few dollars could be made to go so far. "Think of finding such a bower on Clover street!" She made Marcia give her the cost of everything; and her heart swelled with pride in her sex when she heard that Marcia had put down all the carpets herself. "I wanted to make them up," Marcia explained, "but Mr. Hubbard wouldn't let me,—it cost so little at the store."

"Wouldn't let you!" cried Miss Kingsbury. "I should hope as much, indeed! Why, my child, you're a Roman matron!"

She came away in agony lest Marcia might think she meant her nose. She drove early the next morning to tell Olive Halleck that she had spent a sleepless night from this cause, and to ask her what she *should* do. "Do you think she will be hurt, Olive? Tell me what led up to it? How did I behave before that? The context is everything in such cases."

"Oh, you went about praising everything, and screaming and shouting, and my-dearing and my-childing her, and patronizing —"

"There, there! say no more! That's sufficient! I see,—I see it all! I've done the very most offensive thing I could, when I meant to be the most appreciative."

"These country people don't like to be appreciated down to the quick, in that way," said Olive. "I should think Mrs. Hubbard was rather a proud person."

"I know! I know!" moaned Miss Kingsbury. "It was ghastly."

"I don't suppose she's ashamed of her nose —"

"Olive!" cried her friend, "be still! Why, I can't *bear* it! why, you wretched thing!"

"I dare say all the ladies in Equity make up their own carpets, and put them down, and she thought you were laughing at her."

"Will you be still, Olive Halleck?" Miss Kingsbury was now a large blonde mass of suffering. "Oh, dear, dear! What shall I do? It was sacrilege—yes, it was nothing less than sacrilege—to go on as I did. And

I meant so well; I did so admire, and respect, and revere her!" Olive burst out laughing. "You wicked girl!" whimpered Clara. "Should you—should you write to her?"

"And tell her you didn't mean her nose? Oh, by all means, Clara,—by all means! Quite an inspiration. Why not make her an evening party?"

"Olive," said Clara, with guilty meekness, "I have been thinking of that."

"No, Clara! Not seriously!" cried Olive, sobered at the idea.

"Yes, seriously. Would it be so very bad? Only just a *little* party," she pleaded. "Half a dozen people or so; just to show them that I really feel—friendly. I know that he's told her all about meeting me here, and I'm not going to have her think I want to drop him because he's married, and lives in a little house on Clover street."

"Noble Clara! So you wish to bring them out in Boston society? What will you do with them after you've got them there?" Miss Kingsbury fidgeted in her chair a little. "Now look me in the eye, Clara! Whom were you going to ask to meet them? Your unfashionable friends, the Hallecks?"

"My friends, the Hallecks, of course."

"And Mr. Atherton, your legal adviser?"

"I had thought of asking Mr. Atherton. You needn't say what he is, if you please, Olive; you know that there's no one I prize so much."

"Very good. And Mr. Cameron?"

"He has got back,—yes. He's very nice."

"A Cambridge tutor; young and of recent attachment to the college, with no local affiliations, yet. What ladies?"

"Miss Strong is a nice girl; she is studying at the Conservatory."

"Yes. Poverty-stricken votary of Miss Kingsbury. Well?"

"Miss Clancy."

"Unfashionable elderly sister of fashionable artist. Yes?"

"The Brayhems."

"Young radical clergyman, and his wife, without a congregation, and hoping for a pulpit in Billerica. Parlor lectures on German literature in the meantime. Well?"

"And Mrs. Savage, I thought."

"Well-preserved young widow of uncertain antecedents tending to grassiness; outdoor *protégée* of the hostess. Yes, Clara, go on and give your party. It will be *perfectly safe*! But do you think it will *deceive* anybody?"

"Now, Olive Halleck!" cried Clara, "I am not going to have you talking to me in that way! You have no right to do it, and you have no business to do it," she added, trying to pluck

up a spirit. "Is there anybody that I value more than I do you and your sisters, and Ben?"

"No. But you don't value us *just in that way*, and you know it. Don't you be a humbug, Clara. Now go on with your excuses."

"I'm not making excuses! Isn't Mr. Atherton in the most fashionable society?"

"Yes. Why don't you ask some other fashionable people?"

"Olive, this is all nonsense,—perfect nonsense! I can invite any one I like to meet any one I like, and if I choose to show Mr. Hubbard's wife a little attention, I can do it, can't I?"

"Oh, of course!"

"And what would be the use of inviting fashionable people—as you call them—to meet them? It would just embarrass them all round."

"Perfectly correct, Miss Kingsbury. All that I want you to do is to face the facts of the case. I want you to realize that, in showing Mr. Hubbard's wife this little attention, you're not doing it because you scorn to drop an old friend, and want to do him the highest honor; but because you think you can palm off your second-class acquaintance on them for first-class, and try to make up in that way for telling her she had a hooked nose!"

"You *know* that I didn't tell her she had a hooked nose."

"You told her that she was a Roman matron,—it's the same thing," said Olive.

Miss Kingsbury bit her lip and tried to look a dignified resentment. She ended by saying, with feeble spite, "I shall have the little evening for all you say. I suppose you won't refuse to come because I don't ask the whole Blue Book to meet them."

"Of course we shall come! I wouldn't miss it for anything. I always like to see how you manage your pieces of social duplicity, Clara. But you needn't expect that I will be a party to the swindle. No, Clara! I shall go to these poor young people and tell them plainly, 'This is not the *best* society; Miss Kingsbury keeps that for —!'"

"Olive! I think I never saw even you in such a teasing humor." The tears came into Clara's large, tender blue eyes, and she continued, with an appeal that had no effect, "I'm sure I don't see why you should make it a question of anything of the sort. It's simply a wish to—to have a little company of no particular kind, for no partic— Because I want to."

"Oh, that's it, is it? Then I highly approve of it," said Olive. "When is it to be?"

"I sha'n't tell you, now! You may wait

till I'm ready," pouted Clara, as she rose to go.

"Don't go away thinking I'm enough to provoke a saint because *you've* got mad at me, Clara!"

"Mad? You know I'm not mad! But I think you might be a *little* sympathetic sometimes, Olive!" said her friend, kissing her.

"Not in cases of social duplicity, Clara. My wrath is all that saves you. If you were not afraid of me, you would have been a lost worldling long ago."

"I know you always really love me," said Miss Kingsbury, tenderly.

"No, I don't," retorted her friend, promptly. "Not when you're humbugging. Don't expect it, for you won't get it." She followed Clara with a triumphant laugh as she went out of the door; and except for this parting taunt, Clara might have given up her scheme. She first ordered her *coupé* driven home, in fact, and then lowered the window to countermand the direction, and drove to Bartley's door on Clover street.

It was a very handsome equipage, and was in keeping with all the outward belongings of Miss Kingsbury, who mingled a sense of duty and a love of luxury in her life in very exact proportions. When her *coupé* was not standing before some of the wretchedest doors in the city, it was waiting at the finest; and Clara's days were divided between the extremes of squalor and of fashion.

She was the only child of parents who had early left her an orphan. Her father, who was much her mother's senior, was an old friend of Olive's father, and had made him his executor and the guardian of his daughter. Mr. Halleck had taken her into his own family, and, in the conscientious pursuance of what he believed would have been her father's preference, he gave her worldly advantages which he would not have desired for one of his own children. But the friendship that grew up between Clara and Olive was too strong for him in some things, and the girls went to the same fashionable school together.

When his ward came of age, he made over to her the fortune, increased by his careful management, which her father had left her, and advised her to put her affairs in the hands of Mr. Atherton. She had shown a quite ungirlish eagerness to manage them for herself. In the midst of her profusion she had odd accesses of stinginess, in which she fancied herself coming to poverty; and her guardian judged it best that she should have a lawyer who could tell her at any moment just where she stood. She hesitated, but she did as he advised; and having once intrusted

her property to Atherton's care, she added her conscience and her reason in large degree, and obeyed him with embarrassing promptness in matters that did not interfere with her pleasures. Her pleasures were of various kinds. She chose to buy herself a fine house, and, having furnished it luxuriously, and unearthed a cousin of her father's in Vermont and brought her to Boston to matronize her, she kept house on a magnificent scale, pinching, however, at certain points with unexpected meanness. When she was alone, her table was of a Spartan austerity; she exacted a great deal from her servants, and paid them as small wages as she could. After that, she did not mind lavishing money upon them in kindness. A seamstress whom she had once employed fell sick, and Miss Kingsbury sent her to the Bahamas and kept her there till she was well, and then made her a guest in her house till the girl could get back her work. She watched her cook through the measles, caring for her like a mother; and, as Olive Halleck said, she was always portioning or burying the sisters of her second-girls. She was in all sorts of charities, but she was apt to cut her charities off with her pleasures at any moment, if she felt poor. She was fond of dress, and went a great deal into society; she suspected men generally of wishing to marry her for her money, but with those whom she did not think capable of aspiring to her hand, she was generously helpful with her riches. She liked to patronize; she had long supported an unpromising painter at Rome, and she gave orders to desperate artists at home.

The world had pretty well hardened one half of her heart, but the other half was still soft and loving, and into this side of her mixed nature she cowered when she believed she had committed some blunder or crime, and came whimpering to Olive Halleck for punishment. She made Olive her discipline partly in her lack of some fixed religion. She had not yet found a religion that exactly suited her, though she had many times believed herself about to be anchored in some faith forever.

She was almost sorry that she had put her resolution in effect when she rang at the door, and Marcia herself answered the bell, in place of the one servant, who was at that moment hanging out the wash. It seemed wicked to pretend to be showing this pretty creature a social attention, when she meant to palm off a hollow imitation of society upon her. Why should she not ask the very superfinest of her friends to meet such a brilliant beauty? It would serve Olive Halleck right if she should do this, and leave the Hallecks out, and Marcia would certainly be a sensation. She

half-believed that she meant to do it when she quitted the house with Marcia's promise that she would bring her husband to tea on Wednesday evening, at eight; and she drove away so far penitent that she resolved at least to make her company distinguished, if not fashionable. She said to herself that she would make it fashionable yet, if she chose, and as a first move in this direction she easily secured Mr. Atherton: he had no engagements, so few people had got back to town. She called upon Mrs. Witherby, needlessly reminding her of the charity committees they had served on together; and then she went home and actually sent out notes to the plainest daughter and the maiden aunt of two of the most high-born families of her acquaintance. She added to her list an artist and his wife ("Now I shall *have* to let him paint me!" she reflected), a young author whose book had made talk, a teacher of Italian, with whom she was pretending to read Dante, and a musical composer and his daughter.

Olive came late, as if to get a whole effect of the affair at once; and her smile revealed Clara's failure to her, if she had not realized it before. She read there that the aristocratic and æsthetic additions which she had made to the guests Olive originally divined had not availed; the party remained a humbug. It had seemed absurd to invite anybody to meet two such little, unknown people as the Hubbards; and then, to avoid marking them as the subjects of the festivity by the precedence to be observed in going out to supper, she resolved to have tea served in the drawing-room, and to make it literally tea, with bread and butter, and some thin, ascetic cake.

However sharp he was in business, Mr. Witherby was socially a dull man; and his wife and daughter seemed to partake of his qualities by affinitation and heredity. They tried to make something of Marcia, but they failed through their want of art. Mrs. Witherby, finding the wife of her husband's assistant in Miss Kingsbury's house, conceived an awe of her, which Marcia would not have known how to abate if she had imagined it; and in a little while the Witherby family segregated themselves among the photograph albums and the bric-à-brac, from which Clara seemed to herself to be fruitlessly detaching them the whole evening. The plainest daughter and the maiden aunt of the patrician families talked to each other with unavailing intervals of the painter and the author. The radical clergyman and his wife were in danger of a conjugal devotion which society does not favor; the unfashionable sister of the fashionable artist conversed with the young Har-

vard tutor and the Japanese law-student, whom he had asked leave to bring with him, and whose small, mouse-like eyes continually twinkled away in pursuit of the blonde beauty of his hostess. The widow was winningly attentive, with a tendency to be confidential, to everybody. The Italian could not disabuse himself of the notion that he was expected to be light and cheerful, and when the pupil of the Conservatory sang, he abandoned himself to his error, and clapped and cried bravo with unseemly vivacity. But he was restored to reason when the composer sat down at the piano and played, amid the hush that falls on society at such times, something from Beethoven, and again something of his own, which was so like Beethoven that Beethoven himself would not have known the difference.

Mr. Atherton and Halleck moved about among the sufferers, and did their best to second Clara's efforts for their relief; but it was useless. In the desperation which owns defeat, she resolved to devote herself for the rest of the evening to trying to make at least the Hubbards have a good time; and then, upon the dangerous theory, of which young and pretty hostesses cannot be too wary, that a wife is necessarily flattered by attentions to her husband, she devoted herself exclusively to Bartley, to whom she talked long and with a reckless liveliness of the events of his former stay in Boston. Their laughter and scraps of their reminiscences reached Marcia where she sat in a feint of listening to Ben Halleck's perfunctory account of his college days with her husband, till she could bear it no longer. She rose abruptly, and, going to him, she said that it was time to say good-night.

"Oh, so soon!" cried Clara, mystified and a little scared at the look she saw on Marcia's face. "Good-night," she added, coldly.

The assembly hailed this first token of its disintegration with relief; it became a little livelier; there was a fleeting moment in which it seemed as if it might yet enjoy itself; but its chance passed; it crumbled rapidly away, and Clara was left looking humbly into Olive Halleck's pitiless eyes.

"Thank you for a *delightful* evening, Miss Kingsbury! Congratulate you!" she mocked, with an unsparing laugh. "Such a success! But why didn't you give them something to eat, Clara? Those poor Hubbards have a one-o'clock dinner, and I famished for them. I wasn't hungry myself,—*we* have a two-o'clock dinner!"

XXII.

BARTLEY came home elate from Miss Kingsbury's entertainment. It was something like

the social success which he used to picture to himself. He had been flattered by the attention specially paid him, and he did not detect the imposition. He was half-starved, but he meant to have up some cold meat and bottled beer, and talk it all over with Marcia.

She did not seem inclined to talk it over on their way home, and when they entered their own door, she pushed in and ran upstairs.

"Why, where are you going, Marcia?" he called after her.

"To bed!" she replied, closing the door after her with a crash of unmistakable significance.

Bartley stood a moment in the fury that tempted him to pursue her with a taunt, and then leave her to work herself out of the transport of senseless jealousy she had wrought herself into. But he set his teeth, and, full of inward cursing, he followed her upstairs with a slow, dogged step. He took her in his arms without a word, and held her fast, while his anger changed to pity, and then to laughing. When it came to that, she put up her arms, which she had kept rigidly at her side, and laid them round his neck, and began softly to cry on his breast.

"Oh, I'm not myself at all, any more!" she moaned penitently.

"Then this is very improper—for me," said Bartley.

The helpless laughter broke through her lamentation, but she cried a little more to keep herself in countenance.

"But I guess, from a previous acquaintance with the party's character, that it's really all you, Marcia. I don't blame you. Miss Kingsbury's hospitality has left me as hollow as if I'd had nothing to eat for a week; and I know you're perishing from inanition. Hence these tears."

It delighted her to have him make fun of Miss Kingsbury's tea, and she lifted her head to let him see that she was laughing for pleasure now, before she turned away to dry her eyes.

"Oh, poor fellow!" she cried, "I did pity you so when I saw those mean little slices of bread and butter coming round!"

"Yes," said Bartley, "I felt sorry myself. But don't speak of them any more, dearest."

"And I suppose," pursued Marcia, "that all the time she was talking to you there, you were simply ravening."

"I was casting lots in my own mind to see which of the company I should devour first."

His drollery appeared to Marcia the finest that ever was; she laughed and laughed again; when he made fun of the elderly aristocrat's conjecturable toughness, she implored him to stop if he did not want to kill her.

Marcia was not in the state in which woman best convinces her enemies of her fitness for empire, but she was charming in her silly happiness, and Bartley felt very glad that he had not yielded to his first impulse to deal savagely with her.

"Come," he said, "let us go out somewhere, and get some oysters."

She began at once to take out her ear-rings and loosen her hair.

"No, I'll get something here in the house; I'm not very hungry. But *you* go, Bartley, and have a good supper, or you'll be sick to-morrow, and not fit to work. Go," she added to his hesitating image in the glass, "I insist upon it. I won't *have* you stay."

His reflected face approached from behind; she turned hers a little, and their mirrored lips met over her shoulder. "Oh, how *sweet* you are, Bartley!" she murmured.

"Yes, you will always find me obedient when commanded to go out and repair my wasted tissue."

"I don't mean *that*, dear," she said softly. "I mean—your not quarreling with me when I'm unreasonable. Why can't we always do so?"

"Well, you see," said Bartley, "it throws the whole burden on the fellow in his senses. It doesn't require any great degree of self-sacrifice to fly off at a tangent, but it's rather a maddening spectacle to the party that holds on."

"Now I will show you," said Marcia, "that I can be reasonable, too: I shall let you go alone to make our party call on Miss Kingsbury." She looked at him heroically.

"Marcia," said Bartley, "you're such a reasonable person when you're the most unreasonable, that I wonder I *ever* quarrel with you. I rather think I'll let *you* call on Miss Kingsbury alone. I shall suffer agonies of suspicion, but it will prove that I have perfect confidence in *you*." He threw her a kiss from the door, and ran down the stairs. When he returned, an hour later, he found her waiting up for him.

"Why, Marcia!" he exclaimed.

"Oh! I just wanted to say that we will both go to call on her *very soon*. If I sent you, she might think I was mad, and I won't give her that satisfaction."

"Noble girl!" cried Bartley, with irony that pleased her better than praise. Women like to be understood, even when they try not to be understood.

When Marcia went with Bartley to call, Miss Kingsbury received her with careful, perhaps anxious, politeness, but made no further effort to take her up. Some of the

people whom Marcia met at Miss Kingsbury's called; and the Witherbys came, father, mother, and daughter together; but between the evident fact that the Hubbards were poor, and the other evident fact that they moved in the best society, the Witherbys did not quite know what to do about them. They asked them to dinner, and Bartley went alone; Marcia was not well enough to go.

He was very kind and tractable, now, and went whenever she bade him go without her, though tea at the Hallecks was getting to be an old story with him, and it was generally tea at the Hallecks to which she sent him. The Halleck ladies came faithfully to see her, and she got on very well with the two older sisters, who gave her all the kindness they could spare from their charities, and seemed pleased to have her so pretty and conjugal, though these things were far from them. But she was afraid of Olive at first, and disliked her as a friend of Miss Kingsbury. This rather attracted the odd girl. What she called Marcia's snubs enabled her to declare in her favor with a sense of disinterestedness, and to indulge her repugnance for Bartley with a good heart. She resented his odious good looks, and held it a shame that her mother should promote his visible tendency to stoutness by giving him such nice things for tea.

"Now, I like Mr. Hubbard," said her mother, placidly. "It's very kind of him to come to such plain folks as we are, whenever we ask him; now that his wife can't come, I know he does it because he likes us."

"Oh, he comes for the eating," said Olive, scornfully. Then another phase of her mother's remark struck her: "Why, mother!" she cried, "I do believe you think Bartley Hubbard's a distinguished man, somehow!"

"Your father says it's very unusual for such a young man to be in a place like his. Mr. Witherby really leaves everything to him, he says."

"Well, I think he'd better not, then! The 'Events' has got to be perfectly horrid, of late. It's full of murders and all uncleanness."

"That seems to be the way with the papers, nowadays. Your father hears that the 'Events' is making money."

"Why, mother! What a corrupt old thing you are! I believe you've been bought up by that disgusting interview with father. Nestor of the Leather Interest! Father ought to have turned him out of doors. Well, this family is getting a little *too* good, for me! And Ben's almost as bad as any of you, of late,—I haven't a bit of influence with him any more. He seems determined to be friendlier with that *person* than ever; he's always trying to do him good,—I can see it,

and it makes me sick. One thing I know: I'm going to stop Mr. Hubbard's calling me Olive. Impudent!"

Mrs. Halleck shifted her ground with the pretense which women use, even amongst themselves, of having remained steadfast.

"He is a very good husband."

"Oh, because he likes to be!" retorted her daughter. "Nothing is easier than to be a good husband."

"Ah, my dear," said Mrs. Halleck, "wait till you have tried."

This made Olive laugh; but she answered with an argument that always had weight with her mother:

"Ben doesn't think he's a good husband."

"What makes you think so, Olive?" asked her mother.

"I know he dislikes him intensely."

"Why, you just said yourself, dear, that he was friendlier with him than ever."

"Oh, that's nothing. The more he disliked him, the kinder he would be to him."

"That's true," sighed her mother. "Did he ever say anything to you about him?"

"No," cried Olive shortly; "he never speaks of people he doesn't like."

The mother returned, with logical severity, "All that doesn't prove that Ben thinks he isn't a good husband."

"He dislikes him. Do you believe a bad man can be a good husband, then?"

"No," Mrs. Halleck admitted, as if confronted with indisputable proof of Bartley's wickedness.

In the meantime the peace between Bartley and Marcia continued unbroken, and these days of waiting, of suffering, of hoping and dreading, were the happiest of their lives. He did his best to be patient with her caprices and fretfulness, and he was at least manfully comforting and helpful, and instant in atonement for every failure. She said a thousand times that she should die without him; and when her time came, he thought that she was going to die before he could tell her of his sorrow for all that he had ever done to grieve her. He did not tell her, though she lived to give him the chance; but he took her and her baby both into his arms, with tears of as much fondness as ever a man shed. He even began his confession; but she said, "Hush! you never did a wrong thing yet that I didn't drive you to." Pale and faint, she smiled joyfully upon him, and put her hand on his head when he hid his face against hers on the pillow, and put her lips against his cheeks. His heart was full; he was grateful for the mercy that had spared him; he was so strong in his silent repentance that he felt like a good man.

"Bartley," she said, "I'm going to ask a great favor of you."

"There's nothing that I can do that I shall think a favor, darling!" he cried, lifting his face to look into hers.

"Write for mother to come. I want her!"

"Why, of course."

Marcia continued to look at him, and kept the quivering hold she had laid of his hand when he raised his head.

"Was that all?"

She was silent, and he added,

"I will ask your father to come with her."

She hid her face for the space of one sob.

"I wanted you to offer."

"Why, of course! of course!" he replied.

She did not acknowledge his magnanimity directly, but she lifted the coverlet and showed him the little head on her arm, and the little creased and crumpled face.

"Pretty?" she asked. "Bring me the letter before you send it."

"Yes, that is just right,—perfect!" she sighed, when he came back and read the letter to her, and she fell away to happy sleep.

Her father answered that he would come with her mother as soon as he got the better of a cold he had taken. It was now well into the winter, and the journey must have seemed more formidable in Equity than in Boston. But Bartley was not impatient of his father-in-law's delay, and he set himself cheerfully about consoling Marcia for it. She stole her white, thin hand into his, and now and then gave it a little pressure to accent the points she made in talking.

"Father was the first one I thought of—after you, Bartley. It seems to me as if baby came half to show me how unfeeling I had been to him. Of course I'm not sorry I ran away and asked you to take me back, for I couldn't have had you if I hadn't done it; but I never realized before how cruel it was to father. He always made such a pet of me; and I know that he thought he was acting for the best."

"I knew that *you* were," said Bartley, fervently.

"What sweet things you always say to me!" she murmured. "But don't you see, Bartley, that I didn't think enough of him? That's what baby seems to have come to teach me." She pulled a little away on the pillow, so as to fix him more earnestly with her eyes. "If baby should behave so to *you* when she grew up, I should hate her."

He laughed, and said,

"Well, perhaps your mother hates you."

"No, they don't—either of them," said Marcia with a sigh. "And I behaved very stiffly and coldly with him when he came up to see

me,—more than I had any need to. I did it for your sake; but he didn't mean any harm to you,—he just wanted to make sure that I was safe and well."

"Oh, that's all right, Marsh."

"Yes, I know. But what if he had died!"

"Well, he didn't die," said Bartley, with a smile. "And you've corresponded with them regularly, ever since, and you know they've been getting along all right. And it's going to be altogether different from this out," he added, leaning back, a little weary with a matter in which he could not be expected to take a very cordial interest.

"Truly?" she asked, with one of the eagerness of those hand-pressures.

"It won't be my fault if it isn't," he replied, with a yawn.

"How good you are, Bartley!" she said, with an admiring look, as if it was the goodness of God she was praising.

Bartley released himself, and went to the new crib, in which the baby lay, and with his hands in his pockets stood looking down at it with a curious smile.

"Is it pretty?" she asked, envious of his bird's-eye view of the baby.

"Not definitely so," he answered. "I dare say she will smooth out in time; but she seems to be considerably puckered yet."

"Well," returned Marcia, with forced resignation, "I shouldn't let any one else say so."

Her husband set up a soft, low, thoughtful whistle.

"I'll tell you what, Marcia," he said, presently. "Suppose we name this baby after your father?"

She lifted herself on her elbow, and stared at him as if he must be making fun of her.

"Why, how could we?" she demanded. Squire Gaylord's parents had called his name Flavius Josephus, in a superstition once cherished by old-fashioned people, that the Jewish historian was somehow a sacred writer.

"We can't name her Josephus, but we can call her Flavia," said Bartley. "And if she makes up her mind to turn out a blonde, the name will just fit. Flavia,—it's a very pretty name." He looked at his wife, who suddenly turned her face down on the pillow.

"Bartley Hubbard," she cried, "you're the best man in the world!"

"Oh, no! Only the second-best," suggested Bartley.

In these days they took their fill of the delight of young fatherhood and motherhood. After its morning bath Bartley was called in, and allowed to revere the baby's mottled and dimpled back as it lay face downward on the nurse's lap, feebly wiggling its arms and legs, and responding with ineffectual little sighs and

gurgles to her acceptable rubbings with warm flannel. When it was fully dressed, and its long clothes pulled snugly down, and its limp person stiffened into something tenable, he was suffered to take it into his arms, and to walk the room with it. After all, there is not much that a man can actually do with a small baby, either for its pleasure or his own, and Bartley's usefulness had its strict limitations. He was perhaps most beneficial when he put the child in its mother's arms, and sat down beside the bed, and quietly talked, while Marcia occasionally put up a slender hand and smoothed its golden-brown hair, bending her neck over to look at it where it lay, with the action of a mother bird. They examined with minute interest the details of the curious little creature: its tiny finger-nails, fine and sharp, and its small queer fist doubled so tight, and closing on one's finger like a canary's claw on a perch; the absurdity of its foot, the absurdity of its toes, the ridiculous inadequacy of its legs and arms to the work ordinarily expected of legs and arms, made them laugh. They could not tell yet whether its eyes would be black, like Marcia's, or blue, like Bartley's; those long lashes had the sweep of hers, but its mop of hair, which made it look so odd and old, was more like his in color.

"She will be a dark-eyed blonde," Bartley decided.

"Is that nice?" asked Marcia.

"With the telescope sight, they're warranted to kill at five hundred yards."

"Oh, for shame, Bartley! To talk of baby's ever killing!"

"Why, that's what they all come to. It's what you came to yourself."

"Yes, I know. But it's quite another thing with baby." She began to mumble it with her lips, and to talk baby-talk to it. In their common interest in this puppet they already called each other papa and mamma.

Squire Gaylord came alone, and when Marcia greeted him with "Why, father! Where's mother?" he asked, "Did you expect her? Well, I guess your mother's feeling rather too old for such long winter journeys. You know she don't go out a great deal. I guess she expects your family down there in the summer."

The old man was considerably abashed by the baby when it was put into his arms, and being required to guess its name, he naturally failed.

"Flavia!" cried Marcia, joyfully. "Bartley named it after you."

This embarrassed the Squire still more.

"Is that so?" he asked, rather sheepishly.

"Well, it's quite a compliment."

Marcia repeated this to her husband as evi-

dence that her father was all right now. Bartley and the Squire were in fact very civil to each other; and Bartley paid the old man many marked attentions. He took him to the top of the State House, and walked him all about the city, to show him its points of interest, and introduced him to such of his friends as they met, though the Squire's dress-coat, whether fully revealed by the removal of his surtout, or betraying itself below the skirt of the latter, was a trial to a fellow of Bartley's style. He went with his father-in-law to see Mr. Warren in "Jefferson Scattering Batkins," and the Squire grimly appreciated the burlesque of the member from Cranberry Center; but he was otherwise not a very amusable person, and off his own ground he was not conversable; while he refused to betray his impressions of many things that Bartley expected to astonish him. The "Events" editorial rooms had no apparent effect upon him, though they were as different from most editorial dens as tapestry carpets, black-walnut desks, and swivel chairs could make them, Mr. Witherby covered him with urbanities and praises of Bartley that ought to have delighted him as a father-in-law; but apparently the great man of the "Events" was but a strange variety of the type with which he was familiar in the despised country editors. He got on better with Mr. Atherton, who was of a man's profession. The Squire wore his hat throughout their interview, and everywhere except at table and in bed; and as soon as he rose from either, he put it on.

Bartley tried to impress him with such novel traits of cosmopolitan life as a *table d'hôte* dinner at a French restaurant; but the Squire sat through the courses as if his barbarous old appetite had satisfied itself in that manner all his life. After that, Bartley practically gave him up; he pleaded his newspaper work, and left the Squire to pass the time as he could in the little house on Clover street, where he sat half a day at a stretch in the parlor with his hat on, reading the newspapers, his legs sprawled out toward the grate. In this way he probably reconstructed for himself some image of his wonted life in his office at home, and was for the time at peace; but otherwise he was very restless, except when he was with Marcia. He was as fond of her in his way as he had ever been, and though he apparently cared nothing for the baby, he enjoyed Marcia's pride in it; and he bore to have it thrust upon him with the surly mildness of an old dog receiving children's caresses. He listened with the same patience to all her celebrations of Bartley, which were often tedious enough, for she bragged of him constantly, of his smartness

and goodness, and of the great success that had crowned the merit of both in him.

Mr. Halleck had called upon the Squire the morning after his arrival, and brought Marcia a note from his wife, offering to have her father stay with them if she found herself too much crowded at this eventful time.

"There! That is just the sort of people the Hallecks are!" she cried, showing the letter to her father. "And to think of our not going near them for months and months after we came to Boston, for fear they were stuck up! But Bartley is always just so proud. Now you must go right in, father, and not keep Mr. Halleck waiting. Give me your hat, or you'll be sure to wear it in the parlor." She made him stoop down to let her brush his coat-collar a little. "There! Now you look something like."

Squire Gaylord had never received a visit except on business in his life, and such a thing as one man calling socially upon another, as women did, was unknown to the civilization of Equity. But, as he reported to Marcia, he got along with Mr. Halleck; and he got along with the whole family when he went with Bartley to tea, upon the invitation Mr. Halleck made him that morning. Probably it appeared to him an objectless hospitality; but he spent as pleasant an evening as he could hope to spend with his hat off and in a frock-coat, which he wore as a more ceremonious garment than the dress-coat of his every-day life. He seemed to take a special liking to Olive Halleck, whose habit of speaking her mind with vigor and directness struck him as commendable. It was Olive who made the time pass for him; and as the occasion was not one for personal sarcasm or question of the Christian religion, her task in keeping the old pagan out of rather abysmal silences must have had its difficulties.

"What did you talk about?" asked Marcia, requiring an account of his enjoyment from him the next morning, after Bartley had gone down to his work.

"Mostly about you, I guess," said the Squire, with a laugh. "There was a large, sandy-haired young woman there —"

"Miss Kingsbury," said Marcia, with vindictive promptness. Her eyes kindled, and she began to grow rigid under the coverlet.

"Whom did *she* talk with?"

"Well, she talked a little with me; but she talked most of the time to the young man. She engaged to him?"

"No," said Marcia, relaxing. "She's a great friend of the whole family. I don't know what they meant by telling you it was to be just a family party, when they were going to have strangers in," she pouted.

"Perhaps they didn't count her."

"No."

But Marcia's pleasure in the affair was tainted, and she began to talk of other things.

Her father staid nearly a week, and they all found it rather a long week. After showing him her baby, and satisfying herself that he and Bartley were on good terms again, there was not much left for Marcia. Bartley had been banished to the spare room by the presence of the nurse; and he gave up his bed there to the Squire, and slept on a cot in the unfurnished attic room; the cook, and a small girl got in to help, had the other. The house that had once seemed so vast was full to bursting.

"I never knew how little it was till I saw your father coming down-stairs," said Bartley. "He's too tall for it. When he sits on the sofa, and stretches out his legs, his boots touch the mop-board on the other side of the room. Fact!"

"He wont stay over Sunday," began Marcia, with a rueful smile.

"Why, Marcia, you don't think I want him to go!"

"No; you're as good as can be about it. But I hope he wont stay over Sunday."

"Haven't you enjoyed his visit?" asked Bartley.

"Oh, yes, I've enjoyed it." The tears came into her eyes. "I've made it all up with father; and he doesn't feel hard to me. But, Bartley — Sit down, dear, here on the bed." She took his hand and gently pulled him down. "I see more and more that father and mother can never be what they used to be to me,—that you're all the world to me. Yes, my life is broken off from theirs forever. Could anything break it off from yours? You'll always be patient with me, wont you? And remember that I'd always rather be good when I'm behaving the worst?"

He rose, and went over to the crib, and kissed the head of their little girl.

"Ask Flavia," he said, from the door.

"Bartley!" she cried, in utter fondness, as he vanished from her happy eyes.

The next morning they heard the Squire moving about in his room, and he was late in coming down to breakfast, at which he was ordinarily so prompt.

"He's packing," said Marcia, sadly. "It's dreadful to be willing to have him go."

Bartley went out and met him at his door, bag in hand.

"Hollo!" he cried, and made a decent show of surprise and regret.

"M-yes!" said the old man, as they went down-stairs. "I've made out a visit. But I'm an old fellow, and I aint easy away from

home. I shall tell Mis' Gaylord how you're gettin' along, and she'll be pleased to hear it. Yes, she'll be pleased to hear it. I guess I shall get off on the ten-o'clock train."

The conversation between Bartley and his father-in-law was perfunctory. Men who have dealt so plainly with each other do not assume the conventional urbanities in their intercourse without effort. They had both been growing more impatient of the restraint; they could not have kept it up much longer.

"Well, I suppose it's natural you should want to be home again, but I can't understand how any one can want to go back to Equity when he has the privilege of staying in Boston."

"Boston will do for a young man," said the Squire, "but I'm too old for it. The city cramps me: it's too tight a fit; and yet I can't seem to find myself in it."

He suffered from the loss of identity which is a common affliction with country people coming to town. The feeling that they are of no special interest to any of the thousands they meet bewilders and harasses them; after the searching neighborhood of village life, the fact that nobody would meddle in their most intimate affairs if they could, is a vague distress. The Squire not only experienced this, but, after reigning so long as the censor of morals and religion in Equity, it was a deprivation for him to pass a whole week without saying a bitter thing to any one. He was tired of the civilities that smoothed him down on every side.

"Well, if you must go," said Bartley, "I'll order a hack."

"I guess I can walk to the depot," returned the old man.

"Oh, no, you can't."

Bartley drove to the station with him, and they bade each other adieu with a handshake. They were no longer enemies, but they liked each other less than ever.

"See you in Equity next summer, I suppose," suggested the Squire.

"So Marcia says," replied Bartley. "Well, take care of yourself.—You confounded tight-fisted old woodchuck!" he added, under his breath, for the Squire had allowed him to pay the hack-fare.

He walked home, composing variations on his parting malison, to find that the Squire had profited by his brief absence in ordering the hack to leave with Marcia a silver cup, knife, fork, and spoon, which Olive Halleck had helped him choose, for the baby. In the cup was a check for five hundred dollars. The Squire was embarrassed in presenting the gifts, and when Marcia turned upon him with: "Now, look here, father, what do you mean?" he was at a loss how to explain.

"Well, it's what I always meant to do for you."

"Baby's things are all right," said Marcia. "But I'm not going to let Bartley take any money from you unless you think as well of him as I do, and say so, right out."

The Squire laughed.

"You couldn't quite expect me to do that, could you?"

"No, of course not. But what I mean is, do you think *now* that I did right to marry him?"

"Oh, *you're* all right, Marcia. I'm glad you're getting along so well."

"No, no! Is Bartley all right?"

The Squire laughed again, and rubbed his chin in enjoyment of her persistence.

"You can't expect me to own up to everything all at once."

"So you see, Bartley," said Marcia, in repeating these words to him, "it was quite a concession."

"Well, I don't know about the concession, but I guess there's no doubt about the check," replied Bartley, jocosely.

"Oh, don't say that, dear," protested his wife. "I think father was pleased with his visit every way. I know he's been anxious about me all the time; and yet it was a good deal for him to do, after what he had said, to come down here and as much as take it all back. Can't you look at it from his side?"

"Oh, I dare say it was a dose," Bartley admitted. The money had set several things in a better light. "If all the people that have abused me would take it back as handsomely as your father has,"—he held the check up,—“why, I wish there were twice as many of them.”

She laughed for pleasure in his joke.

"I think father was impressed by everything about us,—beginning with baby," she said, proudly.

"Well, he kept his impressions to himself," said Bartley.

"Oh, that's nothing but his way. He never was demonstrative,—like me."

"No, he has his emotions under control—not to say under lock and key—not to add, in irons."

Bartley went on to give some instances of the Squire's fortitude when apparently tempted to express pleasure or interest in his Boston experiences.

They both undeniably felt freer now that he was gone. Bartley staid longer than he ought from his work, in tacit celebration of the Squire's departure, and they were very merry together; but, when he left her, Marcia called for her baby, and, gathering it close to her heart, sighed over it, "Poor father! poor father!"

JOHN HENRY, CARDINAL NEWMAN.

By a series of events, none of them noisy or startling, but which have become historic, or, as some would say, by a singular leading of divine Providence, one by nature retiring and shy holds a position of higher dignity than any other, not hereditary, in England. A small room in a religious house, only technically differing from a monk's cell, is the home of the one English writer of transcendent intellectual and literary merit left by the deaths of Carlyle and George Eliot.

Whatever a man's religious or political opinions,—and the majority of my readers have different views to those of my subject,—that must be a dull imagination which is untouched by the ecclesiastical and storied splendor of the office of cardinal. The Pope and the members of the Sacred College alone are they whose dignity and influence go beyond the bounds of kingdoms or states; they, whatever their authority, wield it equally in Rome, their center, and Japan or San Francisco, points of their circumference; their sway, being over the mind, is far more real than rule over the mere bodies of men. Yet, because of the once temporal dignities of the pontifical court, there still encompasses them, also, a state and a majesty which impresses the eye, and lends the sanction of sense to their intellectual empire.

In England, this historic grandeur has been strongly felt, even by those who most repudiate the papal claim, and, though somewhat illogically, men rejoiced and felt that Englishmen were honored when spiritual honor flowed on Dr. Newman from an authority which they do not recognize. It came tardily, but the late Pope had not, perhaps, so fair a chance of discovering intellectual worth as his successor, and, more narrowly Italian, did not, it may be, fully understand so thoroughly English a mind as that of Dr. Newman. But if the dignity came late, it came at a good time. After many years of misunderstanding, mists have cleared off as, in the natural course of human life, Dr. Newman's sun draws to its setting, and the honor from abroad coincided opportunely with the full recognition of its recipient as one of our greatest, wisest, and best. Much of the improved understanding is due to the publication of "*Apologia pro Vita Sua*,"—a fragment of autobiography written with rare courage and frankness, a work which has become classical, and is, or ought to be, known to all students of religious

life, of psychology, or of pure and vigorous English.

It seemed well to the editor of this magazine that a critical analysis of such a life and character should be presented by an outsider, and I was consulted in regard to the writer. Certain names of persons, younger, indeed, than the Cardinal, but still workers with him in Oxford days, at once suggested themselves. These were interested in the desire to make their friend better known and understood, but the old days and times were too sacred in their memories, too dear and too painful to allow them, as yet, to treat of them in full. "The Parting of Friends," in the cases of which I speak, has left a wound fresh as though it were of yesterday. They who now know best Dr. Newman's life and mind are not especially qualified to write of the Oxford past, nor can they be free to speak of one, their master and their father, with whom they are in daily companionship. It was equally clear that such a memoir could not be written by any former opponent—then, as now, out of sympathy with the mind with which they would deal, nor, if there were such, by any once familiar friend who had lifted up his heel against him.

So, by a process of natural elimination, the thoughts of those old friends of whom I have spoken, and my own, suggested that the task should be mine. One word, not for egoism, but for explanation, of what I may know on the matter. My entrance into Oxford life almost coincided with Mr. Newman's secession. The high-church movement of that day had reached its furthest water-mark. It remained at the full for some years before the ebb preceding the new tide which we call ritualism; all the doctrines of the movement had been settled and defined by the Tractarians, and in that full, still time, though Newman was gone in person, his was the one influence abiding in the place—his spirit and his name were everywhere. With it Oxford resounded, as Hebrus of old with that of Eurydice:

"Eurydice the woods,
Eurydice the floods,
Eurydice the rocks and hollow mountains rang."

Dr. Pusey's was the name which stamped the Oxford movement in the country, but in spite of his long retirement at Littlemore, Newman's was the one potent memory in the

university, alike a charm to conjure with and a dangerous force to execrate. The men who had been his friends were kind to me, a younger man; the glamour which had attached to him wrapped me round. I well remember a home near Oxford, in which a veiled crucifix seemed to its possessors to have gained a special sanctity because it had been his, and many of us who attended his former church at Littlemore prayed all the more fervently because he had prayed there before us; it was hard to say if the young zealots of that day loved St. Mary's most for the porch which Laud had built, or for the pulpit whence Newman had preached.

Having, then, had a clear understanding of these things from the first, from eye-witnesses and fellow-workers, my veneration and my interest have never flagged. But my interest then, as now, was mainly intellectual, not doctrinal. It is true that I now feel, even far more than then, that, granting the premises, Dr. Newman's church is the only logical outcome of them; but even then I scarce accepted the premises with a whole assent. And there is no seeming paradox more certainly true than this, that a man may largely agree with and give full intellectual admiration to those with whom he remains irreconcilably at variance. So near but so far is not a contradiction in terms. A liberal of the liberals, one of those, therefore, falling under Dr. Newman's stern disapproval, with the affectionate sympathy of a pupil for a master whom he cannot follow, with genuine admiration for the subtlest intellect, the largest heart, the most unselfish life I know, I try to give my readers some faint portraiture of John Henry Newman, Cardinal of St. George.

He was born in London eighty-one years ago, the eldest son of Mr. John Newman, a London banker. His brother, still living, is Mr. Francis Newman, the well-known author of "Phases of Faith." One of his sisters, Mrs. Thomas Mozley, now dead, was the writer of several exceedingly clever stories for young people, among which "The Fairy Bower" and "The Lost Brooch" are the best known. Some graceful lines in the second of these are understood to be by her brother John. That literary tastes and reading were not exceptional in the family shows, in a measure, the character of the home. The religious tone was what would now be called evangelical, and, indeed, religious earnestness in that day usually took no other form, save in a few nooks of cathedral cities, and in some old-world aristocratic families. But it was not of a narrow or fanatical type. Dr. Newman speaks of his having read "some romance, Mrs. Radcliffe's or Miss Porter's," of having been taken

by his father, "who wanted to hear some piece of music," into the Catholic chapel in Warwick street, and, in other directions than fiction, the boy's own reading was allowed to be discursive. Tom Paine's tracts, Hume's "Essay on Miracles," some of Voltaire, all seem to have been studied without parental opposition, and, indeed, a father might well have judged that such a boy would refuse the evil and choose the good. For, from a child, he took delight in sermons and in theological reading—"all of the school of Calvin," and the same teaching had deep effect on him after mere boyhood; he went up to Trinity as a scholar, after education at Ealing School, near London, with the same opinions dominant in his mind. Yet, as Dr. Newman is himself careful to point out, he was, to a certain extent, eclectic in his acceptance of the theology set before him; he denied and abjured the doctrine of predestination to eternal death, nor had that of final perseverance any tendency to lead him to be careless about pleasing God. It had some influence, he tells us, "in isolating me from the objects which surrounded me, in confirming me in my distrust of the reality of material phenomena, and making me rest in the thought of two, and two only, absolute and luminously self-evident beings—myself and my Creator." In this we may indeed see the boy of fifteen father of the man, for there is no single strain of teaching which so runs through all Dr. Newman's works as that of the direct relation of the human soul to God, its isolation from all else, however it may seem involved with others, "the everlasting face to face with God." And, even at that early date, a guiding fact was fixed as well as a guiding dogma. A deep imagination took hold of him that it would be the will of God that he should lead a single life. This expectation, which coalesced by degrees with personal decision, had a great effect in fitting him to be the guide and friend of many men. For the religious adviser in his ideal state must be celibate, free from other absorbing ties. Such an one is also able to contract friendships which are personal to himself alone, and not involved in the tastes and needs of others. Dr. Newman's friendships have been singularly firm and strong. The affectionate epithet "*carissime*" is applied to more than one in his published letters, and the love thus given has been returned in as full measure as has been compatible with other calls on the heart. He was surely in some measure describing himself, also, when he spoke of St. Paul, "who had a thousand friends and loved each as his own soul, and seemed to live a thousand lives in them, and died a thousand deaths

when he must quit them." But in friendship as in love the feeling is perhaps always stronger on one side than the other; there can be no exact reciprocity.

Dr. Newman's residence at Oxford introduced him to wholly new ideas. The vigorous mind of Whately, the cautious shrewdness of Dr. Hawkins, the free speculations of Blanco White, whose tendency was not then as yet recognized, were among the personal influences which surrounded him, while the study of "Butler's Analogy" was "an era in his religious opinions." A time of change had begun for the university as well as for its new and distinguished student, who passed from his Trinity scholarship to a fellowship at Oriel. The old high-church tradition had never died out at Oxford; the daily chapel, so often a formal observance, still had its effect on many minds, and the whole spirit of the English Prayer-book was realized with a vividness unknown in the country at large. There were elderly men linked by tradition to the days of Wesley, whose influence at Oxford was all in the direction of Catholic observance—men who walked out week by week to Godstowe on each Friday, that they might dine off fish, who discontinued their darling indulgence of snuff through Lent, did reverence to the altar on entering church, and turned to the east at the Creeds. The bones had become very dry, but they were the bones of Catholic doctrines and observances, and the wind of change breathed on them—the same wind whose influence had already been shown in Scott and Wordsworth in the fields of literature. It is true, men did not know it. The same persons, or those most closely allied to them, were they whom Dr. Newman calls unintellectual and "most fond of port,"—one of whom, when Dr. Pusey first showed acquaintance with continental literature, wished "that German theology and German philosophy were both at the bottom of the German ocean." Many of them opposed the innovators who fully restored their own imperfect tradition, but they yet made it possible that the new revival should for a time remain, as Wesley had remained, within the boundaries of Oxford and the English Church.

In 1828, Mr. Newman became vicar of St. Mary's. Though the nave is used as the university church, and in it are preached the majority of sermons delivered to the university as such, St. Mary's is really the church of a very small parish, the area of which is covered by Oriel and St. Mary's Hall, together with a few houses in the High street and Oriel Lane. To it was attached the then small hamlet of Littlemore, on rising ground about three miles from Oxford—a spot which was to be-

come famous, and, when Mr. Newman had left the English Church, almost a place of pilgrimage for enthusiastic young Oxford men who loved his memory. He says himself: "It was at this time that I began to have influence, which steadily increased for a course of years." This influence was gained, first, by his sermons; secondly, by the boundless sympathy which he showed to those who, recognizing from his pulpit-teaching his great knowledge of the human heart, came to lay bare before him their troubles and ask his advice. As his view of the dignity and power of his office deepened, his ministrations assumed more and more a sacerdotal character. Private confession had perhaps never become wholly extinct in the Church of England, but it had certainly been confined to extremely rare occasions. Mr. Newman and his friends were the first, for many years, to make it habitual; and independent of its theological character, this close intercourse between themselves and younger men became one of the modes of breaking down the fence which had so long divided the don from the undergraduate. That moral, social, and intellectual sympathy which has of late years characterized the relations of tutor and pupil has been manifested in various forms. It passed in its early stages into the relation of priest and penitent, and in some instances the confessional was the way in which it began.

We have evidence of the power of Newman's preaching, not only in those ten eloquent volumes which all may read for themselves, but from his own description and from the unwilling testimony of his enemies. When, many years later than the time of which we are now speaking, he preached at Littlemore his sermon on the "Parting of Friends," the speaker and the hearers alike knowing that it was his farewell to them and to the English Church, he used the following words:

"And, O my brethren, O kind and affectionate hearts, O loving friends, should you know any one whose lot it has been, by writing or by word of mouth, in some degree to help you thus to act; if he has ever told you what you knew about yourselves, or what you did not know; has read to you your wants or feelings, and comforted you by the very reading; has made you feel that there was a higher life than this daily one, and a brighter world than that you see; or encouraged you, or sobered you, or opened a way to the enquiring, or soothed the perplexed; if what he has said or done has ever made you take interest in him, and feel well inclined towards him; remember such a one in time to come, though you hear him not, and pray for him, that in all things he may know God's will, and at all times he may be ready to fulfill it."

Mr. J. A. Froude, a younger brother of one of Newman's dearest friends, himself in a measure and for a time his disciple, wrote in

the once widely known romance, now forgotten, "The Nemesis of Faith," of "that voice so keen, so preternaturally sweet, whose very whisper used to thrill through crowded churches, when every breath was held to hear; that calm gray eye; those features, so stern and yet so gentle!"

Mr. Kingsley, though of the sister university, knew well the sway that was exercised over men of his own age at Oxford when he, too, characterized that wonderful preaching in terms at once of strong condemnation and unwilling admiration; and neither of these descriptions is in any degree overstrained. The reader may begin by thinking the sermons cold; so, in some cases, did their hearers, for there is little attempt at rhetoric: profound thoughts and logical conclusions are stated in the simplest and most direct words. By degrees, only, did the hearer or does the reader find himself, by accepting simple premises, implicated in the web of a relentless logic, and fused in the fire of the preacher's intense conviction. Now and then, indeed, as if unconsciously, the words rise to a lofty strain almost unequalled in the language, though even then the style is severe and simple, stripped of all those ornaments which men usually regard as eloquence. One such example is the passage on music in the University Sermon on "The Theory of Developments in Religious Doctrine":

"Let us take another instance, of an outward and earthly form, or economy, under which great wonders unknown seem to be typified; I mean musical sounds, as they are exhibited most perfectly in instrumental harmony. There are seven notes in the scale; make them fourteen; yet what a slender outfit for so vast an enterprise! What science brings so much out of so little? Out of what poor elements does some great master in it create his new world! Shall we say that all this exuberant inventiveness is a mere ingenuity or trick of art, like some game or fashion of the day without reality, without meaning? We may do so; and then, perhaps, we shall also account the science of theology to be a matter of words; yet, as there is a divinity in the theology of the Church, which those who feel cannot communicate, so is there also in the wonderful creation of sublimity and beauty of which I am speaking. To many men the very names which the science employs are utterly incomprehensible. To speak of an idea or a subject seems to be fanciful or trifling, to speak of the views which it opens upon us to be childish extravagance; yet is it possible that that inexhaustible evolution and disposition of notes, so rich yet so simple, so intricate yet so regulated, so various yet so majestic, should be a mere sound, which is gone and perishes? Can it be that those mysterious stirrings of heart, and keen emotions, and strange yearnings after we know not what, and awful impressions from we know not whence, should be wrought in us by what is unsubstantial, and comes and goes, and begins and ends in itself? It is not so; it cannot be. No; they have escaped from some higher sphere; they are the outpourings of eternal harmony in the medium of created sound; they are echoes from our Home, they are the voice of Angels,

or the Magnificat of Saints, or the living laws of Divine Governance, or the Divine Attributes; something are they besides themselves, which we cannot compass, which we cannot utter,—though mortal man, and he perhaps not otherwise distinguished above his fellows, has the gift of eliciting them."

It is no part of our intention to tell over again, save in small measure, the story of the Tractarian movement, so well told by Dr. Newman himself in the "Apologia." The masterly sketches of Pusey, Keble, Froude, and others in that work leave nothing to be desired. But though these were the leaders, the party itself was not definitely formed for five years after Mr. Newman became vicar of St. Mary's. The year before this event, the *vates sacer* had indeed appeared, "The Christian Year" having been published in 1827. For six months previous to the definite formation of the party, Mr. Newman was not in Oxford. At the end of 1832 he stood in need of rest, after the completion of the "History of the Arians," and went abroad with Archdeacon Froude and Mr. Hurrell Froude, for the health of the latter. His body was weary, his mind full of care; fortunately for us, he threw many of the thoughts of that period into verse—those short poems which afterward appeared in the "Lyra Apostolica"; the most beautiful of them all, the well-known "Lead, Kindly Light," was, as he has told us, written at sea in an orange-boat, between Palermo and Marseilles. He returned early in the following July, to find that the Liberalism he so much dreaded, and the reaction against it, had each assumed decided shape; and, on Sunday, July 14th, Mr. Keble preached his celebrated sermon on "National Apostacy," of which Mr. Newman says, "I have ever considered and kept the day as the start of the religious movement of 1833." The first outward and visible form of the party was that of an "Association of Friends of the Church." The leaders, or, at least, the Oxford leaders, determined to put out a series of "Tracts for the Times," of which Mr. Newman was editor. They were published at varying intervals from 1833 to February, 1841, the date of "Tract XC." They were of lengths between a mere leaflet and a great theological pamphlet. They were written, some *ad clerum*, some *ad populum*. About half a dozen are, perhaps, still forgotten; the last only, "Tract XC.," is of any real historical importance. Before that came to be written, the party, with Mr. Newman in its van, had advanced far on the Romeward road, though he was not always fully aware of it. Three things during that time had tended to weaken his reverence for the existing state of things in the English Church

and in his own Oxford, the visible embodiment of so large a portion of that church. These were the suppression of the Irish sees, which proved the church under the iron grasp of the state; the appointment of Dr. Hampden, an avowed liberal, and, as Dr. Newman and his friends thought, dangerously heretical, to the Regius Professorship of Theology; and, at the last, the establishment of an English bishopric at Jerusalem. It will be remembered that this last was brought about by the joint action of the Prussian and English Governments. By such action, two Catholic principles were violated. The Anglican Church, by acting with Lutherans, seemed to declare itself Protestant, to consider that Episcopal orders were no note of the church, but merely a convenient form of church government, while the ancient Patriarchate of Jerusalem was unchurched by the intrusion of such a bishop. It need hardly be said that against all these things the party protested, and protested in vain; yet the more they felt the unsatisfactory state of things around them, the more they desired to reform the English Church. They held almost all Catholic doctrine, but they were not prepared as yet to leave that which had been their home for so many happy years. The Articles were, of course, the great difficulty in their way. Though ritualism was not as yet, it was felt that there was nothing in the words of the services, or in the rubrics, necessarily inconsistent with the extremest developments of doctrine and ceremony; but the Articles drawn up by Puritan divines were generally held to represent a totally different phase of thought. Was the Prayer-book, then, as it has been termed, only "an Elizabethan compromise"? It has been said that Acts of Parliament are so loosely drawn that it is possible to drive a coach and four through the clauses of any one of them. Mr. Newman was about to try whether he could not drive his coach through the clause of an Act of which, on the whole, he disapproved. He tried, therefore, to discover whether within the grammatical meaning of the Articles it might not be possible to hold all Catholic doctrine; nor in this was there anything dishonest. In considering any legal document, "the legal obligation is the measure of the moral," to use the words of Mr. H. B. Wilson, at a later period. If the framers of an Act of Parliament decide, contrary to the desire of the promoters of a railway, that it shall not go through a certain valley, and it afterward be found that, through some error in the drafting, the valley is not exempted from its passage, no one can surely complain should the promoters, or their successors on the

board, take their line down that valley, however much the inhabitants may regret that the Act was not more carefully framed. Mr. Newman wished to show that, in holding certain opinions, he and his friends were not what Mr. Faber, long years afterward, designated as "straying under the shadow of condemned propositions." He had not only laid down what he thought his party might legitimately hold, but he had cleared his own mind. He had rendered his own position unmistakable, and he had challenged his university and the bench of bishops. The other party was not long in taking up the gage thus flung down. The tract appeared on February 27, 1841, and on March 8th was issued a solemn protest of four of the senior tutors in Oxford. The senior tutors of the other colleges either agreed with Mr. Newman, or, at least, did not agree with his assailants. These grounded their interference on the fact that the Articles were "the textbook for tutors in their theological teaching." They alleged that the tract had "a tendency to mitigate beyond what charity requires * * * the very serious differences which separate the Church of Rome from" that of England. They admitted "the necessity of allowing liberty in interpreting the formularies of the church," but demurred to the extent to which that liberty had here been carried, and, although the editorship of the whole series and the authorship of this tract was an open secret, it was yet necessary to call upon the editor that "some person, other than the printer and publisher of the tract, should acknowledge himself responsible for its contents." The letter was signed by T. T. Churton, tutor of Brasenose; H. B. Wilson, tutor of St. John's; John Griffiths, tutor of Wadham; and A. C. Tait, tutor of Balliol. Of these, only two were afterward found to be men of real weight. Mr. Churton accepted a college living, and died a year or two since. Mr. Griffiths has lately retired, full of years and honored by all, from the wardenship of Wadham, but neither of them had at any time a claim to be called a theologian. The same, indeed, may be said of Dr. Tait, an energetic tutor, an excellent head master, and who, both as Bishop of London and Archbishop of Canterbury, has done so much to uphold the dignity, honor, and firmness of the English bench. But we suppose that many even of those who have the interest of the Church of England at heart would think it, on the whole, well that her chief representative should be commonplace. The fourth, Mr. Wilson, was a man of very different stamp, a theologian, and as a writer of graceful English inferior to few. His Bampton

Lectures, published not long after Mr. Newman's secession, were the nearest approach to a theological treatise, constructed on other than Catholic lines, that has been known in England for many years. His aim, as laid down in these Lectures, was to build up a Zwinglian school within the church, and a further development of his opinions was put forth in his article in the "Essays and Reviews," the ablest contribution made to that volume. Had his health lasted, he was the one man who could have given a cohesion and a headship to the broad-church party, which neither the mystical piety of Mr. Maurice nor the poetic enthusiasm of Dean Stanley has been able to furnish. That river of thought has almost ceased to run within the church, or dribbles away in the little stream of followers of Mr. Llewellyn Davies and a few writers in the "Spectator," while he who might have been a leader is stricken down by paralysis and weakness of brain.

We do not know whether Mr. Newman would have recognized that the tutors had any right to call him to account, but on March 15th a more weighty appeal was made to him by an authority which he was bound to respect. The Hebdomadal Board, consisting of the vice-chancellor, the heads of houses, and the proctors, resolved "that the modes of interpretation such as are suggested in the said tract, evading rather than explaining the sense of the Thirty-nine Articles, and reconciling subscription to them with the adoption of errors which they were designed to counteract, defeat the object and are inconsistent with the due observance of the above mentioned statutes." On this appeal, Mr. Newman at once informed the vice-chancellor that he was "the author, and had the sole responsibility of the tract"; and on an appeal from his bishop he discontinued the series. It was the second time that he had entirely submitted himself to the bishop's judgment, but on the former occasion the cessation of the tracts had not been required.

The "Lives of the Saints" is another publication with which Mr. Newman's name is connected about the same time. Although the tone of the "Lives" would now be recognized by most persons as Roman, it was undertaken in the same inclusive spirit as "Tract XC." Mr. Newman started it with the idea that "it would be useful, as employing the minds of men who were in danger of running wild, bringing them from doctrine to history, and from speculation to fact; again, as giving them an interest in the English soil and the English Church, and keeping them from seeking sympathy in Rome as she is; and further, as tending to promote the spread of right views."

But no sooner was the "Life of Saint Stephen Harding" written than persons of great weight decided that it could not proceed even from an Anglican publisher, and, therefore, after the issue of two numbers, Dr. Newman ceased to be editor. But men still persisted in associating him in their minds with the scheme; some blamed the series because they thought of him; others wrote in it because the idea had been his, and if any were disloyal in carrying out the work which had been given them to do, their disloyalty was unfaith to him. Considered as literature, the "Lives" are of singular beauty and grace. It can scarcely have been anticipated, even by their writers, that they could ever be taken as serious history. There is little attempt at original research. Legend and admitted facts are mixed inextricably with one another.

One writer alone avowedly drew on his imagination. His conduct in so doing has always been regarded by those who knew the circumstances as an act of singular unfaithfulness to the dear friend of his dead brother. The "Life of Saint Bettelin" was intrusted to Mr. James Anthony Froude, and the following is the peroration of this very graceful work of fiction: "And this is all that is known, and more than all,—yet nothing to what the angels know,—of the life of a servant of God, who sinned and repented, and did penance and washed out his sins, and became a saint, and reigns with Christ in heaven." Mr. Froude has not alluded to it in his recent account of the Tractarian movement at Oxford; but the matter is not without interest, and may perhaps throw some light on his whole method of writing history and biography.

On September 18, 1843, Dr. Newman resigned the living of St. Mary's. He says himself that the ostensible, direct, and sufficient reason for his doing so was the persevering attack of the bishops on "Tract XC."; the immediate cause was the secession to Rome of a young friend under his spiritual care. And so his work was over, and he withdrew still more completely into his seclusion at Littlemore, where for some time past he and a band of religious-minded men had been endeavoring to lead a life more simple and more by rule than was possible in the ordinary social distractions of collegiate life. Here, thrown in on his own thoughts, which had been moving so long in one direction, it soon became visible to himself whither they must bear him; but he had not attained certainty; until that certainty came, he felt that he could take no further voluntary step. In 1845, he began his "History of the Develop-

ment of Doctrine," an expansion of his last university sermon, preached February 2, 1843, and this landed him with certainty in Rome. The book remains a fragment, but it is sufficient to sum up what he had taught, and to show whither all his teaching tended. The argument is flawless. Given the premises from which he starts, his conclusions follow by simple rules of logic, unless it be held that an absolutely sufficient doctrine and teaching are to be gained from the very letter of the Bible; and few but unlearned and unhistorical persons would be found to maintain this. If it be admitted that any one body of men has authority to bring out explicitly and infallibly what is implicit in simple statements and imperfect observances, the Catholic Church is that body, and the Roman is the true Church Catholic. The only escape from his conclusions is illogical, such as that adopted by one who, when pushed into a corner on a philosophical question, said, "I admit your premises, I see the conclusion, but I decline to draw it"; or there is the bolder but more scientific method of denying the premises. But in such a case knowledge, certainty, and a great deal of faith are destroyed; while all that remains is a hazy speculation and a hazardous hope.

Meantime Oxford was, as we have already said, still full of the spirit of him whose bodily presence was secluded at Littlemore. The tracts had ceased, but "Tract XC." was still alive and at work. In 1844 Mr. Ward, fellow of Balliol, published his "Ideal of a Christian Church," and as men gazed at the stately fabric raised before their imagination it was plain that the church so described—if it ever had found realization at all—had found it nowhere but on the Seven Hills. In this work was to be found contravention of the Articles still more alarming than that of "Tract XC.," because it was the language of an assailant, not of one who would fain find terms of peace. The party so long opposed to the movement endeavored to procure Mr. Ward's degradation from his degrees, and they joined to the censure intended to be pronounced upon him a condemnation of Mr. Newman. The number of pamphlets, addresses, memoranda, etc., which this produced was so vast that even a collection of some of the more striking fills many thick volumes, and there is no need to speak of more than two or three. One is remarkable as bearing out all and more than all that we have said of the love felt for Mr. Newman by his friends. Mr. Rogers, fellow of Oriel, now Lord Blachford, wrote a short appeal to members of Convocation upon the proposed censure of No. XC., from which we may quote the following passage:

"Those who have been ever honored by Mr. Newman's friendship must feel it dangerous to allow themselves thus to speak. And yet they must speak, for no one else can appreciate it as truly as they do. When they see the person whom they have been accustomed to revere as few men are revered—whose labors, whose greatness, whose tenderness, whose singleness and holiness of purpose they have been permitted to know intimately—not allowed even the poor privilege of satisfying, by silence and retirement, by the relinquishment of preferment, position, and influence, the persevering hostility of persons whom they cannot help comparing with him,—not permitted even to submit in peace to these irregular censures to which he seems to have been even morbidly alive, but dragged forth to suffer an oblique and tardy condemnation; called again to account for matters now long ago accounted for, on which a judgment has been pronounced, which, whatever others may think of it, he at least has accepted as conclusive;—when they contrast his merits, his submission, his treatment which they see or know, with the merits, the bearing, and the fortunes of those who are doggedly pursuing him, it does become very difficult to speak without sully what it is a kind of pleasure to feel is *his* cause by using hard words, or betraying it by not using them."

But the most interesting now of all these papers is a little leaflet bearing only the signature "Nemesis," and written by Arthur Penrhyn Stanley, then fellow of University College. It is as follows:

"OXFORD, February 10, 1845.

"1. In 1836, Dr. Hampden was censured by Convocation on an undefined charge of want of confidence. In 1845, Mr. Newman and Mr. Ward are to be censured by the same body.

"2. In 1836, the country was panic-stricken with a fear of Liberalism. In 1845, the country is panic-stricken with a fear of Popery.

"3. 474 was the majority that condemned Dr. Hampden. 474 is the number of requisitionists that induced the censure on Mr. Newman.

"4. The censure on Dr. Hampden was brought forward at ten days' notice. The censure on Mr. Newman was brought forward at ten days' notice.

"5. Two proctors of decided character, and of supposed leaning to the side of Dr. Hampden, filled the proctor's office in 1836. Two proctors of decided character, and of supposed leaning to the side of Mr. Newman, fill the proctor's office in 1845.

"6. The 'Standard' newspaper headed the attack on Dr. Hampden. The 'Standard' newspaper heads the attack on Mr. Ward and Mr. Newman.

"7. The 'Globe and Morning Chronicle' defended Dr. Hampden. The 'Globe and Morning Chronicle' defends Mr. Ward.

"8. The Thirty-nine Articles were elaborately contrasted with the writings of Dr. Hampden as the ground of his condemnation. The Thirty-nine Articles are made the ground of the condemnation of Mr. Ward and Mr. Newman.

"9. The Bampton Lectures were preached four years before they were censured. The 90th 'Tract for the Times' was written four years before it is now proposed to be censured.

"10. Two eminent lawyers pronounced the censure on Dr. Hampden illegal. Two eminent lawyers have pronounced the degradation of Mr. Ward illegal.

"11. The 'Edinburgh Review' denounced the mockery of a judgment by Convocation then. The 'English Churchman' denounces it now.

"12. And if on the one hand the degradation of Mr.

Ward is more severe than the exemptions of Dr. Hampden, on the other hand, the extracts from Mr. Ward give a truer notion of the Ideal than the extracts from Dr. Hampden of the Bampton Lectures."

"'The wheel then is come full circle.' The victors of 1836 are the victims of 1845. The victors of 1845 are the victims of 1836. The assailants are assailed, the assailed are the assailants. The condemners are condemned, the condemned are the condemners.

"'The wheel is come full circle.' Voters of the 13th, take this in its true spirit—not as an idle note of triumph, nor as a merely striking coincidence, but as a solemn warning to all who were concerned then, to all who are concerned now,—as a sign that there are principles of justice equally applicable to opposite cases, and that sooner or later their violation recoils on the heads of those who violated them.

"'The wheel is come full circle.' How soon may it come round again? Voters of the 13th, deal now to your opponents that justice which perhaps you may not expect to receive from them; remembering that the surest hope of obtaining mercy and justice then is by showing mercy and justice now. Judge, therefore, by 1836, what should be your conduct in 1845; and by your conduct in 1845, what should be your opponent's conduct in 1856, when Puseyism may be as triumphant as it is now depressed; when none can with any face cry for toleration then who have refused toleration now; or protest against a mob tribunal then, if they have used it now; or deprecate the madness of a popular clamor then, if they have kindled or yielded to it now."

Making full allowance for the fact that the points in dispute concern controversy in an insular church, and that civilization and culture have softened manners, there was much to remind us of the Councils of Sardis and Soissons in the existing state of Oxford when this question came before Convocation. The proceedings were brought to a summary and dramatic close by the proctors Mr. Guillemard, fellow of Trinity, and Mr. Church, of Oriel, the present dean of St. Paul's, who exercised the power they possessed of interposing their own veto on the condemnation which would have been passed. It required no little courage to make this stand against an angry and excited majority, and thus to save the university from an unjust and dishonorable action—unjust because a charge which had been virtually condoned was revived; dishonorable because the blow was aimed at Mr. Newman through a second work, with which he had nothing whatever to do. How little, indeed, he considered Mr. Ward as the exponent of his own views is seen in the curious fact that, in the "Apologia pro Vita Sua," Mr. Ward's name is not even mentioned. When the late dean of Westminster used to speak of these times, in which he, too, began to play a not inconspicuous part, he was wont to attribute the collapse of the Oxford movement to Mr. Ward's marriage, and to say, "*Solvuntur risu tabulae.*" There was, however, no real inconsistency in

the fact that Mr. Ward, vehemently as he upheld the necessity of clerical celibacy, should have married so soon as he had convinced himself that Anglican orders were naught, and when about to join a church in which he would be no priest; but the event had its comic side, and might perhaps be styled the collapse, for the time, of Ward, though not the collapse of the Oxford movement. This really came from the secession of Mr. Newman. In that was gathered up and brought to an end the strife of many anxious years. It, and nothing else, made men who had followed him so long almost unquestioningly, ask themselves, "Am I prepared also to go?" and in the "No" of many there was not only the unavoidable pause, but a resistance to further advance. Those so long carried forward by the current were now stranded and became fixed. The tide ebbed away and left them there. It gathered strength again and came on in its new phase of ritualism, but, opposed by them in some instances, has passed it, but not changed or moved them. Their convictions were fixed when Newman left; they have felt no further duty, as certainly they have had no inclination, to ask themselves again the questions of that time. It is not, however, unnatural that Dean Stanley should have taken the view he did. He was always a little inclined to minimize the Oxford movement. Great as was his tolerance when he looked at anything from the side of the affections, he was yet intellectually somewhat intolerant; with all his courteous allowance there was ever mingled a something of scorn for that which he did not wholly understand.

And so the end had come. The foremost man in the English Church was content to send for the humble Italian monk, Father Dominic, the Passionist, and, falling at his feet, to ask reception into the Roman Church. At the call of conscience he had already resigned preferment and leadership; he now abandoned home and nearly all his friends; for ease he accepted comparative poverty; for rule over others he took on him obedience; "*et exiit nesciens quo iret.*"

II.

FOR a while after his reception, Mr. Newman proposed to devote himself to some secular calling, but Cardinal Wiseman, in whose hands he had placed himself, decided otherwise; and, indeed, it must have been obvious to all the leading members of the church which now had gained him that so great gifts of preaching, such deep theological

learning, so keen a power of analyzing the workings of the human heart, should be available for the service of the priesthood. In the intervals of the close study at Rome which the change of belief required, he relaxed his mind by writing the extremely interesting story, "Loss and Gain." A friend, also a convert, related not long since how, in the winter of 1847, he was a very constant visitor to Dr. Newman, and was puzzled at finding him so frequently laughing to himself over the manuscript on which he was then engaged, till he said: "You do not know what I have been doing. Poor Burns" (the late high-church publisher), "a convert like ourselves, has got into difficulties owing to his change of faith, and I am going to give him this manuscript to see if it may not help him a little out of them."

Of course, Dr. Newman is to be believed implicitly when he tells us that none of the characters in this little romance of Oxford life are drawn from nature; real persons were, he says, far from his thoughts. Free use was made, however, of sayings and doings which were characteristic of the time and place in which the scene was laid, and he admits that "it is impossible that, when a general truth or fact is exhibited in individual specimens of it, an ideal representation should not more or less coincide, in spite of the author's endeavor, or even without his recognition, with its existing instances or champions." And so it came to pass that, whether intended or not, the book was a presentation, on the somewhat lighter side, of not only the conflicting opinions, but of the men who had held them, in Oxford during the late years. It exhibits the author's good-humored and more playful sarcasm. We shall see presently what he could do in this strain when he thought the time was fitting for its still more vigorous use.

The history of his religious opinions, we are told, ended with his conversion; and though this is strictly true, since he who accepts the Roman system accepts it in faith and as an unchangeable whole, yet that development which Dr. Newman claimed for doctrine in the church takes place also in the life of the individual. Each dogma which he held implicitly, some, perhaps, unconsciously, had to be brought out and formularized in his Roman retirement. Each that at first was only a faith had to be grasped afterward by the reason, and put into its proper relation with other tenets. Again, since his reception into the Roman Church, certain great doctrines, hitherto undefined, have been dogmatically fixed, and until they were so, he, with other divines, was free to take either

side of the controversy concerning them. Before the definition of any dogma, it is in the very nature of things that the matter shall be weighed, discussed, arguments for and against heard. Hence it is quite possible that in regard to these Cardinal Newman's attitude of mind may not be precisely that which it was in the early days of his conversion; but this is not to say that there has been any change in his religious opinions. What he accepted, he accepted once for all. His mind has been at rest. He has possibly not always seen the same aspect of divine truth; the doctrines have developed in his mind as the whole system of Catholic doctrine has developed in the church at large. But all his mental progress must have seemed to him like stepping from firm to ever firmer ground, or, at least, to the increasing assurance that under his feet was solid rock. For the Church of England, in so far as it had been possible to hold in it Catholic truth, and in so far as its offices had fostered devotion, he has been full of affectionate memories. In so far as it has been regarded by him as a Protestant establishment, he has had nothing but scorn. Two short passages will give his attitude of mind as he regarded his past from those two standpoints.

"Why should I deny to your memory what is so pleasant in mine? Cannot I, too, look back on many years past and many events in which I myself experienced what is now your confidence? Can I forget the happy life I have led all my days, with no cares, no anxieties worth remembering—without desolateness, or fever of thought, or gloom of mind, or doubt of God's love to me, and Providence over me? Can I forget—I never can forget—the day when, in my youth, I first bound myself to the ministry of God in that old church of St. Frideswide, the patroness of Oxford?—nor how I wept most abundant and most sweet tears when I thought what I then had become, though I looked on ordination as no sacramental rite, nor even to baptism ascribed any supernatural virtue? Can I wipe out from my memory, or wish to wipe out, those happy Sunday mornings, light or dark, year after year, when I celebrated your communion rite in my own church of St. Mary's, and, in the pleasantness and joy of it, heard nothing of the strife of tongues which surrounded its walls? When, too, shall I not feel the soothing recollection of those dear years which I spent in retirement, in preparation for my deliverance from Egypt, asking for light, and by degrees gaining it, with less of temptation in my heart and sin on my conscience than ever before?"

But, on the other hand, he says:

"We see in the English Church, I will not merely say no descent from the first ages, and no relationship to the Church in other lands, but we see no body politic of any kind; we see nothing more or less than an establishment, a department of Government, or a function or operation of the state,—without a substance,—a mere collection of officials, depending on and living in the supreme civil power. Its unity and personality are gone, and with them its power of exciting feelings

of any kind. It is easier to love or hate an abstraction than so commonplace a framework or mechanism. We regard it neither with anger, nor with aversion, nor with contempt, any more than with respect or interest. It is but one aspect of the state, or mode of civil governance; it is responsible for nothing; it can appropriate neither praise nor blame; but whatever feeling it raises is to be referred on, by the nature of the case, to the Supreme Power whom it represents, and whose will is its breath. And hence it has no real identity of existence in distinct periods, unless the present Legislature or the present Court can affect to be the offspring and disciple of its predecessor. Nor can it in consequence be said to have any antecedents, or any future; or to live, except in the passing moment. As a thing without a soul, it does not contemplate itself, define its intrinsic constitution, or ascertain its position. It has no traditions; it cannot be said to think; it does not know what it holds, and what it does not; it is not even conscious of its own existence. It has no love for its members, or what are sometimes called its children, nor any instinct whatever, unless attachment to its master, or love of its place, may be so called. Its fruits, as far as they are good, are to be made much of, as long as they last, for they are transient, and without succession; its former champions of orthodoxy are no earnest of orthodoxy now; they died, and there was no reason why they should be reproduced. Bishop is not like bishop, more than king is like king, or ministry like ministry; its Prayer-book is an Act of Parliament of two centuries ago, and its cathedrals and its chapter-houses are the spoils of Catholicism."

While it was still uncertain in what special post Dr. Newman's great powers could be used in England, he was attracted by the elasticity, beauty, and usefulness of the Oratorian congregation in Rome, and, with the full consent of the Pope, he was the first to introduce the Oratorians into England. The congregation of the Oratory had gradually grown up around St. Philip Neri toward the middle of the sixteenth century, and was formally approved in 1575. The Oratorians "are secular priests without vows, bound together by the simple tie of charity. Their aim is the conversion and sanctification of souls by means of prayer, daily preaching, and frequentation of sacraments." St. Philip made few rules, but would have these perfectly kept. The character of the Oratorians at this present day is as at their foundation; each congregation is independent of the others; each priest is free to go when he will; but the simple life that they live together is very beautiful, and the various works of preaching, education, and the like most efficiently and admirably performed. It is an interesting fact that Dr. Newman himself gives, as the remote cause of his attraction to the Oratory, Ranke's sketch of St. Philip (Bk. IV., Sec. 10, "On the Roman Curia"). It had struck him while still in the Anglican Church. This was a curious place in which to find the germ of a vocation.

While he was working at Birmingham, in 1851, occurred the first event which brought

Dr. Newman again prominently before the world, from which he had to so large an extent retired. He gave a course of lectures on "The Position of Catholics in England," addressed to the brethren of the Oratory, exposing in a lively manner some of the vast number of misconceptions which have attached themselves to Catholics in England. In words at once indignant and pathetic, he explained how a number of gentlemen who had devoted themselves to live a religious life, and who would build a house for their own accommodation, were exposed to the most malignant insinuations from persons "who peeped into the under-ground brickwork and were curious about the drains," to discover cells of imprisonment, or even places of murder, which must, they thought, necessarily exist in every Catholic establishment; and he was not unnaturally indignant that the religious world of Birmingham should consider that these malignant insinuations gained some color from the words of those who, profligate in life and false in tongue, had left the Roman Church, not because they were no longer able to agree with its dogmas intellectually, but because moral rules were disagreeable to them, and because denouncing an unpopular religion was easier than leading a virtuous and cleanly life. Foremost among these persons was a certain Father Achilli, an Italian, an ex-Dominican monk, who had been lecturing at the Birmingham town-hall against the church he had left, and to which he had been a disgrace. "It is, indeed, our great confusion," said Dr. Newman, "that our Holy Mother could have had a priest like him." What more he said need not be quoted; though necessary at the time, it is not now edifying to lay bare the scandals of an evil life, exposed as they were by a master of indignant eloquence. Every word of his burning accusation was true, and even less than the truth, but it was actionable according to our singular English law of libel. Dr. Newman was prosecuted, and by the Court of Queen's Bench condemned to pay a fine of one hundred pounds; but Father Achilli was disposed of once for all. The price was a cheap one to pay for having finally routed such a rascal, while with his exposure fell a large part of the hinted accusations against the Birmingham Oratorians. It is recognized by all fair-minded men and women that, in England at least, Catholics are much like other people, and that they do not, because they happen to hold certain opinions about the jurisdiction of the Bishop of Rome, and about the supernatural in this world and the next, necessarily secrete horns and grow a tail.

In the same lectures Dr. Newman incidentally refuted one very common statement, which had been made in regard to his position as a Catholic in England. It was the fashion to say that a man of his intellect must have accepted the Roman faith with reservations; that it was impossible he could believe all the church taught; that he was a Protestant among Catholics, holding only what his reason could accept, and leaving all the rest on one side; but the fact was far otherwise. Here are his own words in contradiction:

"The Catholic Church, from east to west, from north to south, is, according to our conceptions, hung with miracles. The store of relics is inexhaustible; they are multiplied through all lands, and each particle of each has in it at least a dormant, perhaps an energetic, virtue of supernatural operation. At Rome there is the true cross, the crib of Bethlehem, and the chair of St. Peter; portions of the crown of thorns are kept at Paris; the holy coat is shown at Trèves; the winding-sheet at Turin; at Monza, the iron crown is formed out of a Nail of the Cross; and another Nail is claimed for the Duomo of Milan; and pieces of our Lady's habit are to be seen in the Escorial. The Agnus Dei, blessed medals, the scapular, the cord of St. Francis, all are the medium of Divine manifestations and graces. Crucifixes have bowed the head to the suppliant, and Madonnas have bent their eyes upon assembled crowds. St. Januarius's blood liquefies periodically at Naples, and St. Winifred's well is the scene of wonders even in our unbelieving country. Women are marked with the sacred stigmata; blood has flowed on Fridays from their five wounds, and their heads are crowned with a circle of lacerations. Relics are ever touching the sick, the diseased, the wounded; sometimes with no result at all, at other times with marked and undeniable efficacy. Who has not heard of the abundant favors gained by the intercession of the Blessed Virgin, and of the marvelous consequences which have attended the invocation of St. Antony of Padua? These phenomena are sometimes reported of Saints in their life-time, as well as after death, especially if they were evangelists or martyrs. The wild beasts crouched before their victims in the Roman amphitheatre; the axe-man was unable to sever St. Cecilia's head from her body, and St. Peter elicited a spring of water for his jailor's baptism in the Mamertine. St. Francis Xavier turned salt water into fresh for five hundred travellers; St. Raymond was transported over the sea on his cloak; St. Andrew shone brightly in the dark; St. Scholastica gained by her prayers a pouring rain; St. Paul was fed by ravens; and St. Francis saw her guardian Angel. I need not continue the catalogue; here, what one party urges, the other admits; they join issue over a fact; that fact is the claim of miracles on the part of the Catholic Church; it is the Protestants' charge, and it is our glory."

I must give one specimen, also, of how in these most telling lectures his pathos passes into sarcasm, his sarcasm into impassioned argument, when he endeavors to explain the manner in which the Church of Rome uses images; and in a passage of great humor he shows that the Protestant practice is not so different as it is the fashion to represent it:

"A Protestant blames Catholics for showing honour to images; yet he does it himself. And first, he sees

no difficulty in a mode of treating them quite as repugnant to his own ideas of what is rational as the practice he abominates; and that is, the offering insult and mockery to them. Where is the good sense of showing dishonour, if it be stupid and brutish to show honour? Approbation and criticism, praise and blame go together. I do not mean, of course, that you dishonour what you honour; but that the two ideas of honour and dishonour so go together, that where you *can* apply (rightly or wrongly, but still)—where it is *possible* to apply to one, it is possible to apply the other. Tell me, then, what is meant by burning bishops, or cardinals, or popes, in *effigy*? has it no meaning? is it not plainly intended for an insult? Would any one who was burned in effigy feel it no insult? Well, then, how is it *not* absurd to feel pain at being dishonoured in effigy, *yet* absurd to feel pleasure at being honoured in effigy? How is it childish to honour an image, if it is not childish to dishonour it? This only can a Protestant say in defence of the act which he allows and practices, that he is used to it, whereas to the other he is not used. Honour is a new idea—it comes strange to him; and, wonderful to say, he does not see that he has admitted it in principle already, in admitting dishonour; and after preaching against the Catholic who crowns an image of the Madonna, he complacently goes his way, and sets light to a straw effigy of Guy Fawkes.

"But this is not all; Protestants actually set up images to represent their heroes, and they show them honour without any misgiving. The very flower and cream of Protestantism used to glory in the statue of King William on College Green, Dublin; and, though I cannot make any reference in print, I recollect well what a shriek they raised, some years ago, when the figure was unhorsed. Some profane person one night applied gunpowder, and blew the king right out of his saddle; and he was found by those who took interest in him, like Dagon, on the ground. You might have thought the poor, senseless block had life, to see the way people took on about it, and how they spoke of his face, his arms, and his legs; yet those same Protestants, I say, would at the same time be horrified had I used 'he' and 'him' of a crucifix, and would call me one of the monsters described in the Apocalypse did I but honour my living Lord as they their dead king."

In 1852 Dr. Newman, who had, both in Oxford and at Birmingham, shown the deep interest he took in education, and his ability as a teacher, was called from his post at Birmingham to be rector for a time of the Catholic University in Dublin. We need not deal with this episode in his life further than to say that his residence in Dublin drew from him one of his most interesting books—his nine lectures on "The Idea of a University Defined and Illustrated," in which his recollections of what Oxford was at its best, and his former dreams of what it might become, were happily blended with a larger vision of some greater Oxford in a once more Catholic land. But after this short episode was over he returned again to his quiet work at Birmingham, content to be obscure and unknown, except to his spiritual children. Once more, however, by no means through his own seeking, he came forward in controversy, and was able to put before his countrymen a statement and an explanation of his life and his religious opin-

ions. It seemed good to Mr. Kingsley, an eager controversialist, when anxious to maintain that truth for its own sake was not esteemed a virtue by Roman ecclesiastics, to put Dr. Newman's name forward as an example of what he was saying. It is probable that he at first used Dr. Newman's name only as a concrete way of expressing the Roman priesthood. It was the mightiest English name, but he could not have lighted on a more unlucky instance. The "*Apologia pro Vita Sua*" was the answer to what its author says "was the impression of large classes of men, the impression twenty years ago, and the impression now."

"There has been a general feeling that I was for years where I had no right to be; that I was a 'Romanist' in Protestant livery and service; that I was doing the work of a hostile Church in the bosom of the English Establishment, and knew it, or ought to have known it. There was no need of arguing about particular passages in my writings when the fact was so patent, as men thought it to be."

But the English mind, if suspicious, is not on the whole unfair, and it is quick to recognize the ring of truth. When, therefore, Dr. Newman at last spoke out, men saw directly that here was very fact. A life was laid before them bare to its inmost cell. Although the writer had for years felt "*secretum meum mihi*," he at last spoke out all that he had to say, and his countrymen believed him. However they may differ, however some of them may abhor the opinions which he holds, however dangerous to the well-being of society at large and to many individuals they may think them, they have recognized that here at least is one who holds the opinions he does, because he honestly believes they are the best guides and safeguards to wandering men, because they tend to produce holy, happy, and consistent lives. There are few more touching dedications to any man or company of men than that in which Dr. Newman inscribes his "*History of My Religious Opinions*," work to his brethren of the Oratory. I must quote the closing words:

"In you" (that is, in those to whom he dedicates his book) "I gather up and bear in memory those familiar, affectionate companions and counsellors who in Oxford were given to me, one after another, to be my daily solace and relief; and all those others, of great name and high example, who were my thorough friends, and showed me true attachment in times long past; and also those many younger men, whether I knew them or not, who have never been disloyal to me by word or deed; and of all these thus various in their relations to me, those more especially who have since joined the Catholic Church.

"And I earnestly pray for this whole company, with a hope against hope, that all of us, who were once so united, and so happy in our union, may even now be brought at length, by the Power of the Divine Will, into One Fold and under One Shepherd."

And so, having nobly vindicated himself, he was again silent, publishing only from time to time collections of his former works, and as a new contribution to literature "*The Grammar of Assent*," in which he put forward arguments satisfactory to his own mind for theism, for Christianity, and for the Catholic religion. Every intelligent Catholic would be ready to admit that, though in the Church faith is one, the schools of thought and shades of feeling are more than one; that the late Pope did not perhaps belong to the same school as the present, certainly had not always the same feeling and tone; or that it was unlikely that one called to the highest eminence in the church under the present pontiff should have been selected by Pío Nono. It is said, however, by one likely to be well informed on this subject, that had the late Pope known, or been allowed to know, about Dr. Newman all that his successor knew, he would have probably bestowed the same honor. In his residence at Gaeta, in 1849, Pío Nono spoke of Dr. Newman in terms of high, even enthusiastic, admiration. But another school of thought was preponderant in his councils, and the Pope in Italy may not always have been conversant with English thought. None can fairly blame a dominant party for promoting its own men,—but the party was narrow and provincial. As Dr. Newman has himself said: "The rock of St. Peter enjoys at its summit a pure and serene atmosphere, but there is" (was then especially) "a great deal of Roman malaria at the foot of it." By the present Pope, Dr. Newman's long services have been rewarded by the highest dignity in his power to bestow. And he added to his gift by dispensing Dr. Newman from all those duties and services which might have been burdensome to him at his great age, and to one who for so long had lived apart from the stir of the world in his peaceful home at Edgbaston.

It will not be to trespass unduly on his privacy if we give those who have not seen it some glimpse of what that home is, and what is the life within it. Above the dingy streets of Birmingham, and within short distance of the open, still wild and beautiful country, spread the broad roads of Edgbaston, with their wide gardens and villas, their shrubberies which sift the smoke, and in spring, at least, are bright with lilac and laburnum. The Oratory fronting one of these roads, within sight of thickets and sound of singing birds, is an imposing brick building, with spacious corridors and well-proportioned rooms within. Each father has his own comfortable room, library and bedroom in one, the bed within

a screen, the crucifix above, and the prized personal little fittings on the walls. The library is full of valuable books, many of them once the private property of Dr. Newman, now forming the nucleus of a stately collection for the use of the community. The quiet men who share this home come and go about their several businesses—the care of the school, whose buildings join but are separate from the Oratory proper, the work in the church, in hearing confessions, saying masses, and preaching. In the house the long *soutane* and *biretta* are worn; to go abroad they wear the usual dress of the clergy in England. Perhaps it is the dinner hour, and the silent figures pass along the galleries to the refectory, a lofty room with many small tables, and a pulpit at one end opposite the tables. At one of these sits the superior alone, clad like the rest save the red lines of his *biretta*, which mark his cardinal's rank. But among his children, and in his home, he is still more the superior and the father than a prince of the church. At a table near him may perhaps be a guest, and at others the members of the community, two and two. The meal is served by two of the fathers who take this office in turn, and it is only of late that Dr. Newman has himself ceased to take his part in this brotherly service, owing to his advanced years. During the meal a novice reads from the pulpit a chapter of the Bible, then a short passage from the life of St. Philip Neri, and then from some book, religious or secular, of general interest. The silence is otherwise unbroken save for the words needful in serving the meal. Toward the end, one of the fathers proposes two questions for discussion, or rather for utterance of opinion. On one day there was a point of Biblical criticism proposed, and one of ecclesiastical etiquette (if the word may be allowed), whether, if a priest called in haste to administer Extreme Unction did so inadvertently with the sacred oil set apart for another purpose, instead of that for Unction, the act were gravely irregular. Each gave his opinion on one or other of these questions, the Cardinal on the first, gravely, and in well-chosen words. Yet it seemed to the observer that, while he, no doubt, recognized that such a point must be decided and might have its importance, there was a certain impatience in the manner in which he passed by the ritual question and fastened on that proposed from Scripture. After this short religious exercise, the company passed into another room for a frugal dessert and glass of wine, since the day chanced to be a feast, and there was much to remind an Oxford man of an Oxford common room, the excellent talk sometimes to be heard there,

and the dignified unbending for a while from serious thought.

As might be inferred from the passage on music quoted above, which none but a musician could have written, Dr. Newman once took great delight in the violin, which he played with considerable skill. Even now the fathers hear occasionally the tones awakened by the old man's hand ring down the long gallery near his room, and know that he has not lost the art he loved, while he calms a mind excited from without, or rests from strenuous labor, in the creation of sweet sound. He is still a very early riser, punctual as the sun, still preaches often with what may be best described in words he has applied to St. Philip, "thy deep simplicity."

The Cardinal has of late been engaged on a careful revision, in the light of modern researches, of his translation of St. Athanasius, with notes of some treatises of St. Athanasius against the Arians. He regards this as the end of his life's work—a life which is now appreciated and honored not only by his spiritual sons, but by all fair-minded men of English speech.

May he long remain in the possession of bodily ease and intellectual vigor! Long may it be before any life of him has to be written! Till that day comes, when his loving friends shall gather such private letters and memoranda as he may have desired should be given to the world, he who would speak of Cardinal Newman is bound, whatever his sources of information, to trench but little on any but published matter. One paper, however, may be given which has not yet seen the light. The following memorandum was written in answer to an inquirer, who wished to know the Catholic view on certain subjects, not in themselves the most important, but which were at the time of interest to him, and each of which answered incidentally several other questions of the same sort. With these few words of explanation the following paper explains itself:

"Very little has been formally determined by the church on the subject of the authority of Scripture further than this, that it is one of the two channels given to us by which the *salutaris veritas* and the *morum disciplina* (in the words of the Council of Trent), which our Lord and his apostles taught, are carried down from age to age to the end of the world. In this sense Scripture is the 'word of God,' i. e., the written word.

"There has been no formal definition on the part of the church that Scripture is inspired.

"It is defined that Almighty God is *auctor utriusque Testamenti*. I do not know of any definition that he is *auctor omnium librorum* which belong to each Testament.

"But it is not to be supposed that, because there is no definition on the part of the church that Scripture

is inspired, therefore we are at liberty at once to deny it.

"1. First, St. Paul's words cannot be passed over *omnis scriptura divinitus inspirata*.

"2. Next, the very strong opinion on the subject of the early fathers must be taken into account.

"3. Thirdly, the universal feeling, or *ὑπόνομα*, of the Church in every age down to the present time.

"4. The consent of all divines, which, whatever their differences on the subject in detail, is clear so far as this, viz., that Scripture is true. This, when analyzed, I consider to signify this, viz., 'Truth in the sense in which the inspired writer, or, at least, the Holy Ghost, meant it, and means to convey it to us.'

"Thus, though it be not proposed to us by the church *de fide* that we should accept the doctrine of the inspiration of Scripture, only that we must accept all the church teaches us to be in Scripture and teaches us out of Scripture, yet it is a matter of duty, for the first reasons I have given, not to encourage, to spread, or to defend doubts about its inspiration.

"As to the extent of its inspiration, I do not see that the Council of Trent speaks of it as the authoritative channel of doctrine in other matters than faith and morals; but here, besides the four considerations above set down, I would observe that it is often a most hazardous process to attempt to enunciate faith and morals out of the sacred text which contains them. It is not a work for individuals. At last it has been felt and understood that faith and morals are not involved in a doctrine which Scripture seems to teach, that the earth is fixed and the sun moves over it. The time was necessary to ascertain the fact, viz., that the earth *does* move, and therefore that the divine spirit did not dictate these expressions of Scripture which imply that it does not, rather that He did not mean to convey that notion by these expressions.

"As to the questions you put to me, I do not see anything in the text of Scripture which obliges us, or even leads us, to consider the six days of Genesis i. to be literal days.

"The literal accuracy of the history of Jonah, or that of Elisha, rests upon a different principle, viz., whether miracles are possible, and to be expected. I see no difficulty in believing that iron, on a particular occasion, had the lightness of wood, if it is the will of God in any case to work miracles, *i. e.*, to do something contrary to general experience. And while I say the same of Jonah and the whale, I feel the additional grave and awful hazard how to attempt to deny the history without irreverence toward the express teaching of the incarnate God."

It would ill become me to dare to pronounce a critical judgment on Dr. Newman, except so far as such judgment is involved in any account of the man and his works. The scales of comparison at the disposal of the writer are too small to weigh and judge so great an intellect, such deep learning, such subtle literary skill, as is possessed by Cardinal Newman. I can only say that, during the last few months, I have re-read a very large part of what he has written, always with fresh admiration and even wonder.

One word, however, may be permitted of Cardinal Newman, considered as a poet, in addition to what comes out incidentally in the foregoing sketch. If I have said nothing hitherto of his poetry, it is not that I am unmindful of it. Who can forget that the lyric "Lead, Kindly Light" has found its

way into almost every hymnal? Who can ignore the wonderful "Dream of Gerontius," in which the peaceful and beautiful side of the doctrine of purgatory is presented to all who can receive it? His poetry, however, is to be found chiefly in the beautiful thoughts scattered through his prose rather than in the form of verses. These have been the lighter flowers of his literature, and, graceful as they are, are not those by which he is to be judged.

We suspect, however, that few who know the gravity and greatness of such a mind would have been prepared for the flower of religious fancy which broke forth in his "Valentine to a Little Girl":

"Little maiden, dost thou pine
For a faithful Valentine?
Art thou scanning timidly
Every face that meets thine eye?
Art thou fancying there may be
Fairer face than thou dost see?
Little maiden, scholar mine,
Wouldst't thou have a Valentine?"

"Go and ask, my little child,
Ask the Mother undefiled:
Ask, for she will draw thee near,
And will whisper in thine ear:
'Valentine! the name is good;
For it comes of lineage high,
And a famous family:
And it tells of gentle blood,
Noble blood,—and nobler still,
For its owner freely poured
Every drop there was to spill
In the quarrel of his Lord.
Valentine! I know the name;
Many martyrs bear the same,
And they stand in glittering ring
Round their warrior God and King.—
Who before and for them bled,—
With their robes of ruby red
And their swords with cherub flame.'

"Yes! there is plenty there,
Knights without reproach or fear,—
Such St. Denys, such St. George,
Martin, Maurice, Theodore,
And a hundred thousand more,
Guerdon gained and warfare o'er
By that sea without a surge.

"And beneath the eternal sky,
And the beatific Sun
In Jerusalem above,
Valentine is every one;
Choose from out that company
Whom to serve, and whom to love."

But it is time to draw these words to an end. The readers of THE CENTURY will have had enough of the interpreter, who trusts that he has not said so much as to weary them, but that he may have succeeded in imparting something of his own reverence and affection to some who knew only as a name this man, so old with the weight of honored years, but, in ecclesiastical dignity, the youngest English cardinal.

C. Kegan Paul.

THE DANGER OF AN OFFICE-HOLDING ARISTOCRACY.

THERE is probably no objection to permanent tenure in office, or to tenure during good behavior, which has a stronger hold on that portion of the public which has no direct interest in the spoils system—that is, which does not seek office as the reward of political services—than the objection that it would convert the officers into a sort of aristocracy, whose manners toward those with whom they had to transact business would be haughty and overbearing. I can hardly describe this objection better than in the words of a Western friend of the movement, in a private letter written nearly two years ago. He said:

“The people mean by this [an aristocracy of office-holders] that a continuance in office of the same set of men creates in the mind of the office-holder the idea that he owns the office, and instead of being a public servant, he becomes a master, haughty toward those whom he ought to serve. Is it not quite a general experience with office-holders of long standing that they are apt to become somewhat overbearing? I am inclined to think that they view it in that light, and my experience is based upon conversation with men of ordinary position in society, who make our majorities for us, who must be educated to whatever of good there is in the reform idea, and must be consulted as to its adoption, if the reform ever becomes permanently ingrafted upon our Government and administration.”

If Americans had had any such experience as this of the effect of permanence in office on the manners of office-holders, I admit freely that it would be very difficult for civil-service reformers to make head against it. In politics no *a priori* argument can stand for a moment with the mass of mankind against actual observation. There would be no use, for instance, in our saying that the effect of appointment through competitive examination upon the character of office-holders would be so improving that they would be sure to be polite and considerate in their intercourse with the people, if the people had found that permanent officers, selected by any method whatever, were haughty, overbearing, and acted as if the offices were their private property. Nothing is more difficult to eradicate than the remembrance of insulting treatment at the hands of an aristocracy of any kind. If the American people had suffered in mind even, through not in body or estate, from such a class at any time since the Revolution, and that class happened to be a permanent office-holding class, we should, in short, be forced to admit that, great as

might be the abuses of the present system, it was certainly the one best adapted to the conditions of American society, and that we must make the best of it, just as we make the best of the drawbacks on universal suffrage.

Curiously enough, however, no trace of any such experience appears in the history of the American civil service. Down to 1820, office-holders practically held during good behavior. It was considered at first doubtful whether the President had the discretionary power of removal at all. It was settled in 1789 that he had it, but its exercise was long viewed with great disfavor. It was, said Webster, speaking in 1835, “regarded as a suspected and odious power. Public opinion would not always tolerate it, and still less frequently did it approve it. Something of character, something of the respect of the intelligent and patriotic part of the community, was lost by every instance of its unnecessary exercise.” And it was very sparingly exercised. During Washington’s administration only nine persons were removed from office; during John Adams’s, ten; during Jefferson’s, thirty-nine; during Madison’s, five; during John Quincy Adams’s, only two. In 1820, the first change in this tenure was made by the passage of an act which fixed at four years the term of all those called accounting officers—that is, officers who had the handling of considerable sums of public money. Now, if this act was due, in part even, to the popular perception of the growth among the office-holders of pride of station and of a sense of proprietorship in the office, it would undoubtedly have found expression in the discussions which preceded or attended its passage. But there is no trace of any such motive in the reports or chronicles of the day. Nothing of the kind appears to have been alleged by the promoters of the measure. In fact, it does not appear to have occurred to any one as an argument likely to help its passage. The bill was due to the fact that there had been many defalcations and irregularities among this class of officers, owing to want of proper supervision, and to the belief that if the tenure were limited to four years, and they were thus compelled to account periodically by mere operation of law, they would be more careful and strict in the discharge of their duties in the meantime.

In 1830, a resolution was introduced in the Senate, calling on the President for the reason of his removing certain officers; and in the

debate which followed, Mr. Barton, of Missouri, stated very clearly and succinctly the motives which animated those who brought about the legislation of 1820. He said :

"The legislator in 1820 naturally asked himself what term and tenure of office would attain the desired public security? To hold for life would be too irresponsible. To fix his tenure during good behavior would not remedy the evils of the old law. There must be a process at law to convict him of the cause before the removing power could be exerted. To make him removable at the will of the President alone, as in the case of 1789, would make the President too absolute; and hence the provision for a term of years, provided he so long behaved faithfully, removable at the pleasure of the appointing power during his term, if he gave cause."

Now, what were these "evils of the old law" to which he refers? He thus describes them, and his description was not gainsaid by anybody :

"By the old law there was no summary power except the disputed one of taking care that the laws be faithfully executed, to arrest the career of official delinquency; and the process was doubtful and dilatory by which the cause of removal was to be established, whether by impeachment, indictment, or by civil suit. The evil of the old law was that, while the Government was plodding through some tedious process of law, amidst its delays and proverbial uncertainties, the defaulter could embezzle our funds and ruin our affairs so far as they lay within his control, and escape to Texas, etc., before the process had ascertained whether there was lawful cause for removal or not."

In short, the act of 1820 was intended to provide a safeguard against speculation. The safeguard, it is true, was a clumsy one, but nobody appears to have thought of it as a safeguard also against the growth of bureaucratic pride and insolence. Webster spoke on the same subject five years later, in a debate on a bill repealing the act of 1820. He was opposed to this act, but he confessed that some good had resulted from it. "I agree," he said, "that it has in some instances secured promptitude, diligence, and a sense of responsibility. These were the benefits which those who passed the law expected from it, and these benefits have in some measure been realized." He goes on to say, however, that the benefits wrought by the change have been accompanied by a far more than equivalent amount of evil—an opinion which, if he were alive to-day, he would probably express in a still stronger and more unqualified form. But neither he nor any of his contemporaries appears to have thought of the act as an act for the abolition of an official aristocracy, nor for reminding office-holders that they were the servants, not the masters, of the people. It made them prompter and more diligent than they had been in writing up their

books, and in collecting and arranging their vouchers, and in having their balances properly adjusted at the expiration of their term; but nowhere is there any indication that it was intended to reach the evil which we now hear spoken of as the very probable result of a tenure during good behavior, and as the greatest objection to a recurrence in our time to the old system. Webster defended the repealing bill, on the ground that the act of 1820 had given the President too much power, by creating vacancies for him to fill which he would not have ventured to create for himself, and which the Constitution, in his (Webster's) view, did not intend that he should have the power of creating, and the creation of which demoralized the service. He advocated the retention of the old tenure during good behavior, leaving the offenses committed by officers to be punished by some legal process, instead of having the tenure of office settled on the theory that every officer would commit offenses if left undisturbed in his place more than four years. In fact, he advocated it on precisely the grounds on which the friends of civil-service reform now advocate it. "I think," said he, "it will make the men more dependent on their own good conduct, and less dependent on the will of others. I believe it will cause them to regard their country more, their duty more, and the favor of individuals less. I think it will contribute to official respectability, to freedom of opinion, to independence of character; and I think it will tend in no small degree to prevent the mixture of selfish and personal motives with the exercise of political duties." But it evidently did not occur to him that it was necessary to show that it would not create a haughty bureaucracy.

The spoils system, as we now know it, was introduced by Jackson. The removals, which only amounted to two altogether under John Quincy Adams, suddenly rose in Jackson's first year to nine hundred and ninety. This sudden change in the way of looking at places in the Federal service of course provoked a great deal of discussion and denunciation. Jackson's use of his power was fiercely assailed and fiercely defended during his two terms, both in and out of Congress. But we may search the debates and the newspapers between 1830 and 1840 in vain for an assertion that the revolution had been called for, or was justified by the effect of security on the manners of office-holders, or by the growth of a feeling among office-holders that their tenure of their places made them a class apart from and superior to the rest of the community. There was, instead, a great deal of assertion in Jackson's defense that, if tenure during

good behavior had lasted, this feeling would have sprung up, just as there is now much prediction that, if this tenure were to be restored, the feeling would spring up. But no one alleged that it had sprung up, and had constituted a reason for beginning the practice of frequent removals, to which the absurd name of "rotation" was afterward given. In other words, no attempt was made to justify Jackson's introduction of the *régime* under which we are now living by pointing out that particular effect of the old *régime* on the office-holding mind, which is now alleged as the chief obstacle to its restoration. In short, the American people really knows nothing from its own experience, however much it may know in other ways, of the tendency of permanent tenure to create and perpetuate a caste.

The belief that this tendency exists must, therefore, be a deduction from the experience of foreign nations, or from general principles of human nature. It must rest, in other words, on the assumption that what happens in England or on the European continent is sure to happen here, and that it is his security of tenure which gives the foreign official that sense of his own superiority for the display of which he has long been famous. Nothing is older in story than the "insolence of office." We can go back to no time, in the annals of the Old World, when the man "dressed in a little brief authority" was not an object of popular odium. See, it is said, what the manners of the German and Russian, and even the French and English, officials are; such will the manners of our officials be should we ever permit them to hold their places, as these foreigners do, during good behavior, and fail to remind them by frequent or periodical dismissals without cause (which is really what is meant by short fixed terms) of how little consequence they are to the community which they serve. The answer to this is that the argument rests on the assumption that greater security of tenure constitutes the only difference between the condition of the American and that of the European office-holder, whereas there are numerous other differences. Nothing has so much to do with a man's manners as the manners of the society in which he lives. No one can wholly, or even in great part, withdraw himself from this influence without partial or complete isolation, such as that in which soldiers live in barracks or camp, or monks in their monastery. In order to make any body of men really peculiar, either mentally or physically, we have to take possession of their whole lives and impose great restrictions on their intercourse

with the community at large, and effect a considerable, if not complete, severance between their interests and the general interest. No modern state, however, subjects its civil functionaries to any such treatment. They all, out of office hours, live as they please. They marry and are given in marriage, and spend their salaries in precisely the same manner as other salaried people. Their society is the society of persons of like tastes and like manners. They are, in short, an integral part of the community, getting their livelihood by a kind of labor in which a large body of their fellow-citizens are engaged. A clerk in the post-office, or custom-house, or treasury is occupied in very much the same way as a clerk in a banking-house or store. If, therefore, the manners of the Government officials be marked by any peculiarity not visible in those of *employés* of private firms, it must be due to something else than the kind of work they do, and the manner in which they spend their salaries. It is due, in fact, to the place held by the governing class in the social and political organization.

If this governing class be a social aristocracy, the office-holders, as the machine through which power is exercised, will naturally and, indeed, almost inevitably, contract the habit of looking on themselves as a part of it. In a society made up of distinctly marked grades, the Government officials almost inevitably form a grade, and copy everybody else in looking down on the grades below them. The English or German official gives himself airs and thinks himself an aristocrat because, as a matter of fact, his official superiors are aristocrats, and the government is administered in all the higher branches by an aristocracy. It is difficult, if not impossible, for a servant of the Crown to avoid arrogating to himself a share of the Crown's dignity. In any country in which politics is largely managed by an aristocracy, the aristocratic view of life is sure to permeate the civil as well as the military service, be the terms long or short. In such a country, a great deal of the pleasure of life is derived from the reflection that one has "inferiors." The nobleman takes comfort in his superiority to the commoner; the gentleman in his superiority to the man in trade; the barrister in his superiority to the attorney; the merchant in his superiority to the shopkeeper. It would be impossible for any system of appointment or any tenure of office to cut off the Government officers, any more than any other class, from this source of happiness. The social position the place gives them is one of the rewards of their services, and they would be more than human if they did not reveal their appreciation of it. The state

official really shows his sense of his own importance no more than, if so much as, any other man who has an assured income and considers his position "gentlemanly." The manners of the Government clerk in England very much resemble those of the successful barrister's clerk, or the clerk in the great banking-house; they are neither better nor worse.

If the English and German officials were all appointed and held office under the spoils system, and had their "heads cut off" every time there was a change in the ministry, or a new man got the King's ear, there is every reason for believing that they would be much more insolent or overbearing than they are now, as they would share in the excitement of the political strife, and in the pride of victory, and in the contempt for the vanquished which form so marked a feature in official life here. They would, too, fall rapidly into the habit, which is so strong among our office-holders, of treating non-official criticism of their manner of performing their duties as simply a weapon in the hands of some one who wants their places, and not as a help toward the improvement of the public service.

In the United States, on the other hand, not only are the traditions of the Government democratic, but the social organization is democratic. What is of still more importance for our present purpose, the popular view of the social value of different callings is thoroughly democratic. There is little or no conventional dignity attached to any profession or occupation. As there is hardly anything honest which a man may not do for hire without damage to his social position, so there is hardly anything he can do for hire which will raise the value of his social position. In every country in the world the office-holder, like everybody else, bases his own opinion of himself and his office on the opinion of them entertained by the public. He thinks highly of them because his neighbors do. The Prussian or English civil or military officer bristles with the pride of station, largely because the public considers his station something to be proud of. So, also, in America, the office-holder does not bristle with pride of station, because nobody thinks his station anything to be proud of. He is not kept humble by the insecurity of his tenure, but by the absence of popular reverence for his place. The custom-house or post-office clerk as a matter of fact knows very well that nobody thinks any more of his place than it thinks of the place of a bank clerk or commercial traveler. One of the very odd things in the popular dread of an office-holding aristocracy is that it arises out of the belief that an

aristocracy can build itself up on self-esteem simply. But no aristocracy has ever been formed in any such way. It grows upon popular admission of its superiority, and not simply on its own estimate of itself. The attempts which have been occasionally made to create an aristocracy in new countries, or in countries in which the respect for station has died out, have always failed miserably for this reason.

Moreover, association with the Government and the exercise of a portion of its authority do less, and must always do less, for an office-holder in this than in other countries, because there is here absolutely no mystery about government. Its origin is not veiled from the popular gaze by antiquity, or tradition, or immemorial custom. Nowhere else in the world does sovereignty present itself in such naked, unadorned simplicity to those who have to live under it. Nowhere else is so little importance attached to permanence either in Government office or any other office. In America, it brings a man no particular credit to remain long in the same position doing the same thing. In fact, with the bulk of the population it brings him some discredit, as indicating a deficiency of the great national attribute of energy. Outside the farming class, the American who passes his life in the position in which he began it, without any extension or change of his business, or without in some manner improving his condition by a display of enterprise or activity, is distinctly held to have failed, or, rather, not to have succeeded. There is probably no country in the world in which the popular imagination is so little touched by a contented and tranquil life in a modest station, or by prolonged fidelity in the discharge of humble duties. Public opinion, indeed, almost exacts of every man the display of a restless and ambitious activity. The popular hero is not the contemplative scholar, or the cautious dealer who relies on small but sure profits for a provision for his old age. It is the bold speculator, who takes great risks, and is in constant pursuit of fresh markets to conquer and new demands to supply. It is not "the poor boy," who stays poor and happy, around whom the popular fancy plays admiringly, but the poor boy who becomes a great manufacturer, or the president of a bank or railroad company, or the master of large herds, or the owner of rich mines. The very familiar personage of European counting-houses and banks, the gray-headed clerk or book-keeper, is almost unknown here. In fact, employers would think but little of the young book-keeper or clerk who made no effort to improve his condition,

and did not look forward to a change of pursuits before he reached middle life. It may be said, indeed, without exaggeration, that the security of tenure which contributes so much to the value of a position in Europe counts for but little in popular estimate of it in America. Places which "lead to nothing" are not made any more attractive among us by the circumstance that they are easy to keep if one wishes. Indeed, such places are rather avoided by young men whose self-esteem is high, when they are entering on life, and those who accept them are apt to be set down as having, in a certain sense, withdrawn from the race.

In Europe, on the other hand, security or fixity of tenure, owing to the very much smaller number of chances offered there than here by social and commercial conditions to the enterprising and energetic man, adds very greatly to the value of an office of any kind, and not only to its value, but to its dignity. The person who has it, even if the salary be very small, is considered by the public to have drawn one of the prizes of life, and excites envy, rather than commiseration, even among the young. The prodigious eagerness for Government office in France is due, in a very large degree, to the fact that Government offices are permanent—a quality which more than makes up for the extreme smallness of the salaries. In England, commerce competes formidably in the labor market with the Crown, and the spirit of the people is much more adventurous; but the certainty of a small income has even there attractions for the young which are unknown in this country. This certainty always has a powerful influence in exalting the social position of the man who has managed to lay hold of it, in places in which recovery from failure or miscarriage is difficult, and in which mistakes in the choice of a calling are not easily rectified. The whole spirit of American society is, however, hostile to the idea that permanence is a thing which a young man will do well to seek. This feeling will, beyond question, operate in one way, if we ever come back to tenure in office during good behavior, to lower rather than raise the office-holding class, as a class, in the popular estimation. Far from converting it into an aristocracy, it will probably put a certain stamp of business inferiority on it in the eyes of "the live men," the pushing, active, busy, adventurous multitude, who after all make the standards of social value which are in commonest use.

At present, office-holding as a business really gets a kind of credit from its extreme precariousness and uncertainty. It is felt that anybody who gets into it must be in some sense "practical." He may

have failed in trade, or in some profession, or have, through some moral defect, lost all chance with private employers, but then he must have, if he has got a Government office, made himself useful to "an influence" through some kind of "work." Successful electioneering, for instance, may not require a high order of talent, or very much character, but anybody who achieves it must have push and energy and some knowledge of men, and these are, of course, no mean qualifications for success in life. Any one who possesses them, though he may make a wretched custom-house or post-office clerk, will be sure of a certain amount of consideration from the busy world, which would not be accorded to the modest, easily contented man who, in choosing his calling, seeks only mental peace. In truth, to sum up, there is no country in which it would be so hard for an aristocracy of any kind to be built up as this, and probably no class seeking to make itself an aristocracy would, in the United States, have a smaller chance of success than a body composed of unambitious, quiet-minded, unadventurous Government officers, doing routine work on small salaries, and with but little chance or desire of ever passing from the employed into the employing class. One might nearly as well try to make an aristocracy out of the college professors or public-school teachers.

There is no society which at present makes so little provision for this class as ours. We do nothing to turn them to account. They are a class eminently fitted for Government service, or any service of which tenure during good behavior is one of the conditions, and in which fidelity rather than initiative is a leading requirement. At present they furnish a very large share of the business failures, and contribute powerfully to produce our panics by being forced into the commercial arena without the kind of judgment or nerve which the commercial struggle calls for. If we tried to economize labor, and put the right men in the right places in our national administrative machine, we should undoubtedly offer this class, which has just the kind of talent and character we need for Government work, the thing which most attracts them, by offering them positions which no commercial crisis could put in peril, and which they could hold as long as they did their work well.

Even if it were established, however, that the selection by competitive examination and tenure during good behavior would make the office-holder feel himself the master of the people, and express his sense of his superiority in his behavior, the question whether

the present system establishes a satisfactory relation between the people and the civil servants of the Government would still have to be answered. It may be that the thing we propose would be no improvement on the thing that is, but the fact that the existing system has the very defect which it is contended that the new system would have, and which is offered as a fatal objection to the introduction of the new system, is one which the friends of "rotation" cannot expect us to pass over unnoticed.

It may be laid down as one of the maxims of the administrative art, that no public officer can ever take the right view of his office, or of his relation to the people whom he serves, who feels that he has owed his appointment to any qualification but his fitness, or holds it by any tenure but that of faithful performance. No code of rules can take the place of this feeling. No shortening of the term can take its place. The act of 1820 was simply a very rude, clumsy plan of getting rid of the duty of careful supervision and good discipline. Turning out all the officers every four years, in order to make sure that they keep their accounts well, instead of turning out as soon as possible those who do not keep their accounts well, and retaining as long as possible those who do keep their accounts well, reminds one of the old woman who whipped all her children every night on a general presumption of blameworthiness. A suggestion of such a scheme of precaution in a bank would excite merriment. A man's best service is given to those on whose good opinion he is dependent for the retention of his place. Under the spoils system, places are filled without any reference to the good opinion of the public; in fact, very often in defiance of the public. They are given as rewards to men of whom the public knows nothing, for services of which the public has never heard, and which have generally been rendered to individuals. An officer who owes his appointment to a party manager for aid given him in politics, cannot but feel that his main concern in discharging the duties of his place must be the continued favor of the person to whom he owes it, and not the favor of the public which has had nothing to do with it. It is, consequently, impossible to expect such an officer to feel that the public is his master, or to show in his manner that he is in any way dependent on its good opinion. He feels that the boss or Senator who got him his place is his master, and that his mode of discharging his duty must be such as to merit his approbation. He does not fancy that he himself owns the office, but he fancies that another man does, and as long as he considers it the

property of any one man, it makes little difference to the public which man.

The only way in which the proprietorship of the public can ever be brought home to office-holders is through a system which, whatever its *modus operandi*, makes capacity the one reason for appointment, and efficiency the one safeguard against dismissal. No such system now exists here. Those who say that the plan of the civil-service reformers would not produce it may be right, but it is not open to them to make in support of their opposition a charge which is notoriously true of the system they are upholding. Whether the proposed change, therefore, be the best one or not, some change, it must be admitted, is imperatively necessary. In fighting against any change, we are trying to avoid that adaptation of our administrative system to the vast social and commercial changes of the past half-century, from which no civilized people can now escape, and which all the leading nations of Europe have effected or are effecting. Any one who takes the trouble to examine the reforms which have been carried out since 1815, in France, or England, or Germany, which in all these countries have amounted to a social transformation, will be surprised to find how much of them consists simply in improvements in administration, or, rather, how fruitless the best legislative changes would have been without improved administrative machinery for their execution. We cannot very much longer postpone the work which other nations have accomplished, and neither can we avoid it by plans—like Mr. Pendleton's constitutional amendment—for getting rid of responsibility by making mere executive offices elective. This, like the act of 1820, is simply a makeshift. Nobody pretends that elected postmasters would be any better than, or as good as, properly appointed postmasters. All that can be said for them is that they would save the President a good deal of trouble under the present spoils system. But the remedy for one absurdity is not to be found in another absurdity. When a thing is being done by a wrong method, we do not mend matters by trying another wrong method. The true cure for the defects in the present system of transacting public business is the adoption of the methods which are found successful in private business. These are well known. They are as old as civilization. They are gradually taking possession of government business all over the world. Our turn will come next, and, in spite of "politics," will probably come soon.

THE COLONIZATION OF PALESTINE.

COLONIZATION eastward, like all efforts to turn back the hands of time, is likely to meet with little success. Even when prophecy and the religious instinct of the Hebrew race favor the return of the Jews, progress toward the Holy Land is slow-paced, and those who have gone there to reside within the last hundred years number less than the aggregate of emigrants arriving at the port of New York in a single month. From the time of the Crusades feeble efforts, of a semi-religious character, have been made to recover and occupy the country about Jerusalem, but always with barren results. Nearly all the elements of successful colonization are wanting there. The colonist may plant, but the harvest is pretty sure to leave little enough for seed after the predatory Arab and the organized Turk have taken their tithes from the field. Nor is commerce more attractive. The ports are inaccessible in bad weather and are unprotected at all seasons. The climate is unfavorable for the foreigner, and is often fatal to the tourist. The graves of modern travelers and explorers may be seen from Dan to Beersheba, and from Jerusalem to Damascus. Notwithstanding previous failures, there is, and always has been, a mysterious, indefinable attraction drawing the imagination of men toward Jerusalem, and new schemes for colonizing Palestine are still presented to the public, under auspices which command increased attention. The last and most important, as well as the most practical, is that advocated by Mr. Laurence Olyphant, whose project for a grand international joint-stock company, for the purchase or lease and occupation of the territory lying east of the Jordan, has received favorable consideration from members of the Royal Family and prominent statesmen in England and at Constantinople. The details and groundwork of his scheme, as set forth in his recent book, "The Land of Gilead," were, it appears, acceptable to many of the Sultan's advisers, but failed, last year, to receive his official sanction. His Highness was evidently pleased with the proposed relief which the plan offered to the Turkish treasury, but was naturally deterred from authorizing the establishment of an *imperium in imperio* within his already jeopardized territory. The contest for the control of the holy places produced the Crimean War, and the establishment of a million or two of European Jews upon as many acres, within a day's march of the Sepulcher,

would inevitably lead to European complications and another religious war.

In July, 1866, the *Nellie Chapin*, an American ship, sailed from the coast of Maine, freighted with about one hundred and sixty souls—men, women, and children. They had sold their goods and chattels, the slow accumulation of a toilsome life, and embarked with the proceeds for the port of Jaffa, Palestine. The motives which induced these people to turn their backs upon the land of their birth were of no ordinary kind. With them were the aged and infirm who could not reasonably expect to return, and there were infants whose destiny was thus being strangely influenced. Religious services were held on board with regularity. Their leader was their preacher and prophet, and the combined financial resources of these colonists were placed in the hands of this man, who by his preaching among the villages in Maine had founded a new church, "The Church of the Messiah," whose creed and doctrines were proclaimed in his church journal, known as "The Sword of Truth and the Harbinger of Peace": Published by G. J. Adams, editor and proprietor, South Lebanon, Maine. The first number of this publication was issued September 15, 1862, and it soon found friends in the villages of Indian River and Jonesport, the homes of the principal members of the colony. From an examination of this "Harbinger" it would appear that Adams aspired to become a religious leader and the founder of a church, and to succeed in this he sought to lead his people where they would be more dependent upon him. He seemed to have before his mind the example of the *Mayflower* Pilgrims and the history of Brigham Young. Like him, Adams possessed much personal magnetism and great power of vituperative denunciation, so that he was able to maintain his influence over his followers as much through fear as by the gentler arts of persuasion.

The writer of this paper had frequent interviews with Adams and his people during the two years of their oriental career, and after hearing his Sunday discourses and seeing their effect upon his people, I could understand something of his power over illiterate men and women, and at the same time discover that it must of necessity grow smaller as their experience with the world about them increased. This ambitious apostle of a new

faith appealed to three motives in calling upon his people to establish a colony in Palestine. To the pious and devout, he proclaimed the speedy coming of the Messiah for the purpose of establishing a temporal kingdom, and he invited them to stand ready with him to rally around the standard of the Redeemer when He should re-appear upon the Mount of Olives. The Saviour would then, he argued, be in need of friends, and those who were faithful would meet with rich reward. To the shrewd and calculating Yankee skipper and small trader who made up in part the male portion of his company, Adams had told of the return of the Jews, who, under divine command, would soon proceed from the four quarters of the globe, and take up the land of their forefathers, and become permanent residents in Palestine. And his discourses were rich in suggestion that a rise in values would be sure to follow, and that it would be a good thing to secure the corner-lots a little in advance, and derive the legitimate profits arising from a "corner" in real estate. To the farmer and the market-gardener, he spoke much of "milk and honey," the richness of the soil, and the certainty of three crops a year.

The *Nellie Chapin* landed her cargo of colonists in September, upon the sands of Jaffa, outside the city walls. They had brought their houses with them, in sections, but it required much time to land all the material and transport it to the locality designated for their future homes. The custom-house and heavy seas were not friendly to their enterprise, and delays were fatal, for while they were waiting in their tents upon the shore the heat was fearful, the water bad, and the food inappropriate. The aged and the infants died, and a score or more were buried before the families were housed, amid the orange-groves, about a mile from the town. And now they were confronted with a question of international importance. They had established a colony on Turkish soil without the consent of the Turkish authorities, and although they had paid a round price for the land, as aliens they could not obtain a good title.

The Ottoman Government, always jealous of foreign influence, avoids with care every pretext for foreign interference. At that time, foreigners were not permitted to take up land in their own names, and were obliged to hold it by some fiction, as in the name of a Turkish subject or of a female, women not being regarded as subjects of any government. This question of title became a source of much trouble among men who wished to own in fee simple the title to their individual hearthstones. And from this time the strife and bickerings which had broken out

on ship-board took a wider scope, until the boldest of them charged Adams with dishonesty in his financial dealings, and with the purpose of introducing polygamy as a new element in their creed.

Soon two camps were formed, the seceders feeling strong enough to call for an accounting and to set up for themselves, even at the cost of excommunication. None of them could speak the language of the people, and their intercourse with the natives, from whom they might have taken counsel, was of the most formal and unsatisfactory character. The worldly minded colonists who expected to derive advantage from the prospective rise in real estate soon found themselves without occupation. The Jews were slow in returning, and came singly and without capital. Real estate was not desirable if they could not obtain good titles, and they were not long in discovering that there was no activity in lands.

The agricultural members of the colony were even more unfortunate. They arrived at the wrong season for sowing, and having put all their money into land, had none left for current expenses. Failing in their expectations to obtain three crops, they would have been much consoled had they succeeded in reaping one, but their want of familiarity with the times and seasons, the necessity and modes of irrigation, and the nature of the crops worked sadly against them.

The dissensions in the colony became serious. Consular officers were called in to adjudicate between them, both at Jaffa and Jerusalem. General Beauboucher, who had lost a leg in the United States army during the rebellion, filled the office of consul, and he was frequently obliged to ride down to the coast to mediate between the belligerents and to dispense justice. This French gentleman was not fully master of the idioms spoken by the colonists, and they demurred to the military style in which the consular court is sometimes of necessity conducted in the East. Mr. Adams therefore appealed to the Department of State, requesting the removal of the consul from office, and offering to discharge its duties himself. The rebellious colonists sent counter statements, and their complaints against their chief, made to their friends at home, became widely known through the publication of their private letters. About this time (spring of 1867), items appeared in European journals describing the colonists as paupers, begging in the streets from tourists of every nationality. The publicity and scandal attending this phase of the colonial enterprise attracted the attention of the Department of State at Washington, and at the request of

Mr. Seward the late Rev. W. H. Bidwell, of New York, then about to travel in the East, accepted the office of special commissioner to make inquiry and report the true state of facts. Dr. Bidwell visited the colony and was pleasantly entertained by Mr. Adams, who succeeded in making a favorable impression and in securing a favorable report. But the troubles broke out afresh, and the colonists were obliged, in some cases, to sell all their furniture for food. Complaints against Mr. Adams and against the consul were multiplied, and great distress soon became manifest. At this point the writer, then United States consul-general at Beirut, was requested by Mr. Seward to proceed to Jaffa and examine into the nature of the complaints against General Beauboucher and his agent. It was found that the consular officers had earnestly endeavored to perform their duty—a rather difficult task in view of the ill-concealed hostility of the local authorities, the jealousy of the natives, and their mutual misunderstandings and dissensions. The colonists did not understand their relations to their consul under our treaty with a non-Christian country, and the military training of the consul was not adapted to a conciliatory work among people with whose extraordinary schemes he had little sympathy. After the inquiry as to the consular officials was concluded, I went from house to house among the colonists and offered them a passage home to America, as the only solution of the troublesome question. Harmony was impossible. As day-laborers they could not earn more than twenty cents a day, and on that they could not support their families.

Eighteen of the seceders accepted the proposal, under the leadership of Elder Wass, and were forwarded at once to Liverpool by way of Alexandria. But in some cases I met with reproaches, especially from the women, for offering them what they called bribes to desert their church and their leader. They declared their intention never to desert their standard. However, within the next twelve months the remaining colonists accepted the offer of a passage home, and were glad of the opportunity—with only two exceptions. One woman remained, even after Adams abandoned the enterprise, and she is still on the ground, having married a Turkish subject. One man, who adopted the career of guide, also remained.

Less than a score of frame houses now stand, the sole souvenir of the American colony at Jaffa. They teach little of architecture to the natives, for their own limestone houses and flat roofs are better adapted to the climate.

An effort on a smaller scale, with even more disastrous results, was made in 1858.

During the previous year an American family of the name of Dixon established themselves in the outskirts of Jaffa, and lived after the manner of peasants, in the most simple and economical manner. They mingled freely with the town and country people, and the *fellahin* of the vicinity had free access to the premises in the purchase and sale of milk, eggs, and vegetables. Intercourse with the natives was encouraged, with a view to religious influence. This family was a branch of a Sabbatarian mission, whose religious services were held on Saturday, and whose aim was to reach the Hebrews whose Sabbatarian usages might bring them into sympathy. The daughters of the family mingled as freely with their neighbors as they were accustomed to do in their American home, and the honest freedom of their manners was so much in contrast with the usages of the East, which insists upon the seclusion of women, that they were cruelly misunderstood, and were exposed to the greatest dangers. A night attack was made upon their house by five Arab ruffians, and though gallantly defended by Mr. Dixon and his son-in-law, a Prussian, the latter was soon killed, and the old man shot down in the presence of his wife and children. The survivors returned to America as soon as they were able to travel. A money indemnity was obtained for the property stolen and destroyed, and three of the savages were caught and brought to trial. These confessed their crime, but agreed in charging the murder upon a negro companion, who had fled to the desert on the night of the murder. These three were condemned to imprisonment for life, in chains, in the castle at St. Jean d'Acre, but the mission was broken up, and further effort toward missionary colonization was abandoned.

Model farms have been established near Jaffa and Jerusalem by converted Jews, under the auspices of English societies, but no considerable success has attended their efforts. In case of any wholesale attempt at colonization, however, they may serve as valuable nuclei around which the ignorant and the indigent may gather for instruction.

The German Jews at Caipha, with their American associates, under an organization known as The Temple, have adopted a different course, and have met with better success. Their leaders, who are established near Mount Carmel, and their home committees in Germany and the United States, arrange in advance for the shipment of small detachments of colonists, from year to year, but only to such an extent as to comply with the prudential requirements of the governing elders. Mechanics, farm-hands, laborers, and domestics are sent for only when employment has

been duly provided, and thus each colonist becomes self-supporting from the hour of his arrival, and is soon able to acquire a sufficient knowledge of the language of the people to coöperate in promoting the general aims of the colony. Numbering in all about eight hundred, including branches and offshoots in other parts of Palestine, and having about a thousand acres under cultivation, they seem to have avoided the mistakes of the Jaffa colonists, and to have established friendly relations with the people and the local authorities. Should they continue to show the same tact and discretion they may prosper until, by the recurrence of periodical outbreaks of Moslem fury, they are swept away, as the river Kishon, which flows through their farms, sweeps away all accumulations of labor upon its banks when its swollen torrents rush to the sea.

It is doubtful if any effort by Christians toward the colonization of Palestine will succeed in the face of climatic and political complications. Hebrews may find more in the language and customs of the country to harmonize with their history and traditions, yet it is to be doubted if they can achieve any greater success. A pilgrimage to El Khuds is pleasing in anticipation, enjoyable in execution, and charming in retrospect; but a residence and a life career where commerce and traffic is inconsiderable, and where daily bread will depend on daily labor in the open field, is not to

the taste of the fiscal and commercial Hebrew of modern times. While investigating the Jaffa colony, I met at the Jewish hotel a French gentleman who was largely interested in grape-culture and the wines of Bordeaux. In discussing with him the feasibility of a Jewish colony and matters relating to the "return of the Jews," as prophesied in the Old Testament Scriptures, I learned that he was a Hebrew and had given some thought to the subject. He seemed a practical man, and I asked his view of the matter. His reply was emphatic.

"It will be impossible," said he, "to bring Jews of different nationalities together and make them live in harmony. As a matter of fact, a French Jew has his prejudices, and will not affiliate with Englishmen and Germans of the same creed: their national antagonisms are too strong! In my judgment, it will require a greater miracle to bring all the Jews together than was required for their dispersion, and a greater miracle still, each day, to prevent their eager departure to the countries of their birth."

The success of colonies must of necessity depend on the climate and the products of the territory, and history teaches that successful colonies have never been established upon the sites of decayed empires, or upon ground exhausted by the civilizations of the past.

J. Augustus Johnson.

TOPICS OF THE TIME.

Henry Wadsworth Longfellow.

PURITY of heart, directness and simplicity of expression, a fine musical instinct, an extraordinary felicity in the use of images and similes, and a severe artistic conscientiousness characterize the verse of Longfellow, from the earliest beginning down to his latest poem. In his poetry, as in his genial, benevolent life and conversation, there was nothing violent, nothing electric, as in the poetry of Shelley, Browning, or Emerson. He did not crowd a new thought into every line, like the Concord poet. Though more evenly sustained, perhaps, than Bryant, his best poetry does not reach the imaginative height and intensity of those few passages where Bryant is intensely imaginative. His charm is serene and pervasive. Though so simple in structure, many imitators during the last fifty years have found the poetry of Longfellow essentially inimitable. For if he used plain and simple speech, it was not because he despised his audience, but because it was his disposition and habit to express his thought fully and with the utmost clearness. This tendency would, of course, have landed him oftener

in sheer commonplace had it not been for the poet's sense of fitness and of beauty, cultivated by a life-time devoted to the study of the highest models in every language.

There never was a better proof than Longfellow of the truism that a poet's individuality does not rest upon eccentricity, nor even upon marked peculiarity of style,—that in order to be one's self it is not necessary to be strange. He had a manner, but very little mannerism; and though this manner consisted largely in a very simple use of language, still it was almost as easy to detect an unsigned poem by Longfellow as by any other poet. We were staying once in a little English village; near the ivy-covered inn was a public fountain, and over the fountain an unsigned poetic inscription of a few lines—trite and commonplace in thought, yet expressed with such clearness and propriety that we thought at once of Longfellow, and were not surprised when afterward we were told that he had written it "for the occasion." Propriety,—taste in the choice of subject, taste in the choice of meter, taste in the choice of words,—a rounded and restful

completeness in telling the story, in expressing the idea: this is a characteristic of the lyrical writings of Longfellow. It is this sense of propriety, joined to imaginative insight, that gives us, in one of Longfellow's most vivid and characteristic poems, such perfect and exquisite lines as these:

"Lo! in that house of misery,
A lady with a lamp I see
Pass through the glimmering gloom,
And flit from room to room.

"And slow, as in a dream of bliss,
The speechless sufferer turns to kiss
Her shadow, as it falls
Upon the darkening walls."

It is this sense of propriety, allied to the qualities which we have mentioned, which has given to the world so many lines, stanzas, and lyrics that have become actually household words. Other poets of our generation have stirred us more profoundly: from but one other has the English-speaking world accepted, and absorbed into current thought and speech, so many poetic phrases. No other poet of our time has struck out so many pieces which have gone at once, and as a whole, into general intellectual circulation.

Longfellow, we have said, did not "originate ideas" to any great extent. Indeed, we have known a reward to be offered, in heated literary argument, to any one who could discover a single strong, imaginative thought in Longfellow which was not obviously quoted from some other writer. This was a rash wager, but it is evident that, even if he did not often invent ideas, he was a most prolific and felicitous inventor and adapter of images. We could easily cover pages of the magazine with quotations to prove the assertion, but the memory of every reader will supply him at once with a sufficient number of examples. As has recently been said, everything was to him an image of something else; he seemed to think "double, swan and shadow."

The poetry of Longfellow—to read it with care might almost be called a "liberal education," from so many sources of history, of literature, of life, and of nature is its inspiration drawn. We fear there is no one man who can fairly be called a typical American, but Longfellow was a type, certainly, of many Americans—a type of a large part of "the national mind." While loving best, and having the utmost faith in and hope for his own new world, he had the national love and hunger for the picturesque life, the art, and the traditions of the old world. It was long ago pointed out that he scarcely ever wrote a page that did not have in it the words "old," "olden," "ancient," or equivalent expressions. But this, we should say, might be rather a sign of his American nationality than a proof of his being a foreigner at heart. It is true that America was made for Europeans, but it may be said with equal truth that Europe was made for Americans.

The stream of Longfellow's poetry, beautiful from the first, grew broader and deeper to its end. In all his prime he wrote nothing more spirited and vigorous than "The Revenge of Rain-in-the-Face," "A Ballad of the French Fleet," and "The Leap of Roushan Beg"; among his latest poems nothing more pathetic than "The Chamber over the Gate." It was in his

old age that his harp gave forth those deep tones which move us in "Morituri Salutamus," and the sonnets entitled "Three Friends of Mine." From the latter series we quote the fourth, the one on Charles Sumner—a sonnet which will come home now with a new and more poignant meaning, not only to those of our elders who were his personal companions, but to many others who never saw the poet's face, yet to whom he has always been a living, revered, and beloved presence:

"River, that stealest with such silent pace
Around the City of the Dead, where lies
A friend who bore thy name, and whom these eyes
Shall see no more in his accustomed place,
Linger and fold him in thy soft embrace
And say good-night, for now the western skies
Are red with sunset, and gray mists arise
Like damps that gather on a dead man's face.
Good-night! good-night! as we so oft have said
Beneath this roof at midnight, in the days
That are no more, and shall no more return.
Thou hast but taken thy lamp and gone to bed;
I stay a little longer, as one stays
To cover up the embers that still burn."

Practical Education in the Common Schools.

THE perennial demand for "practical" education in the public schools is just now exceptionally strenuous. At a recent conference of teachers and school committees, this question was discussed: "How shall we educate our pupils so as to fit them for the practical duties of life, such as farming and the various industrial pursuits?" That is a fair statement of the problem as it is urged in many quarters.

In trying to solve it, everything depends on the meaning of that short word "fit." If by "fitting" pupils for farming and other industrial pursuits is meant giving them technical instruction in agriculture and the various handicrafts, then it is doubtful whether the public schools can attempt it. It is true that, in some parts of Austria, small "school-gardens" have been established in connection with many of the public schools, in which most of the common grains and other plants of the country are cultivated, the names of which are taught to the children, thus giving them object lessons in botany, by which they become somewhat familiar with the flora of their own neighborhood and learn something, also, of the structure and habits of plants. As much as this might be done in connection with many of our suburban and country schools. But this would go but a little way toward fitting boys to be farmers. In the public schools of Boston, girls are taught sewing; and this branch of "practical" education might well be taught in other places. But it is not easy to see how our schools can undertake to give any instruction in the methods of agriculture, or of those other industrial trades by which men and women earn their livelihood.

It might be possible to establish in every considerable town a public workshop, into which boys could go out of school-hours and learn the use of various mechanical tools, under the instruction of a competent mechanic. Most school-boys in the cities and larger towns have much spare time on their hands, which might well be put to some such use. Perhaps a portion of the funds provided by taxation for public schools could be profitably expended in furnishing such schools as these. To do this would require legislation in most of the States; but it is open

* "Santa Filomena."

to any benevolent gentleman to offer the boys of his own town such an opportunity. If it should be appreciated and improved, the public authorities might be led to adopt the same plan. Beyond some such simple provisions as these, we do not see how industrial education can be furnished to the pupils of our public schools. The handicrafts are so many, and their methods are so constantly changing, as civilization becomes more complex and the practical arts are multiplied and modified, that it would be quite out of the question to teach them all, even if skilled instructors could be obtained, which is equally out of the question.

Besides, it is hardly the function of public schools to impart any kind of special or technical education. We cannot "fit" boys to be ministers, or doctors, or lawyers, or farmers, or carpenters, or shoe-makers; we cannot train girls to be artists in pigments, or in music, or in millinery, or in cookery; all we can undertake to do in our public schools is to train the intellect and develop the character of the pupils so that they shall be intelligent, industrious, contented, and virtuous citizens. It ought to be possible to give the pupils of these schools a mental and moral discipline that shall "fit" them for any calling in life, and not more for one honest calling than for another.

The thing to be first sought, and the thing most often neglected in our public teaching, is the development of a sound character in the pupils. The State cannot teach religion, but it can require its teachers to enforce the virtues of industry, self-reliance, truthfulness, purity, honesty, justice, kindness, and courtesy; it can make the inculcation of these virtues a chief part of the teacher's work. The education that neglects or undervalues morality is worse than worthless; it "fits" the pupil to be a malefactor.

The next thing to be sought is to awaken the minds of the pupils, to stimulate their thirst for knowledge, to train them in habits of inquiry. The successful teacher is the one who makes his pupils think patiently and independently, who stirs them up to original investigation. Any pupil who has had this done for him has been "fitted," so far as his mind is concerned, for success in any calling.

As to the subjects taught in our common schools, it is plain that the old-fashioned rudiments of an English education are essential, though the amount of time given to some of them might well be reduced. Every pupil should learn to read the English language readily and intelligibly, and to speak and write it with a good degree of propriety. Some knowledge of geography is also important, though the time generally devoted to this study is fully twice as much as it is entitled to. Exactly the same thing may be said of arithmetic. In many of our graded-school systems, boys and girls are kept studying arithmetic for ten full years. Half of that time is ample for acquiring all necessary knowledge of that science. Some acquaintance with the history of our own country, and with the forms of our government, indicating the political relations and duties of citizens, is also indispensable. All these subjects must be taught in the public schools. In most of the public schools they are taught, and in the district and grammar schools, where the great majority of the children of the State finish their schooling, not much else is taught. A little music and

sometimes a little drawing may be added; but this is about all that is attempted in the great majority of our common schools. The high-schools are much more ambitious, not to say pretentious, but only a very small minority of the children taught by the State ever reach the high-schools.

Now, doubtless, a teacher who knows how to teach may manage, even in this narrow curriculum, to awaken the mental faculties and broaden the horizon of his pupils; but it is evident that a little wider range of subjects would make this work much easier. For it is not only necessary to awaken the love of study, but also to direct it toward subjects that will afford the student a life-long pursuit. We want to give our boys and girls a training that shall enable them not merely to make a living, but to find contentment and enjoyment in life.

Let us suppose that a boy is to be a farmer. It is notorious that boys in these days do not take kindly to the farmer's life. What is the reason? Is it that the farmer's gains are slow or that his labor is severe? These reasons partly explain the fact, but neither of them is the strongest reason. The loneliness of the farmer's life is a weightier consideration. The girls and boys now growing up, whether in the towns or in the country, do not like the isolation and solitude of the farms. They would rather live in less comfort, and work harder for less net wages, at more disagreeable labor, in the factory villages and in the cities, because they like to be in the crowd. They depend on outside excitements. "There is nothing going on in the country." That is the uniform reason given for preferring life in the city.

The first thing to do in "fitting" a boy for the life of a farmer is, therefore, to get this notion out of his head. The reason why life is so lonely in the country is that his mental resources are so small, and his own knowledge of the objects round about him is so limited. If we could give the boys who are destined for such life as this a kind of training which would enable them to see that there is something going on in the country all the while,—something of marvelous and thrilling interest,—that would help greatly in fitting them to their environment, and in enabling them to find contentment and reward in their work. Would not this result be secured, at least in part, by giving a portion of the years now spent in the everlasting grind of arithmetic and geography to the study of natural history, the materials of which are under the farmer's feet, and on every side of his path, and in the air all about him? Would not some knowledge of the minerals, the plants, and the animals of his own neighborhood, and some enthusiasm in prosecuting his studies among them, wonderfully broaden the farmer's life, and dispel much of its loneliness?

It would be easy to show how the study, in some elementary way, of these and perhaps other sciences of nature would do the same service for those who are to spend their lives in other industrial pursuits, enlarging their horizon, multiplying their resources, and showing them how to extract from the world about them a higher enjoyment than is to be found in the diversions and dissipations on which the multitudes are trying to feed their cravings.

The kind of education that fits the men and women who are to live by agriculture or the various handi-

crafts to find meaning and recompense in life, would be practical education in the highest sense of the word. And it is worth inquiring whether, by reforming the courses of study in our common schools so as to make room for such subjects as have been mentioned above, this end would not in some good degree be gained.

Minister and Citizen.

THERE have been lively discussions lately, in the press and elsewhere, as to the part American clergymen may, can, or do play in public affairs. It has been intimated that a clergyman is partly deprived, in America, of those extra official opportunities of usefulness and influence which, in England, especially abound.

There is a certain correctness in such a view as this. In England, a clergyman—that is, a clergyman of the Established Church (and in England all others are designated simply as ministers)—may be, and in the country often is, a magistrate. In cities he is eligible for election as a school commissioner, as member of the local board of charities, and other similar bodies. No such usage obtains among us, or if it does it is exceptional. Nor is the reason for it obscure. In England there is an Established Church, and bishops sit in Parliament and help, as “peers spiritual,” to make the laws. From such a condition of things the step is natural and easy to a usage which puts both clergymen and ministers in places, as we should say, of “political influence.” But imagine Cardinal McClosky running against Mr. Conkling for the position of United States Senator, or Bishop Simpson contending with his fellow-citizen Mr. Randall for the speakership of the House of Representatives! Such a thing we say is not to be thought of. We have no state Church, though it used to look sometimes in New York, on St. Patrick’s Day, as if we had an Established Church. It is undesirable that clergymen should hold, or be candidates for, positions which make them the nominees of political parties. If a clergyman is to “run” for an office, one who belongs to that class in the community which esteems ministers will be inclined to say, “Let it not be my minister, but some other minister.” We do not want one whose office brings him into such tender and sacred relations with the most serious facts of our lives to subject himself to the rough usage received by a candidate in a lively political campaign.

And yet we do not want him to forget that he is a man, and a citizen, as well as a minister. The best evidence of this is to be found in the fact that ministers who have remembered this, and who have illustrated it by conspicuous and long continued services to the state and to the community, have been those ministers whom we have most of all delighted to honor. There went to his rest, not long since, an eminent citizen of New York who was not less eminent as a citizen than he was as a minister. And yet, as a minister in the communion of which he was a lifelong member he was, distinctly and undeniably, its foremost man,—not by any eminence of self-assertion or of ecclesiastical rank, for he ministered in a fellowship which knows no distinctions of ecclesiastical

rank, but simply and supremely by the divine right of his noble gifts and nobler service. The pastor of a large city congregation, which, like other city congregations, expected little from its minister in the way of pastoral service, he yet made his name a proverb for pastoral fidelity. The preacher in a pulpit which demanded from him who undertook to fill it the best that his brain and heart could bring to an exacting and critical people, he never disappointed by meagerness, though he sometimes taxed severely those who listened to him by his seemingly exhaustless fullness. A thinker of genuine insight, and with a mind so open that it welcomed truth from all quarters and honored it, though disguised sometimes in strangest “motley,” he kept himself abreast of the best scholarship of his time, and was as profoundly interested in his ministerial work the day he laid it down as when, more than forty years before, he took it up.

And yet this minister (we are speaking, we need hardly say, of the late Dr. Henry W. Bellows) was no less eminent as a citizen than he was as a divine. The civil war and the organization of the Sanitary Commission gave him, some may say, an opportunity to which he owed much of his subsequent usefulness and fame. But, “the gods give chances, and they who are their children seize them,” the proverb runs, and it was so here. Dr. Bellows had the courage in a great national crisis to see his opportunity to serve his country, and to seize it. In his pulpit, first of all, he spoke such words as helped to decide doubtful men and to nerve timid ones; and then, when he came down out of his pulpit, he took his rare gift of organization and administration and put it to work in the service of his imperiled country.

That preëminent ministry of helpfulness and leadership was but a type of all the rest. There is no good cause that has been contended for, whether on the platform or at the polls, in which Dr. Bellows was not felt and heard. With characteristic modesty, he was wont to wait till his fellow-citizens summoned him before obtruding himself upon the public notice; but when the call came, he never shrank from obeying it. And all this (for this, after all, is the point of our little homily), without the smallest loss of his influence or dignity as a clergyman. Dr. Bellows not only *looked* his profession (unlike, in this, some modern ministers, especially of the younger generation, whose appearance is a cross between a billiard-marker’s and a commercial traveler’s), he honored and adorned it. He will always be thought of in connection with it. A minister in an unorthodox communion, according to prevailing standards, he yet made himself to be recognized and respected everywhere for his ministerial office as well as for his personal character. And thus he will be remembered and regretted—as an exemplary and faithful divine, and no less as a public-spirited and influential citizen. This, we venture to submit, any minister may be in any American community, in his measure and according to his gifts. His people will not begrudge him the time he gives to public interests, though they may never wish to see him elected to office; and the community will not disesteem him as a minister because he chooses to remember that he also is a citizen and a man.

The Free Library Movement.

NEW ENGLAND has long had a habit of providing for the culture of her people by the free lending of books. A sort of obligation is put upon rich men in the old territory of Puritanism to do something for the public, and especially for the native city or village. The story of the Boston man whose will was contested because he had not left anything to Harvard University, is but a burlesque of a real New England feeling that one who has made a fortune is under obligations to do something for the land that made him a man by pinching his boyhood. When we see such foundations as that in St. Johnsbury, Vermont,—one example of many,—we count that country happy whose sons are grateful, filial, and enlightened. It is from Boston that this spirit has radiated through the hill-country, once considered so forbidding, now rendered so home-like and habitable by domestic virtue and public spirit.

But the *direct* influence of New England on the country at large is not very great, and is growing less. With all its culture, New England is rather provincial. Her early isolation and Puritan sense of divine election seem to have got into her blood. The country at large is only remotely known at Boston, which has never taken the nation fully into its sympathies, and this limitation of view on the part of home-staying New-Englanders makes their metropolis seem half-foreign to the rest of the country. It is only after a New England idea has undergone a transplanting to the metropolis that it becomes national in its influence. Slow as our great mart has been to receive or conceive new ideas beyond the sphere of commerce, it is the real and only center of diffusion. The art movement, the literary movement, the philanthropic movement of this generation have their capital where once the Dutch trade in wampum, beaver-skins, and match-coats had its center, to wit: on Manhattan Island. So that a liberal movement for popular education by free libraries, set afoot in New York and Brooklyn, will produce, perhaps, a wide-spread awakening on the same subject in the towns and villages of the country. The old reproach, that we teach our children how to read in free schools but do not teach them the love of reading, will be in fair way for removal whenever literature shall be as free to the poor in New York as it is in Boston.

As long ago as the colonial time, the complaint was current that literary institutions did not flourish in New York. No doubt the motley origin of the people of the old city had much to do with it. From the very beginning of New Amsterdam, the French Huguenots divided the town with the Dutch, and there were also people of other nations. "English carpenters from Stamford" built the first Dutch church, and when the little village at the lower end of Manhattan was a quarter of a century old, there were eighteen languages spoken within its narrow walls. When, in 1664, an English population and the tyranny of royal governors was overlaid on the Dutch and French background, one cannot wonder that the community was divided into cliques by national prejudices. Public spirit grows with difficulty among people who speak different tongues, go to different churches, and have different traditions. What does grow in such

a place, however, is the metropolitan spirit: national and sectarian prejudices in New York were early blunted by mutual attrition, and that wide and tolerant sympathy so characteristic of the metropolis of to-day came out of the multifarious origins of her early trading population.

We have not wanted for libraries, though they have had other purposes than those proposed in a free library. It is foolish to blame the Astor Library, as many do, for not doing a work for which it was not intended. The Astor is primarily for scholarly people. The student is the people's proxy, the nation's eyes. No library in America, perhaps, offers such conveniences to special students as the Astor. He whose researches are not very extensive can there consult any works he may ask for, without cost or ceremony of introduction. The scholar pursuing a given line of study, and bringing proper credentials, may gain admittance to classified alcoves, where he can have the invaluable privilege of seeing and examining all that the library affords on his theme; and some of our writers have come to have a sentimental home attachment to the quiet alcoves of the Astor. Even the British Museum Library, a sort of paradise for scholars, where everybody is incredibly obliging and polite, has no such arrangement as that by which the Astor permits the accredited scholar to range at will among its treasures. This privilege we possibly owe to Washington Irving, who had much to do with the early plans of the library, and who knew a scholar's wants; and though the privilege has no doubt been abused by impostors, it is to be hoped that it will never be taken away. To the gentlemen of the Astor family we owe this substantial gift, and it would be ungrateful to find fault that they have not made a popular library out of what was meant to serve another purpose. It is a pity that a building holding such treasures is not quite fire-proof, and that the light in the old halls is not better. The most valuable eyes in America are injured by its dusky twilight on dark days. And it is to be hoped that the liberality of some wealthy men may enable it to complete its collections, particularly in the important department of American history, since the Astor is the main source of information to scholars in New York City. It is to be regretted that the fine collection on American history made by the State Library at Albany could not be located where it would be more accessible to students. Neither Albany high-school pupils nor members of the State Legislature, who are its most numerous clients, seem quite capable of using to advantage its rare treasures, which are hardly known to many special students.

There are, besides the Astor Library, other public libraries, such as the Mercantile, with its vast membership, the Society Library,—a joint stock association,—with an ancient history, high prices, and an aristocratic patronage. The Lenox is not to be accounted among public libraries in any other sense than that it is exempt from taxation. It is open neither to the public nor to scholars engaged in special research, nor does there seem to be any warrant for believing that it ever will be opened as a working library. A library founded and managed in this exclusive spirit works injury to scholarship; it makes the rare and expensive books needed by scholars and authors more rare and expensive, by retiring a large

number of them from use. Private collectors, who buy books only as curiosities, render a similar disservice to letters. Nor can the libraries of learned associations, such as the Historical Society, be fairly accounted public, since their books are for the use of members and the acquaintances of members. For practical purposes, this great metropolis has but two or three public libraries: the Mercantile, which is a lending library, charging a rate that is not high, but out of the reach of the poor; the free reading-room of the Cooper Institute, whose books are to be used only in the rooms; and the Astor Library, which is accessible to all, but only in hours which practically confine its benefits to students, since its books are never loaned to be carried out of the building.

Brooklyn seems to be in a fair way to realize the project of a free lending library through Mr. Sency's liberality, and Baltimore has been tendered a munificent gift for the same purpose by Mr. Pratt. New York's free library is yet in the brain of projectors, not having up to this time touched the pockets of givers. But the great merchants—the burgher princes of the metropolis—have never failed in these later years to sustain any movement having reasonable prospect of serving the city and the world, and we do not doubt of the ultimate success of the Free Library, now that it is fairly propounded and advocated by influential men. It is to be hoped that the proposition to distribute books through the police-stations will not be accepted. A free library ought to guard itself carefully against all appearance of shabbiness; and to the poor the station-house seems a sort of porter's lodge to perdition. The distribution through the public schools would be less objectionable, but the tendency of this might be to lower the standard of books purchased and the public estimation of the library. We think that means can easily be devised for distributing over the wide territorial extent of New York without calling in the aid of other institutions. It is important that a strict censorship be kept upon the books of such a library, that it may not become a fountain of corruption instead of a source of enlightenment.

But why should the movement for free libraries be confined to great cities? A library is of more use in an educational way than a high-school. The taste for good reading is the true door to culture, and if the taste for good reading be once established in a young person, there is an absolute certainty of the attainment of a degree of culture which persevering years in school cannot give. It is not enough to have free schools. A wide-spread movement for libraries, which shall be either wholly free or exceeding cheap, would be a most wholesome one. The abolition of the low-priced pirated productions, which we hope to see brought about by copyright, would leave the field free for libraries, and libraries would render American as well as English literature of easy access to the humblest.

A Third Offer of Prizes for Wood-engraving.

By reference to page 230 of the present number, the reader will find the report of the Committee of Award setting forth the results of the second annual competition for the prizes for wood-engraving offered by this magazine in April, 1881. These results are of so successful and promising a nature that, in making a third offer, we are induced to add an additional prize to competitors of the first and second year. The demand for first-rate engravers continues to keep pace with the rapid growth in public favor of the best American work, and the reasons urged by us, a year ago, for the establishment of instruction in the art in technical and art schools have gained rather than lost in cogency. In Philadelphia, by the efforts of Miss Emily Sartain, a class in wood-engraving has been organized in connection with the Academy of Design, and, we are told, is fully justifying the faith of those who united in its establishment. The number of those from Boston who have already competed for these prizes is so large that we shall not be surprised to hear that a similar experiment is to be set on foot in that city.

In Cincinnati, a city of most liberal investments in art,—investments which have already produced a large return of good designers and artists,—the project has been favorably considered, but, we believe, has been dropped for want of funds. The past year has seen, as every succeeding year is likely to see, such improvement of individual engravers, that it is safe to regard as confirmed that the present high state of the art in America is not accidental, but is in the constitution of the national mind and hand. So long as there are good paintings, there will be a popular demand for their reproduction by the wood-cut, and with the spread of a taste for the former will come an increased demand that the latter shall always be as good as the best. With this desire in view, we announce herewith the

TERMS OF THE THIRD COMPETITION.

I. To the engravers of the first, second, and third best blocks to be made during the current year by persons who, before June 1st, 1882, have never engraved for pay or taken part in former competitions—the proofs to be submitted to us by Dec. 1st, 1882—we will pay respectively \$100, \$75, and \$50

II. For the best block engraved during the year by any one who has taken part in former competitions, except prize winners \$50

III. For the best block to be done during the year by any prize winner in former competitions \$50

IV. Competing blocks must be accompanied by two fine press-proofs and by the original.

V. No subject must be chosen by an engraver until he has secured permission from the owner of the original, or, if copyrighted in America or Europe, from the holder of the copyright, to publish the engraving in THE CENTURY MAGAZINE without cost to the magazine.

COMMUNICATIONS.

Mr. Whittier's Poem of "Mogg Megone."

ADELAIDE, SOUTH AUSTRALIA, January 18, 1882.
TO THE EDITOR OF THE CENTURY MAGAZINE.

SIR: Some time ago you published in your magazine an article, from the pen of Mr. R. H. Stoddard, on the life and poetry of John Greenleaf Whittier, who, next to Longfellow, is the best known American poet in Australia. In that article reference was made to "Mogg Megone," which is an Indian story based on the early history of the State of Maine. Mr. Stoddard mentioned as two of the principal characters in the poem John Bonython and his daughter Ruth. These were real personages. The former, I may explain, was the son of Captain Richard Bonython, one of the original landed proprietors of the colony, and a member of the first council appointed to administer its affairs, as well as "a most efficient and able magistrate." Being a descendant of the old Cornish family of which Richard Bonython was a member, I lately wrote to Mr. Whittier, asking as to the sources of his information respecting John Bonython, and expressing a strong doubt as to whether he was at all an outlaw of the kind described in "Mogg Megone," although he was unquestionably outlawed for setting at defiance the general court of Massachusetts. But it should be remembered that the poem carries the reader back to the old Puritan days, when the records show that a woman was ordered "to be publicly whipped for abusing Captain Bonython," and that a fine was inflicted for the serious offense of saying "that Major Phillips's mare was as lean as an Indian dog." I suggested to Mr. Whittier that if he shared my opinion as to there being no sufficient historical foundation for the John Bonython of "Mogg Megone," the fact might be more distinctly stated in a note to future editions of his poems. Mr. Whittier promptly replied to my inquiries in the generous and characteristic letter which I inclose.

Yours, faithfully,

JOHN LANGDON BONYTHON.

The following is Mr. Whittier's letter:

"AMESBURY, MASS., U. S., 9th mo. 15, 1881.

"JOHN LANGDON BONYTHON, ESQ'RE.

"DEAR FRIEND: Thy letter has just reached me. The poem referred to was written in my boyish days, when I knew little of colonial history or anything else, and was included in my collected writings by my publishers against my wishes. I think thou art right in regard to John Bonython. I knew nothing of him save what I found in the 'History of Saco,' and supposed the name and race extinct, as I never heard of the name on this side of the water. If possible, I shall have the entire poem omitted; if not, I will cheerfully add the note suggested. I thank thee for calling my attention to the matter, as I would not knowingly do injustice to any one, living or dead.

"I am very truly thy friend,
"JOHN G. WHITTIER."

More about the Pitcairn Islanders.

We are courteously permitted to print the following letter from Miss Rosalind Young, whom our readers will remember as the author of the curious article on the "Mutineers of the *Bounty*," in SCRIBNER'S MONTHLY for May, 1881:

"PITCAIRN ISLAND, Aug. 26, 1881.

"DEAR FRIEND: Your letter, bearing date May 22d, reached me safely on the 19th ultimo, and I was really pleased with it. * * *

"Now I am going to reply to your various questions. In the first place, as regards our quiet life, we are in general quite contented with living in this little world by itself, although at times there is a desire to go and see the outside world.

"Three of our young men left this island, in the early part of this year, in three several ships, bound for Liverpool, so on their return we shall doubtless have plenty to ask and hear about. Amongst the older portion of our community there is, as you think, a deep-seated love for this little island.

"When your letter reached me there was a shipwrecked crew with us, and it amused me not a little that one of them, a young Englishman, should tell us that we seemed to be living in an antediluvian period, as our ways are so primitive and we are so far behind the rest of the world.

"The only photographer that has penetrated to this obscure spot was the captain of a British man-of-war, who was here two years ago and took several photographs, three of which only reached us, and as one of them happened to be mine I will send you one. * * *

"As regards music, the present young generation were taught vocal music by my dear father, who received his own very limited musical education from a passing stranger, a music-teacher, thirty-one years ago, who came ashore on a visit. * * * The result of his six days' teaching gave him much satisfaction, and the people, who are naturally music-loving, have tried to educate themselves to the best of their ability ever since. The knowledge we have of instrumental music is certainly small. We first taught ourselves by the ear and then play over some simple pieces by sight, and in that way manage to gain a little day by day. * * *

"Your next question is how the speech has been kept pure. I do not think any difficulty has ever been experienced in communicating with vessels that happened to call in here, even from the very first, for we read in Mr. Murray's 'History of Pitcairn' how surprised were the first people that came here to receive a greeting in hearty English from the two young men who went on board. * * * Still we do have a dialect of our own, which strangers who visit us can scarcely understand. It is made up of the unsuccessful attempts to speak English which our maternal ancestors made, intermingled with a few half Tahitian words still retained amongst us.

"Money is an article that can well be dispensed with here, as we grow our own food, and then to obtain clothing we trade off the produce of the island, and get its worth in what we require—from whale-ships mostly. * * * Every woman here is her own dress-maker. We fashion our dresses from patterns that are sent ashore from time to time by ladies, both English and American, who call in here on their way to and from San Francisco.

"We manufacture our own hats, made into different shapes, from the leaf of a kind of palm-tree. To make straw, the leaves are cut from the tree when young, and then laid out in the sun to dry. Each leaf is about two or three inches broad. As I write, one of my sisters is trimming one for our married sister. I wish it were possible to do so, then I would send you one just for you to see.

"For reading matter we have enough to last a lifetime. As I do a great deal of correspondence, I am sometimes in want of paper and envelopes; if you can, send me some, please. We all smiled at that paragraph in your letter which says you feel as if writing to another world.

"The time your letter took to get here was scarcely two months, and should this soon have an opportunity of being sent, it will probably reach you in less time than that. Letters sent to us often miscarry, and when a mail does reach us it is a time of great pleasure. Messrs. Hanley & Snow, 126 California street, San Francisco, always kindly forward our letters to us. When you write me again, please inclose your photograph.

"I hope you will like my letter as well as I do yours. I know I can learn to love you, because your name is Lucy, my favorite name.

"Yours most sincerely,

"ROSALIND YOUNG."

LITERATURE.

Nordenskiöld's "Voyage of the Vega."

THE recent disaster to the Arctic exploring steamer *Jeannette*—a disaster which seems likely to result in a greater loss of life than has ever before attended an American polar expedition—will, in all probability, revive again the old questions, "Of what use is Arctic discovery?" "What has ever been gained by Arctic exploration which is at all commensurate with its cost in money, suffering, and lives?" The questions are not very hard to answer, at least to the satisfaction of science; but as the popular mind does not fully appreciate the value of scientific knowledge until such knowledge is shown to have some bearing upon everyday life, and as the scientific and practical results of the great Arctic expeditions, even of the last twenty-five years, are already half forgotten, it may perhaps be regarded as a fortunate circumstance that Baron Nordenskiöld's history of the successful voyage of the *Vega* comes just in time to break the discouraging force of the bad news from the *Jeannette*, and to furnish the advocates of Arctic exploration with new answers to the questions and objections of its opponents.

It would be hard to point to a book of travel or exploration written within the last quarter of a century which has added more to the world's stock of accurate and valuable knowledge than this history of the voyage of the *Vega* around the northern coasts of Europe and Asia. It is not merely a narrative of Arctic exploration, or a series of sketches of Arctic life. It is an exhaustive historical and scientific study of the whole Arctic region lying along the North-Asiatic coast. The material which it contains might be divided into at least four separate and independent books, as follows: first, "A History of the Attempts to Discover a North-east Passage"; second, "The Narrative of the Voyage of the *Vega*"; third, "The Physical Geography and Natural History of the North-Siberian coast"; and, fourth, "A Study of the Siberian Chookchees." Each of these books would contain from one hundred and seventy-five to two hundred octavo pages, each would be com-

plete in itself and almost exhaustive of its subject, and any one of the last three might fairly be regarded, not only as an adequate return for the money invested in the expedition, but as a complete and satisfactory answer to the question, "Of what use is Arctic exploration?"

If full and accurate knowledge of the world in which we live, and of the people who inhabit it, is valuable and desirable for its own sake, then Arctic exploration may stand justified by its results as set forth in Baron Nordenskiöld's book. But even if this be not admitted, and if Arctic exploration be tried by the severer test of immediate practical utility, the voyage of the *Vega* must still be regarded as a great and important achievement, since it has demonstrated the possibility of opening communication by water with the whole interior of Northern Asia, and of thus developing and making available the vast mineral and agricultural resources of Southern Siberia.

The salient features of the voyage of the *Vega* are familiar to all readers of periodical literature, and it is hardly necessary in the present review to do more than briefly refer to them. The cruise of the Swedes along the Asiatic coast from the frontier of Europe to Bering Strait was comparatively an uneventful one, and does not seem to have been attended with any great difficulty or danger. In fact, Baron Nordenskiöld himself says (p. 451) that "it may be accomplished again in most, perhaps in all, years, in the course of a few weeks." The *Vega* followed everywhere the narrow lane of open water between the Siberian coast and the main pack, rarely venturing out of sight of land, and never dashing hastily or imprudently into the fields of ice which at times seemed to bar further progress. The commander of the expedition was apparently guided throughout in the management of his ship by the rule which he states on page 222 of his book, that "the polar navigator ought above everything to avoid being beset." When the pack drifted in against the coast and temporarily closed the narrow channel which he was following, he did not attempt to force his way through, at the risk of having his ship imprisoned and carried helplessly northward in the ice, as were the *Tegetthoff* and the *Jeannette*, but waited patiently until the ice barrier had been broken up or removed by a change of wind. It was this prudent management, combined with thorough and accurate foreknowledge of all the conditions of Arctic

* The Voyage of the *Vega* round Asia and Europe, with a historical review of previous journeys along the north coast of the Old World. By A. E. Nordenskiöld. Translated by Alexander Leslie. With five steel portraits, numerous maps, and illustrations. London and New York: Macmillan & Co.

navigation, which enabled Nordenskiöld to take the *Vega*, in a little more than two months, from Tromsø through the Arctic Ocean to a point distant only one hundred and twenty miles from Bering Strait; to winter there in perfect safety; and, in the following year, to complete the north-east passage by sailing through Bering Strait into the Pacific.

In preparing the present record of the *Vega's* voyage and its results, Baron Nordenskiöld has worked on a far more comprehensive plan than that usually adopted by Arctic narrators. He has not contented himself with a mere statement of the *Vega's* fortunes and achievements, and of the personal experience, work, and impressions of her officers. The narrative of every stage of her progress eastward is preceded by an exhaustive historical review of all previous explorations in the same field, and is enriched by a multitude of facts, comparisons, and conclusions, drawn from the author's wide experience as an explorer in Greenland, Spitzbergen, and other parts of the Arctic regions. This method of treatment, although it breaks the continuity of the narrative, throws a flood of illustrative light upon the facts narrated, by bringing each one into its proper place in the existing body of Arctic knowledge, and thus showing its comparative importance or significance. Nearly half of Baron Nordenskiöld's bulky volume is taken up by information which is not a direct result of the work of the *Vega's* officers and naturalists, but which is indispensable to a proper understanding of that work and its value.

It is, of course, impossible within the narrow limits of a review to give more than the barest outline of the contents of a closely printed volume of eight hundred octavo pages. Attention can be called only to particular subjects here and there which are made prominent by unusual fullness of treatment, or which open new and interesting fields of investigation. Among such are the history, customs, and present condition of the Samoyedes; the animal world of Novaya Zemlya; the topography, climate, and material resources of Siberia; the fossil remains of extinct animals found in the frozen soil of Northern Asia; the flora of the North-Siberian coast; the submarine fauna of the Asiatic Arctic Ocean; and the history, mode of life, customs and characteristics of the Siberian Chookchees.

Among original investigations of great scientific interest made by Baron Nordenskiöld, are those with regard to the aurora, and to the fall of cosmic dust from interplanetary space upon the great Siberian plains. From observations made at the winter quarters of the *Vega* in 1878-9, Baron Nordenskiöld draws the conclusions that the aurora of the high north is a permanent natural phenomenon; that our globe is adorned with an almost constant single, double, or multiple luminous crown, whose inner edge is situated at a height of about one hundred and twenty-five miles above the surface of the earth, and whose center—the aurora pole—lies somewhat under the surface and a little north of the magnetic pole. This luminous crown, which the author calls "the aurora glory," is permanent, or nearly so, and bears the same relation to the irregular ray and drapery-auroras of more southerly latitudes that the steady trade and monsoon winds of the south bear to the irregular storms and hurricanes of the north. The observations upon which these conclusions rest have been made the subject of a

special paper, which is printed in the official record of the scientific work of the *Vega* expedition.

The fall of "cosmic dust," or meteoric matter in the form of an invisible and impalpable powder, is another subject of great scientific interest to which the author has devoted particular attention. From careful observations, made originally in Spitzbergen and repeated with the same results in Greenland and at the mouth of the Yenesei, Baron Nordenskiöld is convinced that there is falling upon the earth, from interplanetary space, a steady although imperceptible rain of meteoric particles, which when collected and analyzed are found to consist of the same elements which occur in aerolites. The author says "it may appear to many that it is beneath the dignity of science to concern itself with so trifling an affair as the fall of a small quantity of dust"; but he gives facts which go to show that the amount of matter which reaches the earth annually in this way from interplanetary space exceeds five hundred thousand tons, and that such an amount falling uniformly and steadily every year throughout past geologic ages must have profoundly affected the constitution of the globe. Baron Nordenskiöld will doubtless be gratified to know that, since his return to Europe, his observations and experiments have been repeated by Russian scientists in the interior of Siberia, with the result of fully confirming his conclusions. On the 31st of last October, M. Marks, a Russian meteorologist, collected at Yeneseisk, in Central Siberia, a considerable quantity of the same dust which Baron Nordenskiöld discovered in Spitzbergen, in Greenland, and on the Arctic coast of Northern Asia, and found it, upon analysis, to consist of the elements which are distinctively characteristic of meteors, viz., cobalt, nickel, and iron.

The chapters of Baron Nordenskiöld's book which will perhaps interest the largest number of readers are those relating to the Siberian Chookchees. The picture which he gives us of this small but interesting Arctic tribe is a peculiar and, in some respects, an anomalous one. Here are a few thousand people, living in the extreme north-eastern part of Asia in a state of savagery, or at most on a low level of barbarism, without any form of government, without any kind of social restraint except public opinion, without any religion except a vague fetichism, and without any hope or expectation of a future life. Such a state of society we should naturally call the most complete anarchy; and yet in this social state are found among the Chookchees peace, a certain degree of comfort, perfect security for life and property, unbounded hospitality, and a strong feeling of mutual sympathy and good-will. If it be thought that this picture of Chookchee life is too favorably drawn, let the reader compare it with the statements made by Baron Nordenskiöld on pages 501 to 508. The women, he says, are invariably well treated, are consulted by the men with regard to matters of business, and may hold property in their own right. "Within the family, the most remarkable unanimity prevails, so that we never heard a hard word exchanged either between man and wife, parents and children, or between the married pair who own the tent, and the unmarried who occasionally live in it. The children are neither chastised nor scolded, and yet they are the best behaved I have ever seen.

Their behavior in the tent is equal to that of the best brought-up European children in the parlor." The men are honest, good humored, and obliging, and "criminal statistics of the tribe are impossible for want of crimes." Judged by the highest European and American standards, this is clearly the ideal society in a realized form. The question naturally arises, what is the secret of the general amiability which seems to prevail throughout the Chookchee nation. The author does not tell us to what he attributes it, but leaves us to infer that the Chookchees are happy, honest, cheerful, and harmonious because they have no system of theology and are not over-governed. We are surprised, however, to learn that, in Baron Nordenskiöld's opinion, the virtues and amiable characteristics of this Arctic tribe are so many evidences of a change in the direction of decadence; that, in other words, as soon as a savage stops beating his wife, abusing his children, and robbing his neighbors, he is degenerating in character, and is on the way to speedy extinction. This is certainly a blow at the root of all heathen reform societies and missionary enterprises, if not at the root of Christian civilization itself.

In summarizing the general characteristics of Baron Nordenskiöld's book, it must be frankly said that, while it is a perfect treasury of scientific information, it cannot be compared, as far as dramatic interest and descriptive power are concerned, with such a book as that of Payer. This is due, in part, to the fact that the voyage of the *Vega* was not diversified by any stirring incidents or relieved by any picturesque circumstances, and partly to the fact that all the grace and descriptive force of Baron Nordenskiöld's style have been eliminated by the English translator. The translation is not only hard to read, on account of the frequent recurrence of non-English idioms and bad syntax, but it is often absolutely unintelligible. The following sentence, which will be found on page 348, is a fair specimen of the translator's English style:

"These accounts show that I indeed might have reason to be uneasy at my ill-luck, in again losing some days at a place at whose bare coast, exposed to the winds of the Polar Sea, there was little of scientific interest to employ ourselves with, little, at least, in comparison with what one could do in a few days, for instance, at the islands in Behring Straits or in St. Lawrence Bay, lying as it does south of the easternmost promontory of Asia, and therefore sheltered from the winds of the Arctic Ocean, but that there were no grounds for fearing that it would be necessary to winter there."

When to such syntax as this are added such obsolete, technical, or provincial words as "terrain," "droue," "fairway," "gazon," "louvre-case," and "leister," and such compounds as "self-dead," "self-colored," "ice-casts," "fowl-fell," "strand-bank," "train-drenched," and "stomach-cold," the English reader can hardly be charged with lack of intelligence if he fails to understand the author's meaning. It is furthermore very irritating to find the words "exceedingly inconsiderable" used everywhere for "small," and "not inconsiderable" for "large." The translator seems for some reason to have taken a violent prejudice against monosyllabic English adjectives, and systematically avoids using them. In-

stead of "high," he always writes "lofty" or "stately," as "lofty ice-casts" (high hammocks) and a "stately cairn." Many of the errors which occur most frequently, and are most annoying,—such as the failures of verbs to agree with their nouns, the use of adjectives to modify verbs, the reference to "soup" as "them," and to "work" as "these,"—should and would have been corrected by an intelligent proof-reader; but of intelligent proof-reading there is not the slightest evidence.

The spelling of proper names throughout the book is as irregular and inconsistent as it well could be. It is, perhaps, too much to expect that a translator who is not familiar with the Russian language will adopt and follow a definite and coherent system of spelling Russian names; but he might at least spell or transliterate with uniformity. Almost every proper name in this entire volume is spelled in two, three, and sometimes four different ways. There are, for instance, four variations of Yakootsk: viz., "Yakutsk," "Yakouts," "Yakootsk," and "Jakouts"; three variations of Kamchatka: viz., "Kamchatka," "Kamschatka," and "Kamschatska"; and three variations of Chookchee: viz., "Chukch," "Chukchi," and "Chukche." Zemlya is spelled on the same page "Zemlya" and "Semlja"; Chasson appears as "Chann" and "Tschann"; and Pyasina masquerades in the forms "Pjaesina," "Pjasina," and "Pjaisna." Even common and well-known names such as Tartar, Litke, Erman, and Quatrefores are given in their correct forms, and also in the forms "Tatar," "Litke," "Erman," and "Quatrefores." This varying orthography of foreign names can be attributed only to carelessness, and it is to be regretted that a defect so easily remedied should have been permitted to mar the general accuracy and trustworthiness of a volume which is otherwise so creditable to author and publishers. The book is well printed and tastefully bound, and is beautifully illustrated with more than three hundred engravings and maps.

Warner's "Washington Irving" and Scudder's "Noah Webster" "American Men of Letters" Series.

THE "American Men of Letters" series opens pleasantly with its editor's life of Irving; a somewhat sketchy little volume, expanded from the introductory essay that Mr. Warner supplied to a recent edition of Irving, and swelled to the required dimensions by citations from the latter's writings which take up a third of the book. There remains, indeed, very little that is new to say about Irving. His biography has been written in full, and readers have come to an agreement about the quality of his genius. It is significant of the distance to which the literary intellect has drifted from that placid Addisonian tradition of which Irving was the American heir, that Mr. Warner finds it necessary to adopt the tone of apologist. The greater depth and stress of our post-Knickerbocker literature has perhaps made us forgetful how enduring a quality there is, after all, in Irving's gentle and cordial charm. The effect of Mr. Warner's sympathetic criticism will be to recall this once more to the recollection of many who, having cried or

* Washington Irving. By Charles Dudley Warner. Boston: Houghton, Mifflin & Co. 1881. Noah Webster. By Horace E. Scudder. Boston: Houghton, Mifflin & Co. 1882.

laughed in boyhood over the "Sketch-Book" and the "History of New York," have since allowed those immortal works to grow dusty on their book-shelves.

The biographer recognizes in his subject a congenial nature. He finds that humor and sentiment are his prominent traits, and yet he vindicates his title to imagination—a quality that has sometimes been denied him. "It seems to me," he says, "that the transmutation of the crude and therefore unpoetical materials which he found in the New World, into what is as absolute a creation as exists in literature, was a distinct work of the imagination. Its humorous quality does not interfere with its largeness of outline, nor with its essential poetic coloring." "The Knickerbocker Legend and the romance with which Irving has invested the Hudson are a priceless legacy. * * * New York is the Knickerbocker city; its whole social life remains colored by his fiction; and the romantic background it owes to him, in some measure lends to it what great age has given to European cities."

We are glad, too, to see Mr. Warner resenting the slighting estimate which the Philistine puts on "light literature," as he densely calls all writings whose aim is to move rather than to instruct. Irving's biographer claims for the "Sketch-Book" and the "History of New York" a solid claim to importance than books like his "Columbus" or his "Washington" can present, though it was the latter and not the former that gained him a D. C. L. from Oxford. "All the learning of Oxford and Cambridge together would not enable a man to draw the whimsical portrait of Ichabod Crane, or to outline the fascinating legend of Rip Van Winkle; while Europe was full of scholars of more learning than Irving, and writers of equal skill in narrative, who might have told the story of Columbus as well as he told it, and perhaps better." In other words, it is the characteristic thing about a man that is important: the thing that he can do and no one else can.

The summary of Irving's character as man and author, in Mr. Warner's closing chapter, is appreciative and modest, though it gives no new insights. The preliminary sketch of the condition of American literature before Irving is interesting but meager. Room might well have been made for more of such, even at the sacrifice of the hundred pages of "filling" in chapter eight.

Noah Webster doubtless comes under the definition of a "man of letters" in his own dictionary; but he was not a man of letters at all in the sense in which Irving was, or in the common meaning of the term. He had no grace of style, no literary taste, not even that sense of the niceties of language which might be looked for in an eminent philologist. No man endowed with a really literary gift could have suggested such verbal changes as he made in his revision of the Bible. He was a school-master and a dictionary maker, with a strong business side to him, rather than a man of literature, or of elegant scholarship even. Nevertheless, we have found Mr. Scudder's life of Webster unexpectedly juicy, considering the dryness of his subject. For one thing, he breaks fresh ground, no life of the great lexicographer having yet appeared except the memoir by Chauncey Goodrich prefixed to "The Unabridged." Mr. Scudder, moreover, has had the skill to abandon

the formal biographic method, and to make Webster the text of an essay on the condition of American society and literature in his generation. It was the day of few books, scant population, and small colleges. The biographer begins with an air of amusement, as he quotes from the diary of President Stiles of Yale College, how "the students disputed forensically this day a twofold question: whether the destruction of the Alexandrian Library, and the ignorance of the Middle Ages, caused by the inundation of the Goths and the Vandals, were events unfortunate to literature. They disputed imitably well, particularly Barlow, Swift, and Webster." But as he goes on, he seems to conceive a real respect for the admirable qualities of his subject, and his tone becomes more earnest. The portrait of Webster gradually takes shape under his hands as that of the typical Connecticut Yankee—a quite different species from the Massachusetts Yankee; more intensely practical and less prone to idealism; in many things more conservative and orthodox, yet in others more given to innovation; restless, and readily inclined to wander away to the South, the West, or even to Europe, and adapt himself to new habits. Joel Barlow was another typical Connecticut Yankee of Webster's generation—indeed, a classmate of Webster's at college—who had the same adventurous, adaptive spirit. It was just a hundred years ago, and at Goshen, Orange Co., N. Y., that Webster, then a young school-teacher, compiled the first part of his "Grammatical Institute," better known as the famous "Webster's Spelling Book," which has instructed many millions of school children, of which indeed some sixty millions of copies have been issued up to date. The innovations which Webster proposed, and in part carried out in his "American Dictionary of the English Language" (begun in 1806 and published in 1828), were highly characteristic of the man and of the race to which he belonged. He took the mechanical view of language; it was an invention, a machine, and might be improved like any other machine. With his Yankee instinct for the useful and the simple, he accordingly set to work to reduce our chaotic spelling to regularity. The outcry raised against what now seem the very moderate changes proposed by Webster, and the battle of the dictionaries that followed on the publication of Worcester's Dictionary, are matters of general note, and Mr. Scudder wisely declines to discuss the points at issue. The victory at one time certainly seemed to be with the Worcesterians, and in the latest editions of Webster the conservative spellings have been silently restored. But lately the combat has re-opened with bigger artillery. The etymological stronghold of the Worcesterians has been stormed, and Dr. Holmes, who once made brilliant fun of *center* and *meter*, sees himself compelled to "hedge" in a printed letter—the professor of English at his own university having come out in favor of a spelling reform which would have seemed radical even to Noah Webster.

Webster's restless activity found vent in other directions than lexicography. He started the "American Magazine" in New York; contributed political articles—on the Federal side, of course—to the Hartford "Courant"; procured the printing of Winthrop's valuable "Journal"; and issued, himself, a current

volume of common-sense reflections on popular proverbs, entitled "The Prompter." Mr. Scudder draws a comparison between Webster and Franklin. "He had Franklin's common sense and homeliness, by which he gained a hearing from plain men and women; but he had not Franklin's crystal style, his instinct for the fewest and best words, his happy use of a language which seemed made for his thoughts." Another of Webster's practical achievements was his pushing through copyright laws, first in the legislatures of the several colonies, and afterward in the Congress of the United States. In pursuit of this object, which he undertook to protect his spelling-book, he displayed his usual energy and shrewdness, traveling many miles, memorializing legislatures, and interviewing Congressmen till the law was passed.

In his dictionary enterprise, as in all his writing and thinking, Mr. Scudder discovers as a prominent trait in Webster a bumptious and somewhat provincial Americanism. In this he was a true representative of his generation. Having proclaimed independence of Great Britain politically, we were to be independent in everything else. Had not Joel Barlow written a great American epic? Was there not Roman eloquence in the orations of Hancock, Warren, Livingston, etc.? Why should we not have an American spelling, an American pronunciation—nay, an American language—distinct from that of the mother country? This kind of patriotism has become a thing of the past; but it may be questioned whether the cosmopolitanism which has taken its place can quite afford to laugh at it.

Altogether, Mr. Scudder has made out of rather jejune materials a clever and instructive study, and one not wanting in original remarks, as where he says of the Puritan Sabbath: "Never, perhaps, has there been a religion which succeeded so completely in investing time with the sacredness which elsewhere had been appropriated by place."

Froude's "Carlyle."

THE long review of Carlyle's "Reminiscences," in SCRIBNER'S MONTHLY for May, 1881, renders needless any extended notice of this more formal biography. What Mr. Froude has done is to fill up the interstices between the "Reminiscences" from the abundant material in his possession, and to supply an orderly narrative as a setting to the extracts from Carlyle's journals and correspondence. The history is brought down to the year 1835, when its subject had settled down for life in London, and begun the writing of his "French Revolution," the work which first clearly established his reputation. The letters of Mrs. Carlyle—which Mr. Froude promises at an early day—will continue the story to the time of her death, and the editor of the "Reminiscences" will then add his own recollections of Carlyle during his last years, thus completing what will be, if not a methodical biography, at least most ample material for that future biographer who will only appear when the evidence is all in; that is to say, when the last person who knew

the great Scotchman, and has anything to say about him publicly, shall have spoken and passed away.

Meanwhile, Mr. Froude's history deepens and confirms the impression of Carlyle's personal character produced by the "Reminiscences"—an impression, we need hardly say, not so favorable as the admirers of his writings might have hoped to receive, when the circumstances of his life should finally be made known. The feeling is more than ever borne in upon us, as we read, that here was a nature in essentials sound, but in its outward aspects frightfully marred by intolerance, arrogance, impatience of suffering or contradiction, and even—what seems at first sight incredible—by vanity. For it becomes sadly evident to the reader of these volumes that Carlyle's attitude toward individuals of his acquaintance depended not so much on "the eternal verities" as on *their* attitude toward *him*—as it does in the case of ordinary mortals. His disparaging estimate of Scott seems due in part to a personal slight which he conceived himself to have received from the latter. Carlyle had been made the medium of a communication and a little present from Goethe to Scott, and had accompanied the delivery of these with a letter of his own, which Sir Walter had left unnoticed. "To me," writes Carlyle, "he is and has been an object of very minor interest for many, many years. The novelwright of his time, its favorite child, and *therefore* an almost worthless one." De Quincey had reviewed unfavorably his translation of "Wilhelm Meister," and accordingly he says of him—with ludicrous exaggeration, for the little opium-eater was the gentlest of souls—"He carries a laudanum bottle in his pocket and the venom of a wasp in his heart." The anecdote about Lamb and Carlyle ("Perhaps you are a p-p-poulterer") which has been going the rounds of the press may not be authentic, and can scarcely account for the savage grudge which the philosopher bore the harmless Elia, but the passage about Lamb in this history looks on the face of it even more vindictive than the one in the "Reminiscences":

"A more pitiful, rickety, gasping, staggering, stammering Tomfool I do not know. * * * He is now a confirmed, shameless drunkard; asks vehemently for gin and water in strangers' houses, tipsles till he is utterly mad, and is only not thrown out of doors because he is too much despised for taking such trouble with him. Poor Lamb! Poor England, when such a despicable abortion is named genius!"

The only reason why "poor Hunt" got any better treatment from Carlyle than "poor Lamb" and "poor De Quincey," would seem to be that Hunt liked Carlyle, and showed his liking; the others perhaps not.

A little drama hinted at in the "Reminiscences" is here more distinctly brought out. Mrs. Carlyle, we now learn for a certainty, had been passionately in love with Edward Irving before she had ever met her future husband. The feeling was returned, but Irving had already engaged himself to another woman, who declined to release him. The custom of Scotland made betrothal only less binding than wedlock. The lovers accordingly took the only honorable course and renounced each other, with consequences to both that may without exaggeration be called tragic. Had Irving married Jane Welsh, her clear, penetrating sense and mocking wit would have kept him free from the mis-

* Thomas Carlyle: A History of the First Forty Years of his Life. By James Anthony Froude. New York: Charles Scribner's Sons. London: Longmans, Green & Co.

erable delusions and fanaticisms that overtook the close of his career. She said herself that if Irving had married her "the tongues" would never have been heard of. On the other hand, it is Mr. Froude's deliberately expressed opinion that her marriage with Carlyle was a misfortune, certainly for her, perhaps for both. Toward the end of her life she said: "I married for ambition. Carlyle has exceeded all that my wildest hopes ever imagined of him—and I am miserable." She had given Carlyle to understand, when he sought her hand, that though she loved him, she was not *in love* with him. They were neither of them under any romantic illusion as to the state of the other's feelings. She became his brave, uncomplaining helpmate through years of self-denial and household drudgery. His intellectual companion, in the sense that she had hoped, she never became. The devil that possessed him was a solitary fiend, and his work had to be done—as probably all creative work has to be done—apart from all companionship. That Carlyle loved his wife and came after her death to worship her memory no reader of his "Reminiscences" and his letters can doubt. But he was, as his mother described him, "gey ill to live wi"; and in his plucky fight against poverty and dyspepsia, he dragged his wife along over smooth and rough, an unflinching sacrifice to the egotism of genius. The suspicion excited by the "Reminiscences" and strengthened by Miss Jewsbury's recollections is confirmed by this history: the suspicion, viz., that the repeated and almost exaggerated expressions of love and grief which Carlyle uttered after the death of his wife were in great part the effect of remorse. He saw too late that he had been self-absorbed, inconsiderate, and often irritable. But she who had suffered that he might become great had passed beyond the reach of his atonement.

Socially, the best side of Carlyle was his strong family affections. All that part of his correspondence which displays his filial love and fraternal helpfulness is very beautiful. Here there is nothing but forbearance, unselfishness, and simplicity. One cannot help wondering why he did not turn toward the world a little of that "sweet reasonableness" which he kept for his somewhat feckless brothers John and Alick, who were a sore burden to him in his poverty.

Carlyle's journals, which were rather intermittent, bear no such important relation to his books as Hawthorne's note-books do to his. Yet there are some seed thoughts in them here and there, interesting to note. And both in the journals and the correspondence are passages now of deep tenderness and awe, and now of sharp, humorous observation. "I am often very calm and quiet. I delight to see these old mountains lying in the calm sleep of twilight, stirless as death, pure as disembodied spirits, or floating like cerulean islands, while the white vapours of the morning have hidden all the lower earth." This from Craigenputtoch. The following, of a different kind, is a sketch of two fellow passengers on the boat from Leith to London. Sir David Innes "had a large, long head like a sepulchral urn. His face, pock-pitted, hirsute and bristly, was at once vast and hatchet-shaped. He stood for many hours together with his left hand laid upon the boat on the middle of the deck and the thumb of his right hand stuck firmly with its point on the hip joint; his large blue

and rheumy eyes gazing on vacancy, the very image of thick-lipped misery. Captain Smith was of quite an opposite species, brisk, lean, whisking, smart of speech and quick in bowing; but, if possible, still more inane than dullness. * * * These two, dullness and inanity, contrived to tell me in the course of the voyage nearly all the truisms which natural and moral science have yet enriched the world withal. They demonstrated to me that sea-sickness was painful, that sea-captains ought to be expert, that London was a great city, that the Turks eat opium, that the Irish were discontented, that brandy would intoxicate."

Here is that exaggeration of the characteristic which produces caricature—a gift Carlyle had in common with Dickens, and which explains his admiration for Dickens.

In general, this biographical fragment exhibits the philosopher as he is already known, burning no clear flame (*Terar ut proxim* the motto of him), but rolling up volumes of red volcanic fire mixed with pitchy smoke. A phenomenon rather than an illumination; a spirit of destruction and negation quite as much as of "the eternal Yea."

"Dorothy."*

THE APOTHEOSIS OF BRAWN.

THIS is not simply an idyl, but a sermon preached on the ironical text of Hobbes in Clough's "Bothie":

"Scrubbing requires for true grace but frank and artistical handling,
And the removal of slops to be ornamentally treated."

The author has a two-fold mission: first, to preach the beauty of hard hands and red arms; secondly, to denounce the Bill to Regulate Female Employment—of which piece of legislation Colonel St. Quentin, the villain of the story—if he merits so strong a title—is, significantly enough, the great promoter. The heroine is a farm-servant at White Rose Farm, the natural and unacknowledged child of the Colonel by a milk-maid employed at the farm, who dies on giving birth to her. Dorothy, or "Dolly," is reared upon the farm; she does the coarsest out-door and in-door work, and has the "strong, coarse frame of a farm wench":

"Rough were her broad brown hands, and within, ah me!
they were horny:
Rough were her thick ruddy arms, shapely and round as
they were:
Rough too her glowing cheeks; and her sunburnt face and
forehead
Brownier than cairngorm seemed, set in her amber-bright hair."

Her employments are described with a defiant minuteness. The fastidious reader who wishes to be shocked shall be shocked to the top of his bent. Nothing shall be withheld, however homely or seemingly unpoetic. If Dorothy is sweaty or greasy at her work; if her handsome face has a smudge on it; if she absorbs a substantial quantity of bacon and beer, the reader shall know it. It shall be thrust down his throat by repetition and emphasis, until he has no lingering illusion on the matter. She carries coal, chops wood, blackens the grates and her master's boots, harnesses the horse, cuts turnips for the

* Dorothy: A Country Story in Elegiac Verse. Boston: Roberts Brothers. London: C. Kegan Paul & Co.

sheep, helps at the pig-killing, and cleans out the pigsty afterward.

"Then she can scrub and scour, and swill with the bucket
and besom,
Flinging her pailfuls afar mightily over the yard."

She can even plow, and the process is described in a very fine passage, one of the most graphic and truthful in the poem:

"Ah, what a joy for her, at early morn, in the spring-time,
Driving from hedge to hedge furrows as straight as a line!
Seeing the crisp brown earth, like waves at the bow of a vessel,
Rise, curl over, and fall, under the thrust of the share;
Orderly falling and still, its edges all creamy and crumbling,
But, on the sloping side, polished and purple as steel;*"
And, ere the ridges were done, there was gossamer woven
above them,
Gossamer dewy and white, shining like foam on the sea."

This is good poetry, written "with the eye upon the object," and there is plenty more of it in the book. Dorothy's accomplishments and good qualities win her the love of a desirable *parti*, Master Robert, the head game-keeper at the castle, and the story of the courtship and marriage is simply and sweetly told.

But from the doctrine of the poem and, in consequence, from a large part of its execution, we must dissent. One has not to read far to discover that the poet is not content to let his poetry rest on its naturally poetic qualities. He must be preaching: he is eager to make proselytes to his view that the coarsest manual labor is in and of itself a lovely thing. He might have profited by reading what Hawthorne said of his experience at pitching manure in the farmyard of Brook Farm. Or he might have taken to heart the wise caution with which the tutor in Clough's "Bothie" checks the youthful Chartist who chants the praises of *his* ideal Dorothy:

"Washing, cooking, scouring,
Or, if you please, with the fork in the garden, uprooting potatoes."

To which "the grave man, Adam," answers:

"Education and manners, accomplishments and refinements,
Waltz peradventure, and polkas, the knowledge of music and
drawing,
All these things are Nature's, to Nature dear and precious."

This, we take it, is the moral of Clough's poem—if any moral there be; and it is identical with that deep saying of Shakspeare's, who makes *Prince Florizel* reply to *Perdita*'s dislike of garden-flowers as being the artificial creations of the gardener's art:

"Yet Nature is made better by no mean
But Nature makes that mean."

Our complaint is that the author of Dorothy has too narrow a conception of nature. In particular he insists with a snappish tenacity on the hardness of his heroine's hand, its gray palm and rugged edges. Let it be that the hand was hard. We will agree to waive that objection; but why should the poet make a merit of it? In Goethe's "Hermann and Dorothea," to which this poem has a manifest likeness in verse, name, and narrative, the heroine's hand was doubtless equally hard, but Goethe makes no fuss over it. His method is the simpler and more truly natural. But our author in a somewhat truculent appendix again challenges our admiration for hard hands. He gives a sort of historical sketch of the horny hand in literature, and uncon-

sciously condemns himself when he says naively of Wordsworth, "Wordsworth, whose rustic women and girls are so many, was concerned rather with their moral character and atmosphere than with their physical frame." Of course, and so was Goethe, and so was Clough, and so is every poet who has a right sense of proportion and of the proper business of poetry. In "Dorothy," on the other hand, the elevation of this petty detail into a matter of prime importance becomes ludicrous. We cannot see the heroine by reason of her hand. That inoffensive member gradually swells and broadens till it becomes a gigantic screen covering heaven and earth, just as in reality one's hand held up before his eyes shuts out the whole landscape. In particular it is made a sort of touch-stone. All the good characters in the poem admire it; all the wicked ones are afraid of it. The lover wins the heroine's love by fondling her crooked fingers and kissing her "cold, gray palm, cooling his lips with the horn"! On the other hand, a wicked young gentleman, who is bothering Dolly with his attentions, has his real baseness exposed by a sudden application of the test.

"The touch of her hands cured him completely of love."

For white hands, for "soft pink palms," and their owners, male or female, the poet has nothing but contempt and distrust.

If it is weak to feel repelled by a healthy physical coarseness in a woman, it is yet no sign of strength to insist on coarseness as a charm. The latter state of mind is an artificial reaction against the artificial. The common-sense view we take to be the natural one, viz., that delicacy and grace are physically necessary to the highest womanly charm; and that wholesome, handsome farm wenches, like Dorothy, please in spite of their lack of delicacy, not in consequence of it. Moreover, we refuse to accept the heroine of this poem as a type of character. It will be found that coarseness of sentiment usually accompanies coarse bodies and coarse employments. "The *hand* of less employment hath the daintier sense."

Milner's "Country Pleasures."*

WHEN one remembers that the Englishman is first and last essentially a countryman, that his tastes and pleasures are thoroughly bucolic, that in England the class of greatest leisure and culture is rooted like the oaks to the soil, that the English landscape is more mellow and bosky and more redolent of human qualities than any other in the world, it is singular that English literature contains so few good books expressive of the national taste and temperament in this respect—books that are the outcome of simple country content and delight in the presence of rural nature; few, we should say, outside of the works of her poets. The muse of English poetry, from Chaucer down, has reveled in country scenes and pleasures as that of no other nation has; but the muse of English prose, when it turned to nature, has, for the most part, looked to distant lands, to Africa, America, Asia, and been subservient to the instinct of the sportsman and traveler.

* Country Pleasures. The chronicle of a year, chiefly in a garden. By George Milner. Boston: Roberts Brothers. London: Longmans, Green & Co.

Gilbert White's "Selborne" is the first prose work of note that is the fruit of this native contentment and love. Then a hundred years elapses before another prose work is produced, of conspicuous merit, informed with essentially the same spirit. Mr. Jefferies' recent books, "The Gamekeeper at Home," "Wild Life," and "Round About a Great Estate," etc., are the product of the same quiet contemplation and familiar intercourse with the ripe, half-domestic English nature as the work of the Selborne naturalist.

The work before us, Mr. George Milner's "Country Pleasures," while it hardly deserves to be mentioned in the same list with the above named works, is yet a fair expression of that unostentatious love of country life—the pleasure in trees, fields, flowers, birds, lanes, paths, frost, rain, the clouds, etc.—so characteristic of the English mind. A very good idea or picture of

the procession of the seasons in the mother country may be had from its pages.

The bird and the flower are given, not so much from the point of view of the naturalist as from the point of view of the casual country sojourner. The record is tame and uneventful, and to the readers of such a writer as Henry Thoreau will seem positively flat and tasteless. Mr. Milner does not look at Nature with an intense and absorbing gaze, but he sees with good, appreciative, wholesome eyes. He never offends one, is not patronizing nor gushing, but writes down his observations and impressions in a genial and sympathetic, if not in an ardent and poetic, frame of mind. His volume is richly fraught with quotations from the poets, and it is in these two hundred gems gathered from the whole field of English song that, to our thinking, the chief value of the book consists.

HOME AND SOCIETY.

HOUSE CONSTRUCTION. II.

Sanitary Arrangements.

THE art of house-building is, perhaps, the oldest of the arts, dating from before Tubal Cain, yet, judging from the average structure in most civilized communities, it seems to be, like Milton's "great first cause," least understood, and is apparently becoming another of the "lost arts." A modern dwelling should be a tight, solid, durable structure, located upon a site free from damp, sheltered from inclement winds, yet with an abundance of sunlight and pure air, the interior spacious and comfortably warm, but not over-heated, and the whole absolutely free from all objectionable odors, whether from plumbing fixtures, the kitchen, laundry, cellar, or other sources. All of these requisites may be had with due care and moderate outlay. That they are not more common in the community is largely due to ignorance, false economy, or neglect.

The first consideration before preparing to build a house is the choice of a suitable site. Too much care cannot be taken to secure a healthful location, and to make sure that there are no hidden drawbacks to be discovered when it is too late to correct them. Bacon said: "He who builds a fair house upon an ill-seat, committeth himself to prison." All retentive soils contain more or less water in their interstitial spaces. To insure salubrity there should always be a deep crust of open, dry soil between the foundation of a house and the subterranean water level below. While it is desirable to avoid a site which is naturally wet or polluted, even such a site may be made dry and wholesome by proper precautions. Yet even upon a dry, porous soil, danger is incurred by carelessness in allowing water to soak into the ground adjacent to houses, from waste-pipes, leaching cess-pools, and from dripping roofs. In consequence, such dwellings become filled with "dry rot" and unfit for human habitation, while the soil is thoroughly polluted. The risks to health from these causes are greater where there is a public water supply, and insufficient

or no sewerage. The abundance of water encourages its lavish use, and the soil soon becomes saturated with the fluid waste.

Sunlight is another essential. There are hundreds of dwellings which are as deficient in sunlight as an average tenement house. Scores of families of ample means and refinement seem content to live in rooms which have no outlook beyond a blank wall or the rear windows of their neighbors. Human beings, like plants, need an abundance of light.

The reason why modern houses are so ill constructed is not far to seek. The blame rests partly upon the builder and the various mechanics employed by him; but a large share properly belongs to the owner's ignorance of what is essential to a perfect house, or to his unwillingness to pay for it when pointed out by others. While the architect has a recognized superiority in matters of taste and design, he is also better fitted to direct the great variety of artisans employed about a house than any one of their own number. It is a common, but mistaken, custom to give this direction to a contractor or builder, who is usually a mason or carpenter, and who is not thorough in his own trade, while lamentably ignorant of the details of other men's work which he has to superintend. The sole interest of such a man is to get through each job as soon as possible, and with the least trouble and outlay. He is the plumber's worst friend, when he winks at the latter's failure to do justice to the owner's interest, while, as he has no comprehension of the importance of good plumbing, he takes no pains to secure it. The practice of subletting plumbing to such men, or to any "lump contractor," is very objectionable, and all sanitary details should have the personal supervision of the owner or architect. The same reasoning will apply in the case of other departments of house construction, and proves the necessity of competent superintendence.

Again, the owner should not be in too great haste either to begin a building, or, when begun, to get

through with it. In English professional phrase such impatience is called being in a "jackass hurry." In one case in my experience, a gentleman asked a plumber in Newark to make a bid for the work in a ten-thousand dollar house in *half an hour's time*, which he very properly refused to do. Before undertaking any building or other like work, it is always best to draw up a detailed specification, with plans, to insure against errors or misunderstandings, which create disputes in settling accounts, and to thus make it clear just what it is proposed to do, and what are the duties and obligations of all parties concerned. Detailed sketches and working-plans will be found useful, especially for explaining designs to persons not familiar with building operations. A building specification should be concise and clear; nothing should be stated in general terms, as "the work to be done in a proper manner," or, "proper material to be provided," but the terms should be specific, particularly those relating to plumbing and drainage; the kind and character of each article of the material named should be defined, so as to prevent the substitution of an inferior article; and the weight of pipes, etc., should be stated. Care should be taken to have a distinct understanding in regard to "extras," so that in case of an advance or decline in the rates of labor or materials, there need be no question as to the price. In contracting for plumbing, it should be understood that the plumber's estimate does not include the carpenter's or laborer's work unless specially stipulated. And here it should be said that it is always safest and cheapest in the end to specify the best materials, especially for plumbing work. The difference in first cost, for example, between medium and heavy water, supply, or waste pipe, or between light and heavy lining for tanks or baths, is slight compared to the durability and safety of the better material. A chain is only as strong as its weakest link, and the quality of the material has a far more important bearing in plumbing than in other work. This is a matter of great importance, and one in which owners and even architects are liable to be deceived. It is a common thing for unscrupulous plumbers to substitute light weight pipe, full of sand-holes, where sound material was specified; and as there are no official tests for such material, only great watchfulness will guard against frauds of this kind. A few years ago, whole car-loads of condemned soil-pipes of this description were bought by "jerry" builders in New York and shipped to Boston, where they may be found in some of the finest residences in the Back Bay region—with what results the reader may easily imagine. In this connection, the rules of the New York Board of Health regarding the weight and quality of plumbing materials to be used in new houses may be consulted with advantage. In making contracts for plumbing, it should be remembered that the lowest bidder may be the most expensive man in the end. No bid should be accepted at so low a rate that the mechanic who takes the contract must either suffer loss or "scamp" the job, and therefore be tempted to cheat at every step. Let the owner inquire about the cost of materials and labor, and make sure for his own protection that there is a living profit left for the contractor, for the latter will "get even with him" in some way.

Two facts should be specially borne in mind by property owners. First, that a great saving can be made by having sanitary arrangements made right in the first place, instead of correcting them afterward; and, secondly, that a house in first-class sanitary condition will bring a much higher price than another which has only ordinary drainage arrangements. To illustrate the first point: The expense of putting in a proper drain when a house is constructed would be about half what it would cost to tear up a concreted floor, take out a defective drain and substitute another. The same ratio would occur in the case of carrying a soil-pipe to the roof for ventilation. When the house is building, it is easy to run pipes in any direction, but when plastering must be torn down and replaced, double expense is incurred. It is estimated that the difference between good plumbing and the average work of this kind does not exceed twenty-five per cent. of the original outlay. An average city house can be piped scientifically, with the best materials and in the best way, for about twelve hundred dollars, while the house could not be plumbed at all, provided the same plan were followed, for less than nine hundred dollars. If a compromise must be made because the owner's purse cannot afford the best plumbing, then let the amount of the work be reduced, not the quality. It is far wiser to be satisfied with one really good plumbing appliance than with two inferior articles. Get the best under any circumstances. If it is asked, "How am I to know a good plumber from another?" I answer how are you to know a good doctor or lawyer or architect,—simply by taking pains to inquire, and by avoiding the too common delusion that the cheapest man is the best. The only safeguard is to employ a mechanic of good character, who has a reputation to lose, and who will be guided by his interest and his probity to do only first-class work. If the public will insist on having good plumbing, they will get it. If a man persists in buying sour bread or diseased meat, no one pities him—why then should we condole with one who engages the first plumber who comes along, without taking the least pains to learn his capacity or honesty, and who in consequence gets cheated?

Prime sources of soil pollution are defective cess-pools, or, rather, we may say, the ordinary cess-pools, as they are universally bad in design and worse in execution. A proper cess-pool should be cemented tight, so as not to contaminate the soil in the vicinity; it should be well ventilated, and disconnected from any dwelling or building; it should be regularly cleaned out and disinfected, and not overflow into streams where its contents may cause a nuisance; it should not be within a hundred feet of any well, unless absolutely water-tight, nor near a house. But how many cess-pools fulfill these conditions? They are constantly found under houses and close to windows. They are built of brick or stone, with loose joints, so that their fluid contents leach into the ground about foundations, poison the air, penetrate through the soil to distant wells or water-courses, and breed infection on all sides. They are not ventilated, except by the waste-pipes, which carry the gases of decomposition directly into the living rooms; they are rarely large enough to retain any amount of

material, and hence must of necessity overflow somewhere, while they are seldom cleaned. At Princeton College three years elapsed without a cleaning, and they are usually forgotten until they force themselves on the attention. Household-ers trust to the permeability of the soil around their cess-pools to convey away their fluid contents, without a thought of what becomes of the material, or what evil influence it may exert on other people's premises. A physician traced a case of typhoid fever to the pollution of a well by a cess-pool one hundred feet distant. In another case the salt used in packing an ice-cream freezer, which was thrown on the ground after the ice had melted, penetrated to a well two hundred feet away. At Princeton a gentleman, suspecting that his well was too near a cess-pool, ordered another to be dug at what seemed to be a point far enough away; but before the excavation was completed the fluid sewage began to flow through a rift in the under-ground rock, and the site had to be abandoned. Where a cess-pool is constantly leaching into the ground, the soil becomes so saturated that the organic matter cannot get

during heavy storms. A supply of coal giving off noxious gases fills one side of the cellar. Barrels crammed with ashes, and too often with garbage, are found in another place. The cold-air box of the furnace is of unseasoned wood and full of cracks, through which the cellar air, laden with coal-dust, ashes, and damp, readily finds entrance. It is just the place for rats or cats to nest. The cold-air box ends at the front or rear area on a level with the surface of the ground, so that the air that enters it is liable to be saturated with soil moisture and surrounding impurities. If a wire netting is placed over the opening it usually becomes choked with dirt. In hundreds of cases these visible defects are enhanced by the hidden evils of broken drains under-ground, or open joints through which sewer-gas finds its way and pollutes the air. It is very probable that the cellar itself has a drain, either without a trap or with no means to keep the trap fed with water, if it exists. A favorite fashion is to carry this drain to the depression around the furnace, and thus create a strong suction from the furnace to draw sewer air into the house. The refriger-

AN UNSANITARY CELLAR.

oxidized. All authorities agree that it is necessary to absolutely forbid all leaching cess-pools. Colonel Waring says, better run the house waste into street gutters than into "unventilated and leaky caverns called cess-pools."

A dry, tight, well-ventilated cellar is a prime necessity to a healthful house, yet Professor Chandler declares, with all the weight of his experience as a chemist and as president of the New York Board of Health, that "not one house in a hundred has a properly constructed cellar"; and the experience of every one who has opportunities of forming a judgment in the matter will sustain this statement. From my own experience in examining houses in both large and small communities, I do not hesitate to say that the risk to health in most modern dwellings is far greater from bad cellars than from sewer gas and all other unsanitary conditions.

A photographic sketch of the ordinary city cellar would astonish most householders. Let me set down some of its leading features. It is dark—a prime defect. It has little, if any, ventilation, and hence smells musty and damp. Even if floored with concrete it is not dry, for it is liable to be flooded

ator, also, commonly has a waste-pipe connecting with the sewer. A sharp eye will usually discover openings in the walls or ceiling leading up through the house, by which the cellar air may enter the living rooms. Where these are missing the dumb-waiter supplies a ready substitute. If, in addition, the gas-meter leaks, and there is a foul water-closet for the use of the domestics, the cellar may be pronounced a model of neglect and bad arrangement.

All of these defects can be easily remedied. The cellar can be made and kept dry. The tile-drain can be replaced by an iron drain carried along the side wall in full view, so that any leaks will at once be visible. All surface-drains can be trapped securely, and the traps kept full of water. The walls and ceiling can be whitewashed, and, if kept scrupulously clean and well-ventilated, the cellar will be pure and sweet. The cold-air box to the furnace should be carried up several feet above the ground level, and the box made of galvanized iron instead of wood, or, if of wood, with tongued and grooved joints. Refrigerator wastes can be disconnected from the sewer, and a vast improvement thus effected.

Are modern improvements safe? The ravages of

disease, ascribed by physicians to the influence of sewer-gas in dwellings, has created wide-spread alarm. There is general distrust of plumbing arrangements, and undoubtedly there is much ground for this. But it should not lead to wholesale denunciation of, or total abolition of, what is undoubtedly a great domestic convenience and health preservative. A solution of the whole problem may be found by answering the simple question, Why is it that sewer gas is a comparatively new evil, whose bad effects have only recently attracted attention? Twenty years ago, the average dwelling was much better built than at present. The masonry was more substantial, the interior fittings better constructed, and the plumbing, though less in amount, was more thoroughly executed than is the rule now. The cause of the change which has since taken place is the development of the "speculative" builder, who has built most of the leased houses in New York, as in all our other large cities, and has found a ready market for them. Like Peter Pindar's razors, they have been constructed "to sell," and not for permanent occupation. Cheap, showy, and flimsy, their miserable deficiencies are known to every householder. Leaky roofs, flaking-off plaster, damp cellars, cracked walls, and unseasoned wood-work are a few of their ear-marks. But worst of all is the plumbing, which, being hidden behind partitions and below floors, is easily "scamped," and made to appear elegant and elaborate on the surface, while it is criminally deficient beneath. Marble basins and silver-plated faucets are poor equivalents for trap-less and unjointed pipes, often with leaks from which sewer-gas pours with insidious flow, and for the countless other defects common in ordinary houses.

The blame for such unsanitary conditions should not be charged alone upon the underpaid and unappreciated plumber, who has no voice usually in regulating the quality of his work, but upon the unscrupulous contractor who employed him. A share of the blame also rests upon the householder, who rents or buys houses of this class without guarantees of their healthfulness. But the presence of sewer-gas and disease from the bad plumbing in contract-built houses is no argument against having good plumbing in other dwellings. Modern improvements are popular because they are "improvements." A copious supply of water is vital to health and essential to every household. The serious proposal to abandon these common features of modern civilization and return to the primitive and offensive sanitary practices of our forefathers is simply absurd. As well abolish stoves, the telegraph, the newspaper, and the use of steam, because each have their drawbacks. The present reaction regarding these matters is inconsistent and inexcusable. Progress is the order of the age, and so long as it is possible to make plumbing absolutely safe and wholesome it is folly to give it up. A properly plumbed house is the safest place to live in, and it is paradoxical to deny it. It must also be borne in mind that modern plumbing practice is not mere theory, nor the result of the whim or interested invention of the plumbing craft, but is the product of the experience of hundreds of keen and watchful observers, many of them with scientific training, and including not only plumbers and builders, but architects, engineers, and physicians.

The following general recommendations are suitable for plumbing most modern dwellings: (1) A trap on the main drain, between the house and sewer or cess-pool, with an air inlet open where it will not cause offense, so as to flush the entire system of plumbing with pure atmospheric air; (2) the soil-pipe to be extended through the roof, at its full size, and ending away from chimneys or windows. If any one has any doubt of the necessity of this provision, let him simply take note of the obnoxious vapors which pour out of any of these openings, and which sometimes find their way into neighbors' windows, when the latter chance to be higher than the top of the soil-pipe; (3) traps to be placed on all fixtures, with suitable vent-pipes to prevent siphonage; (4) securing absolute freedom from soil dampness in cellar or vicinity of foundations by proper drains; (5) the furnace cold-air box to be raised above the ground to exclude soil moisture; (6) all under-ground drains to be tested when laid, to insure that they are not broken, and preference given to tarred iron pipe, with gas-tight joints carried along the cellar wall; (7) the tank overflow, refrigerator, and safe-wastes not to connect with the sewer under any circumstances, but to run direct to the cellar or to end over the kitchen sink; (8) no soil-pipe to connect with a chimney flue; (9) no pan water-closet to be countenanced, or any closet, without a cistern to keep it well flushed; (10) no well to be located within two hundred feet of a cess-pool; (11) no garbage or vegetables to be stored in a damp or unventilated cellar; (12) all cess-pools to be ventilated by two openings.

Sewer-gas has been frequently analyzed, and its chemical constituents are well known. Where a sewer is clean, ventilated, and well flushed with water it does not create hurtful gases. If the sewer is laid without a proper grade, so that its contents stagnate and do not flow off easily, or if it gets choked, then it becomes merely an "elongated cess-pool," and foul gases are thrown off in great volume. Decomposition is promoted by the hot water and waste steam from houses and factories which mingle with the sewage. The germs of human diseases that find their way into the sewers are light and almost infinitesimal in size, so that they may be borne with the impalpable and expansive sewer-gas through the house-drain connections along the line of the sewer and into living rooms. It is these germs of disease, of which the sewer-gas is the vehicle or carrier, that are so often the source of sickness.

Hence it is the duty of the authorities to ventilate the sewers by perforated man-holes, and it is the duty of the householder to bar the entrance of the sewer-gases into his house by a trap, and to ventilate his own plumbing as well.

How far disease can be traced to sewer-gas is yet an unsettled question. Men employed in the sewer department state that they can spend days and weeks in the sewers without ill effects. Again, some plumbers assert that they experience no discomfort from working near open connections and the sewer. Others state just the contrary, and I have heard repeatedly of instances of nausea, headache, and other like effects caused by inhaling the air from an open joint or disconnected pipe. In regard to the first statement, it should be borne in mind that it is made by men of vigorous constitution, leading out-door lives, who are actively engaged when in the sewer. The same

influences acting upon persons of less vitality, and engaged in sedentary pursuits, might produce very different results. It is just this class, particularly women and children, who suffer most from such

PROPER FORM OF REFRIGERATOR WASTE-PIPE.

causes, especially while sleeping at night in the average close, unventilated, American bed-rooms with adjacent and defective plumbing fixtures.

Sewer-gas may be created in the waste-pipes of a wash-basin or sink, by the decomposition of the soapy slime which forms the lining of these pipes, just as readily as in the sewer. Hence it is very important to place traps upon these pipes to prevent the gases getting into the rooms, and to ventilate them.

To avoid the chance of their contents being contaminated by foul gases, refrigerators should never be connected directly with any drain or cess-pool. Most food, and particularly milk and meat, is easily tainted if exposed to such influences, and, in repeated instances, cases of sickness have been traced to this cause. The proper method is to allow the refrigerator waste-pipe, with the end turned up, to discharge over an open pan, and this can have its own drain, with a trap to prevent any foul odors returning. Such odors have been created merely from the slime of melted ice adhering to the sides of the waste-pipe.

A sanitary water-closet should be durable, compact, with gas and water tight joints, free from all odors, well-flushed, cleanly, simple in action, with no hidden receiver to store up and decompose filth. The valves ought not to leak or fail to provide a sufficient scour of the bowl; there should be no pan to wear loose or corrode with gases so as not to retain water; there should be no putty-joints to dry and crumble or be gnawed by rats, nor half-made fastenings to rack and break; and, finally, it should be ventilated in every part, and if the compartment where it stands can be ventilated and isolated as well, so much the better. In many English cities, the location and arrangement of water-closets is strictly regulated. In some places they are not permitted under an occupied room, while they must also adjoin an outer wall so as

to be readily ventilated. The too common American custom of having the bath-room in the center of the dwelling, with a light-shaft conveniently arranged to ventilate it *into* living rooms above, would not be countenanced by any English sanitarian. Wherever practicable, water-closets should be shut off from the rest of the house by double doors, and have plenty of sunlight and air. The English official requirement that all closets shall be supplied from a cistern and not direct from the main, might advantageously be enforced everywhere.

Even in the best houses water-closets need constant care. All parts should be accessible to the housemaid's scrubbing-brush and soap and hot water. The most absurd extravagance will sometimes be shown in the surroundings of water-closets when more essential matters may be neglected. I have found cheap pan-closets in bath-rooms superbly fitted with marble tiles and other luxuries. The warning about making the outside of the platter clean while the interior is vile should be commended to persons who wish to indulge in luxuriousness in sanitary arrangements.

Nothing is more objectionable, both on the score of neatness and of healthfulness, than the universal plan of boxing in all water-closets with wood-work, which is never taken down except when repairs are necessary, and which becomes, in nine cases out of ten, a receptacle for drip from joints, damp, rust, etc.

With Hopper closets, where the cost is not an obstacle, it is best to line the sides and floor about the closet with enameled tiles, and to remove all the wood-work except a hinged seat, which can be raised. Every water-closet should have a safe made of sheet lead, with the sides turned up and soldered to catch any moisture from leaks or dripping. Where there is risk of ceilings being damaged in case of a break, it is usual to have a small pipe to drain the safe. This is often connected directly with the waste-pipe by means

COMMON ARRANGEMENT OF BASINS.

of a trap supplied by a small pipe connecting with the valve of the closet, so that it is supposed to be filled every time the handle is raised. These feed-pipes, which are the size of a lead-pencil, are apt to clog with

sediment, or fail to act from some other cause, and then the water-seal of the trap on the safe-waste dries up, and there is nothing to prevent sewer-gas passing through it. This little trap may also be siphoned by the discharge of the closet or other fixture, when the same ill results will follow. In good plumbing work, therefore, it is the rule to carry the safe-wastes down to the cellar, or to empty them over a sink where they can do no harm.

Care should be taken to prevent rats nesting about plumbing fixtures, as they will gnaw the pipes if impelled by thirst, and sometimes they will eat into vent-pipes and thus leave openings for sewer-gas, which will not show themselves, as in ordinary cases, by leaks. It is also important to see that the openings in the floor below a water-closet to admit the plumber's pipes are closed at the top, as they may admit cellar air, and also increase the risk of freezing the supply-pipes.

Servants' water-closets are difficult to keep in order, both from their poor quality and the want of care in looking after them. Being out of sight, they are easily out of the mistress's mind. It is rare to find them cleanly or in good repair, but it seems to be thought that anything is good enough for servants. They should never be placed in a cellar unless the latter is well lighted and warmed. Any appliance that is to receive hard usage should be of the best construction and material; hence the servants' water-closets should be of the best make instead of the reverse, and located where the comfort of the domestics will be considered as far as possible. Much might be said regarding the sanitary provisions for domestics. Householders should reflect that their own and their children's welfare is involved in the health of their servants. More than one serious outbreak of sickness in families has been traced to the failure to care for the health of servants.

Charles F. Wingate.

THE WORLD'S WORK.

Protection for Workmen.

WE have already referred to mica masks for the protection of workmen exposed to great heat.* Among the new devices for economizing the cost of labor by making the laborer more comfortable, or in guarding him from injury, is a water shield for furnaces. It consists of an apron of sheet-iron, suspended before the furnace, over which a film of cold water is allowed to flow continuously. The apron may be of any size or shape desired, and may be hinged at one side, or suspended on rollers, so that it can be pushed out of the way when it is necessary to open the furnace doors. The upper edge of the apron is bent slightly back, and just above the receding portion is placed a pipe pierced with holes along the lower side. This pipe is joined by means of a piece of hose to the water supply of the place. The lower edge of the apron is bent upward so as to form a trough, and this is connected at one end with a hose for carrying off the waste water. When the shield is in place before the furnace, water is let on through the hose, and escaping from the pipe it flows in a film down the outside of the shield, absorbing the heat of the furnace, cooling the air in front of the furnace, and catching much of the dust that may be in the air. The waste water from the trough may be used for cooling tools used in the furnace, or for any other purpose, or it may be run into a reservoir, and after cooling may be used again. The cost of the shield is very slight. Among appliances for protecting workmen while placing belts over driving pulleys while in motion, is a piece of sheet-iron formed in the shape of a spiral flange, fastened to the edge of the pulley for half its circumference. At one end it is as wide as the face of the pulley and at the

other end it narrows to a point. It thus makes a supplemental face for half the circumference of the pulley, and having a spiral edge. On directing the belt, by means of a rod carrying an arm at the top, over the pulley, it meets this attachment, and is, as it were, screwed into place. If it fails to catch the first time it may be taken at the next revolution, and is then easily pressed over upon the face of the pulley. The device has been examined by experts, and is highly recommended as a cheap and ready means of preventing the accidents that so often arise in placing large belts in position. It does not appear to be patented. In lubricating appliances for engines or reciprocating machinery in motion, an automatic oiler, sometimes used in marine engines, deserves notice. It consists of an oil-cup of any convenient shape, having a hollow tube or pipe extending through the bottom, and reaching nearly to the top or cover. A wick, regulated by a screw, is passed through this pipe, and, dipping in the oil by being bent over the top of the pipe, hangs down below the cup. By capillary action the oil gathers at the lower end of the wick, the flow being regulated by the screw. The cup is intended to be suspended over a crank for lubricating the pin, or over any moving machinery, where the occasional delivery of a drop of oil is required. The flexible wick touches the crank-pin, cross-head, or other part of the machinery as it passes it, and thus all the dangers that attend oiling by hand are avoided. The wick in some forms of cups is replaced by a flexible metal strip, or spring, down which the oil flows. The end of the spring just touches the moving machinery, as it passes under it, and the oil is dashed or knocked off upon the place where it is needed. The wick would seem to be the safer and more economical plan, as it will yield most readily to any irregularity in the motion of the machinery. No patent appears to have been

* See "The World's Work" for February, 1882.

taken out on this form of oil-cup. A safety shield for circular saws has also been invented, that deserves commendation. It consists of a hood or shield, designed to fit over the upper part of the saw that projects above the table. The hood is pivoted upon an arm over the saw, and is kept in place by a weight when the saw is not in use. The end of the hood in front of the saw has a lip or projection, designed to slip over the log or other piece of wood that is to be cut by the saw. The log, as it advances toward the saw, thus lifts the shield, and passes under it, supporting it till the cut has been made, when the shield falls back over the saw. The shield is so arranged that it will fit over any size of saw, and can be adjusted to fit the saw as it is worn away.

Novel Application of Photography.

LANTERN slides are now made directly from photographic negatives by the use of a special kind of dry plate (quarter size), which is laid upon the negative in a printing frame and exposed for a few seconds to the light of an oil lamp. The plate may then be developed with ferros-oxalate in the usual manner. By a new application of this process, lantern slides of many natural objects may be made directly from nature, without the use of a camera. Anything that is more or less transparent or translucent, and that may be pressed quite thin, such as the leaves of plants, sections of wood or other organic formations, sections of minerals, metals, fossils, or the thin parts of insects, wings, etc., may be copied directly. In the experiments made, young leaves from a rose bush were laid upon a sheet of clear glass in a printing frame. The dry plate was laid face down over the leaves and the printing frame was closed. On exposure for three seconds to the light of an oil lamp, the dry plate was developed strongly to get great intensity in the film. The result was a lantern slide having the rose leaves as a positive image sharply defined. The light also passed through the leaves, and every rib and vein in the tissue of the leaves was accurately copied in the minutest detail. In a lantern the slide gave a greatly magnified picture of the leaf, showing the minute views that were not visible to the eye in the leaves. This offers a cheap and ready means of copying natural objects for study or for illustration of lectures, and by projecting the picture upon a screen a large number of people may examine enlarged copies of small natural objects. Negative prints can also be taken on ferro-prussiate paper or on silver paper, as in printing ordinary photographs. In this case, the leaves would appear black on a white ground, while in a lantern they would be white on a black ground. Further experiments are being made in this direction.

Improved Elevators.

A NUMBER of patents have been taken out in this country on appliances for closing elevator shafts above and below the elevator, as it moves up and down. The most recent of these inventions employs a series of movable floors or covers in the shaft that are controlled by the movement of the elevator car. Half of these,

corresponding to the number of floors in the building, are above the car and half below. If the car is at the bottom of the shaft, all the covers above are in place, each one resting securely on ledges or projections at the corners or sides of the shaft. The other set of covers are at the same time laid in a heap on the floor of the shaft, under the car. At the four corners of the shaft, both at the top and bottom, are pulleys, or grooved wheels, and over each pair, above and below, is carried a small wire rope. One end is fastened to the top of the car and the other end is fastened to the bottom of the car. By this arrangement, each rope becomes an endless band, moving easily up and down with the car. These ropes pass through holes in the corners of the platforms or covers, and do not affect them in any way till required. Just above the top of the car is a knot in each rope, and when the car rises from the bottom of the shaft the ropes pass through the holes in all the covers above till the knots meet the covers on the second floor. As the knot cannot pass, the cover is raised and is supported by the ropes. At each floor, in turn, this cover takes up each of the covers till all are raised, and the car is at the top floor. All the covers above now rest above the car, and in descending each in turn is left behind in its proper place, resting on the supports fitted for it, these supports being arranged to support only the cover intended for that place. The covers below are also provided with holes at the corners, through which the ropes pass. On the ropes are fixed balls or knots of different sizes, and as the car rises, dragging the ropes after it, all the floors are raised, and each is supported by its proper set of knots on a level with the floors of the building.

New Exploder for Firing Blasts.

A SIMPLE mechanical device for firing explosives of all kinds has been introduced, that is designed to prevent all danger that might arise from firing blasts by means of a fuse or fire in any form. It consists of a small metal cylinder containing a piston or hammer, designed to strike an anvil or nipple at the end of the cylinder. This hammer is moved by a spring, and, to prevent the hammer from striking on the anvil, it is securely soldered to the other end of the cylinder. When ready for use, a fulminating cap is placed on the anvil, and the other end of the cylinder is closed by a cap containing a small quantity of quicksilver. The solder used to fasten the hammer is composed of materials that are readily decomposed by quicksilver. When the exploder is to be fired, the quicksilver is brought in contact with the solder, either by turning the cylinder upside down, or by any other simple arrangement of the parts; the solder is softened and the spring released. The spring then drives the hammer upon the anvil, striking the cap and firing the explosive. The apparatus has the merit of getting rid of fire in such exploders and making it possible to regulate the time of firing.

Novel Application of the Expansion of Metals.

THE fact that different metals expand differently under the influence of heat has recently and, it is believed for the first time, been made of use in the arts.

For instance, gun metal exposed to a certain temperature will expand a certain amount. Steel exposed to the same temperature will expand less. This difference of expansion between two materials has been made of use in a new oil-cup for lubricating machinery. The oil-cup is of gun metal, and has double walls and double cover, etc., as in other forms of cups. The novel feature of the apparatus is a hole in the bottom of the cup, through which the oil is to pass when required. This opening is closed by a steel plug, that fits tightly into the hole so long as the cup is cold and not in use. On admitting hot steam to the under side of the cup the two metals are heated and expand, but as the ratio of expansion of the gun metal is the greater, the hole becomes larger than the steel plug. The plug has expanded, but in a lesser degree, and this difference of expansion leaves an annular opening between the plug and the hole or its seat. Through this opening the oil escapes. When the engine stops and the oil is no longer needed, the steam is withdrawn. The oil-cup then contracts, and the plug again fits tightly upon its seat and cuts off the flow of oil. The apparatus gets rid of all wicks or other movable parts liable to wear out, and has the merit of being self-acting. It would seem that this application of the unequal expansion of different metals might prove of use in many other ways. Hot liquids could in the same manner be used to open escape or relief valves for their own passage, by arranging the valves in such a way that the heat of the liquids would operate on metals of different degrees of expansion.

Controlling the Waves at Dock Gates.

OIL spread upon the surface of the water tends to prevent the cresting or breaking of the waves in storms, and thus, in a measure, renders the waves less dangerous to vessels. Oil-springs under the sea have in the same way caused "slicks," or spots of comparatively still water, to appear on the sea over the springs. This familiar fact has never been made of any use, except in isolated cases of shipwreck, until recently. Many artificial ports or small harbors of refuge have very narrow entrances, and these are often exposed to heavy seas, which make the passage of vessels trying to enter the port very dangerous. For the experiment we are about to describe, the narrow entrance of such a port was selected and pipes were laid into the water from the beach, the pipes resting on the bottom and being left open at a point under the entrance where the waves were generally most dangerous. A small hand-pump was connected with the land end of the pipes, and a supply of cheap oil provided. On the appearance of a storm the apparatus was got ready, and when the waves were breaking badly at the entrance of the port, oil was pumped into the sea through the pipes. In a short time, the oil began to rise and spread in a film over the water, preventing the wind from breaking or feathering the waves. The billows were made sufficiently smooth to render the water perfectly safe for the smallest boats. The experiment was regarded as entirely satisfactory, and it is suggested that oil-pipes be laid under water at all dock and port entrances where the waves are a

source of danger. One hundred gallons of oil were used in the experiment, but this would be a very small expense in case of an emergency when the fate of a ship and crew might depend on the character of the seas to be met in seeking the port in a storm.

New Milling Appliances.

THE most radical changes that have been made within the last few years in the art of grinding or milling appear to be toward some substitute for mill-stones. Disintegrating machines, attrition and atomizing apparatus have been introduced, with the view of performing the work of grinding without the aid of burr-stones. Among the more recent of these attrition mills is an invention in which the material to be ground is broken against itself instead of being broken against stones, as in the old methods, or against revolving paddles or arms, as in some forms of disintegrators. The new apparatus consists essentially of a revolving chamber, some simple form of air-exhaust for removing the fine dust or flour as fast as it is ground, and a settling chamber where the flour may be separated from the finer dust. The mill consists of a cylinder of metal, supported at one side by a horizontal shaft which causes it to revolve. There is an opening at the opposite side, through which the material to be ground is put in the mill or drawn out when floured. Through this opening may also be inserted a curved arm, or plow, which reaches nearly to the sides of the cylinder. When the apparatus is started, the material to be ground is allowed to run into the cylinder while it is revolving rapidly. By centrifugal action, the material is quickly gathered in a ring clinging to the outer sides of the cylinder. In position, no action of any kind takes place. The curved arm is then moved into the cylinder, where it nearly touches the sides, the ring of material moving round with the cylinder passing under it untouched. More material is then added, and, as it increases the thickness of the ring, a part is caught in front of the arm. The arm now acts as a plow, stirring up the material moving in the cylinder. The heap that gathers in front of it is brought into violent attrition with the material that passes under the plow, and in this way it is ground against itself. Neither the sides of the cylinder nor the plow are much worn, for the grinding action appears to be between the belt of material clinging to the sides of the cylinder and the mass in front of the plow. As fast as the material is reduced enough to cause it to float in the air, it is drawn out by the exhaust and is conveyed through pipes to the settling-chamber. Any excess of flour or finer dust is carried on to a still larger settling-room, where it may be collected. The details of the invention, as applied to the work of grinding phosphates, etc., appear to be well worked out.

Recording Music.

A GREAT deal of time and money have been spent by different inventors in the effort to make some kind of a machine that would record the action of keyed musical instruments. None of these experiments has hitherto proved of any practical value to the musician.

The action of the keys has been mechanically recorded upon a strip of paper, but the marks do not appear to represent the music produced by the movements of the keys in anything like an intelligible manner. The most recent experiments in this direction have combined the use of electricity and a novel application of the automatic musical instruments invented in this country a few years since. These musical instruments (already described in this department) depend on the use of a perforated band of paper and a set of reeds or pipes. The paper band is drawn over openings that admit air to the reeds, each of the perforations admitting air and causing the reed to sound. In the new apparatus, the movement of an organ key makes or breaks an electric circuit. On depressing the key, the circuit is closed in a wire leading to the recording machine. This consists essentially of a series of knives and a band of paper that is arranged to pass by means of rollers over the knives. The closing of the electrical circuit brings one knife into action, and a perforation is cut in the paper corresponding to the length of the note in the music. As each key has its own electric circuit and knife, a number of perforations may be made at the same time, and thus several notes

may be recorded at once. The perforated band may then be placed in an automatic instrument and used to reproduce the music played on the organ. The perforations may also be translated into ordinary musical characters. It may be suggested that, while this apparatus is reported to be a practical success, it is much too complicated. If the keys of a piano or organ can be used to close an electrical circuit, it would appear a much better plan to cause the electricity to record a mark by staining a band of chemically prepared paper, as in the familiar chemical systems of telegraphy. By previously making the band of prepared paper in parallel lines corresponding to the musical staff, the reading of the stains on the paper would be comparatively simple. To secure the marking of the time a separate circuit might be closed by a pedal, a touch of the pedal by the foot marking the accent or beginning of each measure by a distinct and separate stain on the paper. This suggestion is made in the hope that the idea will be made the subject of experiment. A cheap and trustworthy recorder of music, that will give a report that can be played at sight, as from ordinary music, would, no doubt, prove of great scientific interest, and perhaps of some commercial value.

BRIC-À-BRAC.

Longfellow's Inscription on the Shanklin Fountain.

THE following quotation from a private letter, dated Shanklin, Isle of Wight, Oct. 1st, 1879, will explain an allusion in the editorial on Henry Wadsworth Longfellow, in "Topics of the Time":

"Just look at this group of thatched cottages! The one on the right is a library where we go for books. In the middle is the Crab Inn. Do you see what looks like a pile of stones to the right of it? That is a fountain for the use of the public. I read some verses painted there on a piece of tin, and said to myself: 'That must be from Longfellow.' I found afterward that they were written by him, by request, when he was here, some years ago:

'O traveller, stay thy weary feet;
Drink of this fountain, pure and sweet;
It flows for rich and poor the same.
Then go thy way, remembering still
The wayside well beneath the hill,
The cup of water in His name.'"

Parson Murray, of James City, in Virginia.

HEAD peruked and shaven face,
Stately step, and air of grace,
Suit severe of somber black,—
Smiles across his lips go fleeting
While he gives My Lady greeting,
With a swift bend of his back.

"Dine on Thursday. What could be
More delightful? Then, D. V.,
I shall be here on that day;"
And a lowlier bow then made he,
Kissed his gloved hand to My Lady,
Mounted steed and rode away.

Parson Murray. Past the road
Where the fallow fields lie broad,

In the grove of trees up there
Parson's house-lights faintly glimmer,
As the evening light grows dimmer,
And more cool the evening air.

Never voice of scolding wife
Maketh sad the parson's life,
Never voice of crying child.
And the winter evenings closing
Find him dreaming, reading, dozing—
Drinking knowledge undefiled.

Slippers for the parson's feet
(Which, in sooth, are slim and neat)
Soft white hands have made a score;
And the bright eyes on him glancing
Sometimes set his heart a-dancing;
This they do—but nothing more.

All the men the country 'round
Fear his small-sword's lightest wound;
In a fox-hunt no one's horn
Is so lusty in its warning,
On the fine November morning,
Just before the sun is born.

At the ball where all the girls—
White arms bare and shining curls,
Sparkling teeth, and heavenly eyes—
Set the young bucks' hearts a-tremble,
Where the county's best assemble,
Parson carries off the prize.

To the gay young gallants there,
Buckled pumps and powdered hair,
Parson Murray yields no whit
In the stately dance, whose measure
Is the cadenced throb of pleasure—
Grand old dance, the minuet.

Never any yeoman wight
Stripped more gladly to a fight
Than he to the boxing-glove;
And a brooklet's voice at vesper
Is not sweeter than his whisper
When a lady lists his love.

In the dining-room, My Lord,
Standing by the huge side-board,
Watches with admiring eyes
How the parson brews the toddy,
Saying it is very odd *he*
Cannot make it in such wise!

Tithe and cummin, anise, mint,
Hath the parson without stint,
Hath, as well, the people's trust.
Many, in his years spent there,
Hath he christened, and with prayer
Many given back to dust.

Not a kindlier heart than his
Ever stirred a breast, I wis;
Never smiled a sweeter face;
And his pure, unselfish nature
Works delight for every creature—
Beast, and bird, and human race.

Well he knoweth hymn and psalm;
When the Sabbath's holy calm
Spreads its benison o'er earth,
Well he reads "Good Lord, deliver!"
Well for life's gifts thanks life's Giver,
Praises God for death and birth.

Many years have passed away
Since, in old colonial day,
Knelt the people at his word.
In the county of James City—
(On his tombstone: "Christ, have pity!")—
Sleeps the parson with the Lord.

A. C. Gordon.

Song of the Spring.

De spring-time is on us an' de March wind squallin',
De long-rolin' comin' an' de dead tree's fallin';
De lan' is dryin' an' de new groun' callin',
Callin' mighty strong!

De red-head peckerwood's beatin' an' a-drummin',
De butterflies swarmin' an' de bumble-bee bummin';
De apple-trees buddin' an' de peach-blossoms comin',
Comin' right erlong!

De breeze keep a-blowin' an' de pine-trees rockin',
De sap-sucker peckin' an' de yaller-hammer knockin';
De bull-frog's jumpin' an' de black-bird's flockin',
Flockin' up de tree!

Don't you hear de music dat de spring-time bringin'?
De fiel's gittin' green an' de bushes keep a-ringin';
De sparrer-hawk is sailin' an' de morkin'-bird singin',
Singin' mighty free!

Oh! wake up, wake up, 'arly in de mornin',
De time is a-comin' for to git dat corn in;
Go, hitch dem mules while de daylight dawnin',
Dawnin' in de sky;

Go, git dem colters when de teams done drinkin',
Start dat plantin' while de jew-draps' blinkin';
An' wuk till de ebenin' sun go to sinkin',
Sinkin' bimeby!

J. A. Macon.

Love's Inquisition.

"How often have I been in love?"
What an exhaustive query!
To count the stars that shine above
Not more my mind would weary.

"You blush for me!"—I see you do:
Your blushes are becoming!
"You want to hear the whole list through!"
Well, I'll attempt the summing.

My first love!—Oh, those cunning curls,
The wind blew all about so!
My rose of roses! Pearl of pearls!—
I wish you wouldn't pout so!

"I'm not a stoic!"—She is fair:
Not tall, but very stately;
She's sweet and kind beyond compare:
She's—Yes, I've seen her lately.

"My second?"—This is like charades.
Well, she at first was icy,
As I was warm; but like all maids:
Time made things *versd-vice*.

"I ought to be ashamed?"—I'm not!
I didn't start the question!
You asked me to describe the lot!—
"You're sure 'twas my suggestion!"

Well, I'll—"Go on!"—Of course I will:
Let's see: The third was impish—
As bright as steel and never still;
Her hair inclined to crimpish.

She used to dote on me, I know;
At least, she said so often.
A heart as hard as rock, to dough
Her sunny smile would soften!

I loved the rustle of her dress!
I loved the—"Don't be silly!"
All right: I want! But don't distress
Yourself, to be so chilly!

"Don't be sarcastic, but proceed
To number four!"—With pleasure!
She was the sort of girl you read
About! A perfect treasure!

Her eyes would thrill me through and through:
And—shade of General Harrison!—
When she first kissed me, honey-dew
Was acid by comparison!

I loved that girl with all my heart!
I'll love her to my dying
Day!—"You and I had better part!"
"You hate me!"—Why, you're crying!

Don't, dear! The list that I repeat
I only mean in fun, love!
Fair, icy, impish, sunny-sweet,—
You're all of them in one, love!

You are my first love and my last!
I never loved another!
Kiss me, and say the storm is past!
—Confound it! Here's your mother!

J. Cheever Goodwin.

Tableaux.

THE sun of Austerlitz had set
 Behind the pantry door;
 Napoleon sheathed his gleaming blade
 And laid it on the floor;
 The Iron Mask took off his wig—
 It hurt his ear, he said;
 And Queen Elizabeth removed
 Three-quarters of her head.

The next thing was Iniquitous,
 Which seemed to please them all;
 And then we played The Prodigal,
 And then tableau'd The Fall;
 But Snipes, who took The Serpent's part,
 Got hungry probably;
 At least he ate The Apple up
 And quarreled with The Tree.

A larkly spirit was abroad
 Which spoiled the serious things,
 And led the girls to giggle at
 Apollyon's awful wings;
 And when the final scene was set
 Of Mary Stuart's death,
 Poor Mary was in such a gale
 She couldn't catch her breath.

A gloomy court, a headsman's block
 All hung with weeds of woe,
 An Executioner in black,
 And tapers burning low;
 A weird, funereal, solemn scene,
 Impressive, gloomy, dark;
 With all the tragic retinue
 Just bursting for a lark.

Too bad! but Mary looked so sweet,
 And had such pretty hair,
 The headsman leaned upon his ax
 And kissed her plump and square;
 Then Perky Jones, the cowl'd monk,
 So grim, and stern, and slow,
 Turned somersaults across the block
 And spoiled the whole tableau.

Then buzz of talk, and change of seats,
 And laughter's merry peal,
 Broke up the show, and all the boys
 Took partners for a reel.
 And we at Jones's Corners think
 That trying to be jolly
 Is better, thirteen months a year,
 Than limp, æsthetic folly.

David L. Proudfit.

Afterglow.

TO ONE abstruse conundrum much serious thought I give—
 Why is it that the good men die, and all the bad ones live?
 Or why is it we never know our neighbor's rare perfections
 Till his last will and testament is read to his connections?

Ah, then the daily papers spread his virtues all abroad:
 They say he was "an honest man—the noblest work of God";
 How good he was, how wise he was, how honest in his dealing;
 What tenderness of heart he had, and what a depth of feeling!

Perhaps the man was one of those—ah, would that they were fewer!—
 Who all his life ground hard and close the faces of the poor;
 Who drove his debtors to despair by premature foreclosure,
 Then paid his pew-rent in advance, with infinite composure.

Perhaps he was the lordly "head" of some unhappy place
 Called "home" by use and courtesy, but lacking all its grace,
 Who held his children criminals for every trifling error,
 Who pinched his household half to death, and kept his wife in terror.

Perhaps he was a lawyer deep, whose quibbling tricks and words
 Helped base executors to rob poor widows of their thirds;
 Perhaps a thrifty grocer-man, whose wheedling, false palaver
 Sold toughest steak for porter-house, and chicory for Java.

Any of these he might have been—the types are nowise rare—
 But when he dies, behold, we passed an angel unaware!
 Since type and tongue proclaim his worth, what cynic shall dispute them?
 "Many there be who meet the gods," we read, "but few salute them!"

Why don't the papers say fine things of men *before* they die,
 And indicate these saintly souls ere yet they soar on high?
 Then we might recognize them ere grim death and "cold obstruction"
 Have made it quite impossible to get an introduction.

Ah, well—perhaps when I at last beneath my burden faint,
 I, too, shall win the title of a paragon and saint,
 And be, when death's cold breath has blown aside life's dust and soiling,
 A grain of that superior salt which keeps the world from spoiling!

JULY, 1882.

No. 3.

AMONG THE THLINKITS IN ALASKA.

WE set forth in April, 1877, from Portland, Oregon, in the steamer *California*, and steamed northward till we entered the Straits of Fuca. Our purpose was to climb Mount St. Elias, the highest peak in the world above the snow-line, to explore the Mount St. Elias alps, and to acquire information about the unknown districts lying nearest the coast, with a view to future explorations. For less is known to-day of Central Alaska than of Central Africa. From Cape Flattery to Fort Wrangell—nearly a thousand miles—the passage is entirely inland, excepting short runs across the Gulf of Georgia and Queen Charlotte's Sound. The shores are forest-covered mountains, between which the steamer passed as between the lofty banks of a river. One of these channels, Grenville Strait, is forty-five miles long, perfectly straight, and, in some places, only four hundred yards wide. Cliffs and snow-capped mountains wall it in. Avalanches have mowed bare swaths through the fir-trees from the summits to the water's edge, and the mountain lakes, lying a thousand or fifteen hundred feet above the spectator, pour their waters in foaming cataracts into the sea. Twelve hundred miles from the Columbia River bar we touched at Fort Wrangell, a filthy little town at the mouth of the Stickeen, where the miners from the gold-diggings up the Stickeen River spend the winter in squalor and drunkenness. A native village lies, between high tide and the forest, to the east of the town, along a sweep of the rocky beach. Behind the huts may be seen the graves of some Shamáns, or "medicine-men." Their functions, however, are more spiritual than medicinal, for these savages attribute death and disease to the workings of evil spirits. It is the part of the Shamán to exorcise the evil spirits or to call up the good. His remedies are

almost exclusively incantations and frenzied pantomime, accompanied with the wild hubbub of his rattles and drum. The Shamáns alone have tombs. All the other dead are burned on funeral pyres. At Wrangell we first saw the tall ancestral columns, which are carved from the trunks of huge trees, and sometimes are eighty and one hundred feet high. Their colossal symbolic carvings represent the totemic genealogy of the cabin-dweller before whose door they stand. They serve the double purpose of frightening away evil spirits and satisfying family pride. A few sick or bankrupt miners were hanging about the American town. One ragamuffin, almost picturesque in tatters and dirt, was seated on the shoe-box steps of the "Miners' Palace Home and Rest-ent," playing an asthmatic accordion to an audience of half-naked Indians, wearing yellow headkerchiefs and cotton drawers.

After a few hours' stay at Wrangell, we sailed for Sitka by the outside passage around Cape Ommaney and Baranoff Island, as the inside passage is much longer.

As we entered the harbor of Sitka from the sea the general appearance of the place was tropical.* The snowy cone of Edgecumbe first appeared, then the sharp peak of Vostovia—a triangular patch of white against the sky. Everywhere below the snow-line the mountains were green with luxuriant growth. The harbor was protected against the sea by a curved line of reefs, on which grew firs and pines and cedars, with bare trunks and tufts of branches, making them look not unlike palms. The warm, moist atmosphere curtailed all the middle distance with a film of

* Observations at Sitka during fourteen years give as mean summer temperature, 54.2 Fahr. Mean winter temperature, 31.9; average temperature, 42.80.

blue, and, in the foreground, a fleet of very graceful canoes, filled with naked or half-naked Indians, completed the illusion. A line of surf seemed to bar every approach to the town, but suddenly a narrow channel opened. The ship swung sharply to the right and glided into a long, narrow harbor. The Indian village is built upon the beach, and at evening it was covered by the shadow of the adjoining forest. The green spire on the belfry of the Greek church reached up above everything except the former Russian governor's "castle," a huge log structure perched upon a pinnacle of rock near the sea. The church on the lower ground was surrounded by the rambling, dilapidated houses and hovels of the Russian inhabitants, who then numbered about four hundred, their neighbors being two hundred mixed whites and about twelve hundred Sitka Indians. Sitka was abandoned as a military station shortly after our arrival, since which time several efforts have been made to induce Congress to organize some sort of government there.

When we landed at Sitka we forced our way through a crowd of Indians, Russians, half-breeds, Jews, and soldiers, to whom this monthly arrival is life itself, and went directly to the trading-store and post-office. Mr. C. H. Taylor, of Chicago, who supported the expedition, had written to engage Phillips's fur-trading schooner to take us to Yakutat, where we were to begin our exploration. This schooner was the only craft available for rough work in the ice-drifts, so it was with much anxiety that we asked:

"Where is your schooner?"

"Gone to Behring's Bay for a load of furs," was the disappointing answer.

After fruitless efforts to obtain something better, we decided to risk ourselves in one of the

large Indian canoes. The Alaskans, having a superfluity of time on their hands, devote long periods to the most trifling transactions, and, in important bargains, it takes days, and sometimes weeks, to reach an agreement. We found them grasping, shrewd, and unscrupulous.

It was April 16th when we first asked for a large war canoe, or *yahk* (a word which would seem to be related to the yacht of the Germanic tongue), with crew. We negotiated with several of the chiefs, sub-chiefs, and principal men who owned the canoes and slaves to man them. But after wearing ourselves out chaffering with them, we found we could save time by taking the experienced Phillips's advice to "let'm alone." By and by, these aboriginal land-sharks began to offer terms. The winter and spring drizzle set in, and we joined the group of loungers around the trader's stove. We visited "Sitka Jack," an arrant old scoundrel, but one of the wealthiest men of the Sitka tribe. Of course his house stood among the largest, at the fashionable end of the town. These houses were built of planks, three or four inches thick, each one having been hewed from a log, with an adze formed by lashing a metal blade to the short prong of a forked stick. In constructing the native cabin, the planks are set on edge and so nicely fitted that they need no chinking. The shape of the house is square; a bark roof is laid on, with a central aperture for chimney. The door is a circular opening about two feet in diameter. It is closed with a sheet of bark or a bear-skin or seal-skin. On arriving at Sitka Jack's hut we crawled through the door, and found ourselves in the presence of Jack's wives, children, and slaves, who were lounging on robes and blankets laid on a board flooring which extended along

THLINKIT COVERED BASKET AND SPOON. (CHILKÁHT KWÁHN.)

GOING FISHING.

each side of the room. A dirt floor about seven feet square was left in the center, and on this the fire burned and the pot of halibut boiled merrily. Our arrival was hailed with stolid indifference. The family circle reclined and squatted as usual, and went on with the apparently enjoyable occupation of scooping up handfuls of raw herring-roe, which they munched with great gusto. Sitka Jack was absent on a trading expedition to the Chilkáht kwáhn or tribe. One of his brothers-in-law was chief of this tribe, and being a one-eyed despot of sanguinary principles not only held his tribe under absolute control, but inspired his relatives and connections with wholesome awe. His sister, Mrs. "Sitka Jack," was, therefore, a person of great consequence, and her influence surpassed even the usual wonderful authority of the Alaskan women. Evidently she was the head of the house, and as such she received us haughtily. She weighed at least two hundred pounds. She gave us her terms, pointed coldly at the slaves she would send with us, and told us she was the sister of the terrible Chilkáht chief. As we still hesitated, she threw her weight into the scale, and said she would go with us and protect us. We could not get one of the great canoes

holding from sixty to eighty warriors, but finally closed a bargain with Tah-ah-nah-klékh for his canoe, of about four tons burden. He was to act as pilot and steersman. We hired Nah-sach, Klen, and Jack as crew. Jack, our interpreter, was a Sitka Indian who had a smattering of mongrel Russian and English. Myers went with us as prospector and miner.

We had accumulated a cargo that looked fully twice the size of the canoe, which, like all of her kind, was as buoyant as a bladder, as graceful as a gull, and very capacious, so that by skillful stowage we loaded in the entire cargo and left room for ourselves; that is, we could swing our paddles, but we could not change our seats. Jack, or Sam as we had newly named him, was fond of "Hoo-chinoo." This is a native distilled liquor, colorless and vilely odorous. The stills are large tin oil-cans, and the coils are giant kelp. The Sitkans never set forth on an expedition of unusual importance without first getting beastly drunk. Sam had evidently gauged the importance of this expedition as immense. We loaded him in as cargo, and waited for the last man, Myers, who presently appeared, dragging at the end of a rope a half-grown black dog. Myers took his place, his canine friend was put

THE INDIAN VILLAGE AT SITKA.

in the bow, and amid the cheers of idle Sitka we paddled rapidly toward the north. The dog gazed wistfully at the retreating crowd, then suddenly sprang into the water and swam ashore.

For a time we were in mortal terror, lest we should capsize the shell by our awkwardness; an anxiety on our part that was epitomized, at our first landing, in Myers's fervent exclamation:

DOMESTIC BOWL FOR SEAL-OIL. (HOONÁH KWÁHN.)

"Thank Heaven, I kin shift my foot!"

One drowsy evening we saw the peak of Edgumbe for the last time. The great

truncated cone caught the hues of the sunset, and we could note the gloom gathering deeper and deeper in the hollow of the crater. Our Indians were stolidly smoking the tobacco we had given them, and were resting after the labors of the day with bovine contentment. Tah-ah-nah-klékh related to us the Thlinkit legend of Edgumbe:

"A long time ago the earth sank beneath the water, and the water rose and covered the highest places so that no man could live. It rained so hard that it was as if the sea fell from the sky. All was black, and it became so dark that no man knew another. Then a few people ran here and there and made a raft of cedar logs, but nothing could stand against the white waves, and the raft was broken in two.

"On one part floated the ancestors of the Thlinkits, on the other the parents of all other nations. The waters tore them apart, and they never saw each other again. Now their children are all different, and do not understand each other. In the black tempest Chethl was torn from his sister Ah-gish-áhn-akhon ['The-woman-who-supports-the-earth']. Chethl [symbolized in the osprey] called aloud to her, 'You will never see me again, but you will hear my voice forever!' Then he became an enormous bird, and flew to south-west till no eye could follow him. Ah-gish-áhn-akhon climbed above the waters and reached the summit of Edgumbe. The mountain

opened and received her into the bosom of the earth. That hole [the crater] is where she went down. Ever since that time she has held the earth above the water. The earth is shaped like the back of a turtle and rests on a pillar; Ah-gish-áhn-akhon holds the pillar. Evil spirits that wish to destroy mankind seek to overthrow her or drive her away. The terrible battles are long and fierce in the lower darkness. Often the pillar rocks and

We passed a succession of evergreen islands with steep, rocky shores, and in the distance we could see the jagged alps of the main-land. The trees were principally fir, hemlock, and cedar. The evergreen underbrush was so dense and so matted with ferns and moss as to be almost impenetrable. The accumulation of moss was frequently ten or fifteen feet deep. Peat-bogs and coal-fields were common features of the islands, but the

sways in the struggle, and the earth trembles and seems like to fall, but Ah-gish-áhn-akhon is good and strong, so the earth is safe. Chethl lives in the bird Kunna-káht-eth. His nest is in the top of the mountain, in the hole through which his sister disappeared.

"He carries whales in his claws to this eyrie, and there devours them. He swoops from his hiding-place and rides on the edge of the coming storm. The roaring of the tempest is his voice calling to his sister. He claps his wings in the peals of thunder, and its rumbling is the rustling of his pinions. The lightning is the flashing of his eyes."*

* Bishop Veniaminoff, Wrangell, and Dall have given versions of this legend.

coal was found to be sulphurous and bituminous. Clams were abundant and good. The smallest, when opened, were about the size of an orange. The largest shells were used as soup-plates by the natives. The waters of the archipelago at all seasons are alive with halibut. They are caught with a peculiar hook, fastened to a thick line made of twisted cedar-root fiber. Our bill of fare in Alaska included clams, mussels, herring, herring-roe, codfish, salmon, porpoise, seal, ducks, geese, and halibut—eternally halibut. Venison and wild goat and bear's flesh were to be had only occasionally, and the craving for good warm-blooded meats was incessant with us whites. Another intense craving was for sweets. We devoured our

supply of sugar, and when it was exhausted we consumed much seal-oil, and chewed the sweet inner bark of a species of cedar, of which bark the Indians dry great quantities for the winter.

On the 27th we sighted the mouth of the Chilkáht. Professor Davidson of the Coast Survey has been up this river a little beyond the upper village. The two villages are governed by the Chilkáht chief before alluded to as "Sitka Jack's" brother-in-law. He is a despot and

mostly captives from the tribes of the interior, or from hostile coast tribes. So little distinction is made between the bond and the free that at first a stranger finds it difficult to detect the slaves. They sit around the fire and eat from the same dish with their owners, who joke with them, and place them on a footing of perfect social equality. But the slaves hew the wood and carry the water and paddle the canoe. They cannot marry with-

AN ALASKAN INTERIOR.

does not encourage explorations of his river, though recently he has become so envious of the gold mines on the Stickeen, that it is said he will help gold prospectors to ascend his river. This one-eyed chief is very savage and vindictive, but as he holds a monopoly of the fur trade up and down his river he is very wealthy and influential, and can be of great assistance to any expedition.* He owns many slaves,

out the consent of their master, and they are unpleasantly liable to be offered as sacrifices on their master's grave.

From Chatham Strait we paddled against head winds into Cross Sound. In a sudden turn the whole vast sound opened to us, and the Mount St. Elias alps appeared like a shadowy host of snowy domes and pinnacles. Chief among them were the twin peaks Fair-weather and Crillon. About this time we met a canoe-load of Hoonáhs, who had come ninety miles to dig their spring potatoes. On a sunny slope, sheltered by surrounding forests

* A good plan of exploration would be by two parties coöperating: one to go up the Yukon, the other up the Chilkáht, to meet at a depot of supply previously located on the upper Yukon.

THLINKIT WAR CANOE. (HAIDÁH KWÁHN.)

and sentinel peaks, these people had long ago planted some potatoes procured from the Russians at Sitka, and every year they come to dig last year's crop, and sow the ground for the following spring. The tubers were about the size of large marbles. In the gardens of Sitka are grown excellent potatoes, beets, turnips, radishes, lettuce, cabbage, and such hardy vegetables. The soil is not suitable for cereals, neither is the season long enough.

Near Cape Spencer we camped on a little

island, where Tsa-tate, a young man of the Hoonáh kwáhn, had his summer hut. Three families lived here with Tsa-tate; and, though he was much younger than the other men of the family, he was the head of his clan. Tsa-tate's cabin was like all the other wooden huts we had seen. The cross poles and rafters were hung with fish and snow-shoes and nets. The sides were covered with traps, bows, spears, paddles, and skins of bear, sable, and silver-fox. The women sat around the fire, weaving baskets of different shapes and colors

THLINKIT BASKET WORK. (HOONÁH KWÁHN.)

THLINKIT CHIEF'S CLOAK. (CHILKÁHT KWÁHN.)

from the fiber of a long, fine root, which they soaked in water and split into threads. One old woman was chewing the seams of a pair

WOMAN'S WOODEN COMB. (CHILKÁHT.)

of seal-skin boots so as to soften them, and another was pounding some tobacco leaves into snuff. A man with a fiery red head was carving a pipe in which to smoke the tobacco we had given him, and a sick baby, tenderly watched by its mother, lay in a cor-

ner, with its mouth and nostrils stuffed full of some chewed-up weed. As darkness came on and the halibut fishermen returned from the sea, we all gathered about the central fire in Tsa-tate's hut, and Mrs. Tsa-tate lighted the pitch-wood candles, and with down and resin dressed an ugly gash in the sole of her husband's foot. The children slept or poked the fire with an immunity from scolding that would have cheered the heart of every civilized five-year-old. A young girl sat demurely in a corner. Until they are of marriageable age, and entitled to wear the silver ornament through the lower lip, the maidens are carefully watched by the elder women of the family. An old woman stirred and skimmed the boiling pot of porpoise flesh. Tsa-tate, reclining comfortably on a divan of bear-skins, answered our questions and repeated tribal legends. He pointed to his son, a boy about five years old, who, he said, would be his successor, as head of the clan. It was difficult to ascertain the exact law of succession among the Thlinkits, but the chiefship seems to follow the direct line, though, as in all other savage nations, this is scarcely a rule, for the lineal heir may be set aside in favor of a more acceptable man. In the inheritance of personal property the collateral is preferred

to the lineal relationship. The wives, or more properly the widows, being personal property, pass to the collateral next of kin of their husband's totem, for the marriage of two people of the same totem is considered a kind of incest. The widow, in any event, takes with her such possessions as have always been peculiarly her own. She also takes her own infant children; naturally, then, she would take to her new husband the children's inheritance, which may account for the habit of regarding the male collaterally next of kin as proper heir. If there be no male survivor competent to receive the widow, or if he purchases freedom with goods, she then passes into the open matrimonial market, with her pecuniary attractions. Sometimes the heir rebels and refuses to accept his former sister-in-law, cousin, aunt, or whatever she may be. Then her totemic or family relatives wage war on the insulter and such of his totem as he can rally around him, the object being either to enforce her right or extort a proper recompense. Among the Asónques, further to the north and west, I saw a young fellow of about eighteen years of age who had just fallen heir to his uncle's widow. As I looked upon her mummy-like proportions I thought that here was reasonable cause for war. Sometimes a husband already liberally provided for will come into a misfortune in the shape of one or more widows. The only escape is by purchasing freedom. In fact, there seems to be no hurt to a Thlinkit's honor that money or goods will not heal. The scorning of a widow, the betrayal of a maiden, and murder, all demand blood or pecuniary compensation. If in a feud all negotiations fail, and Kanúkh (symbolized in the wolf), the God of War, be unpropitious, and send private war, then the principal antagonists, with their totemic adherents, don their helmets and coats of paint, and stand facing each other in two lines, each

SHAMÁN'S DRUMSTICK AND WAR KNIVES. 1. CHILKÁHT.
2. HOONÁH KWÁHN.

HALIBUT HOOK. (HOONÁH KWÁHN.)

line holding to a rope with the left hand, and wielding heavy knives with the right. They advance, and hack and hew, with more yells than bloodshed, until one side or the other cries the Thlinkit for *peccati*. In this duel, any warrior violates the code who lets go the rope with the left hand, unless he be wounded, or torn from it; when he has let go, he is then out of the fight and must retire. If the strife be inter-tribal, or public war, the plan of combat is surprise and sudden capture. The villages, from necessity as well as from choice, are placed always at the edge of high tide. The forces of the aggressive tribe embark in a fleet of war canoes, and by a swift and stealthy voyage strike the village from the sea and endeavor to take it by storm. If they are resisted they generally retire at once. The Chilkáht kwáhn came down suddenly upon the main village of the Sitka kwáhn while I was near by, but succeeded in getting possession of only half the houses, so the opposing forces divided the village between them and kept up a lively but rather harmless combat for three days, at the end of which the invaders were bought off with some loads of furs. A member of the

SHAMÁN'S RATTLE. (HOONÁH KWÁHN.)

Sitka kwáhn had murdered his Chilkáht squaw in a fit of passion, and this was the cause of the conflict. The goods paid over as recompense went principally to the relatives of the murdered woman. In these tribal conflicts the captured are enslaved, the dead are scalped, and all property taken is held as booty. Hostages and participants in rope duels do not take food from the right hand for several days, because, figuratively (and literally), it is unclean. A head powdered with down is a sign of truce.

We were now within five days' journey of Yakutat, which is near Icy Bay, at which place one of the Mount St. Elias glaciers

ends in the sea. Threats and bribes were alike useless. Pay or no pay, our crew would not put to sea. Tah-ah-nah-klékh pointed to the mountain, and said:

"One mountain is as good as another. There is a very big one. Go climb that if you want to."

Thus perished our hope of climbing Mount St. Elias. We turned our course directly to the main-land, about thirty miles away, and landed a little below Cape Spencer. A sea-wind filled the coast-waters with icebergs, and we had great difficulty in picking our way through them. I noticed that, when journeying through the floating ice in good weather, our Indians would carefully avoid striking pieces of ice, lest they should offend the Ice Spirit. But when the Ice Spirit beset us with peril, they did not hesitate to retaliate by banging his subjects. After picking our way through the ice for three days, we came upon a small temporary camp of Hoonáhs, who were seal-hunting. We found little camps of a family or two scattered along both shores. One of the largest glaciers from Fairweather comes into the bay, and thus keeps its waters filled with the largest icebergs, even in the summer season, for which reason the bay is a favorite place for seal-hunting. The seal is the natives' meat, drink (the oil is like melted butter), and clothing. I went seal-hunting to learn the art, which requires care and patience. The hunter, whether on an ice floe or in a canoe, never moves when the seal is aroused. When the animal is asleep, or has dived, the hunter darts forward. The spear has a barbed detachable head, fastened to the shaft by a plaited line made from sinew. The line has attached to it a marking buoy, which is merely an inflated seal's bladder. The young seals are the victims of the Thlinkit boys, who kill them with bow and arrow. These seal-hunters used a little moss and seal-oil and some driftwood for fuel. In the morning we arose late, and found that our friends of the night before had

1. BROWN WOOD PIPE-BOWL (HOONÁH). 2. PIPE-BOWL MADE FROM DEER ANTLER (CHILKÁHT).
3. WOOD PIPE-BOWL WITH NATIVE COPPER TOP (ASÓNQUE).

silently stolen away, taking with them much of our firewood.

Mr. Taylor decided to return home, and we accompanied him to Sitka. There I reëngaged Sam and Myers, and, obtaining a new crew, returned at once to a bay about twenty miles south-east of Mount Fairweather. My purpose was to explore the bay, cross the coast range, and strike the upper waters of Chilkáht. On the shores of the bay we found hospitality with a band of Hoonáhs. Leaving the crew with our large canoe under the charge of Myers at this place, I took a smaller one and went with Cocheen, the chief of the band, north-westerly up the bay. After about forty miles' travel we came to a small village of Asónques. They received us with great hospitality, and as our canoe had been too small to carry any shelter, the head man gave me a bed in his own cabin. He had a great many wives, who busied themselves making me comfortable. The buckskin reinforcement of my riding trowsers excited childish wonder. I drew pictures of horses and men separate, and then of men mounted on horses. Their astonishment over the wonderful animal was greater than their delight at comprehending the utility of the trowsers. The Alaskan women are childish and pleasant, yet quick-witted and capable of heartless vindictiveness. Their authority in all matters is unquestioned. No bargain is made, no expedition set on foot, without first consulting the women. Their veto is never disregarded. I bought a silver-fox skin from Tsa-tate, but his wife made him return the articles of trade and recover the skin. In the same way I was perpetually being annoyed by having to undo bargains because "his wife said *clekh*," that is, "no." I hired a fellow to take me about thirty miles in his canoe, when my own crew was tired. He agreed. I paid him the tobacco, and we were about to start when his wife came to the beach and stopped him. He quietly unloaded the canoe and handed me back the

THLINKIT WOMAN. (SITKA KWÁHN.)

tobacco. The whole people are curious in the matter of trade. I was never sure that I had done with a bargain, for they claimed and exercised the right to undo a contract at any time, provided they could return the consideration received. This is their code among themselves. For example: I met at the mouth of the Chilkáht a native trader who had been to Fort Simpson, about six hundred miles away, and failing to get as much as he gave in the interior of Alaska for the skins, was now returning to the interior to find the first vender and revoke the whole transaction. Among themselves their currency is a species of wampum, worth about twenty dollars a string, beaver-skins worth about a dollar a skin, and sable or marten worth about two dollars a skin. From the whites they get blankets worth four dollars apiece, and silver dollars; gold they will not touch (except around Sitka and Wrangell), but they accept copper and silver. They are a laughing, good-natured people,

SHAMÁN'S RATTLE. (ASÓNQUE KWÁHN.)

BONE STAKES FOR MARTEN TRAP. (INTERIOR OF ALASKA.)

ordinarily very quiet. Even their large meetings are subdued and orderly. They are undemonstrative. The mothers do not fondle nor play with their children much, but a stranger can win their hearts by kindness to their little ones. They consider corporeal punishment a disgrace, and I did not see a child struck during the time I was among them. A rebuke, a sharp tone, or exclusion from the cabin seemed to be the only punishments. Even the dogs are curiously exempt from punishment and abuse, and a more wolfish, starved, mangy lot of curs it would be hard to find. Good bear-dogs they will not sell at any price. With all their gentleness of voice and manner, and their absolute respect for the rights of the smallest and youngest of the family, their love and affection seemed of the coolest sort. Etiquette required only about forty days of ostensible mourning. The loss of children seemed to cause the greatest grief. They have a curious habit of blacking the face with a mixture of seal-oil and lamp-black, or burnt pitch, but I believe this custom, whatever its origin, is now merely a kind of toilet, to be used according to the whim of the individual.

From this Asónque village I went, with a party of mountain goat-hunters, up into the Mount St. Elias alps back of Mount Fairweather—that is, to the north-east of that mountain. For this trip our party made elaborate preparations. We donned belted shirts made of

squirrel skins, fur head-dresses (generally conical), seal-skin bootees fitting very closely, and laced half-way to the knee. We carried spears for alpenstocks, bows and arrows, raw-hide ropes, and one or two old Hudson Bay rifles. The climbing was very laborious work. The mountains, where not covered with ice or snow, were either of a crumbling schistose character or ice-worn limestone, and sometimes granite. The sides were terribly rugged; some of the face walls were about eight hundred feet sheer, with a foot slope of shell-rock or *débris* of two hundred or three hundred feet more. Ptarmigan were seen on the lower levels where the ground was bare, but I saw nothing on which they could feed. The goats kept well up toward the summit, amid the snow-fields, and fed on the grass which sprouted along the edges of melting drifts. They were the wariest, keenest animals I ever hunted. The animal is like a large white goat, with long, coarse hair and a heavy coat of silky underfleece. The horns, out of which the natives carve spoons, are short, sharp, and black.

After crossing this coast range the country seemed much the same—rugged, bleak, and impassable. The Indians with me, so far as I could understand them, said it was an exceedingly rough country all the way over, and that the Chilkáht River had its rise among just such alps as those around us, only it was warmer in the Chilkáht mountains, and there was more grass and plenty of wild goats,

THLINKIT TRAVELING CHEST.

sheep, and bears. We found a bear that, so far as I know, is peculiar to this country. It is a beautiful bluish under color, with the tips of the long hairs silvery white. The traders call it "St. Elias's silver bear." The skins are not common.

Being unable to go further overland I returned to the Asónque camp. There we fitted ice-guards to a small canoe, and with ice-hooks pulled our way through, and carried our canoe over the floes and among the icebergs, to the extreme limit of so-called open water in that direction. The ice-guards were merely wooden false sides hung to a false prow. From this point, also, I found the interior impenetrable, and went to a temporary

Here he paused again, picked up the corner of his squirrel robe and raised it with a sweeping forward gesture, which he maintained till his words had produced their full effect, when the sing-song intonation would begin again.

Coon-nah-nah-thklé, for that was his name, showed me his sorcerer's kit. There was an immense drum of stretched seal-skin or goat-skin, made to accompany him in his incantations, and to terrify the wicked spirits preying

THLINKIT ANCESTRAL SPOONS. (FROM HORNS OF MOUNTAIN GOAT. HOONÁH KWÁHN.)

camp of seal and goat hunters, who were camped on a ledge of rocks above the crunching and grinding icebergs. The head man of this camp was a young fellow of about thirty, who was both Shamán ("medicine-man") and hereditary chief. He was the most thoughtful and entertaining Thlinkit I had met. He told me that within his own lifetime this place where we now were had been solid ice. He would listen with breathless attention whenever I spoke, and then reply in low, musical intonations, almost like chanting. His narration of the traditions of his people was pathetic in its solemn earnestness. He said:

"You are the only white man that has ever been here, but I have heard of your people. Before I was born—a long time ago—a ship came to the mouth of this bay, and gave the Thlinkits iron to make knives like this one. Before that they had made knives from copper or from stone, like this."

Then he would pause, fix his eyes on me, and hold up the knife. When he saw I had absorbed his words, he would give a graceful wave of the hand and continue:

"Then the Thlinkits had many furs,—foxes, and bear, and sable,—all the people were warm, all were happy, and lived as Yéhl had set them to live [or after Yéhl's example, I don't know which]. There was plenty to eat, and plenty to wear. Now, sometimes we are hungry and wear ragged robes."

upon the life of the sick person. The drum had formerly belonged to a celebrated Shamán, and his spirit was either in the drum itself or had passed into the possessor of the drum, I could not determine which. I found it to be a common belief that anything that had belonged to a dead wizard possessed some inherent virtue. For this reason it was almost impossible to secure Shamán instruments. These Shamáns claim to be able to see the "life" or soul leaving the body or being dragged from it by spirits, and it is their business to seize the soul with the mouth and breathe or force it back into the body. The dress they wear depends upon what malign spirits they determine are at work. I only saw one Shamán exorcising, and I do not believe he would have continued had he known I was observing him. He kneaded, pounded, yelled, chanted, frothed, swayed to and fro, played tunes all up and down the suffering patient, blew in his mouth and nostrils, and literally worried the life out of him. In general practice the Shamán continues this performance till the wretched patient declares he is better or well. If he cures, the Shamán gets large pay. If he kills, he restores the goods he has previously received on account. If any one who is not a regular Shamán does anything for a patient who dies, the self-constituted doctor is held responsible, and must pay forfeit in life or goods. If the patient is obdurate and will not declare

BODY OF CHIEF "SHAKES" LYING IN STATE, PREPARATORY TO CREMATION.

that the spirits have left him, the Shamán makes that statement for him. The hair is generally worn long by the Alaskan women; always short by the men, except the Shamáns, who never cut or comb the hair, nor are the matted locks benefited any by the habit of powdering and greasing for occasions of ceremony. The hair is kept tied up, except when the Shamán is exercising his peculiar functions. Then it is shaken out in long, snaky ropes, which dance over the shoulders. Some take these ropes of hair and stick them all over with flat scales of pitch, increasing thereby the Medusa-like appearance of the head. I made for myself a fair reputation for sorcery while in Coon-nah-nah-thklé's camp by a judicious use of my repeating-rifle and revolver. The chief and I shot at a mark, and I am afraid he was the better shot. He gave me a little amulet (whale totem), which he said would bring me good luck if I would hang it on my rifle. Then he took the weapon and passed his hands over it, and blew on it, which he said would prevent its ever hurting him.

The spirits of the Thlinkit mythology are classified as Ki-yékh, spirits of the air; Tah-ki-yékh, spirits of the earth; Te-ki-yékh, spirits of the water; and Yékh, subordinate or minor spirits. The spirits of those killed in war become Ki-yékh, and the aurora is the flashing of their lights when they are dancing their

war dances. Hence, an auroral display is a sign of war. The chief deity of the Thlinkits, the Bramah, the Creator, is Yehl. One would suppose that he would be the deity of the Tinneh, or interior Indians. Yet among the Thlinkits the raven is held peculiarly sacred for his sake, and the early writers (Veniaminoff and Wrangell) declare the raven to be a foul and ill-omened bird among the Tinneh. Yehl is symbolized in the raven for the reason that one of his chief exploits, the bringing of fresh water to the Thlinkits, was done under the guise of a raven. The sum of Thlinkit philosophy is, "Live as Yehl lived." Their great totem is Yehl's totem or the raven totem, the raven being the symbol. Another scarcely inferior totem is the Kanúkh (wolf), the wolf being the symbol. The third (and, so far as I know, the last) totem is Tset'kh (the whale). Who Tset'kh was before he was a whale and what he did I could not learn.

Their totemic system is the most curious one that ever came to my notice. The totemic relationship is stronger than that of blood. The child follows the totem of the mother, and in family quarrels the opponents must array themselves with their totems; hence, half-brothers are often called on to fight each other. I used to be surprised at having my vagabonds tell me perfect strangers were their "brothers" or "sisters," until I found it meant brother or sister

in the totem. The Kanúkh (wolf) totem is the warrior caste. Men of this caste are the soldiers of the whole people, and are led in war only by chiefs of their own caste. Kanúkh is either the older brother of Yehl or an older deity—I don't know which. He is now the god of war and patron saint of the "wolves," but the myths tell of a celebrated encounter between him and Yehl. It is difficult to arrive at the religion of the Thlinkits from the stories of these deities. In my short visit I certainly could not, and Veniaminoff, who lived among them, has left little information on the subject.

A very wise old raven was pointed out to me as the embodied spirit of a defunct Shamán. Suicides are very frequent, because the tired person wishes to enter upon a happier existence; this and the superstition as to the aurora points to a belief in a spirit life. Then again all bodies are cremated (except Shamáns), and whatever may have been the origin of the pyre, the reason given now is that the spirit may not be cold on the journey to the Spirit Land. A Thlinkit, in answer to my questionings, replied:

"Doctors won't burn."

"But why don't you try?" I persisted.

"Because we know they will not burn."

I once saw a body ready for the funeral pyre. It was lying behind the cabin in a crouching attitude, with a native blanket from the wool of mountain goats thrown over it, and its robes and possessions near by. A hole had been cut through the rear wall of the cabin, for if the corpse had been carried through the entrance, it would have left the dread mystery of death upon the threshold, and the living could not enter. The Shamán attends to the burning. One day a little boy of the Sitká Kwáhn was pointed out to me as a Shamán. He wore the unouched long hair. I asked how they knew so soon that he was to be a Shamán.

"Oh," they answered, "he was alive a long time ago as a Shamán." At the proper time, this boy must take his degree in the college of Shamánism by fasting in solitude in the wilderness. No one must approach him, and his food must be the roots of the earth. When he has become sufficiently spiritualized, the Great Shamán will send to him the otter, to impart the secrets of his order. The novice will meet the animal. They will salute three times. He will fall upon the otter and tear out its tongue and take off its skin. Then in a frenzy he will rush back to his tribe and madly bite whatever comes in his way. These bites are often dangerous, but are sought for as wounds of honor. This frenzy fit among the Haidáhs is called be-

coming "Taamish." If the otter is not forthcoming in due time there are various artifices to compel his presence, such as getting the tooth or finger of a dead Shamán and holding it in the mouth. After the Nawloks, or evil spirits, have thus wrestled with him, the Shamán ever after has his own attendant retinue of Nawloks and Yekhs, or even of higher spirits, whom he summons to his aid. In supernatural matters, therefore, his word is law.

At Coon-nah-nah-thklé's, I found the people using stone-axes, knives, and other implements, some of which I brought away with me. They were made of hypo-chlorite and slate, tempered in oil. The children there were greatly frightened at me, and would not let me approach them. On my return I encountered another Shamán, and purchased from him a finely carved medicine rattle. But a skinny hag snatched it from my hand, just as I had concluded the bargain, and compelled the "Doctor" to return me my tobacco. She said the rattle had been the favorite one of her dead husband, a Shamán, who had left her and his rattles to this nephew, the "Doctor," who certainly did not seem too happy over it. By judicious coaxing and tobacco I succeeded in pacifying her, and renewed my trade with the nephew. The rattle is carved with crane's, owl's, and raven's heads, and has queer long-tongued demons turning back somersaults over it.

From Cocheen's I turned southward and homeward. I had applied for a year's leave with the purpose of exploring the interior of Alaska, and now was anxious to return to Sitka for the reply. In Chatham Strait, near Cross Sound, the old head chief of the Hoonáhs, came and begged me to go to his island to doctor his boy who was very sick. I went but was loath to do any doctoring; for the Thlinkit custom of killing the doctor in case his patient dies, is discouraging to a beginner. The boy was feverish and had a complication of troubles, so I gave him hot-water baths followed with a seidlitz powder. The effervescing of the powder put me at once at the head of the Shamáns. During my stay I built up an extensive practice. I made for the chief some camphorated soap liniment. Eye troubles are common among the Thlinkits, and are due to the glitter of snow and ice and the irritation caused by the smoke in the huts. One feeble old man to whom I had ministered was surely dying, and I was anxious to be off before that event. I visited all my patients preparatory to departing. I gave to some dried onions stewed in sugar, to others cod-liver oil, and diluted alcohol to the feeble old man to keep him up until I could get away. From the father

of the sick boy, then nearly well, I took a fee of some finely carved spoons made from horns of the mountain goat.

At this camp I found traces of a custom which prevails to some extent in Central Africa and is said to obtain throughout the interior of Alaska. When a stranger of rank visits a chief, the latter presents his guest with a wife from among the women of his household. In morals the Alaskans are much inferior to most Indian tribes of the plains. Avarice is their ruling passion. They are the most knavish and cunning of traders. Theft, if successful, brings no disgrace. The detected thief is laughed at and ridiculed. I saw old Cocheen look with fond admiration on Kastase-Kúch, his son, when the latter drew from under his robe some articles he had purloined from the village where we had lodged for the night. Their gratitude seemed small and they have no expression for "I thank you." Flaws in gifts were always carefully examined and critically pointed out to the giver. An Alaskan who shot at some decoy ducks near Sitka, went to the owner of the decoys and demanded the return of his wasted ammunition. Two Alaskans were driven to sea in a canoe. A schooner picked them up, but would not or could not take their canoe as it was still blowing a gale. The rescued demanded payment for the lost craft. Another fellow came to the doctor of the post at Sitka and begged for medicine for his brother and then asked the doctor to pay him for carrying it to the brother. I lent Tah-ah-nah-klékh a goat-skin robe of mine and at the end of our voyage asked him to clean it. He did so and demanded full payment. We did not lose much by theft, because our crew knew very well the value would be deducted from their wages. Thlinkit virtues are hospitality, good-nature, peaceableness, filial obedience, and, after their own code, a respect for solemn contracts or engagements. Even when very angry they only sulk. They are demonstrative only in the expression of surprise. My host, the old Hoonáh chief, was disinterested kindness itself. At his bountiful board I had a seat between his youngest and prettiest wives. They prepared seal-flipper for me with a celery-like dressing of some plant. We lived in ease and luxury and a little necessary grease and dirt. When the fire was stirred, and the spears and paddles were put away for the evening, my host smoked his pipe and told tales of the land of the Tinneh, where all the best furs were and where the mountains were bleak and merciless. His youngest son, a sturdy little fellow of five, shared the pipe with his father, and they passed it from one to the other with amusing solemnity. I told of a

wonderland where the *yahks* were as large as islands and moved against the wind without the help of hands; of great horned animals giving milk; of other great animals on which men rode; of thousands of great stone-houses; of the vast multitude of white people. The Thlinkits received my stories, as they do every statement, with courteous deference. When I rose to go to my own camp the chief selected the handsomest bear-skin from a pile of them, and bade his youngest wife present it to me. When next he came to my camp I gave him, among other things, a fine woollen blanket. He folded it about him and said he would not use it as a hunting blanket. When he went away he would leave it at home, and when he died it should not go with his other effects to his wives and children, but he would be burned in it and it would go with him to the Unknown. A niece of the Chilkáht chief, one of the comeliest of her race, who had married a hideously ugly, but very rich old Hoonáh, the second man in the village, mended my clothes and my sealskin boots, and sang songs or chants for my entertainment that were quite wonderful, I thought, for their flowing measure and rhythm. This is one which I learned to understand the best, called "The Song of the Salmon Fishing":

Why is the young man sorrowful?

Oh why is the young man sad?

Ah-ka. His maiden has left him.

The long suns have come,

The ice now is melting;

Now comes the salmon

He leaps in the river,

In the moon's gentle twilight

He throws up a bow—

A bow of bright silver.

Lusty and strong he darts through the water,

He sports with his mate;

He springs from the water.

All the dark season

He has lain hidden.

Now he comes rushing,

And ripples the river.

Purple and gold, and red and bright silver

Shine on his sides and flash in his sporting,

How he thrashes the net!

How he wrenches the spear!

But the red of his sides

Is stained with a redder;

The maid of the young man leans o'er the salmon

White laugh her teeth,

Clear rings her laughter;

Which passes canoes all busy and happy,

Which outstrips the noise of the many mixed voices

And pierces the heart of her sorrowful lover.

She has forgot him,

She joys with another.

All for another she chases the salmon,

Ah-ka. Your sweetheart has left you.

So do they jeer him,

Ah-ka—your sweetheart is here at the fishing!

Ah-ka—how like you this gay salmon season?

The crabs I saw at this village were wonderful for their size. Two crabs were brought

to me, the largest of which measured a little more than six feet on a line joining the extremities of its outstretched mandibles. The body was eighteen inches long. When broken in pieces one crab filled a camp kettle, and four men made a hearty meal off it, and it was all very good. The boy archers of the village who brought me the crabs held their bows horizontally, and strained the bow against the front of the thumb and back of the little fingers, the arrow passing between the fore and middle fingers, a mode of archery peculiar to the Alaskans. Many of the men and boys of the village were making boxes and firkins, and shaping bows and paddles. They used dried dog-fish skin for sand-paper.

In this village were many little bee-hive huts, temporarily constructed of mats or bark, which were due to one of the most universal superstitions, and especially cruel, as influencing these people. These huts were the temporary shelter to which women were driven at certain times when they most needed comfort and attention, that is, at the periods of childbirth, etc.

When a maiden reaches a marriageable age her lover demands his bride from her parents, and if they answer favorably he sends the purchase-money or goods, and on the appointed day seats himself outside her hut with his back to the door. If they are willing to accept him he is invited in. The maiden sits modestly in a corner. The relatives form a circle round the fire and sing and dance. The wedding gifts are displayed and critically examined. They are laid upon the floor, and the girl walks over them to her lover. According to the Russian priest, Veniaminoff and Wrangell, the marriage ceremony is not complete until bride and groom have fasted four days, and lived away from each other for a month. They then live together as man and wife. I had no opportunity of confirming the accuracy of these statements.

A man frequently takes the name of his son, but, before doing so, he gives a festival and announces his intention. He does not give up his former name or names, but assumes a new one as the father of his son; or he takes the name of a dead ancestor, but first gives a festival in honor of that departed progenitor. They call such a ceremony "elevating" (or reverencing) the dead. Another festival is of a political character. It is to gain popularity and influence. To this end the ambitious person will save for years till he has an accumulation of this world's goods. Then he makes a feast of unlimited eating

and drinking, and all this store of wealth is distributed to the guests present. Festivals also celebrate the arrival of distinguished guests.

In the gray dawn, as we were about to push from shore, the old chief came to us accompanied by two of his wives. My blanket was wrapped round him. He said I had a good heart. I was a young chief now, but some day I would be a great one. Among the Thlinkits, he said, when a friend was leaving on a long journey, they watched him out of sight, for he might never return. I was his friend. I was going away to my own land. He would never see me again. Therefore he had come to watch me out of sight. He then motioned to his elder wife, who handed me a beautiful sable skin, and he continued: "Wherever you go among Thlinkits, show them this and tell them I gave it to you."

The breeze was freshening. I wrapped my capote about me and stepped aboard. We paddled rapidly out to sea, and it was not long before the three figures were lost to view. We were about three hundred and fifty miles from Sitka. In three days we reached Koutzenóo, a large village opposite the entrance to Peril Strait, where most of the native distilled liquor is made. Here we witnessed a drunken revel of indescribable abandon, during which naked and half-naked men and women dragged themselves about the place.

With a comparatively mild climate throughout the Archipelago, with most valuable ship-building timber covering the islands, with a cedar that now sells at one hundred and fifty dollars a thousand feet in Sitka, with splendid harbors, with inexhaustible fisheries, with an abundance of coal, and the probability that veins of copper, lead, silver, and gold await the prospector, with the possibility of raising sufficient garden vegetables, and with wild cranberry swamps on nearly every island; with all these advantages it is surprising that an industrious, amphibious, ship-building, fishing colony from New England, or other States, has not established itself in Alaska. One drawback is that Congress has not yet organized a territorial government, but when this region shall have been opened up to individual enterprise and settlement, it will then be discovered that Alaska is a valuable possession. There is lacking neither the wealth nor the will to contradict this, but to those who are really interested I will say what the opposition does not say:—Go and see! The round trip from New York will cost you about six hundred dollars, which does not include hotel expenses.

CHRISTIANA'S WEDDING-DRESS.

DEACON JOEL EMMETT drove old Suke, his fat and lazy black mare, home from meeting one mild September night, with his mind full of thoughts, perhaps I should say a thought, that had been blindly growing there ever since he had first read in his newspaper about the Michigan fires, but which,—he being a slow man,—had not fairly struggled to the birth until that night when Mr. Owen, the minister, had made an appeal from the pulpit in behalf of the sufferers.

Deacon Joel kept up his thinking and Suke kept up a sort of sham trot, which amounted to little more than a walk, until she had passed the North Road that led around the pond and up by the parsonage; then, suddenly, she stopped. It was a way she had.

"Whoa!" said the Deacon promptly, rousing him from his abstraction. When she stopped the Deacon always said, "whoa." They understood each other perfectly, still they always kept up this pleasant little farce between them. When the Deacon said "whoa" he always looked around, partly to see if any one was looking and partly to discover Suke's reasons for stopping, which were, of course, his reasons for stopping her.

He never would allow that Suke balked; he said she always had reasons. He was wont to tell with great zest how once he went into the village and forgot to stop at the store and get some red flannel that "Mis' Eben," his housekeeper, wanted for her winter shirts.

"I hadn't got forty rod by the store," he used to say, with a sly twinkle in his eye, "before Suke stopped, and she wouldn't budge an inch, all I could do, till I remembered Mis' Eben's flannel. The creetur knew if I hadn't ha' found it out till I got home I'd ha' druv way back again before I'd ha' faced Mis' Eben without it!"

Probably no one will appreciate this story as Deacon Joel's townspeople did, for they knew "Mis' Eben," and they knew that nobody in Middleport but Deacon Joel could live in the same house with her.

"The Deacon wont stand Mis' Eben more'n a week," Middleport had said when she went to keep house for him after his widowed sister, who had lived with him since the death of her husband, died and left him alone. But eight years had gone and there she was still.

"Mis' Eben, now," he was wont to say re-

flectively, "well, now, Mis' Eben a'n't so hard to get along with as some folks seem to think, if you only know how. When she gets a-steppin' purty high all you've got to do is to let her have the house to herself and go it as hard as she's a min' to."

But to return to Suke: as I said before, she trotted by the pond that mild September night and then stopped.

"Whoa!" said the Deacon, and looked around.

"Well, well, Sukey," he said, unable to find her reasons for stopping in any outward circumstances, "have you stopped to wait for me to make up my mind? I dunno as I'd advise you to wait for that," he continued with quaint humor, "for I a'n't very fast about makin' up my mind, and you might get tired."

Suke tossed her obstinate head and stood still, and Deacon Joel fell away into thought again.

"That was a good letter Mr. Owen read from Uncle Siny's granddaughter," he said to himself. "It made you see how things was out there so plain. I've read the papers, but I a'n't half realized how things was before. Jest as purty a letter as I want to hear, that was." Then, rousing himself from his abstraction,—*"Come, come, Sukey! will you stay here all night if I don't make up my mind? Well, I guess it's about made up—I think I'll do it. Come, come, Sukey gal, geddup!"* and Suke started off.

"Settin' up for me, eh?" said he, when he went into the house, after making Suke comfortable for the night.

Mrs. Eben White, widow, looked up from the book she was reading, "Memoirs of Seven Religious Men Renowned for their Piety," and shut it with a decided movement.

"There was a tramp around yesterday; I wa'n't a-goin' to leave no doors unlocked for tramps," she said, shortly.

Deacon Joel stooped to stroke a Maltese tabby-cat that had come rubbing around his legs as soon as he came in.

"'Pears to me Mr. Owen's a-growin' uncommon lengthy," said Mis' Eben, holding a twisted paper in the blaze of the lamp, "I ought 'o gone to bed an hour ago. I've got to stir around early in the mornin' to get the washin' and ironin' both out the way to-morrow, so 's I can get dinner for the thrashers Tuesday."

"I dunno," said the Deacon, mildly. "Mebbe the service was a leetle bit lengthy. But Suke took her time comin' home; you can't hurry her any, you know."

Mis' Eben gave a grunt as she lit her candle.

"I'd hurry her once if I got behind her with a good apple-tree stick. Spare the gad, an' spoil the nag, I say. But, laws! you wouldn't gad her no sooner'n you'd drown a kitten, an' land knows I've had to drown every blessed batch that hussy of a Tab there's brought to town myself, or they wouldn't ha' been drowned!"

"That's true, every word of it, a'n't it, Tab?" said Deacon Joel, when the door was shut behind Mis' Eben.

"She a'n't ever left you the satisfaction of one little kit, has she? Not even one little kit, poor Tab!"

He sat still a few minutes, absently stroking the cat, and then, as if suddenly thinking of something else, he got up, and, lighting a small lamp, took it into an adjoining room, and set it upon a large old-fashioned chest of drawers.

"I b'lieve I'll look at the things right away," he said. "I've got a box out in the shop that'll just about hold 'em, and I can pack it to-night, and take it out there without Mis' Eben's knowin' anything about it. I can take it down any time I happen to be goin' to the Port."

So saying, he took a key from his vest pocket, unlocked the drawers, and took out their contents with clumsy, but careful hands. They had been untouched since the same hands had placed them there the day after his sister's funeral, eight years ago, despite all Mis' Eben's hints as to "moth" and "airin'."

There were three comfortable dresses, a good supply of neat, whole under-clothing, and warm flannels, and in the top drawer some small garments, yellow with age, and old-fashioned, that had belonged to "Christiana's little girl," who had died before her mother.

"There a'n't so very many of 'em," he said, as he laid them out upon the bed; "she never was no hand to make up a stock o' things, and lay 'em away idle in a bureau drawer. She was allus givin' away things. There's three nice warm dresses that'll mebbe be a god-send to some Michigan woman. This one," he went on slowly, taking up a soft, blue merino, "I'm half a mind to put back in the drawer. No, I won't," he said, more decidedly, "not when I know there's poor creeturs out there with hardly more'n a rag to their backs. She wouldn't want me to—Christiana wouldn't."

He shook out the folds of the blue dress, his gentle heart vibrating to tender memories. It had been "Christiana's" wedding-dress.

"S'pose she'd ever come to such need as Uncle Siny's granddaughter spoke of in that letter," he said; "to have to hide away 'cause she hadn't clothes to cover her poor cold body! I s'pose many another Christiana may be sufferin' there."

He stopped and thought a minute, and then he did a thing born of his soft-heartedness, and the memories which the breath and the touch of the clothes had brought to him; he wrote this on a little slip of paper, and put it in the pocket of the dress:

"If there is any woman named Christiana among the sufferers where this box happens to go, please give this dress to her. The woman who wore it was named Christiana. She is dead. It was her wedding-dress."

That week the Middleport committee, at work in an empty room over the village store, were surprised by Deacon Joel Emmett's coming in with a small box all packed and nailed, and asking them to send it with theirs, and to let him know what was the expense of transportation.

The busy fingers of the relief committee at Wecumseh, Michigan, were unpacking a newly arrived lot of boxes. Here and there some of the sufferers who had not entirely succumbed to the shock of their misfortunes, were lending what assistance they could.

"A lot of stout, whole underclothing," said a woman who was bending over a box somewhat smaller than the rest; "some little clothes, dreadfully yellow and old-fashioned, but neat and whole, and three warm dresses."

"Chrissy Bronson!" she called out to a small energetic woman of about thirty-four, whose short black curls hung in diagonal rows across her cheeks, as she bent over her unpacking. "Here's a dress that looks as if it was made for you; it will fit you to a T."

Chrissy Bronson looked up with a quick movement of the head that set all the little curls pendent from a round rubber-comb to dancing.

"Me?" she said with a cheery laugh. "Give it to some one that needs it. I saved a pair of shoes, a flannel petticoat, and a calico dress—I a'n't one of the sufferers!"

The woman, who was forewoman of the committee, shook out the folds of the neat blue merino dress in a business-like way.

"You are going to your folks on Long Island in a day or two, aren't you?" she said; "what are you going to wear?"

"My shoes, my flannel petticoat, and my calico dress," responded Chrissy, promptly.

"If you've got a pair of stockings and some underclothes to spare I'll take 'em, but let her that has two dresses give to her that has nothing but a night-gown, the Bible would read if it was bein' made now and here."

"It'll fit you better than any one else I know of," said the woman, reflectively; "you can take two breadths out of the skirt and make it over beautifully. You won't have to alter the waist one mite. It's a plain, round waist, made before the days of basques; and look at the tiny stitches! The woman that made that dress had never used a sewing machine, I'll warrant." She broke off abruptly. "Here's a note in the pocket," she said, taking it out and reading it.

"Chrissy Bronson!" she ejaculated, after a moment, holding out the note. "Read that! That dress is yours by a special indication of Providence."

Chrissy's energetic face wore a softened look as she read the little slip. She read it twice and handed it back to the woman, who put it absently in the pocket of the dress again. "How kind people have been to us," she said. "The woman who sent that dress loved it for the sake of the one that used to wear it. I wonder where that box came from?"

"This lot's all marked Middleport, L. I.," answered the forewoman. "Why,"—suddenly—"that's the place where your folks live, a'n't it? I never thought of it when I read the name at first."

"Yes," answered Chrissy, musingly. "Christiana! I remember most everybody in Middleport, but I can't seem to think who could ha' sent that dress. But I'll find her out."

Deacon Joel's handwriting was so small and close, that they had taken it for a woman's.

"Well, you see Providence clearly means this dress for you," said the other, refolding and handing it to Chrissy.

"I will take it," said Chrissy quietly, "but if everybody else a'n't as well supplied as I am, I shall give away the one I've got on when I go away."

Chrissy Bronson had laid violent hands on many a dress before to remodel it; she had been feminine Wecumseh's main-stay in matters of dress-making for years. Since her father died her busy fingers had supported her mother, until, one day, the last thing they could do for her was to make her shroud and lay her in it. I say she had laid violent hands on many a dress before, but when she took her scissors to the marvelous stitches in that blue dress, her quick, capable hand hesitated.

"I declare," she said to herself, "it seems almost wicked to cut one of those beautiful

little stitches. Chrissy Bronson, I do believe you're a great goose! You can't wear it as it is—you've got to cut into it, and you might as well begin first as last."

But before she began she took the slip of paper from the pocket and read it again; then she put it back. She did not say in so many words that she should leave it there as long as she wore the dress, but there was a tacit understanding to that effect between Chrissy Bronson and herself. She was a woman of quick instincts and clear-sightedness, and that simple-hearted, child-like note had touched her.

"When it's all told 't a'n't all been loss to me, this fire business," she said, going at her snipping in earnest. "I don't know but I was growin' to think folks was mostly a selfish lot, always skimpin' you in the cloth, givin' you sixteen yards where you ought to have twenty, and expectin' you to get flounces, an' pleatin's, an' paniers, and every other earthly thing a woman puts on her back out of it. But I shall always remember now how kind the folks all over the country have been to the folks here in Michigan."

Many times since she had left her dead mother there had the thought of going to Middleport to live arisen in Chrissy's mind; but there had been a little property and the surety of plenty of work in Wecumseh to keep her there. After her little property had been burned to ashes the thought grew to a purpose.

"There was an old man I've heard my mother tell of, down in Middleport, that used to say, 'Blessed be nothin', for you a'n't got no taxes to pay!'" she said, with a laugh, when the first shock of her loss was over. "There a'n't anything to hold me to Wecumseh any longer. Everybody that belongs to me is at Middleport, and I'm goin' there. I a'n't afraid but what I can get a livin' anywhere."

And so it fell that one week from the day she put her scissors for the first time into Deacon Joel's sister's wedding-dress, Deacon Joel himself, down at the depot with old Suke and a load of barreled cauliflower, saw a vision; it was Chrissy Bronson in her blue dress, stepping out upon the platform with her brisk, independent step.

Apparently she was looking for no one to meet her, for she immediately walked down the platform, at the end of which Deacon Joel stood, transferring his cauliflower from the wagon to the freight-house.

The Deacon had recognized both her and her blue dress, for Chrissy's deft fingers had contrived to modernize the dress with little alteration. As she came toward him he let the barrel he was handling fall, and it went

rolling away down the narrow platform, giving Chrissy scarcely room to turn out.

"I beg your pardon," said Deacon Joel, following helplessly after it.

Chrissy laughed brightly.

"That was nothing," she said, holding out her hand. "How do you do, Deacon Emmett? Don't you remember me?"

She herself never forgot any one she ever saw. She knew everybody in Middleport that had been there six years ago.

Deacon Emmett shook hands with her in a dazed sort of way, answering at random a question or two concerning her grandfather, "Uncle Siny," and then she went on, crossing the track and stepping out into the village road.

The Deacon finished unloading his wagon, got in, chirruped to old Suke and drove off. Less than a quarter of a mile down the road he passed Chrissy, walking with a quick, firm step that set the short curls under her walking hat to dancing softly.

When old Suke had trotted a few yards beyond Chrissy she suddenly stopped.

"Whoa!" said the Deacon, and then he looked around. Suke's reason for stopping was easily found this morning; hearing Deacon Emmett say whoa, and seeing him look around toward her, naturally Chrissy looked up inquiringly when she neared him.

"Hadn't you better ride?" suggested he with clumsy grace. "It's a good mile and a half to Uncle Siny's, and I'm goin' right by there."

"I don't mind walkin' one mite," responded she, in a matter-of-fact way, "but if you have plenty of room, and are going right by there, I may as well ride, and thank you."

So saying she handed up the small bundle that was her only baggage, and climbed nimbly to the spring-seat of Deacon Joel's box-wagon.

"Come, Sukey, geddup!" said the Deacon, with a little fear and trembling at his heart lest she should not obey, but, as I live, that animal gave a little contented whisk of her tail and started off as good as a kitten.

"I guess Uncle Siny's folks wa'n't expectin' you to-day," said the Deacon, by way of conversation, after a little, "or he'd be'n down to the train to meet you."

"No; I didn't write what day I'd come," said Chrissy, "for I don't mind walkin', and I didn't want to make 'em any trouble. He's gettin' to be an old man."

"They tell me you've lost all your property out in Wecumseh, and you're goin' to make it your home here in Middleport," said Deacon Joel.

"T wasn't much to call property," said

Chrissy, "only a little house and a little interest in a store there. Yes, I lost it, and there wasn't anything to keep me in Wecumseh any longer. All the folks that belong to me are here in Middleport, and everything I've got in the world is on my back and in this bundle."

"It seems kind o' hard for a woman that's alone in the world to lose everything," said the Deacon, with a sympathetic quaver.

"I don't know," Chrissy replied, with a laugh that had a bit of a tremble in it. "It a'n't so hard for old maids like me as it is for them that's got families to look out for. It would make your heart ache to see some folks that have raked and scraped for years to get a bit of land cleared, and a house made and paid for, lose everything, and have to commence all over again with a lot of half-clad little children around 'em."

The thought of half-clad little children touched a tender spot in Deacon Joel's heart, for the sake of "Christiany's little girl."

"Cluck, cluck! geddup, Sukey!" he said, huskily.

"As for me," said Chrissy, energetically, after a pause, "it's done me good. The letters and things we got from all over the country warmed my heart to folks as it never was warmed before. The boxes you Middleport folks sent came to Wecumseh,"—the Deacon gave a little inward start, not of surprise, but of fear at what she might be going to say,— "and I'm going to tell folks here what was done with their things, and how glad they made some destitute ones. Why," she went on, "the very dress I've got on came from here."

"Geddup, Sukey! geddup!" said Deacon Joel uneasily.

"And I mean to find the dear old lady that sent it before I've been in Middleport many days."

The Deacon breathed freely again, but there was an odd look at the corners of his mouth, that Chrissy noticed, wonderingly.

There was a short pause, then a sudden thought struck her.

"Perhaps you can tell me who she is. Do you know any old lady in Middleport who had a daughter Christiana that died?"

You see Chrissy, in her positive way, had jumped at her conclusions.

"N-no; I don't think I do," said the Deacon, doubtfully.

"She wrote a note," said Chrissy, explaining, "and slipped it into the pocket—it's there now," she added, in a softened parenthesis—"asking to have the dress given to somebody named Christiana, and that's how I got it. There!" she said, breaking off abruptly.

"That's the house! It a'n't changed one mite. Don't get out, I can step down perfectly well. I am very much obliged to you, Deacon Emmett," and with a nod and a smile she scrambled down, and went in at the door where Uncle Siny's folks stood in astonishment, and Suke and Deacon Joel went thoughtfully on and through their own gateway, a short distance beyond.

"She'll find us out," he said to Suke as he took off her blinders. "She's that kind. She'll find out about what she's a min' to. I sh'd feel like a goose if 'twas some folks, but I dunno as I care—for her!" he concluded, ambiguously.

"I'm glad Deacon Emmett happened down at the train to give you a ride up," said John's wife, when the first greetings were over.

"I don't know," laughed Chrissy. "I can't vouch for it, but I do believe I could ha' walked as fast as that animal of his trotted. Why, it give me the fidgets to see her poke along. And all he did was to hitch at the reins and cluck at her. I don't believe he had a whip in the wagon!"

"Whip? Quaddy!" said Uncle Siny, using his pet ejaculation. "I dunno as Suke ever felt the tickle of a whip-lash in her life. Deacon Joel's father was jest so with his animals, but his grandfather now—his grandfather was different. I've hearn my father tell how 't folks from all the country round 'd bring in their colts for old Squire Emmett to break for 'em. Quaddy! I guess there wouldn't nobody want Deacon Joel to break a colt for 'em, if Suke's the best he can do. His father was jest so. Nice men, nice men, both on 'em, but wonderful easy."

"I should think so," said Chrissy. "Deacon Emmett's as gentle-spoken as a baby; but it struck me that he was kind o' queer,"—tapping her forehead significantly and looking inquiringly at John's wife—"why he looked as if he hardly knew whether to laugh or cry when I was tellin' about the fires!"

"Mercy, no!" laughed John's wife. "There a'n't anything like that the matter with Deacon Joel. Why, bless you! he's one of our solid men here—one of the pillars of the church. He 'most always has a laughin' look on his face, and I s'pose he did feel kind o' like cryin' when you told him about things out there; that must ha' been it."

There were long stories for Chrissy to tell to eager listeners that night.

"And your boxes from Middleport came to Wecumseh," she said, as she ended a long recital of the losses and hardships of the sufferers. "This dress was in one of 'em; it was sent by an old lady who wanted it given to

somebody named 'Christiana.' She said it was the name of the woman who used to wear it and she was dead. I thought I remembered 'most everybody in Middleport, but I couldn't seem to think who it could be. I s'pose you can tell, though."

Uncle Siny stroked his chin thoughtfully.

"Le's see!" he said. "There was Anson Wilbur's wife, she was a Christiany. Her father was old Parson Rackett. He was a master hand at tellin' of a story. Quaddy! he never'd spile a good story 'cause he was in the pulpit; I've hearn him tell some purty tough yarns for a parson right in the pulpit. But she must ha' been dead nigh twenty-five year by this time. There a'n't never been many o' the name o' Christiany here. I allus thought your mother named you for old Miss Christiany Petty. She use to think a sight o' your mother when she was a little gal. I never took Em'ly there in the world but Miss Petty use to fetch out some sweet-flag or some cruller babies or somethin' or other she'd laid by for her. But she went to Boston 'fore your mother was married and I a'n't never hearn what become of her."

"When you get father to goin' on genealogies," laughed John's wife, "he dunno where to stop. I've been a thinkin', and I can't think of any one around here but Deacon Emmett's sister,—her name was Christiany."

"I didn't know Deacon Emmett ever had a sister," said Chrissy, a vague fear growing within her.

"Le' me see, she must ha' been dead when you was here—six years ago?" said John's wife. "Oh, yes; it must be as much as eight year since she died! But it couldn't ha' been her, for her mother's dead, too. You said it was the mother that wrote the note. I can't see who it can be."

But Chrissy saw, although she did not see fit to enlighten John's wife. As rapidly as she had jumped at the wrong conclusion, did she now jump at the right one: and when she got to bed, she lay and laughed, with a mixture of tenderness and humor, at the ridiculousness of the thing until the tears rolled down her cheeks.

It was not long, however, before John's wife, too, saw, for Chrissy suddenly dropped all inquiry about "Christiana," and if anything was said about her dress hastened to change the subject. And by and by the Deacon began to drop in in a neighborly way—bringing a basket of juicy Newtown pippins that he had smuggled up from the cellar when "Mis' Eben's" vigilant eye was turned, or making some awkward excuse at first, but soon dropping all excuses and

coming quite as though it was the natural thing to do. John's wife was a shrewd woman, and she began to put two and two together, and one day the answer to her problem was unexpectedly proved for her. She was in at a neighbor's who had been one of Middleport's relief committee, and they were speaking of the boxes sent from Middleport, when the neighbor casually spoke of the box Deacon Emmett had brought down all packed and nailed.

"I expect they was Christiany's things, likely," said the woman.

And John's wife restrained the exclamation that rose to her lips, and only said quietly:

"I shouldn't wonder at all."

But if John hadn't been in his grave these eight years, he would have been buttonholed that night and have had a secret that was hard to keep poured into his ears.

It seemed quite the natural thing, too, as Uncle Siny's folks didn't hitch up to go down to church twice a day Sunday, and as Chrissy, being active and energetic, did "hitch up 'Zekiel's horses'" (as she said with a laugh, pulling on her warm leggins and overshoes) and start off, that Deacon Joel, passing her, alone in his schooner-wagon, should insist upon her riding, and very soon start a little earlier, and call for her of a Sunday evening, quite as a neighborly kindness.

Uncle Siny took all the Deacon's visits to himself, to the inward enjoyment of John's wife, who, being a shrewd woman, as I said before, kept her own counsel.

"Why, Deacon," he said one night, in a burst of neighborliness, "it's real good to have you run in and be neighborly! I use' to say to John's wife, says I, 'we don't have many neighbors, we're so scattered in this part o' the Port, but I wisht what we had 'ud run in and be more sociable,' says I."

"I've allus been a sort o' stay-to-home man," said the Deacon, a little awkwardly, "but, I dunno why, it's seemed kind o' lonesome this fall."

Chrissy bent lower over the stocking she was knitting to send to Michigan, feeling like laughing and crying together at the simple-heartedness of the man.

"Yes, yes," said Uncle Siny, sympathetically. "Quaddy! I sh'd think it would be wus'n lonesome to live with Mis' Eben in the house. "She's a beater for growlin', now, a'nt she? If a woman'll come out with a good rousin' clap o' thunder, and then clear up, I can stan' it, but Mis' Eben, now, she hangs around in the no'th-east, and rumbles away all day. Le' me see! how long is it she's been a-keepin' house for you? Why, it must be goin' on nine years since your sister died."

A sudden thought struck the forgetful and garrulous old soul.

"Why, Deacon," he said, "she was named Christiany, wa'n't she? We've been a-tryin' to think up all the Christianies around here lately. You see, when Chrissy there was out in Michigan —"

Down went Chrissy's ball of yarn, and down went the deacon after it.

"Father," said John's wife, "don't you think the stove needs rattlin'? That new coal seems to have the most clinker in it I ever saw. Do you like the red-ash coal better than white-ash, Deacon Emmett?"

"I a'n't got a coal-stove in the house. Mis' Eben she likes wood the best, and I've got more swamp wood up at West Farm than I can burn."

"'Ta'n't fit to burn, coal a'n't," growled Uncle Siny, taking up the poker. "Gi' me a well-seasoned hickory log, and I do' want no better fire!"

That night, when Chrissy went upstairs, she laughed to herself in a shy way as she pulled out pins, and unhooked hooks, and unbuttoned buttons; and when she had blown out the light, and lay alone in the dark, she whispered to herself:

"Chrissy Bronson, I do believe you're a goose—a great, soft-hearted goose!"

And so matters progressed until the new year came. Chrissy had found plenty of work in Middleport. People who do their work well seldom have to complain of a lack of work. The Deacon used to think sometimes that she was too smart and capable to take a fancy to so slow, unbusiness-like a man as himself. Still the magnet drew him to Uncle Siny's, and still he took Chrissy down to church of a Sunday evening.

The sky was gray and the air was chilly when the schooner-wagon and old Suke stopped at Uncle Siny's gate, New Year's night.

"You better wrap up warm and take my waterproof. I shouldn't wonder if it snowed when you come home," said John's wife, in a motherly way.

"I hope it will. I like to be out in a snow-storm," said Chrissy, with an exultant little quaver in her voice. "Out in anything with him!" she added, to herself, pulling on her warm mittens and stepping lightly up the horse-block.

That Sunday had been a lovely day to her. It was Communion Sunday at the little church at Middleport. That morning the service had been so sweet and solemn, she had felt it as never before. While Mr. Owen talked in a low voice as he broke the bread, she had felt her eyes growing dimmer and

dimmer in her struggle to keep back the tears; but when Deacon Emmett came down the aisle bearing the bread, a tender tremulousness about his mouth, his whole saintly soul shining through his homely face, she had known that the struggle was over, and that they stood thick and blinding in her eyes. She could not have described to herself the rush of feeling that had come over her, but she had felt that it was sweet and heavenly, and that, if there was aught of earthly love in it, that, too, was but a part of the heavenly.

They did not say much as they drove old Suke down to church that evening. A hush of expectancy seemed to have fallen upon them, like the hush in the air about them as it waited for the snow.

Chrissy had always gone right into Uncle Siny's pew Sunday evenings, and when Deacon Joel had come in, later, from blanketing Suke, he had gone into his own, which was three or four seats back of Uncle Siny's; but to-night, when Chrissy heard his step in the aisle—she did not have to turn to know it—it did not stop at his own pew, but came on to where she was sitting with a beating heart, conscious that she and the Deacon had changed places, and he was the cool, self-possessed one now, while she was trembling in every nerve.

"It's snowin' quite fast," said the Deacon, turning up his overcoat collar as they stood in the church entry after the service. "'Ta'n't deep yet; it's only a step or two to the shed, and if you don't mind comin' out there with me, I can take more time to fix the blankets under shelter than I could out in the snow. But you better step in by the fire again a minute, for I guess I'll bring Mr. Owen's horse around for him. It allus gives him the rheumatics to be out in the snow."

"Just like him! Thinks of everybody!" thought Chrissy, proudly, as she put her toes up on the stove-hearth.

There had been but few people out that evening, and what few wagons had been in the shed were gone when the Deacon and Chrissy went to theirs. He helped her up into the high-seated schooner-wagon, and she sat there, her waterproof drawn close around her, waiting, while he untied Sukey, with a happy little shiver at her heart that grew into a thrill as he got in and tucked the buffalo-robe carefully around her, wrapping her up to the chin.

"I'm 'fraid you'll be cold, ridin' face to the wind," said he.

Cold! Chrissy felt as if she had warmth enough at her heart to keep her warm in an iceberg!

"Now, Sukey gal! Brace up, for you've

got to go out in the storm," he said to the mare, taking the reins in his mittened hands, backing her out from under the shed, and starting her out into the falling snow.

For a time they were silent, listening to the soft, even fall of Sukey's hoofs, and the crunching of the wagon-wheels on the snow.

"Did you mind my comin' up and settin' in the seat with you to-night?" the Deacon asked after a while, with a little hesitation.

"No," said Chrissy, with a slight catching of her breath.

"I dunno what made me," he went on, musingly. "I didn't mean to, but before I knew it I was there! I guess 'twas because I allus feel as if I must be where you are."

Perhaps I ought not to write what Chrissy did then, for I know her behavior was highly improper, and I can offer no excuse for it; but at those simple, slow-spoken words all that had been in her heart that day, and all she had seen in his ever since she first came to Middleport, swept over her, making the thrill of happiness within her uncontainable, and she bent her face to Deacon Joel's coat-sleeve and kissed it four times! Then she gave a little gasp.

"I beg your pardon! I didn't mean to do it!" she said, unconsciously using his own words.

It was well for all concerned that old Suke was the steady, self-poised animal she was, for that minute the Deacon forgot all about her. He pulled his mitten off his good right hand, and groping under Chrissy's waterproof for hers took it in a strong clasp in which throbbed all unspeakable things.

"Don't ask my pardon for makin' me so happy!" he said, huskily. "I a'n't got much to offer you—nothin' but the homestead and West Farm and old Suke here"—with a quaint humor—"but I've wanted to offer what there is ever since you came to Middleport."

"You—you've offered me a fortune, Deacon Emmett!" said Chrissy, and then she gave a shy, trembling little laugh and hid her face again in the Deacon's coat-sleeve.

On jogged old Suke as steadily as though she were not driving herself, lazily whisking the snow from her mane and tail once in a while and keeping up her even pace. On she went by the dark little pond that was greedily swallowing the snow-flakes, and up the North Road where Parson Owen had driven a few minutes before. Had the Deacon known what she was about he would have said with a laugh that she had her reasons for choosing the longest way home in the storm. That she had her reasons, and that they were of far more importance than even the Deacon would have supposed, I do not

doubt, for when she got opposite the parsonage she stopped!

"Whoa!" said Deacon Joel promptly, coming out of the buffalo-robe; "I declare if the animal a'n't up on the North Road and opposite the parsonage!"

Marvelous things were happening to Deacon Joel that night, and now another happened,—a sudden thought struck him.

"I declare!" he said slowly, "I never thought of it before, but why shouldn't we go in—and be married now—to-night! I dunno what Mis' Eben *would* say!" he finished, with a happy little chuckle.

"And I never thought of it before," said Chrissy (who had regained her normal self under the genial influences of the hour), with a laugh, "but I declare I don't see anything to hinder! I a'n't got any money to spend on weddin' fixin's, and if I had I'd rather be married in the dress I've got on than any other in the world—it's the one that brought us together. We can stop and tell the folks,

and I'll give you the best corn-bread you ever ate for breakfast to-morrow mornin'."

And she did.

"Well, well!" said Uncle Siny, when the thing was made quite clear to his belated comprehension. "Seems to me the Deacon a'n't done much courtin'. There was his father, now, Deacon Elim, he courted his wife nigh onto eight year, and, if folks spoke the truth, like to not got spunk enough to speak out then. She wa'n't a bit like the Deacon; he was soft-spoken, and she was kind o' high strung; it allus beat me to see why she hadn't ha' made him speak up before. She was a Slater—Luke Slater's daughter—'Doctor Luke' we allus use' to call him, 'cause he was the seventh son. Well, well, I s'pose it's all right, but 'pears to me the Deacon a'n't done much courtin'."

"I've gen'ally noticed that when old bachelors once get started they do things up in a hurry," remarked John's wife, sententially.

Mrs. Schuyler B. Horton.

A COLORADO CAVERN.

SINCE describing in *THE CENTURY** the remarkable series of caverns at Luray, Page County, West Virginia, I have visited some recently discovered caves in Colorado, which bear some resemblance to those at Luray. They are near Manitou, half a dozen miles from Colorado Springs, and penetrate one of the foot-hills of Pike's Peak, being known locally by the name of the central one—the Cave of the Winds—which is an absurd name, and should be changed to something with a meaning before being fixed in the nomenclature of the region.

The manner of the discovery closely recalls the history of Luray. In both cases there was a cavern near by already known, but little valued. In the spring of 1880 the Rev. R. T. Cross, formerly principal of the preparatory department at Oberlin College, Ohio, was pastor of a church at Colorado Springs. To interest the boys of his congregation in recreation of an instructive character, he organized an "Exploring Society" among them. The first expedition was in June, 1880, to a cave in Williams' cañon, just above Manitou, about which little was known. The owner of the land, however, seems to have put so many obstacles in the way of their entering the cave that their leader

said: "Very well, boys, we'll go and find a cave of our own!" An hour later the merry young crew had crawled far enough into this new crevice to satisfy themselves that they had distanced the other hole in the ground.

The way to the cave is a pleasant walk up one of the prettiest of the many charming ravines that seam the rugged base of Pike's Peak. The walls of the ravine are limestone rock, stained bright red and Indian yellow, standing lofty, vertical and broken into a multitude of bastions, towers, pinnacles, and sweeping curved façades, whose rugged crests often tower hundreds of feet overhead against the violet sky. These upright walls face each other at their bases so closely that much of the way there is not room between them for one wagon to pass another, and the track lies nearly always in the bed of the shallow, sparkling brook. Half a mile up the cañon a trail climbs, by frequent turnings, up the precipitous sides of the ravine, to where about three hundred feet above the brook the sheer cliff begins. Here a rough stairway, running underneath an archway of native rock, leads to a great chimney, and a niche which serves as ante-room for the cave, which is a labyrinth of narrow passages, occasionally opening out into low-roofed chambers of irregular size, into which protrude ledges and points of rock from the stratified walls, greatly

* For January, 1882.

limiting the space in which it is possible to move about. These passages are often so contracted that you are called upon to stoop in passing through, and if you insist upon going to the end of the route, you must squirm along on all fours for several rods at a time.

The passages and chambers are not upon the same level, but run under and over one another—mainly in three general levels—and show numerous slender fox-holes, which the guide tells you lead to some Stygian retreat you have already visited, or are about to enter. Boston Avenue is one such passage, partly artificial, between Canopy Hall and another large chamber, originally separated at that point by a thin wall of clay. Chicago Avenue is another side-squeezing, but very pretty channel, which forms part of the regular four-hours' walk through the caves; for if one is to "do" the whole of the nearly one hundred chambers already discovered it will take him fully that length of time. Often the end of one of these tortuous underground crevices, or passage-ways, is found in a round sink, like one of the great "pot-holes" sometimes found in a river-bottom, and the like of which I have never seen in any other cave. Many of the protruding ledges, especially in Canopy Hall, are thus perforated, and the guide will tell you that they were ground out by revolving pebbles, but it is easy to show the error of this, and demonstrate that the slow action of water, and the atmospheric agents that have cut the rest of the cavern, are responsible for these "pot-holes" also. Instead of them there will sometimes yawn at your feet, in a way likely to startle you, a squarish chasm, or the path will end in the side of a vertical chimney, seeming endless as you attempt to make your candle-beams penetrate the thick darkness which fills the shaft above and below.

Through several such chimneys, or shafts, you follow your guide in climbing long ladders (ultimately to be replaced by stairways) up to a higher or down to a lower level. Clinging to the spidery supports with only a little halo of light about you, both ends of the ladder or the slender bridge hidden from view, and apparently unsupported, you thrill with a sense of romantic peril, and take extraordinary interest in what the guide is telling of his first explorations of this subterranean maze, when there was no route to be followed, nor even a ladder to assist his getting about. You wonder more and more, not only how such a labyrinth ever was explored, but how its passages can be remembered even with daily practice. I can best picture the tortuous complexity of underground shafts and tunnels,

cracks and crannies, by asking you to imagine the atmosphere a solid, and yourself some pigmy following the tangled and criss-crossed interior of the thickly branching twigs of a tree. However, in remote portions of the cave, not yet accessible to the general public, there exist very large rooms. One of these is two hundred and fifty feet long, and of varying width. Another would be large were it not incumbered by fallen masses and by drip-stone pillars, which are vertically ribbed, as though made of boards set on end with rounded edges outward. A third room, the biggest of all, measures four hundred and fifty feet in length, and is wide at each end, but narrows hour-glass fashion in the middle. The ceiling of this chamber is so high that no candle flame or even magnesium light has ever been strong enough to bring it into view, and the echoes are remarkable. In the greater part of the cave, however, one must continually stoop and dodge to avoid contact with the side-walls or the ceiling.

It is to the ornamentation, however, that I wish particularly to call attention. This exactly resembles that at Luray, except that it is upon a very much smaller scale. The largest drip-formed pillars in the Colorado cave are said to be not more than twenty feet in height and few in number, and the great majority of the stalactites and stalagmites I saw were small, and hung in rows from overhanging ledges like the icicles on eaves in winter. There were also few stalagmites, showing that generally the dripping had been sufficiently slow to allow of the evaporation of all the water before it accumulated in too heavy a drop on the tip of the pendant that its burden of lime was building out. This varied greatly, however, in different parts of the cave, and some rooms, for example, those near the entrance, are almost utterly bare, or adorned only with little fungoid tufts of pure clay, which are left after their solid matrix has disappeared. On the other hand, so profuse has been the discharge of water over several ledges, that the native rock is wholly concealed under a great "frozen cascade" of deposited material—alabaster-white, crystalline, sparkling,—which well simulates ice. Elsewhere there is abundant proof that the water dripped rapidly and spattered, producing those curious botryoidal, cauliflower-like masses called "vegetable gardens." This was like Luray, as, also, was the tendency observed everywhere—though rarely well carried out,—toward the curtain or ribbon-like "drapery" form of stalactite, whose gracefully pendant corners make the Virginia cavern-scenery so strangely attractive. There is much less wall-rock and ceiling hidden under

these water-formed accretions here, however, than at Luray, showing, probably, that at no time was there so large an amount of water present in the rocks as found its way through the Virginia catacombs. The relatively smaller size of all the excavations at Manitou would confirm this explanation of a condition which might be expected in this dryer climate and superior altitude.

The floors of many rooms are laid several inches deep with incrustations of limework, which is embroidered with raised ridges of exquisite carving. These cross one another in every direction, making a series of small, shallow compartments, generally half-filled with the finest of clay; and several strata of this thin floor-rock will often be found superimposed upon one another, and, as a whole, easily detachable from the real bed-rock floor.

Again, where water has been caught in depressions, these basins have been lined with a plush of minute lime-crystals—tufts like small cushions of yellow and white moss. Such depressed patches are very abundant. Moreover, the rapid evaporation of such pools in confined spaces has so surcharged the air with carbonated moisture, that particles of lime have been deposited on the walls of the pocket in a thousand dainty and delicate forms of tiny stalactites and bunches of stone twigs, until you can fancy the most airy of coral-work transferred to these recesses. Here, often, the air still seems foggy as your lamp-rays strike it, and the growing filagree work gleams alabaster-white under the spray which is feeding its strange, exquisite growth. In this minute and frost-like ornamentation, to which the most skillful workmanship of the silversmith would bear no comparison, and where the flowers of the hot-house or the brilliantly tentacled dwellers in some sunny tide-cove would find their delicate beauty surpassed, this Colorado cavern can show far more than its larger rival in the Alleghanies.

The most profusely ornamented part of the

cave is that included in Music Hall, Alabaster Hall, and Grotto, the Bridal Chamber and the Dining-Room, which is central to the rest. Music Hall, which is a chamber fifty feet long, with a level floor, even sides, and a high-arched ceiling, takes its name from the musical tones produced by gently striking the resonant, vibratory stalactites. In their varying length and thickness one can easily find the octaves and so hammer out a tune, which if it be of no great compass, will contain much melody. Quaint imitative devices occur in the abundant excrescences here,—a prairie dog, the sleeping bird, and a score of others which the guides have learned to point out for our amusement, while one end of the hall is a perfect little jungle of stalactites and stalagmites. Many of the specimens here do not taper, but, having grown from their interiors by the water which trickled through, leaving successive rings at the mouth of the slender pendent tube, are of exactly the same diameter throughout; and, having grown rapidly, have not had time to waste into the clay-stained condition of the older formations, but remain beautifully translucent, as you may see by holding your yellow candle-flame behind them. Alabaster Hall and the Grotto are treasure-nooks lavishly ornamented in every pattern of cave-art.

I have said enough to show, I think, that in the Pike's Peak cave, which seems to belong to the same geological age (the Silurian) as its eastern type, the conditions of excavation were substantially the same as in the Virginian "wonder," and that consequently the same kind of spaces in the limestone rock are found in both, and the same sort of interior decoration; with this important difference, however, that the far greater supply of water in one has carved out vastly greater rooms and furnished the transportation for an immensely greater mass of material into the secondary formations of both pendent and piled up drip-rock.

Ernest Ingersoll.

THE PUNISHMENT.

Two haggard shades, in robes of mist,
For longer years than each could tell,
Joined by a stern gyve, wrist with wrist,
Have roamed the courts of hell.

Their blank eyes know each other not;
Their cold hearts hate this union drear. . . .
Yet one poor ghost was Lancelot
And one was Guinevere!

Edgar Fawcett.

THE EVOLUTION OF THE AMERICAN YACHT.

It is an interesting circumstance that what was probably the first distinctively American craft may still be seen occasionally. The pink or pinkie was so-called from the Dutch, probably at a remote period, for Spenser uses the term in his "Faerie Queene." The model was perhaps suggested by the quaint hookers of the Scheldt, although it is far more graceful; and it is a noteworthy fact that a very large proportion of the marine terms employed in the English language are from the Dutch. The American pink was invented for the cod-fisheries; it was at first pointed at both ends, and was from five to ten tons burden, and rigged with two fore-and-aft sails. Afterward, the pointed prow was sheered off and a bowsprit and cut-water were added. These pinkies are highly picturesque and seaworthy, but have been gradually superseded by the broad-stern fishing-schooners of Gloucester

A PINK.

and Essex, Massachusetts. But antique examples of this curious craft are still to be seen creeping in and out about the little sleepy ports downeast or laying their rusty sides on the oozy flats left by the tide. They are most common in the waters about Eastport, especially in the herring fisheries.

The year 1713 was a great era in American naval annals. In that year, Captain Andrew Robinson built the first schooner ever seen. This was at Gloucester. As she glided into the

water, a by-stander cried: "Look, how she schooners!" Catching at the word, Captain Robinson replied, "A schooner let her be!" The new rig came at once into wide acceptance. Only eight years later an old chronicler, Dr. Moses Prince, wrote of Captain Robinson: "This gentleman was first contriver of schooners, and built the first of that sort about eight years since; and the use now made of them, being so much known, has convinced the world of their convenience beyond other vessels, and shows how mankind is obliged to this gentleman for this knowledge." This is by no means the only instance of the adoption of American marine inventions by other nations. Captain Howe's patent for double top-sails, for example, is now universally employed in square-rigged vessels. The fore and aft sails of the schooner are really a division of the sails of the sloop; and the sloop-rig, if analyzed to its square root, is evolved from the lateen-sail of the Mediterranean cut into a mainsail and jib. When properly shaped these two sails present one three-cornered sail divided near the middle by the mast, exactly where the yard of a lateen-sail would hang to the traveler on the mast. Subsequent modifications naturally suggested the cutter by dividing the jib in two, and Captain Robinson, as we have seen, divided the mainsail, and added a mast, and the result was a two-masted fore-and-aft schooner. During the last twenty years the schooner's mainsail has in turn been divided, a third mast has been added, and the result has been the three-masted schooner. Each of these modifications has been suggested with the idea of facilitating the handling of the sails, while the principles involved continue the same in each. A fore-and-aft vessel sails several points nearer to the wind than a square-rigged ship, hence a decided advantage in one of the most valuable features of a ship when sails are the motive power. This, of course, is of vital importance in coasters obliged to beat up

narrow estuaries, or in yachts intended for racing.

Exactly when the schooner had square topsails added to her rig it is difficult to ascertain, but one and two top-sail schooners were at one time much in vogue. The square sails, however, have been discarded in this rig for many years in America, while the top-sail schooner—and a very jaunty rig it is—continues to be a favorite in Europe. The *Wanderer* is the only topsail schooner-yacht now flying the American flag. After the invention of the schooner there seems to have been no essential difference between English and American ships for nearly a century. The *Constitution*, built by Humphreys in 1788, had the falling-in topsides of foreign frigates, great breadth on the load-line, a straight keel, full bow, and sometimes a raking stern-post, which were the characteristics of sea-going vessels at that time. But a new era in the modeling of vessels on this side of the Atlantic began soon after the opening of this century; to this we were indebted very largely for the successes of the war of 1812, and for the great activity of our commercial marine until the breaking out of the late civil war, and for the frequent trophies carried off by our leading yachts. Almost simultaneously, a group of master-builders appeared, whose united talents and efforts brought about this revolution in the principles of ship-construction. We think, however, it is no overstatement to say that to no one are we more indebted for this result than to Henry Eckford, who was born in 1775, the year of the Declaration of Independence. At sixteen, in the ship-yards of his uncle, Mr. John Black, at Quebec, he commenced a study of the pursuit in which he was to gain such distinction. At the early age of twenty-one, Mr. Eckford settled in New York, and by his original and scientific methods at once obtained recognition and abundant employment. His careful system of study is well described by his biographer. "Upon the return of one of his vessels from a voyage, he obtained by a series of questions from her commander an accurate estimate of her properties under all the casualties of navigation. This, connected with her form, enabled him to execute his judgment upon the next vessel to be built. In this way he proceeded, successively improving the shape of each, until those constructed by him, or after his models, firmly established the character of New York built ships over those of any other port in the Union, * * * Fashioned after his models our vessels gradually dispensed with their large and low stern frames, the details of their rigging underwent extensive changes, and in the important particulars of stability, speed, and capacity, they

soon far surpassed their rivals." One of Eckford's greatest feats was the construction of the sloop-of-war *Madison*, of twenty-four guns, in the most primitive of navy-yards on Lake Erie, in just forty days after the timber of which she was made was cut in the forest. Cooper, in his *Naval History of the United States*, says: "Henry Eckford was undoubtedly a man of genius. * * * His professional qualities proved to be of the highest order." The two-decker *Ohio*, generally considered to be the finest sailing ship-of-war we have ever had, was built by Eckford, and may still be seen lying at the Charlestown navy-yard. He subsequently built a frigate for the Turkish navy, and accepted an offer to superintend the navy-yards of that government. But after building one line-of-battle ship at Constantinople he died there suddenly. The influence of his genius was such, however, that all the Turkish men-of-war built for years after that were after his models and rig, presenting, in that respect, a striking contrast to the fleets of other nations, with their full bows and inflected topsides.

Another important feature of this period of American naval construction was the invention and development of the famous Baltimore clipper. Already the maritime enterprise of this noted port had been distinguished by the famous voyages of such armed merchant-ships as the *Leila* and *Argyle* in the latter part of the eighteenth century. The Baltimore clipper appeared by gradual evolution in the early part of this century, and was intended originally as a model for a ship that would be advantageous in eluding the British cruisers in the West Indies, who were in the habit of boarding our vessels, and taking away such of the crew as were English citizens. Another cause for the origin of these clippers was the pirates swarming in those waters, and also, alas, the design of stimulating the importation of African slaves. Their origin seems to have been suggested in part, at least, by Commodore Daniels, who was at one time connected with the navies of the South American States, and made a name as a ship-builder. Caleb Goodwin was also one of the ship-builders who distinguished himself at that time in winning fame for the fast ships of Baltimore. These clippers were doubtless due to a study of Spanish, and especially Genoese models. The Latin races, while inferior to the English as sailors and navigators, have, until this age, shown greater skill in the scientific application of the principles involved in the designing of ships. Suggestions might also have been obtained from the small craft of the Channel and Bermuda Isles. When full fledged the Baltimore clipper was a ship with a low free-

BALTIMORE BUCKEYE.

board, broad of beam before the center, having a flaring bow above, but sharp at the water line, and with a deep draught aft, or what is called a long leg, a slightly raking stern-post, and a clean run. They were rigged as schooners and more rarely as brigs, and were heavily sparred, while the masts raked to such a degree that a line dropped plumb from the main truck would nearly or quite touch the taffrail. These lines gave at once a dry deck, stability, and sail-carrying power. When the War of 1812 broke out, the superior qualities of the Baltimore clipper at once became apparent. The Atlantic was swept by these hardy little cruisers, who contributed more to uphold the honor of the stars and stripes than any other element in the war. This fact was fully appreciated by the enemy. Said Captain Wise, of H. M. frigate *Granicus*, to Captain Coggeshall, one of our successful privateersmen, but at that time a prisoner to the English: "Coggeshall, you Americans are a singular people, as respects seamanship and enterprise. In England we cannot build such vessels as your Baltimore clippers. We have no such models, and even if we had them, they would be of no service to us, for we never could sail them as you do. We have now and then taken some of your schooners with our fast-sailing frigates. They have sometimes caught one of them under their lee in a heavy gale of wind, by out-carrying them. Then, again, we have taken a few with our boats in calm weather. We are afraid of their long masts and heavy spars, and soon cut down and reduce them to our standing. We strengthen them, put up bulkheads, etc., after which they lose their sailing qualities, and are of no further service as cruisers."

The Baltimore clipper was the parent of several types of vessels. The famous oyster pungies of the Chesapeake are allied to it, but the latest phase of this form is the Balti-

more buckeye, of which we give a diagram. It is long and low, and, unlike other vessels now built in America, has a raking stern-post and the greatest beam in the fore-section, while the masts have the rake of the old-time clippers. The sails are triangular in shape. But their most remarkable feature, which seems to suggest the Genoese influences already alluded to, is the long, beak-like cut-water, flanked by broad breast-plates at the knight-heads in the bow, in which the hawse-holes look like eyes. These are, by all odds, the most foreign-looking craft in American waters, and are very good sailers, especially on a wind.

Another modification of the Baltimore clipper was developed in our pilot-boats, which, little by little, assumed the type represented by the *George Steers* and *Mary Taylor*, famous little schooners designed by George Steers in 1845,—a type which continues to be followed, with little variation, in this service even now, after a lapse of forty years. They have a keel sloping up to the fore-foot, deep draft, great dead rise on a vertically sharp floor, and a sheer both at stem and stern which makes them buoyant and dry in a sea-way.

About the year 1844 began the most important era in the history of American ship-building. Our Liverpool packets had already demonstrated the capabilities of our builders and mariners. The *Canada*, for example, under the command of Captain Seth G. Macy, made her trips almost with the regularity of a steamer. Fourteen to sixteen days was the average length of her voyages between the two ports. This may have been an extreme case, but the fact remains that these "liners" made a remarkable record. They carried double crews, that being before the great labor-saving invention of double top-sails. The quarter-masters or steerers had their quarters aft, and the reefs in the top-sails were shaken out whenever the wind lulled, and thus the "liner," in a gale, would often walk past ships which could not make sail or take it in fast enough. Those were the days when the Webbs, the Livingstons, the Browns and Bells, the Claghorns, the Eldridges, the Fullers, the Lawrences, and other excellent artisans of New York, Salem, Boston, or Philadelphia, were in their prime. The increasing importance of the East India trade—especially the tea trade—a few years before the general adoption of the propellor in steamships, and the rush to California after its cession to the United States and the discovery of gold, induced the construction of the famous clippers which carried the development of sailing-ships to the highest point of excellence yet reached in the history of naval architecture. Without moot-ing the question about the respective merits of

the noted Aberdeen clippers and the American ships which, during a period of perhaps fifteen years, circled the globe with their vast expanse of canvas, it is not too strong a statement to say that some of the runs made by our ships at that time have never been surpassed by either sail or steam. The great builder of pack-ets, Isaac Webb, died in 1843. Donald McKay, a native of Nova Scotia, who removed in youth to Newburyport and made a name there and in Boston, began, at the same time, to win a world-wide reputation for clipper ships of a size and speed hitherto unexampled. Many competitors appeared at the same time. The ship *James Baines*, built by McKay, ran 420 miles in 24 hours. The ship *Red Jacket*, built at Rockland, Maine, ran 2280 miles in 7 days, or 325 miles per diem, for a week. The *Flying Cloud*, McKay's most celebrated ship, once made 374 knots, or 433 miles, in 24 hours and 25 minutes, equal to 17.17 miles an hour. To appreciate these distances, compare them with the greatest distance ever made in 24 hours by a Liverpool steamer, the new and now celebrated *Alaska*,

up toward the stem. A similar feature can be observed in the sheer plan of the yacht *Maria*, which is printed below.

At the same time that the American merchant clipper was entering upon its brief but glorious career, evidences of activity in another department of marine architecture became apparent, which, with various alternations, have continued to the present time, and are now attracting more general interest than ever before. I refer to the development of the American yacht. The Romans had numerous pleasure vessels, but there is no reason to suppose they were intended for anything more than floating barges. The Greeks, the Venetians, and other southern people also had their pleasure ships, but the Dutch and the English were the first who are recorded as enjoying yachting for the exercise it gives to the manly virtues, making of it at once a vigorous pastime and a school for seamen. A yacht was built in 1604 for Henry, eldest son of James I. Pepys in his Diary has much to say of a Dutch sailing yacht called the *Bezan*, pre-

SHEER PLAN OF THE "MARIA."

in the fastest westward passage yet accomplished from Liverpool to New York. Her greatest run was 419 miles in twenty-four hours. This proves what all sailors know, but of which few landmen are aware—that, with a strong and steady favoring wind, it is possible for a sailing-ship to equal the speed of an Atlantic steam-ship. The difficulty lies not in the ability of the ships, but in the fact that the wind is unsteady. These American clippers were a modification of the Baltimore clipper, with less beam, a slightly flaring bow, a long, sharp, hollow entrance, suggesting the wave line, the greatest beam about amidships on the load line, and a rising floor with an easy bilge. Although heavily sparred, their masts were generally proportionately lower than in the ships which they succeeded, and the yards were longer, giving a large but low spread of canvas. This type of ship may be said to have culminated in the *Great Republic*, built by Donald McKay in 1855. She registered 4300 tons, and carried four masts. A peculiarity of this noble ship was her rising keel, which, for a length of sixty feet, sloped

sent by the Dutch to King Charles I. in 1661. He had the instincts of a genuine yachtsman, for he not only enjoyed the excitement of a sail in a stiff breeze, but also the snug comfort of a cozy cabin with attractive companions and books. Further on he says: "A yacht was built to beat the *Bezan* by our virtuosos, with the help of Commissioner Pett," and succeeded in doing so in an exciting race to which Pepys briefly alludes. This is the first match race on record in the annals of yachting.

The first organization that gave distinct encouragement to yachting was, however, not established until 1815. It was founded at Cowes and was called "The Royal Yacht Squadron." It was followed in 1820 by the Royal Cork, which, however, as the Water Club had existed since 1720. Yachting began in America in an informal way early in this century. It is an interesting fact that there is an American yacht still in commission, whose frame was made in 1819. Originally intended for a Baltimore pungie, she was turned into a schooner-yacht and

"AMERICA" AND "MARIA."

called the *Hornet*. In 1847 she was completely repaired, and again in 1850 she was overhauled and altered by George Steers, and called the *Sport*. She now belongs to the Hull Yacht Club, and possesses some excellent sailing qualities. In 1836, the *Wave* was modeled by Stevens and built by Brown & Bell. The *Sylph* schooner was the crack yacht in Boston in 1835. But she was beaten by the *Wave* in a thrash to windward off Nantucket Shoals. This seems to have been the first race of American yachts of which

there is any positive record. The interest in this sport was gaining, and in 1838 a number of saucy little craft acquired a name for themselves; among them were the *Mohamet*, *Dream*, *Raven*, and *Breeze*. The latter was fast, beating to windward, and was originally an oyster-boat. But no regular yachting organization was formed until 1844, when the New York Yacht Club was founded, with a membership of nine members and nine yachts. The first regatta in America was sailed July 17, 1845; the *Cygnets* was the winner. All the yachts of that period had a strong rake to the masts. Their canvas was confined to lower sails, excepting sometimes a small jib-headed main-gaft top-sail in the schooners. The head of these sails had very little slant, being about parallel with the booms.

Robert Livingston Stevens was the most distinguished of a family of inventors, who are identified with the progress of ship and steam navigation in America. He was possessed of extraordinary mental activity. But for none of his inventions will he be longer remembered than as the designer of the famous sloop-yacht *Maria*, whose exploits mark an era in American ship-building and yachting. She was built at Hoboken in 1844 by Mr. Capes, after Stevens's plans. Her sheer and sail plans are well indicated in the accompanying diagram and drawing. She was one

A PIROGUE WITH LEE-BOARD.

hundred and ten feet over all, with a beam of twenty-six feet eight inches. Her draft aft was five feet three inches, decreasing forward to a minimum of six inches under the fore-foot. The main-boom was ninety-five feet long and three feet in diameter, and hollow, being constructed of doweled white-pine staves, strengthened by iron hoops and trusses of iron rods. The foot of her mainsail measured ninety-two feet, and of her jib

BODY PLAN OF A NORWEGIAN PILOT-BOAT.

BEVEL-WHEEL FOR SMALL YACHTS. SCALE $\frac{3}{4}$ OF 1 IN. = 1 FT.

seventy feet, the latter being laced to a boom. The model of the *Maria* was suggested by the low, broad, almost flat-bottomed sloops employed to steal over the shallows of the Hudson and the Sound—vessels depending on beam rather than on ballast for stability, and imitated by many of our coasters, which are so stiff that they sometimes run down the coast without either cargo or ballast. Though having a floor with only moderate dead rise, the lines of the *Maria* were much finer; she had a long, hollow bow, and was so sharp that the extreme point of the bow had to be widened where the bowsprit entered the hull. The deck plan was not unlike an elongated flat-iron, as she was very broad aft, tapering off only moderately from the greatest beam to the broad and somewhat heavy stern. The model of the *Maria* has since then been generally followed by small center-board sloops in New York waters and along the Sound, and on the Merrimac, although never to the same extreme degree. Two features gave especial significance to this extraordinary yacht. One of these was her double center-board. The principle of the center-board was not strictly new, Captain Schank of the Royal Navy having used one in Boston when the British fleet was stationed there; but its general adoption

in American waters makes it practically a cis-Atlantic invention. It is an evolution from the lee-board, such as the Dutch used two centuries ago on the broad, bluff sloops which floated on the canals of Holland. The lee-board can be seen in the pictures of Vander Velde. After the Dutch settled on Manhattan Island they borrowed the rig of the down-east pinks for the boats which plied in New York Bay, and gave them a lee-board. The name of this peculiarly American craft was taken from the Caribs of the West Indies, brought thence by some hurricane-beaten freebooter, and thus we had the pirogue. It was as a barefoot lad, sailing a pirogue for a ferry-boat between Staten Island and New York, that the late Commodore Vanderbilt began his wonderful career. Pirogues without the lee-board are still used on the Lakes.

Mr. Stevens fitted the *Maria* with two center-boards. The forward one drew twenty feet of water when down, and was weighted with lead. Nicely adjusted springs enabled it to rise easily and rapidly in case it touched the ground. When housed it rose several feet above the deck, and had slots cut to fit the deck beams. The after-board was intended to aid in steering her when running free, as she griped and yawed. She was steered by a long tiller, but since that time the steering-wheel has come into general use in American yachts; even little sloops of not more than twenty-two feet length are now to be seen with a wheel. Several neat inventions are in use for this purpose; a diagram is given here of one of them, called the bevel-wheel. Another peculiarity of the *Maria* was the massive India-rubber compressor on the traveler, to break the strain of the main-boom on the sheet in jibing. This is probably the first time rubber was ever employed for this

THE "SHARK."

SHEER PLAN OF THE "AMERICA."

purpose. Since then it has been used to ease the bitter end of a fishing-schooner's cable when riding in a gale, at the head of fore-topmast stays, and even for the lanyards of wire shrouds. Another feature of the *Maria* which was not sufficiently considered at the time, but is deserving of emphatic attention now in view of recent developments in English yacht construction, was the outside lead ballast she carried. Iron ballast on the keel has been not uncommon in the smaller New England yachts, but the use of outside lead ballast by the *Maria* over thirty years ago, even if differently placed than in English cutters, is a remarkable fact. Molds five inches deep were fixed outside on her bottom, carefully shaped to the lines of the floor, for a distance of twenty feet on each side of the keel. Holes were then bored through the skin, and several tons of hot lead were poured into the molds.

Great inventive ability had contributed to the building of the *Maria*, and her performances justified the expectations of her builder. She was known to log seventeen knots, or over twenty miles, an hour in smooth water. But that was essentially

BODY PLAN OF THE "AMERICA."

her element. Her extreme shallowness, notwithstanding the fineness of her lines, did not give her sufficient momentum in a seaway, and for once she was beaten in a match with the *Coquette* in October, 1846. The *Coquette* represented altogether a different type of model, and thus the conflict now raging in yachting circles here regarding the merits of deep and shallow vessels was practically settled before many of those now dis-

cussing the question were born. The *Coquette* was a little schooner of only sixty-six feet in length over all. But she drew ten feet of water aft, having a sharp-rising hollow floor and a sharp run. She was built by Louis Winde, a Swede, at one time member of the firm of Winde & Clinkard. Mr. Winde evidently borrowed a few ideas on the subject from the famous pilot-boats of the Scandinavian peninsula. A body plan of this model is given here. The resemblance to many of our deep-keel yachts suggests that the Swedish and American yacht-builders were proceeding upon similar lines in applying the principles of naval architecture. It is a noteworthy fact that the only foreign schooner which ever beat the *America* was the Swedish yacht *Sverige*. Great beam and great depth were the prominent characteristics of the *Coquette*, aided by iron ballast carried low. Each yacht in her own domain had outsailed everything, and it was therefore as champions hitherto without a rival that the two yachts were matched against each other for a purse of one thousand dollars. Owing to her larger dimensions, aside from her great powers, it seemed to be a foregone conclusion that the *Maria* would carry off the prize. But the wind was blowing fresh from north-east, obliging the taking in of a reef or two. The boats started from a buoy in Gedney's Channel. On the outward run, going free, the *Maria* walked away from her rival; but when they came up on the wind, with a heavy chop running, the *Coquette* not only made up the distance lost, but won by four minutes and forty seconds without time allowance. The *Maria* was afterward rigged into a schooner, and foundered in the Gulf Stream, being altogether unfitted for cruising in blue water.

While these events were firing the enthusiasm of all true sailors, another great ship-builder was aiding to give prominence to American seamanship, to stimulate inter-

THE PILOT-BOAT "GEORGE STEERS."

est in the noble sport of yachting, and to immortalize the American yacht. This was George Steers—a name identified on both continents with the highest achievements of ship-building. He was the son of David Steers, a native of the Isle of Jersey, and, at one time, captain in the British service, and also a designer of ship-models. After he came to the United States he found employment in our navy, and was the first who had charge of the Navy Yard at Washington. We give a drawing of one of Captain Steers's vessels, the cutter *Shark*. It will be seen that she combines qualities developed in the Baltimore clippers, the early English,

A SHARPIE.

THE "IDLER."

and the present Bermuda yachts. George Steers, whose achievements mark an era in American yachting, was a man of genius—not so much, perhaps, in originating new principles, as in seizing the essential points of the various ideas then floating in the air, as it were, and suggested, in more or less degree, in the models of contemporary builders. He harmonized them in a definite and nearly perfect type, which has been followed, with slight modifications or idiosyncrasies, in most American yachts since 1852. George Steers was not so much an inventor as an organizer of principles of naval construction. The famous *America* exhibited about every principle followed by the American ship-builder, except the center-board, and that he employed in

many of his other yachts, notably the lovely fleet-footed sloop-yacht *Julia*, since then changed into a schooner, and this season appearing again as a sloop. To him we may also attribute, perhaps, the perfection of the V-stern; hitherto a very beautiful feature of American yachts, but now being superseded by the long overhang, such as is indicated in the accompanying diagram of the famous racing-sloop *Gracie*, built by David Carl. The long heel, keel rising forward, long forward section and sharp floor, and full midship section had, it is true, been already employed in the prahus and other vessels of the East Indies, but this did not detract from the merit due the American builders, as they made a new and, doubtless with them original, application of these principles.

George Steers made his first hit with the cat-boat *Manhattan*. He then produced a number of very able pilot-boats, such as the *Mary Taylor* and *George Steers*. The latter was lost on the Jersey shore in a gale of

BODY PLAN OF A SKIP-JACK.

THE "REGINA," SHOWING A CENTER-BOARD CABIN SLOOP WITH DOUBLE HEAD-SAIL.

wind, with all on board. The famous *America* was built for Commodore John C. Stevens, one of the founders of the New York Yacht Club, who was always identified with the encouragement of yachting in America, and to whom it owes more than to almost any other of our yacht-sailors. Wearing a huge broad-brimmed hat, he might often be seen steering a yacht in the summer breezes of New York Bay. The *America* was originally under-sparred, with raking masts, and was rigged like other American schooner-yachts of the time, with main and fore sails, a single jib whose foot was laced to a boom, and a small main-gaff top-sail. She now carries two topmasts and flying jib-boom, according to the present fashion with our schooners, and her masts have been stepped with less rake. After the great race, when she carried off the trophy of the Queen's Cup, she was owned, for a time, by Lord de Blaquiere, who stiffened her by adding iron frames,

which impaired her sailing qualities. Recently an overhanging stern has also been added. George Steers also built the steamer *Adriatic* and the screw frigate *Niagara*. It may be added here that the family ability for naval construction has been further illustrated by Henry Steers, his nephew, who designed the *Idaho*, at first a steamer, and afterward a sailing-ship. Under canvas she made the fastest voyage recorded from New York to Rio. He is also builder of the *Idler*, a noted center-board schooner-yacht presenting the rare combination of equal ability on a wind and running free, and able both in rough and smooth water, being what is called an "all-around" boat.

Since the historic race of the *America* at Cowes, occurred the ocean race of the *Fleetwing*, *Vesta*, and *Henrietta*, in 1866, for a

sweepstakes of \$65,000, which was won by the latter, owned by James Gordon Bennett. In 1870 the *Fleetwing*, purchased by Mr. Bennett, and altered and rechristened the *Dauntless*, was beaten by the English schooner *Cambria*, owned by Mr. Ashbury, in a race to New York. In 1871, the same gentleman brought over the *Livonia* schooner to race for the Queen's Cup with the New York yachts, and was badly beaten. In 1881 the famous Scotch cutter, *Madge*, was brought here, and won five out of six races with American sloops.

With the exception of the latter event, these trans-Atlantic races do not seem to have decided any principle or resulted in anything else except to keep up the *esprit de corps* of our yachtsmen. But the sport has been pursued with alternating although growing interest, as is indicated by the fact that the number of well-established yacht clubs has increased in ten years from thirty-five to seventy-six, from Portland to San Francisco. Many large and

bined length of the foot of the mainsail and jib averages seventy feet. A strong outrigger extends five feet from the stern for the main-sheet block and traveler. They of course have center-boards and carry sand-bags and live ballast. In a race, from twenty to thirty men may be seen hanging on the weather side of a Penny Bridge boat. A similar racing-boat is also popular on the Delaware at Philadelphia.

Accompanying this condition of affairs has been an impulse to experiment, and to produce models or mechanical conveniences adapted to meet special wants. Those who object to this or that model should remember that the whole process of naval construction is a beautiful example of adaptation of means to ends. As in the truest architecture, or in the human form itself, so every line, whether of hull or sails, in a ship, however pleasing and

expensive yachts have also been constructed during this period, although the tendency has been rather toward the production of small and inexpensive yachts, to be sailed by amateurs or Corinthian sailors, thus placing an otherwise costly sport within reach of many who have aquatic tastes—a result which cannot be too highly commended, as it tends to incline our young men to cultivate their health and develop their energies. This may also be called emphatically the age of the cat-boat, a rig peculiarly American, and requiring for its fullest action a broad and rather full model. The cat-boats have also become very popular in England, where they are called *una* boats, after the famous *Una*, built by Robert Fish, of Brooklyn, and taken to England in 1852.

The Penny Bridge boat, like the cat-boat, is also a peculiarly American craft, and was at one time entirely local. Originally built at Penny Bridge, Brooklyn, by Lenox, Mumm, and other well-known builders, they are literally the flattest sailing-boats afloat. The genuine Penny Bridger is twenty-eight feet long, and about twelve feet beam and thirty inches deep. They have hardly any bilge, rising with scarcely a bend to the rail. The mast is about forty-one feet long, and the com-

harmonious to the eye, was first employed with a distinct purpose of utility.

One of the features of this period in the history of American yachting has been the invention of the sharpie. Originally intended to float among the oyster-beds in the shallows of Long Island Sound, a disposition has been shown to bring it into favor for yachting. It is really the old-fashioned punt greatly enlarged, with finer ends, fitted with center-board and cabin, an overhanging stern and a rudder attached to a spindle. The original sharpie carries one or two three-cornered sprit-sails. But they have also been rigged as sloops, schooners, and yawls. They are very fast and stiff, and are excellently adapted to the purpose for which they were designed. I have seen a schooner-rigged cabin sharpie some fifty feet in length, and drawing only one foot aft and three inches forward, which has been to the West Indies.

The skip-jack is another curious and by no means ungainly craft, evolved out of the sharpie by adding to the latter a rising floor, as indicated in the accompanying illustration. The advantage of the skip-jack lies in the fact that, while exhibiting excellent sea-going qualities, both as to safety and speed, and almost

HERRESHOFF YACHT "KELPIE."

the same amount of interior space as other yachts, she can be constructed at much less expense, her frame being composed of straight timbers. Of course, the center-board is an indispensable feature of the skip-jack model. Another peculiar craft not unfrequently seen in our harbors is the boat made without frame timbers, other than the keel, stem, and stern-posts and fashion-pieces. The planking is made of unusual thickness, and the streaks are but two to three inches in width. They are bent to the shape, and bolted together through and through so tightly that calking is unnecessary. A large ship, the *New Era*, was actually built on this plan at East Boston a few years ago, but did not seem to have strength to resist the strain of heavy freight.

Several iron yachts have also been constructed here during the last decade. The famous cutter-sloop *Vindex*, launched in 1870, and the sloop *Mischief*, both designed by Mr. A. Cary Smith, have won such an excellent record that we doubt not iron is destined to become very popular in the construction of American sailing-yachts. The rival of the *Mischief* is the *Gracie*; she is very fast off the wind; but no yacht has ever been altered so frequently. The iron plates of the *Vindex* are only three-sixteenths of an inch in thickness. But she seems to show no perceptible wear and tear, after ten years of use. Her great draft, aided by four tons of lead on her keel, her imposing mast, low free-board, fine lines, jaunty rig, and general capacity, make her one of the most striking of American yachts.

Nothing could be more opposite to the solid qualities of the *Vindex* than the midge-like "skimmer of the sea" called the catamaran, another recent nautical invention. The principle illustrated in the catamaran was borrowed from the Pacific, where the islanders for ages have sailed in large double canoes, propelled by a triangular sail of matting supported on two light spars of bamboo. But Mr. John B. Herreshoff, of Bristol, Rhode Island, conceived the idea of adopting the double-hull principle in our waters, and first attracted general attention to the subject by the catamaran *Amaryllis*, which was exhibited at the Centennial. The turbulent waters of the Atlantic are not favorable to a craft which demands great lightness of construction, the hulls requiring to move separately. But Mr. Herreshoff has succeeded in solving the problem so far as regards inside

aran, another recent nautical invention. The principle illustrated in the catamaran was borrowed from the Pacific, where the islanders for ages have sailed in large double canoes, propelled by a triangular sail of matting supported on two light spars of bamboo. But Mr. John B. Herreshoff, of Bristol, Rhode Island, conceived the idea of adopting the double-hull principle in our waters, and first attracted general attention to the subject by the catamaran *Amaryllis*, which was exhibited at the Centennial. The turbulent waters of the Atlantic are not favorable to a craft which demands great lightness of construction, the hulls requiring to move separately. But Mr. Herreshoff has succeeded in solving the problem so far as regards inside

HENRY ECKFORD.

cruising. Each of the hulls is completely decked and has a center-board and rudder of its own. By a very ingenious contrivance the two rudders can be moved by one tiller. The hulls are joined by transverse beams and galvanized iron rods, trussed, and so nicely supported with elastic arms and links that each boat is separately swayed by the action of the water. A car, with seats, is firmly attached to the cross-bars. The sloop rig is the one adopted in these catamarans. They are generally from thirty to forty feet in length and have become very popular for smooth-water sailing. The catamaran cannot lie as close to the wind as a swift center-board sloop, and is slow in staying, but off the wind her speed exceeds that of any other vessel of her size afloat. The great stability offered by the double hull makes it impossible to capsize it. The catamaran is liable, however, to go down head foremost, or to sink through the straining of one or both hulls. If employed in smooth water, in harbors or on lakes and rivers where winds are very puffy, it is a far safer boat for

lubbers to use than any single-hulled sailboat.

To Mr. Herreshoff we are also indebted for a type of yacht which for certain qualities has not had its superior in America. He is and has been totally blind since he was thirteen years old, but few men living have equaled him for ingenuity and success in certain branches of marine architecture.

From the outset the Herreshoff sailing-yachts were marked by lines so peculiarly his own that it would be impossible to confound them with the models of other builders, although their great success and popularity has at last led the yachtsmen of New England to imitate them frequently, at least in part. They are characterized by a long and full midship section, moderate dead rise (the now famous *Shadow* has a sharper floor than most of the Herreshoff yachts), a clean run, the run and futtock timbers being invariably attached to the deadwood and keel almost at right angles, without any of the gentle, curved modeling or the hollow floor usual

Engr. by W. Clackson.

GEORGE STEERS. (BY PERMISSION OF D. APPLETON & CO.)

in foreign and most American vessels, and carried to the farthest limit in the English lead-keeled cutter. These yachts are further characterized by a high free-board and great sheer, both fore and aft, the forward curve, following a parabolic line, beginning about a third of the length from the stern. The blunt stem is also slightly curved, the quarters are rather heavy, the trunk and wash-board are high almost to clumsiness, and the standing-room extends so far aft that the rudder-head is inside instead of on deck, as is usual with small American yachts, and the rudder is of uncommon dimensions. These yachts have been, with but two or three exceptions, invariably furnished with center-boards, and yet have good draft and a deep, rocker keel. Their long bowsprit curves downward and they are heavily sparred, giving the impres-

sion of being top-heavy, and when one first sails in one of these yachts this impression seems to be confirmed, for they are tender-sided, and a light breeze at once carries them well over; but, like the English cutter, when they find their bearings they go no farther, and accidents to them have been exceedingly rare. Notwithstanding their full body, the Herreshoff yachts have been very successful as racers. The lightness with which they are built aids this result while unfitting them for heavy weather. In a race in Boston harbor in 1870, the prizes in each of the three classes were won by these yachts, one of them being the *Kelpie*, of which a diagram is given on page 360. Herreshoff has been most successful with small yachts, especially sloops and cat-boats. The *Shadow*, the only competing yacht which won a race from the *Madge*

COMMODORE JOHN C. STEVENS.

in 1881, is one of Herreshoff's crack models and one of the last he designed before taking to the building of steam-yachts. She has won no end of prizes, and, whatever may be the merits of the case, it is certain that in eating into the wind she fairly surpassed the *Madge* in the first race, when both yachts were on the port tack after rounding the buoy. On that tack the *Madge* did not feel the loss of her starboard topmast-stay, which it has been alleged was the cause of her defeat.

At present we are in the midst of a great transition movement, which has been hastened, but not originated, by the *Madge's* great success in 1881. Twelve years ago the writer predicted, in talking with Mr. Herreshoff, that a movement in favor of narrower and

deeper yachts, with double head-sail, was not far off, because after going to one extreme there would follow the reaction natural to an active people like ours, unsatisfied long to remain fixed to one idea, and also because of certain advantages inherent to the deeper boat which we had not sufficiently considered while inshore yachting was most in vogue, but must regard, if long cruises were to become more general among our yachtsmen. Commodore Centre about the same time gave public expression to similar views. Not long after that the building of the *Vindex* gave emphasis to these predictions. The change has come at last, like everything in this rapid age and country, with an energetic rapidity that threatens to proceed to an extreme as ab-

GETTING A CAT-BOAT READY FOR THE SEASON.

surd as that alleged against the advocates of the extreme "skimming-dish" type of yacht. Most of those who favor a change incline to a compromise in one or more details. While, for example, the fixed bowsprit is still retained, the large single jib is fast giving place to fore-sail and jib, called double head-sail, or split jib, as in the *Regina*. The form of the head-sail of the three types is well indicated by comparing the accompanying diagrams of the *Kelpie*, the *Regina*, and the *Muriel*. Flush decks are also coming into fashion, as in Mr. Platt's new center-board schooner *Montauk*, built by the Poillon Brothers, and designed by Mr. Ellsworth, who drafted the fine racing-sloop, *Fanita*. Double-topping lifts and other minor imitations of English rig have been adopted, while in the modeling of the hull greater draft and metal added to the keel are innovations coming rapidly into acceptance, especially in Massachusetts waters. It is curious to look at some of our genuine American sloops and schooners, whose owners have become infected by the epidemic of foreign ideas, with heavy additions of iron patched upon keels that were never intended to

carry them. The introduction of the flush deck, while it adds greatly to the looks of a trim yacht, as a trunk cabin can hardly be considered ornamental, of necessity implies greater depth of model, but of course must be confined to yachts of some size, unless, indeed, many of the principles hitherto followed in American yacht-building are entirely abandoned. One of the most notable compromise yachts yet built is the *Valkyr*, designed by Mr. A. Cary Smith, of which we give the sheer and body plans. Although a center-board sloop, she draws six feet on a length of forty-six and seven-tenths feet on the water line. While broad amidships, her lines taper aft to a fine, narrow elliptical counter. Her bow is sharp, but wedge-shaped, and her head-rig is, like that of the *Regina*, a long, straight "horn" of a bowsprit and two jibs. Her sheer plan suggests the cutter, while her interior plan is American, and her rig is modified by English patterns. She carries seven tons of her ballast in lead on her keel. The method by which it is fixed to the keel was invented by Dr. Dawson, her owner, and is worthy of notice. The keel was first shaped and then turned over, and a groove hollowed out on the under side of it, twenty-seven feet long by sixteen inches wide amidships. The groove was filled with pigs

CATAMARAN.

A FRESH BREEZE.

of lead, and then, a barrier of earth and plank having been raised on each side, a quantity of boiling lead was poured into the crevices, which fused the whole into a single mass. This is altogether different from the method generally employed in fixing lead on the keel of the modern cutter. It will be seen from the diagram on page 366 that a keelson is dispensed with, the sharp floor timbers being braced by iron knees, called knee-floors.

Long riveted bolts pass through these and the keel, and entirely through the lead.

Already we have such American-built cutters here as the *Muriel*, the *Yolande* or the *Oriva*, constructed by Mr. Piepgrass. Whatever be the sailing qualities of the latter, she presents one of the finest examples of ship-building skill ever constructed in this country. She is in every respect an out-and-out cutter, except that the bowsprit runs in through a gammon

TYPE OF SMALL AMERICAN YACHT.

iron over the stem instead of by the side of it. The decorations of her cabin, in which great economy of room and admirable mechanical devices have been displayed, was designed by Mr. Eidlitz, the architect. Another architect, Mr. Prague, was employed to design the sumptuous cabins of the *Montauk*, an indication that the decoration of our yachts is keeping pace with the interest displayed in decorating our houses. Mahogany and cherry are the woods most affected for this purpose at present. An excellent adaptation of the latter may be seen in Mr. Lawley's small but beautiful sloop *Countess*.

With the arrival of the cutter has also come the yawl rig, first brought into prominence on the Atlantic coast by the yawl *Edith*, of the Eastern Yacht Club, but a favorite rig for some years with the bold mariners of the San Francisco Yacht Club. There the mizzen is called a driver, and is leg-of-mutton shape instead of square-headed. It is a picturesque rig, and very convenient in small yachts intended for cruising and to be sailed with an eye to economy. As such we think it is destined to supersede our class of small schooners.

What then—are we to see foreign models and rigs driving out native inventions? No, very far from this; but in answering the question we

are brought face to face with problems which, with mathematics and without them, by “rule of thumb” or absolute empiricism, have been discussed almost interminably by salts, scientists, and tyros alike without reaching results acceptable to all, nor can they be ever quite settled, at least not until the question is dispassionately considered from every point of view, and with the fundamental principle of adaptation fully acknowledged. The

American beamy yacht has at the outset greater initial stability than the narrow, deep-draft, heavily ballasted type, and less displacement, therefore, because carrying less weight. The beamy, shallow boat can thus spread more canvas to her length and weight, and gain in speed, other things being equal, by the greater sail-power to her weight up to an inclination of thirty degrees. It is

KEEL PLAN OF CUTTER, SHOWING IRON FLOORS AND LEAD ON THE KEEL.

MIDSHIP SECTION OF TYPICAL CENTER-BEARD SLOOP-YACHT,
40 FEET LONG OVER ALL, 14 FEET BEAM, 3 FEET 9
INCHES DEEP, EXCLUSIVE OF TRUNK.

more difficult to carry her to that point than a narrower vessel, but when that is reached she is far more liable to capsize than the other type at an inclination of forty-five degrees, although the latter reaches that point with less lateral force of wind or waves. Each principle, therefore, has its advantages, while the merit claimed for the narrow cutter in carrying weights and canvas low can be also applied to sloops, if so desired. If the cutter is safer and easier in a sea-way, she is more uncomfortable, as she lies over so far, while by reducing beam a little and increasing

AMERICAN YAWL.

the draft a vessel can be designed that for cruising may combine the chief points of

each type. We find something of this sort in our deep-sea fishing schooners of fifteen years ago. Where they cannot live no other craft of the same size can. The extremes to which each type has been carried are due mainly to the arbitrary rules of measurement adopted by racing organizations. The English clubs tax beam and

BODY PLAN OF TYPICAL ENGLISH CUTTER, 38 FEET LENGTH OVER ALL, 6
FEET BEAM, AND 6 FEET DRAFT.

tonnage, measuring length from the heel of the keel. Therefore, the English yachtsman tries to get stability out of depth, and cheats the rules by raking the stern-post. Until recently American clubs taxed length, and thus, for a given sail-power, size was obtained by beam rather than by length and depth. All rules of measurement can only be general and arbitrary, but it is by this time evident that no rule can approximate justice without also taxing the spread of canvas carried. This is actually the latest phase adopted in this knotty question, and only three cabin-yacht clubs in America still adhere to the absurd length-over-all system of yacht measurement. Were it not for these opposite rules, hitherto laid down in the interest of racing, there would now be far less divergence between English and American yachts. For the rest, the discussion of the relative merits of each would be more valuable if we would first inquire for what purpose a yacht is intended. Adaptation lies at the basis of the whole question, and it is idle to expect to invent a model that will be equally good in rough and in smooth water, for cruising and for racing, for deep water and for shallow sounds.

S. G. W. Benjamin.

HENRY D. THOREAU.

HENRY D. THOREAU. (FROM HIS LAST PORTRAIT, A TINTYPE, TAKEN BY CRITCHERSON, OF WORCESTER, MASS., IN 1861; PRESENTED TO JOHN H. TREADWELL BY RALPH WALDO EMERSON.)

IN "Walden" Thoreau enumerates, in a serio-humorous vein, his various unpaid occupations, such as inspector of storms, surveyor of forest-paths and all across-lot routes, shepherd and herder to the wild stock of the town, etc., etc. Among the rest he says: "For a long time I was reporter to a journal of no very wide circulation, whose editor has never yet seen fit to print the bulk of my contributions, and, as is too common with writers, I got only my labor for my pains. However, in this case my pains were their own reward." The journal to which Thoreau so playfully alludes, consisting of many manuscript volumes, is now the property of Mr. H. G. O. Blake, an old friend and correspondent of his, and his rejected contributions to it, after a delay of nearly twenty years, are being put into print. "Early Spring in Massachusetts," lately published by Houghton, Mifflin

& Co., is made up of excerpts from this journal. A few of the passages have been in print before; I notice one in the "Week," one or more in his discourse on "Walking, or the Wild," and one in the essay called "Life without Principle."

Thoreau published but two volumes in his life-time,—“A Week on the Concord and Merrimack Rivers”—which, by the way, is mainly a record of other and much longer voyages upon other and less tangible rivers than those named in the title—and “Walden, or Life in the Woods.” The other six volumes of his works, including Mr. Blake’s, have been collected and published since his death.

It is to be hoped that, in time, we shall have the rest of his journal in print—at least a series of year-books from it, one volume for each of the four seasons. His journal was probably written with an eye to its future

publication. It does not consist of mere scraps, hasty memoranda, and jottings-down, like Hawthorne's note-book, and like the blotter most literary men keep, but of finished work—blocks carefully quarried, and trimmed, and faced, at least with a plumb spot upon each, to be used or rejected in the construction of future works. When he wrote a book, or a lecture, or an essay, he probably went to his journal for the greater share of the material. The amount of this manuscript matter he left behind him at his death was, perhaps, equal to all the matter he had printed, and, though it had doubtless been sorted over more or less, yet a large per cent. of it seems to be quite as good as any of his work and quite as characteristic. He revised, and corrected, and supplemented his record from day to day and from year to year, till it reflects truly his life and mind. Every scrap he ever wrote carries his flavor and quality unmistakably, as much as a leaf or twig of a sassafras-tree carries its quality and flavor. He was a man so thoroughly devoted to principle and to his own aims in life that he seems never to have allowed himself one indifferent or careless moment. He was always making the highest demands upon himself and upon others.

In his private letters his bow is strung just as taut as in his printed works, and he uses arrows from the same quiver, and sends them just as high and far as he can. In his journal it is the same.

Thoreau's fame has steadily increased since his death, in 1862, as it was bound to do. It was little more than in the bud at that time, and its full leaf and flowering are not yet, perhaps not in many years yet. He improves with age; in fact, requires age to take off a little of his asperity and fully ripen him. The generation he lectured so sharply will not give the same heed to his words as will the next and the next. The first effect of the reading of his books, upon many minds, is irritation and disapproval; the perception of their beauty and wisdom comes later. He makes short work of our prejudices; he likes the wind in his teeth, and to put it in the teeth of his reader. He was a man devoid of compassion, devoid of sympathy, devoid of generosity, devoid of patriotism, as these words are usually understood, yet his life showed a devotion to principle such as one life in millions does not show; and matching this there runs through his works a vein of the purest and rarest poetry and the finest wisdom. For both these reasons time will enhance rather than lessen the value of his contributions. The world likes a good hater and refuser almost as well as it likes a good lover and acceptor, only it likes him farther off.

In writing of Thoreau, I am not conscious of having any criticism to make of him. I would fain accept him just as he was, and make the most of him, defining and discriminating him as I would a flower or a bird or any other product of nature—perhaps exaggerating some features the better to bring them out. I suppose there were greater men among his contemporaries, but I doubt if there were any more genuine and sincere, or more devoted to ideal ends. If he was not this, that, or the other great man, he was Thoreau, and he fills his own niche well, and has left a positive and distinct impression upon the literature of his country. He did his work thoroughly; he touched bottom; he made the most of his life. He was, perhaps, a little too near his friend and master, Emerson, and brought too directly under his influence. If he had lived farther from him, he would have felt his attraction less. But he was just as positive a fact as Emerson. The contour of his moral nature was just as firm and resisting. He was no more a soft-shelled egg, to be dented by every straw in the nest, than was his distinguished neighbor.

An English reviewer has summed up his estimate of Thoreau by calling him a "skulker," which is the pith of Dr. Johnson's smart epigram about Cowley, a man in whom Thoreau is distinctly foreshadowed: "If his activity was virtue, his retreat was cowardice." Thoreau was a skulker if it appears that he ran away from a noble part to perform an ignoble, or one less noble. The world has a right to the best there is in a man, both in word and deed: from the scholar, knowledge; from the soldier, courage; from the statesman, wisdom; from the farmer, good husbandry, etc.; and from all, virtue; but has it a right to say arbitrarily who shall be soldiers and who poets? Is there no virtue but virtue? no religion but in the creeds? no salt but what is crystallized? Who shall presume to say the world did not get the best there was in Thoreau—high and much needed service from him?—albeit there appear in the account more kicks than compliments. Would you have had him stick to his lead-pencils, or to school-teaching, and let Walden Pond and the rest go? We should have lost some of the raciest and most antiseptic books in English literature, and an example of devotion to principle that provokes and stimulates like a winter morning. I am not aware that Thoreau shirked any responsibility or dodged any duty proper to him, and he could look the world as square in the face as any man that ever lived.

The people of his native town remember at least one notable occasion on which Thoreau did not skulk, nor sulk either. I

refer to the 30th of October, 1859, when he made his plea for Captain John Brown, while the hero was on trial in Virginia. He was about the only Northern man who was not a skulker, or who did not hide behind some pretext or other. It was proposed to stop Thoreau's mouth, persuade him to keep still and lie low, but he was not to be stopped. He thought there were enough lying low—the ranks were all full there, the ground was covered; and in an address delivered in Concord he glorified the old hero in words that, at this day and in the light of subsequent events, it thrills the blood to read. This instant and unequivocal indorsement of Brown by Thoreau, in the face of the most overwhelming public opinion even among anti-slavery men, throws a flood of light upon him. It is the most significant act of his life. It clinches him; it makes the colors fast. We know he means what he says after that. It is of the same metal and has the same ring as Brown's act itself. It shows what thoughts he had fed his soul on, what school he had schooled himself in, what his devotion to the ideal meant. His hatred of slavery and injustice, and of the government that tolerated them, was pure, and it went clean through; it stopped at nothing. Iniquitous laws must be defied, and there is no previous question. "The fact that the politician falls," he says, referring to the repeal of the Fugitive Slave law, "is merely that there is less honor among thieves than was supposed, and not the fact that they are thieves." For the most part, Thoreau's political tracts and addresses seem a little petulant and willful, and fall just short of enlisting one's sympathies, and his carrying his opposition to the State to the point of allowing himself to be put in jail rather than pay a paltry tax, savors a little bit of the grotesque and the melodramatic. But his plea for John Brown when the whole country was disowning him, abolitionists and all, fully satisfies one's sense of the fitness of things. It does not overshoot the mark. The mark was high, and the attitude of the speaker was high and scornful, and uncompromising in the extreme. It was just the occasion required to show Thoreau's metal. "If this man's acts and words do not create a revival, it will be the severest possible satire on the acts and words that do. It is the best news that America has ever heard." "Think of him—of his rare qualities!—such a man as it takes ages to make, and ages to understand; no mock hero, nor the representative of any party. A man such as the sun may not rise upon again in this benighted land. To whose making went the costliest material, the finest adamant; sent

to be the redeemer of those in captivity; and the only use to which you can put him is to hang him at the end of a rope!" "Do yourselves the honor to recognize him; he needs none of your respect." It was just such radical qualities as John Brown exhibited, or their analogue and counterpart in other fields, that Thoreau coveted and pursued through life; in man, devotion to the severest ideal, friendship founded upon antagonism, or hate, as he preferred to call it; in nature the untamed and untamable, even verging on the savage and pitiless; in literature the heroic—"books, not which afford us a cowering enjoyment, but in which each thought is of unusual daring; such as an idle man cannot read, and a timid one would not be entertained by." Indeed, Thoreau was Brown's spiritual brother, the last and finer flowering of the same plant—the seed flowering; he was just as much of a zealot, was just as gritty and unflinching in his way; a man whose brow was set, whose mind was made up, and leading just as forlorn a hope, and as little quailed by the odds.

In the great army of Mammon, the great army of the fashionable, the complacent and church-going, Thoreau was a skulker, even a deserter, if you please—yea, a traitor fighting on the other side.

Emerson regrets the loss to the world of his rare powers of action, and thinks that, instead of being the captain of a huckleberry-party, he might have engineered for all America. But Thoreau, doubtless, knew himself better when he said, with his usual strength of metaphor, that he was as unfit for the coarse uses of this world as gossamer for ship-timber. A man who believes that "life should be lived as tenderly and daintily as one would pluck a flower," and actually and seriously aims to live his life so, is not a man to engineer for all America. If you want a columbiad you must have tons and tons of gross metal, and if you want an engineer for all America, leader and wielder of vast masses of men, you must have a certain breadth and coarseness of fiber in your hero; but if you want a trenchant blade like Thoreau, you must leave the pot-metal out and look for something bluer and finer.

Thoreau makes a frank confession upon this very point in his journal, written when he was but twenty-five. "I must confess I have felt mean enough when asked how I was to act on society, what errand I had to mankind. Undoubtedly I did not feel mean without a reason, and yet my loitering is not without a defense. I would fain communicate the wealth of my life to men, would really give them what is most precious in my gift. I

would secrete pearls with the shell-fish, and lay up honey with the bees for them. I will sift the sunbeams for the public good. I know no riches I would keep back." And his subsequent life made good these words. He gave the world the strongest and bravest there was in him, the pearls of his life,—not a fat oyster, not a reputation unctuous with benevolence and easy good-will, but a character crisp and pearl-like, full of hard, severe words, and stimulating taunts and demands. Thoreau was an extreme product, an extreme type of mind and character, and was naturally more or less isolated from his surroundings. He planted himself far beyond the coast-line that bounds most lives, and seems insular and solitary, but he believed he had the granite floor of principle beneath him, and without the customary intervening clay or quicksands.

Of a profile we say the outlines are strong, or they are weak and broken. The outlines of Thoreau's moral nature are strong and noble, but the direct face-to-face expression of his character is not always pleasing, not always human. He appears best in profile, when looking away from you and not toward you—when looking at Nature and not at man. He combined a remarkable strength of will with a nature singularly sensitive and delicate—the most fair and fragile of wood-flowers on an iron stem. With more freedom and flexibility of character, greater capacity for self-surrender and self-abandonment, he would have been a great poet. But his principal aim in life was moral and intellectual, rather than artistic. He was an ascetic before he was a poet, and he cuts the deepest in the direction of character and conduct. He had no caution or prudence in the ordinary sense, no worldly temporizing qualities of any kind, was impatient of the dross and alloy of life—would have it pure flame, pure purpose and aspiration; and, so far as he could make it, his life was so. He was, by nature, of the Opposition; he had a constitutional No in him that could not be tortured into Yes. He was of the stuff that saints and martyrs and devotees, or, if you please, fanatics are made of, and, no doubt, in an earlier age, would have faced the rack or the stake with perfect composure. Such a man was bound to make an impression by contrast, if not by comparison, with the men of his country and time. He is, for the most part, a figure going the other way from that of the eager, money-getting, ambitious crowd, and he questions and admonishes and ridicules the passers-by sharply. We all see him and remember him, and feel his shafts. Especially was his attitude upon all social and political questions scornful and exasperating. His devotion to principle, to the ideal, was absolute;

it was like that of the Hindu to his idol. If it devoured him or crushed him—what business was that of his? There was no conceivable failure in adherence to principle.

Thoreau was, probably, the wildest civilized man this country has produced, adding to the shyness of the hermit and woodsman the wildness of the poet, and to the wildness of the poet the greater ferity and elusiveness of the mystic. An extreme product of civilization and of modern culture, he was yet as untouched by the worldly and commercial spirit of his age and country as any red man that ever haunted the shores of his native stream. He put the whole of Nature between himself and his fellows. A man of the strongest local attachments—not the least nomadic, seldom wandering beyond his native township, yet his spirit was as restless and as impatient of restraint as any nomad or Tartar that ever lived. He cultivated an extreme wildness, not only in his pursuits and tastes, but in his hopes and imaginings. He says to his friend, "Hold fast your most indefinite waking dream." Emerson says his life was an attempt to pluck the Swiss edelweiss from the all but inaccessible cliffs. The higher and the wilder, the more the fascination for him. Indeed, the loon, the moose, the beaver were but faint types and symbols of the wildness he coveted and would have re-appear in his life and books;—not the cosmical, the universal—he was not great enough for that—but simply the wild as distinguished from the domestic and the familiar, the remote and the surprising as contrasted with the hackneyed and the commonplace, arrow-heads as distinguished from whet-stones or jack-knives.

Thoreau was French on one side and Puritan on the other. It was the wild, untamable French core in him—a dash of the gray wolf that stalks through his ancestral folk-lore, as in Audubon and the Canadian *voyageurs*—that made him turn with such zest and such genius to aboriginal nature; and it was the Puritan element in him—strong, grim, uncompromising, almost heartless—that held him to such high, austere, moral and ideal ends. His genius was Saxon in its homeliness and sincerity, in its directness and scorn of rhetoric, but that wild revolutionary cry of his, and that sort of restrained ferocity and hirsuteness, are more French. He said in one of his letters, when he was but twenty-four: "I grow savager and savager every day, as if fed on raw meat, and my tameness is only the repose of untamableness." But his savageness took a mild form. He could not even eat meat; it was unclean and offended his imagination, and when he went to Maine he felt for weeks that his nature had been made the coarser because he had witnessed the killing of a moose. His boasted

savageness, the gray wolf in him, only gave a more decided grit or grain to his mental and moral nature,—made him shut his teeth the more firmly, sometimes even with an audible snap and growl, upon the poor lambs and ewes and superannuated wethers of the social, religious, political folds.

In his moral and intellectual growth and experience, Thoreau seems to have reacted strongly from a marked tendency to invalidism in his own body. He would be well in spirit at all hazards. What was this never-ending search of his for the wild but a search for health, for something tonic and antiseptic in nature? Health, health, give me health, is his cry. He went forth into nature as the boys go to the fields and woods in spring after wintergreens, black-birch, crinkle-root, and sweet-flag; he had an unappeasable hunger for the pungent, the aromatic, the bitter-sweet, for the very rind and salt of the globe. He fairly gnaws the ground and the trees in his walk, so craving is his appetite for the wild. He went to Walden to study, but it was as a deer goes to a deer-lick; the brine he was after did abound there. Any trait of wildness and freedom suddenly breaking out in any of the domestic animals, as when your cow leaped your fence like a deer and ate up your corn, or your horse forgot that he was not a mustang on the plains, and took the bit in his mouth, and left your buggy and family behind high and dry, etc., was eagerly snapped up by him. Ah, you have not tamed them, you have not broken them yet! He makes a most charming entry in his journal about a little boy he one day saw in the street, with a home-made cap on his head made of a woodchuck's skin. He seized upon it as a horse with the crib-bite seizes upon a post. It tasted good to him.

"The great gray-tipped hairs were all preserved, and stood out above the brown ones, only a little more loosely than in life. It was as if he had put his head into the belly of a woodchuck, having cut off his tail and legs, and substituted a visor for the head. The little fellow wore it innocently enough, not knowing what he had on forsooth, going about his small business pit-a-pat, and his black eyes sparkled beneath it when I remarked on its warmth, even as the woodchuck's might have done. Such should be the history of every piece of clothing that we wear."

He says how rarely are we encouraged by the sight of simple actions in the street, but when one day he saw an Irishman wheeling home from far a large, damp, and rotten pine-log for fuel, he felt encouraged. That looked like fuel; it warmed him to think of it. The piles of solid oak-wood which he saw in other yards did not interest him at all in comparison. It savored of the wild, and though water-soaked, his fancy kindled at the sight.

He loved wild men, not tame ones. Any half-wild Irishman, or fisherman, or hunter in his neighborhood he was sure to get a taste of sooner or later. He seems to have had a hankering for the Indian all his life; could eat him raw, one would think. In fact, he did try him when he went to Maine, and succeeded in extracting more nutriment out of him than any other man has done. He found him rather tough diet, and was, probably, a little disappointed in him, but he got something out of him akin to that which the red squirrel gets out of a pine-cone. In his books he casts many a longing and envious glance upon the Indian. Some old Concord sachem seems to have looked into his fount of life and left his image there. His annual spring search for arrow-heads was the visible outcropping of this aboriginal trace. How he prized these relics! One is surprised to see how much he gets out of them. They become arrow-root instead of arrow-stones. "They are sown, like a grain that is slow to germinate, broadcast over the earth. As the dragon's teeth bore a crop of soldiers, so these bear a crop of philosophers and poets, and the same seed is just as good to plant again. It is a stone-fruit. Each one yields me a thought. I come nearer to the maker of it than if I found his bones." "When I see these signs I know that the subtle spirits that made them are not far off, into whatever form transmuted." (Journal, pages 257-58.) Our poetry, he said, was white man's poetry, and he longed to hear what the Indian muse had to say. I think he liked the Indian's paint and feathers. Certainly he did his skins, and the claws and hooked beaks with which he adorned himself. He puts a threatening claw or beak into his paragraphs whenever he can, and feathers his shafts with the nicest art.

So wild a man and such a lover of the wild, and yet it does not appear that he ever sowed any wild oats. Though he somewhere exclaims impatiently: "What demon possesses me that I behave so well?" he took it all out in transcendentalism and arrow-heads. His only escapades were eloping with a mountain or coquetting with Walden Pond! His weakness was that he had no weakness—it was only unkindness. He had a deeper center-board than most men, and he carried less sail. The passions and emotions and ambitions of his fellows, which are sails that so often need to be close-reefed and double-reefed, he was quite free from. Thoreau's isolation, his avoidance of the world, was in self-defense, no doubt. His genius would not bear the contact of rough hands any more than would butterflies' wings. He says, in "Walden": "The finest qualities of our nature, like the

bloom on fruits, can be preserved only by the most delicate handling." This bloom, this natural innocence, Thoreau was very jealous of and sought to keep unimpaired, and, perhaps, succeeded as few men ever have. He says you cannot even know evil without being a *particeps criminis*. He did not so much regret the condition of things in this country (in 1861) as that he had ever heard of it.

Yet Thoreau creates as much consternation among the saints as among the sinners. His delicacy and fineness were saved by a kind of cross-grain there was in him—a natural twist and stubbornness of fiber. He was not easily reduced to kindling-wood. His self-indulgences were other men's crosses. His attitude was always one of resistance and urge. He hated sloth and indolence and compliance as he hated rust. He thought nothing was so much to be feared as fear, and that atheism might, comparatively, be popular with God himself. Beware even the luxury of affection, he says—"There must be some nerve and heroism in our love, as in a winter morning." He tells his correspondent to make his failure tragical by the earnestness and steadfastness of his endeavor, and then it will not differ from success. His saintliness is a rock-crystal. He says in "Walden": "Probably I should not consciously and deliberately forsake my particular calling to do the good which society demands of me, to save the universe from annihilation; and I believe that a like but infinitely greater steadfastness elsewhere is all that now preserves it." Is this crystal a diamond? What will it not cut?

There is no grain of concession or compromise in this man. He asks no odds and he pays no boot. He will have his way, but his way is not down the stream with the current. He loves to warp up it against wind and tide, holding fast by his anchor at night. When he is chagrined or disgusted, it convinces him his health is better—that there is some vitality left. It is not compliments his friends get from him—rather taunts. The caress of the hand may be good, but the sting of its palm is good also. No is more bracing and tonic than Yes. He said: "I love to go through a patch of scrub-oaks in a bee-line—where you tear your clothes and put your eyes out." The spirit of antagonism never sleeps with Thoreau, and the love of paradox is one of his guiding stars. "The longer I have forgotten you, the more I remember you," he says to his correspondent. "My friend is cold and reserved, because his love for me is waxing and not waning," he says in his journal. The difficult and the disagreeable are in the line of his self-indulgence. Even lightning will choose the easiest way

out of the house—an open window or door. Thoreau would rather go through the solid wall, or mine out through the cellar.

When he is sad, his only regret is that he is not sadder. He says if his sadness was only sadder it would make him happier. In writing to his friend, he says it is not sad to him to hear she has sad hours: "I rather rejoice in the richness of your experience." In one of his letters, he charges his correspondent to "improve every opportunity to be melancholy," and accuses himself of being too easily contented with a slight and almost animal happiness. "My happiness is a good deal like that of the woodchucks." He says that "of acute sorrow I suppose that I know comparatively little. My saddest and most genuine sorrows are apt to be but transient regrets." Yet he had not long before lost by death his brother John, with whom he made his voyage on the Concord and Merrimack. Referring to John's death, he said: "I find these things more strange than sad to me. What right have I to grieve who have not ceased to wonder?" and says in effect, afterward, that any pure grief is its own reward. John, he said, he did not wish ever to see again—not the John that was dead (O Henry! Henry!), John as he was in the flesh, but the ideal, the nobler John, of whom the real was the imperfect representative. When the son of his friend died, he wasted no human regrets. It seemed very natural and proper that he should die. "Do not the flowers die every autumn?" "His fine organization demanded it [death], and nature gently yielded its request. It would have been strange if he had lived."

Thoreau was either destitute of pity and love (in the human sense), and of many other traits that are thought to be both human and divine, or else he studiously suppressed them and thought them unworthy of him. He writes and talks a great deal about love and friendship, and often with singular beauty and appreciation, yet he always says to his friend: "Stand off—keep away! Let there be an unfathomable gulf between us—let there be a wholesome hate." Indeed, love and hatred seem inseparable in his mind, and curiously identical. He writes in his journal that "words should pass between friends as the lightning passes from cloud to cloud." One of his poems begins:

"Let such pure hate still underprop
Our love, that we may be
Each other's conscience,
And have our sympathy
Mainly from thence."

"Surely, surely, thou wilt trust me
When I say thou dost disgust me.

Oh, I hate thee with a hate
That would fain annihilate;
Yet, sometimes, against my will,
My dear friend, I love thee still.
It were treason to our love,
And a sin to God above,
One iota to abate
Of a pure, impartial hate."

This is the salt with which he seasons and preserves his love—hatred. In this pickle it will keep. Without it, it would become stale and vulgar. This is characteristic of Thoreau; he must put in something sharp and bitter. You shall not have the nut without its bitter acrid rind or prickly sheath.

As a man, Thoreau appears to have been what is called a crusty person—a loaf with a hard bake, a good deal of crust, forbidding to tender gums, but sweet to those who had good teeth and unctious enough to soften him.

He was no fair-weather walker. He delighted in storms, and in frost and cold. They were congenial to him. They came home. "Yesterday's rain," he begins an entry in his journal, "in which I was glad to be drenched," etc. Again he says: "I sometimes feel that I need to sit in a far-away cave through a three weeks' storm, cold and wet, to give a tone to my system." Another time: "A long, soaking rain, the drops trickling down the stubble, while I lay drenched on a last year's bed of wild oats, by the side of some bare hill, ruminating." And this in March, too! He says "to get the value of a storm we must be out a long time and travel far in it, so that it may fairly penetrate our skin," etc. He rejoices greatly when, on an expedition to Monadnock, he gets soaked with rain and is made thoroughly uncomfortable. It tastes good. It made him appreciate a roof and a fire. The mountain gods were especially kind and thoughtful to get up the storm. When they saw himself and friend coming, they said: "There come two of our folks. Let us get ready for them—get up a serious storm that will send a-packing these holiday guests. Let us receive them with true mountain hospitality—kill the fatted cloud," etc. In his journal he says: "If the weather is thick and stormy enough, if there is a good chance to be cold, and wet, and uncomfortable—in other words, to feel weather-beaten, you may consume the afternoon to advantage, thus browsing along the edge of some near wood, which would scarcely detain you at all in fair weather," etc. "There is no better fence to put between you and the village than a storm into which the villagers do not venture forth." This passion for storms and these many drenchings no doubt helped shorten Thoreau's days.

This crustiness, this playful and willful per-

versity of Thoreau, is one source of his charm as a writer. It stands him instead of other qualities—of real unctious and heartiness—is, perhaps, these qualities in a more seedy and desiccated state. Hearty, in the fullest sense, he was not, and unctuous he was not, yet it is only by comparison that we miss these qualities from his writings. Perhaps he would say that we should not expect the milk on the outside of the cocoa-nut, but I suspect there is an actual absence of milk here, though there is sweet meat, and a good, hard shell to protect it. Good-nature and conciliation were not among his accomplishments, and yet he puts his reader in a genial and happy frame of mind. He is the occasion of unctious and heartiness in others, if he has not them in himself. He says of himself, with great penetration: "My only integral experience is in my vision. I see, perchance, with more integrity than I feel." His sympathies lead you into narrow quarters, but his vision takes you to the hill-tops. As regards humanity and all that goes with it, he was like an inverted cone, and grew broader and broader the farther he got from it. He approached things, or even men, but very little through his humanity or his manliness. How delightful his account of the Canadian wood-chopper in "Walden," and yet he sees him afar off, across an impassable gulf!—he is a kind of Homeric or Paphlagonian man to him. Very likely he would not have seen him at all had it not been for the classic models and ideals with which his mind was filled, and which saw for him.

Yet Thoreau doubtless liked the flavor of strong, racy men. He said he was naturally no hermit, but ready enough to fasten himself, like a blood-sucker for the time, to any full-blooded man that came in his way; and he gave proof of this when he saw and recognized the new poet, Walt Whitman. Here is the greatest democrat the world has seen, he said, and he found him exhilarating and encouraging, while yet he felt somewhat imposed upon by his heartiness and broad generalities. As a writer, Thoreau shows all he is, and more. Nothing is kept back; greater men have had far less power of statement. His thoughts do not merely crop out, but lie upon the surface of his pages. They are fragments; there is no more than you see. It is not the edge or crown of the native rock, but a drift boulder. He sees clearly, thinks swiftly, and the sharp emphasis and decision of his mind strew his pages with definite and striking images and ideas. His expression is never sod-bound, and you get its full force at once.

One of his chief weapons is a kind of restrained extravagance of statement, a compressed exaggeration of metaphor. The hyper-

bole is big, but it is gritty and is firmly held. Sometimes it takes the form of paradox, as when he tells his friend that he needs his hate as much as his love :

"Indeed, indeed, I cannot tell,
Though I ponder on it well,
Which were easier to state,
All my love or all my hate."

Or when he says, in "Walden": "Our manners have been corrupted by communication with the saints," and the like. Sometimes it becomes downright brag, as when he says, emphasizing his own preoccupation and indifference to events: "I would not run around the corner to see the world blow up"; or again: "Methinks I would hear with indifference if a trustworthy messenger were to inform me that the sun drowned himself last night." Again it takes an impish, ironical form, as when he says: "In heaven I hope to bake my own bread and clean my own linen." Another time it assumes a half-quizzical, half-humorous turn, as when he tells one of his correspondents that he was so warmed up in getting his winter's wood that he considered, after he got it housed, whether he should not dispose of it to the ash-man, as if he had extracted all its heat. Often it gives only an added emphasis to his expression, as when he says: "A little thought is sexton to all the world"; or, "Some circumstantial evidence is very strong, as when you find a trout in the milk"; but its best and most constant office is to act as a kind of fermenting, expanding gas that lightens, if it sometimes inflates, his page. His exaggeration is saved by its wit, its unexpectedness. It gives a wholesome jostle and shock to the mind.

Thoreau was not a racy writer, but a trenchant; not nourishing so much as stimulating; not convincing, but wholesomely exasperating and arousing, which, in some respects, is better. There is no heat in him, and yet in reading him one understands what he means when he says that, sitting by his stove at night, he sometimes had thoughts that kept the fire warm. I think the mind of his reader always reacts healthfully and vigorously from his most rash and extreme statements. The blood comes to the surface and to the extremities with a bound. He is the best of counter-irritants when he is nothing else. There is nothing to reduce the tone of your moral and intellectual systems in Thoreau. Such heat as there is in refrigeration, as he himself might say,—you are always sure of that in his books.

His literary art, like that of Emerson's, is in the unexpected turn of his sentences. Shakspeare says :

"It is the witness still of excellency
To put a strange face on his own perfection."

This "strange face" Thoreau would have at all hazards, even if it was a false face. If he could not state a truth he would state a paradox, which, however, is not always a false face. He must make the commonest facts and occurrences wear a strange and unfamiliar look. The commonplace he would give a new dress, even if he set it masquerading. But the reader is always the gainer by this tendency in him. It gives a fresh and novel coloring to what in other writers would prove flat and wearisome. He made the whole world interested in his private experiment at Walden Pond by the strange and, on the whole, beaming face he put upon it. Of course, this is always more or less the art of genius, but it was preëminently the art of Thoreau. We are not buoyed up by great power, we do not swim lightly as in deep water, but we are amused and stimulated, and now and then positively electrified.

To make an extreme statement, and so be sure that he made an emphatic one, that was his aim. Exaggeration is less to be feared than dullness and tameness. The far-fetched is good if you fetch it swift enough; you must make its heels crack—jerk it out of its boots, in fact. Cushions are good provided they are well stuck with pins; you will be sure not to go to sleep in that case. Warm your benumbed hands in the snow; that is a more wholesome warmth than that of the kitchen stove. This is the way he underscored his teachings. Sometimes he racked his bones to say the unsayable. His mind had a strong gripe, and he often brings a great pressure to bear upon the most vague and subtle problems, or shadows of problems, but he never quite succeeds to my satisfaction in condensing bluing from the air or from the Indian summer haze, any more than he succeeded in extracting health and longevity from water-gruel and rye-meal.

He knew what an exaggeration he was, and he went about it deliberately. He says to one of his correspondents, a Mr. B—, whom he seems to have delighted to pummel with these huge boxing-gloves: "I trust that you realize what an exaggerator I am,—that I lay myself out to exaggerate whenever I have an opportunity,—pile Pelion upon Ossa to reach heaven so. Expect no trivial truth from me, unless I am on the witness-stand. I will come as near to lying as you can drive a coach-and-four."

We have every reason to be thankful that he was not always or commonly on the witness-stand. The record would have been

much duller. Eliminate from him all his exaggerations, all his magnifying of the little, all his inflation of bubbles, etc., and you make sad havoc in his pages—as you would, in fact, in any man's. Of course it is one thing to bring the distant near, and thus magnify as does the telescope, and it is quite another thing to inflate a pigmy to the stature of a giant with a gas-pipe. But Thoreau brings the stars as near as any writer I know of, and if he sometimes magnifies a will-o'-the-wisp, too, what matters it? He had a hard common-sense, as well as an uncommon sense, and he knows well when he is conducting you to the brink of one of his astonishing hyperboles, and inviting you to take the leap with him, and what is more, he knows that you know it. Nobody is deceived and the game is well played. Writing to a correspondent who had been doing some big mountain-climbing, he says:

"It is after we get home that we really go over the mountain if ever. What did the mountain say? What did the mountain do? I keep a mountain anchored off eastward a little way, which I ascend in my dreams, both awake and asleep. Its broad haze spreads over a village or two, which do not know it; neither does it know them, nor do I when I ascend it. I can see its general outline as plainly now in my mind as that of Wachusett. I do not invent in the least, but state exactly what I see. I find that I go up it when I am light-footed and earnest. I am not aware that a single villager frequents it or knows of it. I keep this mountain to ride instead of a horse."

What a saving clause is that last one, and what humor!

The bird Thoreau most admired was Chanticleer, crowing from his perch in the morning. He says the merit of that strain is its freedom from all plaintiveness. Unless our philosophy hears the cock-crow in the morning it is belated. "It is an expression of the health and soundness of Nature—a brag for all the world." "Who has not betrayed his Master many times since he last heard that note?" "The singer can easily move us to tears or to laughter, but where is he who can excite in us a pure morning joy? When in doleful dumps, breaking the awful stillness of our wooden sidewalk on a Sunday, or perchance a watcher in the house of mourning, I hear a cockerel crow, far or near, I think to myself, 'There is one of us well, at any rate,'—and with a sudden gush return to my senses."

Thoreau pitched his "Walden" in this key; he claps his wings and gives forth a clear, saucy, cheery, triumphant note—if only to wake his neighbors up. And the book is certainly the most delicious piece of brag in literature. There is nothing else like it; nothing so good, certainly. It is a challenge and a triumph, and has a morning freshness

and *élan*. Read the chapter on his "bean-field." One wants to go forthwith and plant a field with beans, and hoe them barefoot. It is a kind of celestial agriculture. "When my hoe tinkled against the stones, that music echoed to the woods and the sky, and was an accompaniment to my labor which yielded an instant and immeasurable crop. It was no longer beans that I hoed, nor I that hoed beans; and I remembered with as much pity as pride, if I remembered at all, my acquaintances who had gone to the city to attend the oratorios." "On gala days the town fires its great guns, which echo like pop-guns to these woods, and some waif of martial music occasionally penetrated thus far. To me, away there in my bean-field and the other end of the town, the big guns sounded as if a puff-ball had burst; and when there was a military turn-out of which I was ignorant, I have sometimes had a vague sense all day,—of some sort of itching and disease in the horizon, as if some eruption would break out there soon, either scarlatina or canker-rash,—until at length some more favorable puff of wind, making haste over the fields and up the Wayland road, brought me information of the 'trainers'!"

What visitors he had, too, in his little hut—what royal company!—"especially in the morning, when nobody called." "One inconvenience I sometimes experience in so small a house—the difficulty of getting to a sufficient distance from my guest, when we began to utter the big thoughts in big words." "The bullet of your thought must have overcome its lateral and ricochet motion and fallen into its last and steady course before it reaches the ear of the hearer, else it may plough out again through the side of his head." He bragged that Concord could show him nearly everything worth seeing in the world or in nature, and that he did not need to read Dr. Kane's "Arctic Voyages" for phenomena that he could observe at home. He declined all invitations to go abroad, because he should then lose so much of Concord. As much of Paris, or London, or Berlin as he got, so much of Concord should he lose. He says in his journal: "It would be a wretched bargain to accept the proudest Paris in exchange for my native village." "At best, Paris could only be a school in which to learn to live here—a stepping-stone to Concord, a school in which to fit for this university." "The sight of a marsh-hawk in Concord meadows is worth more to me than the entry of the Allies into Paris." This is very Parisian and Victor Hugoish, except for its self-consciousness and the playful twinkle in the author's eye.

Thoreau had humor, but it had worked a little—it was not quite sweet; a vinous fermentation had taken place more or less in it. There was too much acid for the sugar. It shows itself especially when he speaks of men. How he disliked the average social and business man, and said his only resource was to get away from them. He was surprised to find what vulgar fellows they were. "They do a little business commonly each day, in order to pay their board, and then they congregate in sitting-rooms, and feebly fabulate and paddle in the social slush; and when I think that they have sufficiently relaxed, and am prepared to see them steal away to their shrines, they go unashamed to their beds, and take on a new layer of sloth." Methinks there is a drop of aquafortis in this liquor. Generally, however, there is only a pleasant acid or sub-acid flavor to his humor, as when he refers to a certain minister who spoke of God as if he enjoyed a monopoly of the subject; or when he says of the good church-people that "they show the whites of their eyes on the Sabbath, and the blacks all the rest of the week." He says the greatest bores who visited him in his hut by Walden Pond were the self-styled reformers, who thought that he was forever singing:

"This is the house that I built;
This is the man that lives in the house that I built."

But they did not know that the third line was:

"These are the folks that worry the man
That lives in the house that I built."

"I did not fear the hen-harriers, for I kept no chickens, but I feared the men-harriers rather."

What sweet and serious humor in that passage in "Walden" wherein he protests that he was not lonely in his hermitage:

"I have occasional visits in the long winter evenings, when the snow falls fast and the wind howls in the wood, from an old settler and original proprietor, who is reported to have dug Walden Pond and stoned it, and fringed it with pine-woods; who tells me stories of old time and of new eternity; and between us we manage to pass a cheerful evening with social mirth and pleasant views of things, even without apples or cider—a most wise and humorous friend, whom I love much, who keeps himself more secret than ever did Goffe or Whalley; and though he is thought to be dead, none can show where he is buried. An elderly dame, too, dwells in my neighborhood, invisible to most persons, in whose odorous herb-garden I love to stroll sometimes, gathering simples and listening to her fables; for she has a genius of unequaled fertility, and her memory runs back farther than mythology, and she can tell me the original of every fable, and on what fact every one is founded, for the incidents occurred when she was young. A ruddy and lusty old dame, who delights in all weathers and seasons, and is likely to outlive all her children yet."

Emerson says Thoreau's determination on natural history was organic, but it was his determination on supernatural history that was organic. Natural history was but one of the doors through which he sought to gain admittance to this inner and finer heaven of things. He hesitated to call himself a naturalist; probably even poet-naturalist would not have suited him. He says in his journal: "The truth is, I am a mystic, a transcendentalist, and a natural philosopher to boot," and the least of these is the natural philosopher. He says: "Man cannot afford to be a naturalist, to look at Nature directly, but only with the side of his eye. He must look through and beyond her. To look at her is as fatal as to look at the head of Medusa. It turns the man of science to stone." It is not looking at Nature that turns the man of science to stone, but looking at his dried and labeled specimens, and his dried and labeled theories of her. Thoreau always sought to look through and beyond her, and he missed seeing much there was in her; the jealous goddess had her revenge. I do not make this remark as a criticism, but to account for his failure to make any new or valuable contribution to natural history. He did not love Nature for her own sake, or the bird and the flower for their own sakes, or with an unmixed and disinterested love, as Gilbert White did, for instance, but for what he could make out of them. He says (Journal, page 83): "The ultimate expression or fruit of any created thing is a fine effluence, which only the most ingenuous worshiper perceives at a reverent distance from its surface even." This "fine effluence" he was always reaching after, and often grasping or inhaling. This is the mythical hound and horse and turtle-dove which he says in "Walden" he long ago lost, and has been on their trail ever since. He never abandons the search, and in every woodchuck-hole or musk-rat-den, in retreat of bird, or squirrel, or mouse, or fox that he pries into, in every walk and expedition to the fields or swamps, or to distant woods, in every spring note and call that he listens to so patiently, he hopes to get some clew to his lost treasures, to the effluence that so provokingly eludes him.

Hence, when we regard Thoreau simply as an observer or as a natural historian, there have been better, though few so industrious and persistent. He was up and out at all hours of the day and night, and in all seasons and weathers, year in and year out, and yet he saw and recorded nothing new. I cannot say that there was any felicitous and happy seeing; there was no inspiration of the eye, certainly not in the direction of natural history. He has added no new line or touch to

the portrait of bird or beast that I can recall —no important or significant fact to their lives. What he saw in this field everybody may see who looks; it is patent. He had not the detective eye of the great naturalist; he did not catch the clues and hints dropped here and there, the quick, flashing movements, the shy but significant gestures by which new facts are disclosed, mainly because he was not looking for them. His eye was not penetrating and interpretive. It was full of speculation; it was sophisticated with literature, sophisticated with Concord, sophisticated with himself. His mood was subjective rather than objective. He was more intent on the natural history of his own thought than on that of the bird. To the last his ornithology was not quite sure, not quite trustworthy. In his published journal he sometimes names the wrong bird, and what short work a naturalist would have made of his night-warbler, which Emerson reports Thoreau had been twelve years trying to identify. It was perhaps his long-lost turtle-dove, in some one of its disguises. From his journal it would seem that he was a long time puzzled to distinguish the fox-colored sparrow from the tree or Canadian sparrow—a very easy task to one who has an eye for the birds. But he was looking too intently for a bird behind the bird—for a mythology to shine through his ornithology. "The song-sparrow and the transient fox-colored sparrow—have they brought me no message this year? Is not the coming of the fox-colored sparrow something more earnest and significant than I have dreamed of? Have I heard what this tiny passenger has to say while it flits thus from tree to tree?" "I love the birds and beasts because they are mythologically in earnest." (Journal, page 284.)

If he had had the same eye for natural history he possessed for arrow-heads, what new facts he would have disclosed! But he was looking for arrow-heads. He had them in his mind; he thought arrow-heads; he was an arrow-head himself, and these relics fairly kicked themselves free of the mold to catch his eye.

Thoreau was a man eminently "preoccupied of his own soul." He had no self-abandonment, no self-forgetfulness; he could not give himself to the birds or animals: they must surrender to him. He says to one of his correspondents: "Whether he sleeps or wakes, whether he runs or walks, whether he uses a microscope or a telescope, or his naked eye, a man never discovers anything, never overtakes anything, or leaves anything behind, but himself." This is half true of some; it is wholly true of others. It is wholly true of Thoreau. Nature was the glass in which he saw himself. He says the partridge loves

peas, but not those that go into the pot with her! All the peas Thoreau loved had been in the pot with him and were seasoned by him.

I trust I do not in the least undervalue Thoreau's natural history notes; I only wish there were more of them. What makes them so valuable and charming is his rare descriptive powers. He could give the simple fact with the freshest and finest poetic bloom upon it. He says: "The note of the first blue-bird in the air answers to the purling rill of melted snow beneath. It is evidently soft and soothing, and, as surely as the thermometer, indicates a higher temperature. It is the accent of the south wind, its vernacular." Of the return of the highhole, or pigeon woodpecker, he says: "The loud *peep!* of a pigeon woodpecker is heard, and anon, the prolonged loud and shrill cackle calling the thin-wooded hill-sides and pastures to life. It is like the note of an alarm-clock set last fall so as to wake Nature up at exactly this date. *Up up up up up up up up up!*"

Often a single word or epithet of his tells the whole story. Thus he says, speaking of the music of the black-bird, that it has a "split-whistle"; the note of the red-shouldered starling is "gurgle-ee." Looking out of his window one March day, he says he cannot see the heel of a single snow-bank anywhere. He does not seem to have known that the shrike sang in the fall and winter as well as in the spring; and is he entirely sure he saw a musk-rat building its house in March (the fall is the time they build); or that he heard the whippoorwill singing in September; or that the woodchuck dines principally upon crickets? With what patience and industry he watched things for a sign! From his journal it would appear that Thoreau kept nature about Concord under a sort of police surveillance the year round. He shadowed every flower and bird and musquash that appeared. His vigilance was unceasing; not a mouse or a squirrel must leave its den without his knowledge. If the birds or frogs were not on hand promptly at his spring roll-call, he would know the reason; he would look them up; he would question his neighbors. He was up in the morning and off to some favorite haunt earlier than the day-laborers, and he chronicled his observations on the spot as if the case was to be tried in court the next day and he was the principal witness. He watched the approach of spring as a doctor watches the development of a critical case. He felt the pulse of the wind and the temperature of the day at all hours. He examined the plants growing under water, and noted the radical leaves of various weeds that keep green all winter under the snow. He

felt for them with benumbed fingers amid the wet and the snow. The first sight of bare ground and of the red earth excites him. The fresh meadow spring odor was to him like the fragrance of tea to an old tea-drinker. In early March he goes to the Corner Spring to see the tufts of green grass, or he inspects the minute lichens that spring from the bark of trees. "It is short commons," he says, "and innutritious." He brings home the first frog-spittle he finds in a ditch and studies it in a tumbler of water. The first water-beetle that appears he makes a note of, and the first skunk-cabbage that thrusts its spathe up through the mold is of more interest to him than the latest news from Paris or London. "I go to look for mud-turtles in Heywood's meadow," he says, March 23, 1853. The first water-fowl that came in the spring he stalked like a pot-hunter, crawling through the swamps and woods, or over a hill on his stomach, to have a good shot at them with his—journal. He is determined nature shall not get one day the start of him; and yet he is obliged to confess that "no mortal is alert enough to be present at the first dawn of spring"; still he will not give up trying. "Can you be sure," he says, "that you have heard the first frog in the township croak?" A lady offered him the life of Dr. Chalmers to read, but he would not promise. The next day she was heard through a partition shouting to some one who was deaf: "Think of it—he stood half an hour to-day to hear the frogs croak, and he wouldn't read the life of Chalmers!" He would go any number of miles to interview a musk-rat or a woodchuck, or to keep an "appointment with an oak-tree," but he records in his journal that he rode a dozen miles one day with his employer, keeping a profound silence almost all the way. "I treated him simply as if he had bronchitis and could not speak—just as I would a sick man, a crazy man, or an idiot."

Thoreau seems to have been aware of his defect on the human side. He says: "If I am too cold for human friendship, I trust I shall not soon be too cold for natural influences"; and then he goes on with this doubtful statement: "It appears to be a law that you cannot have a deep sympathy with both man and nature. Those qualities which bring you near to the one estrange you from the other." One day he met a skunk in the field, and he describes its peculiar gait exactly when he says: "It runs, even when undisturbed, with a singular teter or undulation, like the walking of a Chinese lady." He ran after the animal to observe it, keeping out of the reach of its formidable weapon, and when it took refuge in the wall he inter-

viewed it at his leisure. If it had been a man or a woman he had met, he would have run the other way. Thus he went through the season, Nature's reporter, taking down the words as they fell from her lips, and disressed if a sentence is missed.

The Yankee thrift and enterprise that he had so little patience with in his neighbors, he applied to his peculiar ends. He took the day and the season by the foretop. "How many mornings," he says in "Walden," "summer and winter, before yet any neighbor was stirring about his business, have I been about mine!" He had an eye to the main chance, to a good investment. He probed the swamps like a butter-buyer, he sampled the plants and the trees and lichens like a tea-taster. He made a burning-glass of a piece of ice; he made sugar from a pumpkin and from the red-maple, and wine from the sap of the black-birch, and boiled rock-tripe for an hour and tried it as food. If he missed any virtue or excellence in these things or in anything in his line, or any suggestion to his genius, he felt like a man who had missed a good bargain. Yet he sometimes paused in this peeping and prying into nature, and cast a regretful look backward. "Ah, those youthful days," he says in his journal, under date of March 30, 1853, "are they never to return?—when the worker does not too enviously observe particulars, but sees, hears, scents, tastes, and feels only himself—the phenomena that showed themselves in him, his expanding body, his intellect and heart. No worm or insect, quadruped or bird confined his view, but the unbounded universe was his. A bird has now become a mote in his eye." Then he proceeds to dig out a woodchuck.

In "Walden," Thoreau pretends to quote the following passage from the Gulistan, or Rose Garden of Sadi of Shiraz, with an eye to its application to his own case, but as he evidently found it not in, but under, Sadi's lines, it has an especial significance, and may fitly close this paper:

"They asked a wise man, saying: 'Of the many celebrated trees which the Most High God has created, lofty and umbrageous, they call none azad, or free, excepting the cypress, which bears no fruit; what mystery is there in this?' He replied: 'Each has its appropriate produce and appointed season, during the continuance of which it is fresh and blooming, and during their absence dry and withered; to neither of which states is the cypress exposed, being always flourishing; and of this nature are the azads, or religious independents.—Fix not thy heart on that which is transitory; for the Dijlah or Tigris will continue to flow through Bagdad after the race of caliphs is extinct: if thy hand has plenty, be liberal as the date-tree; but if it affords nothing to give away, be an azad, or free man, like the cypress.'"

John Burroughs.

THE HEART OF THE YEAR.

WHITE lay the world* in her burial web :
Deep in December her life was at ebb ;
Gray with great clouds, all the air-height was dim ;
Frost-fingers, cruel and stealthy and slim,
Stiffened and sheathed every brier and stem,
Breaths of slow death-wind detaining on them.

Heavy tree-branches swayed upward and fell,
Moved like the swing of a funeral bell.
Where were the toss and the shimmer of June ?
Glory of green that had vanished so soon ?
Bird-song and bloom ? · I outquestioned with fear :
“ Heart of Winter ! Oh, art thou the Heart of the Year ? ”

Hush of the snow, and dull moan of the trees,—
Durance of all,—was there answer in these ?
Durance ! That said it. The things that endure—
Bear, and wait on—are the things that are sure !
Not in the shroud, or the pall, or the tear—
Deep in the life, is the Heart of the Year !

Down where the pain and the shrinking can be,
Buds the great Summer, for earth and for me.
Down at the quick it must gather awhile,—
Grow to the fullness,—for blossom and smile ;
Where the hope hides, under hindrance and loss,
Lies the heart-meaning, the sign of the cross !

Now it is June ; and the secret is told :
Flashed from the buttercup's glory of gold,
Hummed in the humblebee's gladness, and sung
New from each bough where a bird's-nest is swung ;
Breathed from the clover-beds when the winds pass,
Chirped in small psalms through the aisles of the grass.

Beauty of roses,—the lavish sweet light,—
Splendor of trees, rearing up the blue height,—
Smell of the strawberry,—balsam of pine,—
Bliss of the brook,—and this rapture of mine !
Tell they not all, now their heyday is here,
Heart of the Summer is Heart of the Year ?

Billowing forest, and balm-bearing breeze,—
Outcome of life,—lies the answer in these ?
Waiting, fulfilling,—holds neither the whole ;
Greater the gospel than joyance or dole ;
Whether His snows or His roses befall,
Heart of the Father is Heart of it all !

THOSE curious in such matters were much interested, a few years ago, by the circulation of a few sets of photographs, taken at the private race-course of Governor Leland Stanford, of California, by Mr. Muybridge, a photographer of San Francisco. The consecutive positions of the legs in the stride of a running horse, as revealed by these photographs, seemed ludicrous and almost impossible. Indeed, it required the combination of the positions given by the reproduction of the pace in the zoetrope to convince the skeptical that the analysis of the movement was correct. The testimony of the zoetrope, and, later, of the zoepraxiscope, has silenced all skepticism, and one can no longer hesitate to concede the truth and simplicity of what, at first, seemed complicated and absurd. Since the first appearance of these photographs, the processes for securing them have been much improved, and Mr. Muybridge's public and private representations, here and abroad, have been received with the greatest favor. Meissonier, who has made a specialty of the action of the horse, is announced as an adherent of the new theory, and it is said that he has recently modified a painting in conformity with it.

22 23 24 25

FIG. 4.

While great credit is due to Mr. Muybridge for the ingenuity and skill with which he has applied his art to the production of these

pictures, they would not have been taken, nor could the world have had the full benefit of them which it now receives, but for the intelligent liberality of Governor Stanford, who, at much cost and with no chance for pecuniary reward, has carried the investigation to great lengths, and who now presents its results in a large quarto volume, containing more than a hundred plates, which bear over a thousand figures of animals in motion. These illustrations are accompanied by an elaborate essay, in which Dr. Stillman explains their application to the locomotion of quadrupeds, of horses especially.

The method by which these photographs have been taken—the result of years of experiment—is substantially as follows: At one side of the track is a long building arranged for photographic work, containing a battery of twenty-four cameras, all alike and standing one foot apart. On the other side of the track is a screen of white muslin and a foot-board. The screen is marked with vertical and horizontal lines, and the foot-board bears numbers indicating separate intervals of one foot each. The instantaneous shutters of the cameras are operated by electricity, and their movement is governed by such powerful springs that the exposure is estimated to be about one five-thousandth of a second. The contact by which the shutters are sprung is made by the breaking of a thread drawn across the track at about the height of the horse's breast, there being one thread for each camera. In his flight through

*"The Horse in Motion, as Shown by Instantaneous Photography, with a Study on Animal Mechanics. Founded on anatomy and the revelations of the camera. In which is demonstrated the theory of quadrupedal locomotion. By J. D. B. Stillman, A. M., M. D. Executed and published under the auspices of Leland Stanford." Boston: James R. Osgood and Co. 1882.

FIG. 8.

FIG. 9.

the air, therefore, he brings each of the twenty-four cameras to bear upon him at the moment when he passes in front of it, and that camera represents his position at that instant. The series of representations indicates the consecutive positions at each of the twenty-four feet covered by the instruments. In a series showing a horse trotting at speed the spokes of the sulky are shown as distinct lines quite to the felloe of the wheel, indicating an extremely short exposure. In a fast run, the tufts of the horse's tail, as it waves with his stride, are clearly marked. The distinctness of the silhouettes thus produced is well illustrated in Figures 1, 2, 3, 4, 5, 6, 7, showing a hound running with a stride of twenty-one feet. These and the other silhouettes illustrating this article are copied from heliotypes taken from the original photographs.

The illustrations 8 to 18, which follow, are not absolute reproductions; but in drawing them the greatest care was taken to preserve the outlines of the original. Their essential correspondence with the photographs of an animal running at speed show they may be taken as an unquestionable analysis of that gait. It is to be understood that the horse is at full speed, and that the illustrations here given represent alternate photographs of a series of twenty-four; that is, that they represent positions at intervals of two feet.

The eleven cuts cover a trifle more than one stride, the supporting fore leg in the last being a little further to the rear than in the first. In Figure 8 the whole weight is borne by the left fore leg, the pastern of which is nearly horizontal, and which is nearly under the center of gravity. The hind feet are about twelve and fifteen inches from the ground,

FIG. 12.

and the croup and withers are about two inches below the gauge line. Figure 18 shows this supporting foot just before leaving the ground. The extreme lengthening of the leg, by straightening the angles between the shoulder and the forearm, has raised the body about an inch nearer to the gauge line. The effect of that thrust, and of the straightening

FIG. 15.

FIG. 16.

FIG. 10.

FIG. 11.

of the pastern, is continued after the foot leaves the ground, so that in Figure 9 the croup and shoulder have been thrown quite to the gauge line. In Figure 10, the horse being still off the ground, the croup has gone an inch above the line. It has hitherto been the general belief that when the horse descends from his bound he lands on one of his

both fore feet being still more than a foot from the ground, both hind feet are in firm contact with it. In Figure 14, the right hind foot is ten inches from the ground and far to the rear. The left hind foot is performing the functions of the right in Figure 12, and the right fore foot is on the ground. The leading fore leg is extended to its utmost in Figure 15.

FIG. 13.

FIG. 14.

fore feet. Figure 11 shows that the right hind foot first reaches the ground, the other three feet being more than twelve inches above it. As this hind leg passes to the rear in Figure 12 the pastern is parallel with the ground, the left hind foot is preparing to take its position, and both fore feet are moving to the front. At the next position, Figure 13,

The two hind legs are extended, and the left fore leg is still four inches from the ground (Figure 16), when the right, the only one in contact, is nearly at the end of its stroke. In Figure 17, eighteen feet in advance of Figure 1, the left fore foot is still somewhat in advance of the position there shown. Figure 18, as above stated, finishes the stride, the leg,

FIG. 17.

FIG. 18.

FIG. 19.

FIG. 20.

FIG. 21.

FIG. 22.

strongly extended to the rear, having started the upward propulsion that is to carry the horse through the air until his right hind leg reaches the ground.

The deductions from these few illustrations cannot be adequately set forth within these limits. The most curious of them, anatomically, relates to the fact that the horse's withers are much further from the gauge line when one of his fore legs is almost directly under him (Figure 15) than when that leg is extended to the utmost, and when the other feet are in the air (Figure 18), the whole body being strongly thrown upward, as if by the force with which this one leg is extended. This thrust—which shows a wonderful flexibility and strength of the whole mechanism, from the top of the shoulder to the toe—involves the action of muscles whose relations to this movement Dr. Stillman explains in his notes. Another deduction which it seems difficult to avoid is this: Not only are the fore legs of a horse something more than mere supporters of his weight between successive thrusts of the hind-quarters: they are themselves most effective in propelling the body forward. Dr. Stillman even says:

"It will be apparent * * * that each limb is required to support the body and act as a propeller in turn, and that the *anterior one does more than its share of both offices.*" (The italics are mine.)

Nevertheless, it will need more than the photographs and diagrams shown in this book, and the reasoning with which the proposition is advanced, to convert to full belief in this theory one who has watched from a coach-box the tremendous action of the dorsal muscles of a pulling horse. If there is a weak point in the reasoning, it may, perhaps, lie in the fact that due consideration is not given to the effect upon the horizontal momentum of the body of the "dirt-throwing" movement of the fore foot as it passes over the toe—an effect somewhat akin to that

produced by a match on a billiard-table in making a ball "hop."

Looking at these illustrations as a series, the first impression of absurdity must be inevitable; but, as I have had occasion to learn through the perfect reproduction of a graceful and vigorous stride, on placing them in the zoetrope and there studying their combinations at low speed, they lose, in time, their extravagant appearance, and are easily associated in the mind with the natural action of a rapidly moving horse. To what extent they may be useful in modifying the pictorial representation of animals in motion it is not easy to determine. This part of the subject will have consideration further on.

The numerous illustrations given of walking, trotting, cantering, running, and pacing are all most instructive and suggestive, none of them more so than the series 19 to 30, showing a leaping horse. These twelve figures are selected from a series of forty-eight, which begin twenty-one feet before a hurdle three feet and six inches high, and terminate twenty-one feet beyond it. The selected figures begin sixteen feet in advance and terminate nineteen feet beyond. As the horse approaches the leap he slackens his speed, puts one fore leg far in advance, throws his weight upon that leg, and advances his hind legs (19), which pass the position of the supporting fore foot, and strike the ground about two feet in advance of it (20); as the fore leg is about leaving the ground it gives an upward thrust for the rise to the leap (21), a simultaneous spring from the hind legs carrying the animal into the air and over the hurdle (22, 23, 24, 25, 26, 27), until he lands on his fore legs differently advanced (28), and gathers himself (29), ready to begin a fresh stride (30). The distance covered by the leap shown in the illustration between the last position on the ground of the hind feet and the landing with the fore feet is about twenty-seven feet. It has been asserted that when a horse lands from a high leap he touches

FIG. 31.

FIG. 32.

FIG. 33.

FIG. 34.

FIG. 23.

FIG. 24.

FIG. 25.

FIG. 26.

the ground with his fore feet, and makes another step forward, with them both, before his hind feet come to the ground. Muybridge's illustrations of leaping all show that the horse lands on one fore foot, the other taking its position immediately afterward, a little in advance. The quickness of the movement has probably misled observers to the idea that both feet take first one position and then the other. The illustrations 31 to 37 show an unpremeditated standing leap. The horse baulked at the hurdle, and was forced over it with great difficulty. It seems hard to believe that, having forced himself into the position

focus. Figures 38, 39, 40, 41, and 42 show one picture of each of five series. These are not immediate reproductions of the photographs, but the drawings from which they are taken were accurately made on enlargements of the photographs. They are pictures of the same horse leaping, but are parts of five different leaps. In the approach (38), the horse is in the position next preceding that shown in Figure 19. In 39 he is in that shown in Figure 21; in 40 in the position shown in Figure 23; in 41 in the position shown in Figure 27; and in 42 in the position succeeding that shown in Figure 28. Corresponding represen-

FIG. 27.

FIG. 28.

FIG. 29.

FIG. 30.

shown in 34, he could, with his legs thus extended, spring to the position in 35. The positions of the rider in 36 and 37 indicate a general disturbance of forces which, to one who has made a standing leap for which he was unprepared, will seem very truthful.

The illustrations thus far given serve to show the method adopted to indicate the consecutive positions in the measured movements of the horse and of other animals. Their value is very much enhanced by the later series, where five views are given of each of many positions in different gaits. The cameras for this purpose were arranged so as to take one broadside view and four quartering views, looking, for example, to the right shoulder, the left shoulder, the right quarter, and the left quarter, the contact for each being made by the breaking of a single thread struck by the horse when he came into the

tations of a leaping horse are not recalled as appearing in Leech's and other illustrations; that they are, however, entirely true to nature must be at once recognized by any one who, bearing them in mind, will watch the actual leaping of a well-trained horse.

The truth to nature of most of the illustrations given in the work under consideration, while it cannot be questioned, must be considered with reference to the fact that the horses under examination were nearly all highly bred animals, mainly thorough-bred race-horses. The photographs would necessarily show some modification, if representing horses in common use and of less graceful and vigorous conformation. But, modified as they may be, they can never by any ordinary process be reconciled with the conventional horse of the artist, ancient or modern. The horse in full gallop is almost invariably

FIG. 35.

FIG. 36.

FIG. 37.

shown either, as in racing plates, extended to the utmost, or with an equal and uniform disposition of the limbs, as shown in Figure 43, which is a fair example of the representation of a strong and regular gallop. Not

FIG. 38.

one of the series of cuts Nos. 8 to 18 gives, by itself, an idea of great speed. Figure 44, however, corresponding with Figure 18, has a strong headlong movement, and may easily be imagined to be a picture of a horse running at great speed. It becomes now a curious and not unimportant question to discuss whether or not artists should abandon their old method of representing the galloping horse, and show him always in some one of his actual positions.

Dr. Stillman is very strongly of the opinion that they should do so. Perhaps, after all, it resolves itself into a question as to whether an artist whose purpose it is to represent things as they *seem*, is justified in adapting his methods to the limitations of the human vision, or whether he should show things exactly as they *are*, and appeal only to human reason. Dr. Stillman says: "It seems to many unaccountable that the horse, whose movements are so open, should play such a *léger-de-pied* as to deceive all eyes and give rise to controversies as earnest as did the colors of the chameleon in the fable." But Dr. Stillman seems, himself, to account satisfactorily for what he suggests as unaccountable. He says:

"It is difficult at a glance to conceive how the eye could be so deceived; but a little consideration

FIG. 39.

of the physiology of that organ will teach us that no dependence can be placed on it to interpret the motion of an object moving irregularly, even at a comparatively slow rate of speed.

"It has been shown that the retina of the eye is capable of receiving a distinct image of an object in almost inconceivably short space of time, as that of the flash of an electric spark or a millionth part of a second, and that the impression remains for the space of a third to a seventh of a second, according to the experiments of D'Arcy and Plateau; and the mind is incapable of distinguishing between the first impression and the last made during that space of time, and the images run together and are confused. A familiar illustration of this phenomenon is furnished by the spokes of a wheel in motion; yet these spokes will appear stationary if, revolving in the dark, they are suddenly illuminated by an electric flash; or if the end of a stick be ignited, and moved rapidly, a continuous line of fire will appear. Here there is a continuous line of impressions made upon the retina, and so conveyed to the mind * * *. The reader may ask why it is that the artists of all time, with the full accord of all men,—and our own eyes confirm the tradition,—represent the horse in galloping as extending his feet to the utmost, as seen in all the pictures

FIG. 40.

of horses racing. My answer is this: We now know that it is not true that a horse ever did put himself in the position portrayed by the best artists; and the explanation that I have to offer is, that in the gallop the horse always moves his feet alternately, and to the same extent; at the limit of extension there is a change of direction given to them, and their image dwells longer upon the retina, and the impressions are more lasting than of the intermediate and more rapid movements which the mind is unable to distinguish any more than the order in which they are made."

This looks like an unconscious undermining of the whole structure that he has labored to erect.

If a painting showed four horses harnessed to a coach, each of them in certain of the intermediate positions that instantaneous photography shows to be true, they would look as though they were dangling their legs at a stand-still. Whatever position might be given to a trotting horse in a picture intended to show great speed, its effect would be lost if he were shown as harnessed to a sulky of which the spokes of the wheel were visible, as we are told that they become when illuminated

FIG. 41.

in the dark by an electric flash. We need the confused whirl of the wheels to complete the impression.

A somewhat curious illustration of the difference between what is and what seems to be, is given by the quarter-second hand on a racing time-piece. Watching this hand we see it jump to the quarters and stop, and watching its consecutive movement, we see its sweep around the center. If, however, three of the positions are covered,—that is, if we cover a little more than the lower half of the dial,—the effect produced on the eye is that of a needle darting straight out from the center to the top, and darting straight back again. The sweep is entirely undetected. The same principle, perhaps, holds good with a running horse, at least so far as any given position of the legs is concerned. The only position in which it is possible to see the fore feet or the hind feet is when they are extended to the utmost, that is, when they come to a stop. A painting or a statue can show only position; it cannot show movement. The fault in the artistic representation of the gallop seems to me to be inherent. The gait is not a position at all, but ceaseless motion. It is, indeed, to be questioned whether the strongest impression produced on the eye is derived from the extension of the limbs in the

full strides, or from the vigor with which they are gathered after extension. On the race-track, or in the use of the zoetrope, it is the rapid flexion of the legs which most attracts my attention, and the absence of which, from the impression given by a picture, seems to me to mark its greatest limitations. If this line of reasoning is correct, it is not so much a question whether the artist shall reproduce the positions of Muybridge's photographs, as whether he shall attempt to paint a galloping horse at all, since he cannot indicate the *action*, which is the essence of the gallop.

There is, after all, another element of the discussion to which full weight must be given. That is, that not only art but man himself is conventional. We are accustomed to seeing certain things represented in a certain way. When an attempt is made to represent them

FIG. 43.

in another way our conventional natures revolt at the innovation. A familiarity of some years with Muybridge's photographs, while it has not enabled me to see in them the activity of the old type of picture, has unquestionably greatly modified the view with which I regard them. For example: Figure 44, which I should, some years ago, have regarded as absurd, is now a most satisfactory representation of motion. It is by no means improbable that the influence of these illustrations on the horse-paintings of the future, and on the minds of those who look at them, may be such as to banish from the canvas the impossible positions now shown there, and to introduce new positions, more like Muybridge's, which, though they would not now be accepted by the public, will be in entire accordance with the conventions of that day. It would be absolute truth, but it would also be very absurd truth,

FIG. 42.

FIG. 44.

to show the spokes of a wheel going at a 2:17 gait. The picture which shows it as our poor eyes must see it is really the truthful one for the purposes of art. So must it be with the horse in motion. We must see him on the canvas as we see him in life, not as he is shown when his movements are divided by the five-thousandth part of a second.

Dr. Stillman thinks "there is too much capital invested in works of art all over the civilized world to permit the innovation without a protest, and ridicule is the cheapest argument that can be employed in controversy, for it does not require truth for its foundation, and but a low order of talent for its display."

The foregoing remarks as to the influence which these revelations may or may not have on the painting and sculpture of the future have been made in no spirit of protest—the farthest possible from a spirit of ridicule. Surely, too, this question will be settled entirely without reference to the influence of invested capital. It may be that, as our ideas become trained to the analysis of quadrupedal movement, we shall accept the new light in its fullness; but let us not, in our enthusiasm over a new discovery, and in our devotion to a purely theoretical "truth," lose sight of the limitations which must always surround every attempt to represent action by passive objects and lines.

George E. Waring, Jr.

THE BEE-PASTURES OF CALIFORNIA.

IN TWO PARTS: II.

IN THE SAN GABRIEL VALLEY.—WHITE SAGE.

REGARDING Mount Shasta comprehensively from a bee point of view, encircled by its many climates, and sweeping aloft from the

torrid plain deep into the cold azure, we find the first five thousand feet from the summit pretty generally snow-clad, and therefore

they are about as flowerless and honeyless as the sea. The base of this arctic region is girdled by a belt of naked lava measuring about a thousand feet in vertical breadth. Beautiful lichens enliven the faces of the cliffs with their bright colors, and in some of the warmer nooks of the rocks there are a few tufts of alpine daisies, wall-flowers, and pentstemons; but, notwithstanding these bloom freely in the late summer, the zone as a whole is almost as honeyless as the icy summit, and its lower edge may be taken as the superior limit of the honey-line. Immediately below this comes the forest zone, covered with a rich growth of conifers, chiefly silver firs, rich in pollen and honey-dew, and diversified with countless garden openings, many of them less than a hundred yards across. Next, in orderly succession, comes the grand bee-zone. Its area far surpasses that of the icy summit and both the other zones combined, for it goes sweeping majestically around the entire mountain, with a breadth of six or seven miles and a circumference of nearly a hundred miles.

Shasta, as we have already suggested, is a fire-mountain, created by a succession of eruptions of ashes and molten lava, which, flowing over the lips of its several craters, grew outward and upward like the trunk of a knotty exogenous tree. Then followed a strange contrast. The glacial winter came on, loading the cooling mountain with ice which flowed slowly outward in every direction, radiating from the summit in the form of one vast conical

A BEE-RANCH ON A SPUR OF
THE SAN GABRIEL RANGE.
CARDINAL FLOWER.

WILD BUCKWHEAT.—A BEE-RANCH IN THE WILDERNESS.

glacier—a down-crawling mantle of ice upon a fountain of smoldering fire, crushing and grinding for centuries its brown, flinty lavas with incessant activity, and thus degrading and remodeling the entire mountain. When, at length, the glacial period began to draw near its close, the ice-mantle was gradually melted off around the bottom, and, in receding and breaking into its present fragmentary condition, irregular rings and heaps of moraine matter were stored upon its flanks. The glacial erosion of most of the Shasta lavas produced a detritus, composed of rough, sub-angular boulders of moderate size and porous gravel and sand, which yields freely to the transporting power of running water. Under Nature's management, the next marked geological event made to take place in the history of Mount Shasta was a water-flood of extraordinary magnitude, which acted with sublime energy upon this prepared glacial detritus, sorting it out and carrying down immense quantities from the higher slopes, and redepositing it in smooth, delta-like beds around the base; and it is these flood-beds of moraine soil, thus suddenly and simultaneously laid down and joined edge to edge, that now form the main honey-zone.

Thus, by forces seemingly antagonistic and destructive, has Mother Nature accomplished her beneficent designs—now a flood of fire, now a flood of ice, now a flood of water; and then an outburst of organic life, a milky-way of snowy petals and wings, girdling the rugged mountain like a cloud, as if the vivifying

sunbeams beating against its sides had broken into a foam of plant-bloom and bees.

In this lovely wilderness the bees rove and revel, rejoicing in the bounty of the sun, clambering eagerly through bramble and hucklebloom, stirring the clustered bells of the manzanita, now humming aloft among polleny willows and firs, now down on the ashy ground among gilies and buttercups, and anon plunging deep into snowy banks of cherry and buckthorn. They consider the lilies and roll into them, and, like lilies, they toil not, for they are impelled by sun-power, as water-wheels by water-power; and when the one has plenty of high-pressure water, the other plenty of sunshine, they hum and quiver alike. Sauntering in the bee-lands in the sun-days of summer, one may readily infer the time of day from the comparative energy of bee-movements alone—drowsy and moderate in the cool of the morning, increasing in energy with the ascending sun, and, at high noon, thrilling and quivering in wild ecstasy, then gradually declining again to the stillness of night. In my excursions among the glaciers I occasionally meet bees that are hungry, like mountaineers who venture too far and remain too long above the bread-line; then they droop and wither like autumn leaves. The Shasta bees are perhaps better fed than any others in the sierra. Their field-work is one perpetual feast; but, however exhilarating the sunshine or bountiful the supply of flowers, they are always dainty feeders. Humming-moths and humming-birds

seldom set foot upon a flower, but poise on the wing in front of it, and reach forward as if they were sucking through straws. But bees, though as dainty as they, hug their favorite flowers with profound cordiality, and push their blunt, polleny faces against them, like babies on their mother's bosom. And fondly, too, with eternal love, does Mother Nature clasp her small bee-babies, and suckle them, multitudes at once, on her warm Shasta breast.

Besides the common honey-bee there are many other species here—fine mossy, burly fellows, who were nourished on the mountains thousands of sunny seasons before the advent of the domestic species. Among these are the bumble-bees, mason-bees, carpenter-bees, and leaf-cutters. Butterflies, too, and moths of every size and pattern,—some broad-winged like bats, flapping slowly, and sailing in easy curves; others like small, flying violets, shaking about loosely in short, crooked flights close to the flowers, feasting luxuriously night and day. Great numbers of deer also delight to dwell in the brushy portions of the bee-pastures.

Bears, too, roam the sweet wildness, their blunt, shaggy forms harmonizing well with the trees and tangled bushes, and with the bees, also, notwithstanding the disparity in size. They are fond of all good things, and enjoy them to the utmost, with but little troublesome discrimination—flowers and leaves as well as berries, and the bees themselves as well as their honey. Though the California bears have as yet had but little experience with honey-bees, they often succeed in reaching their bountiful stores, and it seems doubtful whether bees themselves enjoy honey with so great a relish. By means of their powerful teeth and claws they can gnaw and tear open almost any hive conveniently accessible. Most honey-bees, however, in search of a home are wise enough to make choice of a hollow in a living tree, a considerable distance above the ground, when it is possible; then they are pretty secure, for though the smaller black and brown bears climb well, they are unable to break into strong hives while compelled to exert themselves to keep from falling, and at the same time to endure the stings of the fighting bees without having their paws free to rub them off. But woe to the black bumble-bees discovered in their mossy mouse-nests in the ground! The bears with a few strokes of their huge paws lay the entire establishment bare, and, before time is given for a general buzz, bees old and young, larvæ, honey, stings, nest, and

all are taken in
in one ravishing
mouthful.

Not the least influential of the agents concerned in the superior sweetness of the Shasta flora are its storms—storms I mean that are strictly local, bred and born on the mountain, and belonging to it as completely as its vegetation. The magical rapidity with which they grow on the mountain-top, and bestow their charity in rain and snow, never fails to astonish the inexperienced lowlander. Often in calm, glowing days, while the bees are still on the wing, a storm-cloud may be seen far above in the pure ether, swelling its pearl bosses, and growing silently like a plant. Presently a clear, ringing discharge of thunder is heard, then a rush of wind, sounding over the bending woods like the roar of the ocean, and mingling rain, snow-flowers, honey-flowers, and bees in wild storm harmony.

Still more impressive are the warm, reviving days of spring in the mountain pastures. The blood of the plants throbbing beneath the life-giving sunshine seems to be heard and felt. Plant growth goes on before our eyes, and every tree in the woods, and bush, and flower is seen as a hive of restless industry. The deeps of the sky are mottled with singing wings of every tone and color; clouds of brilliant chrysididæ dancing and swirling in exquisite rhythm, golden-barred vespidae, dragon-flies, butterflies, grating cicadas, and jolly, rattling grasshoppers, fairly enameling the light.

On bright, crisp mornings a striking optical effect may frequently be observed from the shadows of the higher mountains while the sunbeams are pouring past overhead. Then every insect, no matter what may be its own proper color, burns white in the light. Gauzy-winged hymenoptera, moths, jet-black beetles, all are transfigured alike in pure, spiritual white, like snow-flakes.

In southern California, where bee-culture has had so much skillful attention of late years, the pasturage is not more abundant, or more advantageously varied as to the number of its honey plants and their distribution over mountain and plain, than that of many other portions of the State where the industrial currents flow in other channels. The famous white sage (*Audibertia*), belonging to the mint family, flourishes here in all its glory, blooming in May, and yielding great quantities of clear, pale honey, which is greatly prized in every market it has yet reached. This species grows chiefly in the valleys and low hills. The black sage on the mountains is part of a dense, thorny chaparral, which is composed chiefly of *adenostoma*, *ceanothus*, *manzanita*, and cherry—not differing greatly from that of the southern portion of the sierra, but more dense and continuous, and taller, and remaining longer in bloom. Stream-side gardens, so charming a feature of both the sierra and coast mountains, are less numerous but exceedingly rich in honey flowers wherever found: *melilotus*, *columbine*, *collinsia*, *verbena*, *zauschneria*, wild rose, honeysuckle, *philadelphus*, and lilies rising from the warm, moist dells in a very storm of exuberance. Wild buckwheat of many species is developed in great abundance over the

dry, sandy valleys and lower slopes of the mountains toward the end of summer, and is at this time the main dependence of the bees, reinforced here and there by orange groves, alfalfa fields, and small home gardens.

The main honey months in ordinary seasons are April, May, June, July, and August; while the other months are usually flowery enough to yield sufficient for the bees.

According to Mr. J. T. Gordon, president of the Los Angeles County Bee-keepers' Association, the first bees introduced into the county were a single hive, which cost \$1.50 in San Francisco and arrived in September, 1854.* In April of the following year this hive sent out two swarms, which were sold for one hundred dollars each. From this small beginning the bees gradually multiplied to about three thousand swarms in the year 1873. In 1876, it was estimated that there were between fifteen and twenty thousand hives in the county, producing an annual yield of about one hundred pounds to the hive—in some exceptional cases a much greater yield.

In San Diego County, at the beginning of the season of 1878, there were about 24,000 hives, and the shipments from the one port of San Diego for the same year, from July 17th to November 10th, were 1,071 barrels, 15,544 cases, and nearly ninety tons. The largest bee-ranches have about a thousand hives, and are carefully and skillfully managed, every scientific appliance of merit being brought into use. There are few bee-keepers, however, who own half as many as this, or who give their undivided attention to the business. Orange culture at present heavily overshadows every other business.

A good many of the so-called bee-ranches of Los Angeles and San Diego counties are still of the rudest pioneer kind imaginable. A man unsuccessful in everything else hears the interesting story of the profits and comforts of bee-keeping, and concludes to try it, buys a few colonies, or gets them from some overstocked ranch on shares, takes them back to the foot of some cañon where the pasturage is fresh, squats on the land, with or without the permission of the owner, sets up his hives, makes a box cabin for himself scarcely bigger than a bee-hive, and awaits his fortune.

Bees suffer sadly from famine during the dry years which occasionally occur in the southern and middle portions of the State. If the rain-fall amounts only to three or four inches, instead of from twelve to twenty as in ordinary

seasons, then sheep and cattle die in thousands, and so do these small winged cattle, unless they are carefully fed, or removed to other pastures. The year 1877 will long be remembered as exceptionally rainless and distressing. Scarce a flower bloomed on the dry valleys away from the stream-sides, and not a single grain-field depending upon rain was reaped. The seed only sprouted, and came up a little way, and withered; and horses, cattle, and sheep grew thinner day by day, nibbling at bushes and weeds along the shallowing edges of streams, many of which were dried up altogether for the first time since the settlement of the country.

In the course of a trip made during the summer of that year through Monterey, San Luis Obispo, Santa Barbara, Ventura, and Los Angeles counties, the deplorable effects of the drought were everywhere visible—leafless fields, dead and dying cattle, dead bees, and half-dead people with dusty, doleful faces. Even the birds and squirrels were in distress, though their suffering was less painfully apparent than that of the poor cattle. These were falling one by one in slow, sure starvation along the banks of the hot, sluggish streams, while thousands of buzzards correspondingly fat were sailing above them, or standing gorged on the ground beneath the trees, waiting with easy faith for fresh carcasses. The quails, prudently considering the hard times, abandoned all thought of pairing off. They were too poor to marry, and so continued in flocks all through the year without attempting to rear young. In riding three hundred miles not a single brood of young was seen, though the breeding season was past; but, on the contrary, all the old ones were still in flocks. The ground-squirrels, though an exceptionally industrious and enterprising race, as every farmer knows, were hard pushed for a living; not a fresh leaf or seed was to be found save in the trees, whose bossy masses of dark green foliage presented a striking contrast to the ashen baldness of the ground beneath them. The squirrels, leaving their accustomed feeding-grounds, betook themselves to the leafy oaks to gnaw out the acorn stores of the provident woodpeckers, but the latter kept up a vigilant watch upon their movements. I noticed four woodpeckers in league against one squirrel, driving the poor fellow out of an oak that they claimed. He dodged round the knotty trunk from side to side, as nimbly as he could in his famished condition, only to find a sharp bill everywhere. But the fate of the bees that year seemed the saddest of all. From one-half to three-fourths of them died, in different portions of Los Angeles and San Diego counties, of sheer starvation—not less than eighteen thousand colonies

* Fifteen hives of Italian bees were introduced into Los Angeles County in 1855, and in 1876 they had increased to five hundred. The marked superiority claimed for them over the common species is now attracting considerable attention.

in these two counties alone, while in the adjacent counties the death-rate was hardly less.

Even the colonies nearest to the mountains suffered more or less this year, for the smaller vegetation on the foot-hills was affected by the drought almost as severely as that of the valleys and plains, and even the hardy, deep-rooted chaparral, the surest dependence of the bees, bloomed sparingly, while much of it was beyond reach. All could have been saved, however, by promptly supplying them with food when their own stores began to fail, and before they became enfeebled and discouraged, or by cutting roads back into the mountains, and taking them into the heart of the flowery chaparral. The Santa Lucia, San Rafael, San Gabriel, San Jacinto, and San Bernardino ranges are almost untouched as yet save by the wild bees. Some idea of their resources, and of the advantages and disadvantages they offer to bee-keepers, may be formed from an excursion that I made into the San Gabriel range about the beginning of August of "the dry year." This range, containing most of the characteristic features of the other ranges just mentioned, overlooks the Los Angeles vineyards and orange groves from the north, and is more rigidly inaccessible in the ordinary meaning of the word than any other that I ever attempted to penetrate. The slopes are exceptionally steep and insecure to the foot, and they are covered with thorny bushes from five to ten feet high. With the exception of little spots not visible in general views, the entire surface is covered with them, massed in close hedge growth, sweeping gracefully down into every gorge and hollow, and swelling over every ridge and summit in shaggy, ungovernable exuberance, offering more honey to the acre for half the year than the most crowded clover-field in bloom time. But when beheld from the open San Gabriel valley, beaten with dry sunshine, all that was seen of the range seemed to wear a forbidding aspect. From base to summit all seemed gray barren, silent, its glorious chaparral appearing like dry moss creeping over its dull, wrinkled ridges and hollows.

Setting out from Pasadena, a hopeful little colony of orange groves about six miles from the city of Los Angeles, I reached the foot of the range about sundown; and being weary and heated with my walk across the shadeless plain, concluded to camp for the night. After resting a few moments I began to look about among the flood-boulders of the creek for a smooth camp-ground, when I came upon a strange, dark-looking man who had been chopping cord-wood. He seemed greatly surprised at seeing me, so I sat down with him on the live-oak log he had

been cutting, and made haste to give a reason for my appearance in his solitude, explaining that I was anxious to find out something about the mountains and meant to make my way up Eaton Creek next morning. Then he kindly invited me to camp with him, and led me to his little cabin, situated at the foot of the first of the mountain slopes, where a small spring oozes out of a bank overgrown with wild rose-bushes. After supper, when the daylight was gone, he explained that he was out of candles, so we sat in the dark, while he gave me a sketch of his life in a mixture of Spanish and English. He was born in Mexico, his father Irish, his mother Spanish. He had been a miner, rancher, prospector, hunter, etc., rambling always, and wearing his life away in mere waste, but now he was going to settle down. His past life, he said, was of "no account," but the future was promising. He was going to "make money and marry a Spanish woman." People mine here for water as for gold. He had been running a tunnel into a spur of the mountain back of his cabin. "My prospect is good," he said, "and if I chance to strike a good strong flow, I'll soon be worth five or ten thousand dollars. For that flat out there," referring to a small, irregular patch of bouldery detritus, two or three acres in size, that had been deposited by Eaton Creek during some flood season,—“that flat is large enough for a nice orange grove, and the bank behind the cabin will do for a vineyard, and after watering my own trees and vines I will have some left to sell to my neighbors below me down the valley. And then,” he continued, “I can keep bees and make money that way, too, for the mountains above here are just full of honey in the summer time, and one of my neighbors down here says that he will let me have a whole lot of hives on shares to start with. You see I’ve a good thing; I’m all right now.” All this prospective affluence in the sunken, boulder-choked flood-bed of a mountain stream! Leaving the bees out of the count, most fortune-seekers would as soon think of settling on the summit of Mount Shasta.

About half an hour's walk above the cabin is "The Fall," famous throughout the valley settlements as the finest yet discovered in the range. It is a charming little thing, with a low, sweet voice, singing like a bird as it pours from a notch in a short ledge some thirty-five or forty feet into a round-mirror pool. The face of the cliff back of it and on both sides is smoothly covered and embossed with mosses, against which the white water shines out in showy relief, like a silver instrument in a velvet case. Hither come the San Gabriel lads and lasses to gather ferns and

dabble away their hot holidays in the cool water, glad to escape from their commonplace palm gardens and orange groves. The delicate maiden-hair grows on fissured rocks within reach of the spray, while broad-leaved maples and sycamores cast soft, mellow shade over a rich profusion of bee-flowers growing among boulders in front of the pool—the fall, the flowers, the bees, the ferny rocks and leafy shade forming a charming little poem of wildness, the last of a series extending down the flowery slopes of San Antonio through the rugged, foam-beaten bosses of the main Eaton cañon.

From the base of the fall I followed the ridge that forms the western rim of the Eaton basin to the summit of one of the principal peaks, which is about five thousand feet above sea level. Then, turning eastward, I crossed the middle of the basin, forcing a way over its many subordinate ridges and across its eastern rim, having to contend almost everywhere with the floweriest and most impenetrable growth of honey bushes I had ever encountered since first my mountaineering began. Most of the Shasta chaparral is leafy nearly to the ground; here the main stems are naked for three or four feet, and interspersed with dead twigs, forming a stiff *chevaux de frise* through which even the bears make their way with difficulty. I was compelled to creep for miles on all-fours, and in following the bear-trails often found tufts of hair on the bushes where they had forced themselves through.

For a hundred feet or so above the fall the ascent was made possible only by tough cushions of club-moss that clung to the rock. Above this the ridge weathers away to a thin knife-blade for a few hundred yards, and thence to the summit of the range it carries a bristly mane of chaparral. Here and there small openings occur on rocky places, commanding fine views across the cultivated valley to the ocean. These I found by the tracks were favorite outlooks and resting-places for the wild animals—bears, wolves, foxes, wildcats, etc.—which abound here, and would have to be taken into account in the establishment of bee-ranches. In the deepest thickets I found wood-rat villages—groups of huts four to six feet high, built of sticks and leaves in rough, tapering piles, like musk-rat cabins. I noticed a good many bees, too, most of them wild. The tame honey-bees seemed languid and wing-weary, as if they had come all the way up from the flowerless plain.

After reaching the summit I had time to make only a hasty survey of the basin, now glowing in the sunset gold, before hastening down into one of the tributary cañons in search of water. Emerging from a particu-

larly tedious breadth of chaparral, I found myself free and erect in a beautiful park-like grove of live-oak, the ground planted with aspidiums and brier-roses, while the glossy foliage made a close canopy overhead, leaving the gray dividing trunks bare to show the beauty of their plain, interlacing arches. The bottom of the cañon was dry where I first reached it, but a bunch of scarlet mimulus indicated water at no great distance, and I soon discovered about a bucketful in the hollow of the rock. This, however, was full of dead bees, wasps, beetles, and leaves, well steeped and simmered in the hot sunshine, and would, therefore, require boiling and filtering through fresh charcoal before it could be made available. Tracing the dry channel about a mile farther down to its junction with a larger tributary cañon, I at length discovered a lot of boulder pools, clear as crystal, brimming full, and linked together by glistening streamlets just strong enough to sing audibly. Flowers in full bloom adorned their margins, lilies ten feet high, larkspurs, columbines, and luxuriant ferns, leaning and overarching in lavish abundance, while a noble old live-oak spread its rugged arms over all. Here I camped, making my bed on smooth cobble-stones.

Next day, in the channel of a tributary that heads on Mount San Antonio, I passed about fifteen or twenty gardens like the one in which I slept—lilies in every one of them, in the full pomp of bloom. My third camp was made near the middle of the general basin, at the head of a long system of cascades from ten to two hundred feet high, one following the other in close succession down a rocky, inaccessible cañon, making a total descent of nearly seventeen hundred feet. Above the cascades the stream passes through a series of open, sunny levels, the largest of which are about an acre in size, where the wild bees and their companions were feasting on a fine, showy growth of *zauschneria*, painted cups, and monardella; and gray squirrels were busy harvesting the burs of the Douglass spruce, the only conifer I met in the basin.

The eastern slopes of the basin are in every way similar to those we have described, and the same may be said of other portions of the range. From the highest summit, far as the eye could reach, the landscape was one vast bee-pasture, a rolling wilderness of honey bloom, scarcely broken by bits of forest or the rocky outcrops of hill-tops and ridges.

Beyond the San Bernardino range lies the wild "sage-brush country," bounded on the east by the Colorado River, and extending in a general northerly direction to Nevada and

along the eastern base of the Sierra beyond Mono Lake.

The greater portion of this immense region, including Owens Valley, Death Valley, and the Sink of the Mohave, and whose area is nearly one-fifth that of the entire State, is usually regarded as a desert, not because of any lack in the soil, but for want of rain, and rivers available for irrigation. Very little of it, however, is desert in the eyes of a bee.

Looking now over all the available pastures of the State, it appears that the business of bee-keeping is still in its infancy. Even in the more enterprising of the southern counties, where so vigorous a beginning has been made, less than a tenth of their honey resources have as yet been developed; while in the Great Plain, the coast ranges, the Sierra

Nevada, and the northern region about Mount Shasta, the business can hardly be said to exist at all. What the limits of its developments in the future may be, with the advantages of cheaper transportation and the invention of better methods in general, it is not easy to guess. Nor, on the other hand, are we able to measure the influence on bee interests likely to follow the destruction of the forests, now rapidly falling before fire and the ax. As to the sheep evil, that can hardly become greater than it is at the present day. In short, notwithstanding the wide-spread deterioration and destruction of every kind already effected, California, with her incomparable climate and flora, is still the best of all the bee-lands of the world.

John Muir.

TO E. W. G. IN ENGLAND

(WITH EMERSON'S POEMS).

EDMUND, in this book you'll find
Music of a prophet's mind.
Even when harsh the numbers be,
There's an inward melody;
And when sound is one with sense,
'Tis a bird's song—sweet, intense.
Chide me not the book is small,
For it is our all in all.
We who in Eldorado live
Have no better gift to give.
When no more is silver mill,
Golden stream, or golden hill,
Search the New World from pole to pole—
Here you'll find its very soul!

February, 1882.

G.

DAMMING THE SACRAMENTO.

AWAY up under the shadows of Mount Shasta, plunging down to the south, foaming, shouting, thundering down the land as if to shake the mountains loose, the new-born Sacramento River is as cold and clear and white as the eternal snows that feed his thousand gold-bearing tributaries.

Long ago, in the early days of California, when all the rivers there were thought to be full of gold, it was considered a matter of course that the great Sacramento, far up at its source, was also gold-bearing, and that it only needed men and a little labor to "wing-dam" this stream some summer, and find a vein of gold almost as rich as the famous deposits of the Feather and the American rivers, which feed the Sacramento and drain the melting snows of the sierras far away to the south.

And so it was in the spring of 18—, with this purpose in view, that a party of strangers in San Francisco hastily pooled their fortunes, consisting mainly of hope and muscle, and, ascending the Sacramento River to within thirty miles of its source, settled down there and began to cut it in two with a wing-dam.

How, in one short and yet uncompleted summer, these ten men had managed to do the amount of work which they had, it is hard to say. Winter was not far off at the furthest in this altitude, but then, how a man working for himself will strike out with the thought constantly before him that the very next blow of his pick may mean to him wife, children, father, mother, home, or what is the same thing, gold that would pave the road

leading back to these and all else dear to man!

Late one evening, as the brawny, hairy, half-robed miners still wrestled with the bowlders down in the bed of the river, which as yet had yielded no sign of its secrets, a pale, slim boy stood on the bank and inquired, in a helpless way and with a weak, tired voice, if they did not want "to hire help."

The men stopped, looked up, then at each other, then at the boy above them on the bank; and then they roared with laughter.

"Hire help! Look here, are you the help?" howled the strongest of them, called "Samson."

"Yes, sir."

Again the ragged men leaned on their picks and shovels, lifted up their heads, and roared.

"Say, are you an orphan?" laughed "Colonel Lasses," turning a quid. "We're all orphans here, and a long ways from home. Are you an orphan and a long ways from home?"

"No, sir," piped the tired boy, "I am not an orphan; but I am a long ways from home."

"Well, you better start home, then. It will be dark by the time you get there, I guess. From the Flat, eh?"

"From the Flat, sir? Where is that?"

"Why, Portuguese Flat," chimed in a tall fellow, with a touch of gentleness in his voice. "It's four miles down, the only mining camp on this end of the river. Where did you come from, my kid, that you didn't know that, eh?"

"Why, sir, I came from the other way—down from Oregon."

Some of the men caught their breath and looked at each other, and others shook their heads. But the very tall and ragged one who was called "Nut Crackers" leaned soberly aside on his pick.

At last one of the men, a sprightly, handsome young fellow called Timothy, threw down his long-handled shovel and, coming up out of the mine, said:

"Well, my kid, you may not be an orphan, but you're a mighty long ways from home; about a thousand miles, I guess. And as you can't get back there to-night, you'd better bunk with us—eh, boys?"

"Bet your boots!" cheerily cried Nut Crackers at his side, as he twirled a finger playfully through the boy's yellow hair.

A heavy-booted, half-bear creature, that came crawling out of the mine after his younger partners, grunted out a qualified assent, and the party went slowly stringing out toward the brush shanty of the company, which stood a little way back from the foaming river. Others followed, for the sun was down and it was time to "knock off."

The boy was weary and altogether wretched.

He was tall and pale and thin, like a weed that has grown in shadow, and was not likely to be an addition to the working-force of the mine; but he was reserved and respectful, and so eager to help about the camp in bringing wood and water, and so careful not to be in the way, that he was tolerated until after the tired men had had their suppers. And then when they had filled their pipes, and had thrown themselves about the roaring and sweet-smelling fire of yew and juniper, he was made to feel quite at home, and soon fell so soundly asleep by the fire that he knew nothing more till the sun came down over the mountains, next morning, and looked him full in the face and wakened him.

It was Nut Crackers's "cook-week," and he had left a tin cup full of coffee hot by the fire, where the boy still lay. With an air of desperation, he was now down on his knees, with his sleeves rolled up, before a tub full of boiling hot water and obstinately greasy tin plates. He made an experimental dive with his big fist into the boiling water, and then suddenly leaped up, and hopping high on his naked heels, launched into a series of incoherent oaths, which was timidly interrupted by the boy.

"Let me wash 'em for you, please."

"You?" said Nut Crackers, savagely, in an effort to vent some of his irritation on the new-comer.

"Yes, as soon as I wash my hands."

"You'd better drink your coffee, and get some color in your face first."

"I will. But, sir, I want to wash the dishes for you. I know how. I always washed the dishes for mother at home when she was sick."

Nut Crackers stopped swearing. Pretty soon he came up to the boy, who was washing his hands and face in the little stream that slid through the camp, and, snapping his fingers, which were as red as boiled craw-fish, said:

"Kid, have you got a mother and do you——? But bah! Yes, wash 'em. It's not a man's place to wash dishes. Wash 'em and clean up about camp. Got no money to pay you; we're all on the verge. But you clean up about here, and stay 'round for grub; time enough to get down to the Flat after beans."

And with this he unrolled his sleeves and hobbled off down to the mine, leaving the boy in charge of the few blankets, brush-beds, camp-kettles, pans, and old boots which made up the tangible fortune of the "Sacramento Wing-dam Company."

When the ten tired men came up to din-

ner that day, they found such a change for the better that they persuaded the boy to stay. True, they had no money, even for themselves; but, when they "struck it"—and strike it they must the very next week—he should be paid, and paid well. And with this understanding they went back to their work that afternoon, leaving behind them a boy with a lighter heart than he had borne for half a year.

The men worked like beavers now. The summer had slipped away, and winter had taken possession of the summits of the mountains and set them with snowy castles. The river was rising every day, inch by inch. They must cut quite across the river-bed and strike the vein before the river broke over the wing-dam, or all their labor would be lost. They had already, even in midsummer, pierced the center of the river-bed and thrown the stormy stream behind them. They were now on the farther side, and were cutting straight for the bed-rock bank that cropped out not twenty feet away. They had begun with the bed-rock bank on the other side, and had followed the bed-rock across the entire bed of the river. The gold must lie somewhere ahead of them—somewhere within the next twenty feet. It was now only a question of days, of hours. This, be it remembered, was in the early days, when all men still obstinately believed that gold must lie in veins and strata.

How full of hope, of heart, were these men who had been shut up there in a gaping crevice of the earth all summer! Not one doubted that they would strike it—a little yellow vein deep in the bed of this stormy river, where the finger of God had placed it in the dawn of creation. Banks might fail, ships founder at sea, but this gold—it was *there*! It *had to be* there! A little yellow river of virgin gold!

These ten men did the work of forty. They could hardly wait for dawn, and they worked at night while the stars stood sentinel at the castles of snow above them. They scarcely ate their food, they were so eager. However, there was but little to eat. They did not wear much clothing, although winter was in the air. One man had not even the fragments of sleeves to his only remaining shirt. This was the man called Samson. He had arms like a giant, and would show the knots of muscle on his arms by the fire-light, and boast of his strength by the hour. He had a theory that the arms should always be entirely naked. He said he had torn off and thrown away his splendid sleeves in order to give the muscles of his arms full play, and he advised all the boys to do the same. But it so happened that one night, after one of

these boastful exhibitions, having undertaken to dry the socks of these giants on a pole by the fire as they slept, the boy discovered that Samson had torn off the covering of his arms in order that he might protect his feet.

It is to be recorded that the early Californian was particularly partial to Biblical names. There was one of this party called Joseph. "We calls him Joseph because one day he fell in the pit; and then, he's the biggest fool in the camp," said Lazarus, a bony, pock-marked, thoughtful man, aside to the boy.

One of this company was now called Colonel Lasses. Colonel Lasses was from the South and chewed tobacco. Perhaps nothing pleased the Colonel better than firing tobacco-juice at the thousand little lizards that darted up and down the shining white bowlders that strewed the bar. I forgot to say that Colonel Lasses was not his name. Lazarus, in a burst of confidence toward the boy, had informed him that they at first had called the Colonel "Molasses Jug"—not because he was sweet, but because he looked it. But they had found it a little too long, and finally polished it down to "Lasses."

There now remained only a few feet between the energetic miners and the abrupt bed-rock wall before them. Yet no man for a moment entertained a shadow of a doubt that his fortune lay there, in virgin gold. Or if any man for an instant had a doubt, he kept it to himself. True, only a few feet remained. But even a few inches would be enough to hide a vein of incalculable wealth. Who should dare to doubt, after all they had endured and dared? No, there was no possible show for Fortune to escape them. The gold *must* be there. For was not winter nipping at their heels? Was not the last bit of rusty old bacon in the camp-kettle with the last handful of Chili beans? They had not tasted bread since the Sunday before, the last time they had all gone down to the Flat, and then they had pawned the last six-shooter of the crowd for a last square meal. Bread! Their bread was hope. And of that they had plenty.

But now the boy fell ill—suddenly and seriously ill. He had never quite pulled up, and now, all at once, just as they were about to strike it, just on the eve of the next to the last day, he broke quite down, and lay half-delirious with a fever, as the men came up from the mine by moonlight and quietly gathered about him. They had somehow learned to love him in spite of themselves.

He was indeed very ill. But what could they do? There was no doctor at the Flat. There was not even a drug-store. And if there had been, what then? Every pistol,

rifle, knife, every available article, had been pawned—"put up," as they called it—to carry on the work.

"Boys," at last cried Timothy, the impulsive young fellow who had first welcomed him, "boys, I have an idea; yes, boys, I have. Let's make the kid a pardner!"

"Just as we're strikin' it?" murmured a voice with a Southern accent, out on the edge of the dark. Then after a pause, long enough to turn a quid, the voice answered itself: "Wa-al, yes, Timothy."

Nut Crackers was not a talker. His lips quivered a little, and he went out aside in the dark.

There was a deep silence. The proposition seemed absurd to nearly every man there. The river surged on, now louder, now softer; the fire leaped and licked its red tongue, as if about to break the stillness, and that was all. But Timothy was in dead earnest, and hearing a voice out in the dark breaking the awkward silence never so faintly, was on his feet.

"He may die, boys. He may not live till morning."

"In that case—in that case, I guess we can do it," chipped in the man from Maine.

"Look here, boys, if we strike it, there is enough for us all. And if—if—" here Timothy's two forefingers hooked together angrily, as if they were ready to strangle each other at the thought,—"if we don't strike it —"

Several of the men were on their feet and glaring at each other. The speaker hastened on:

"But of course we will. Boys, it's there. Of course it's there. It's *got* to be there. I never doubted it, boys. But I am a bit superstitious. And as I sat there looking in that boy's face, I says to myself, says I, boys, God wouldn't, couldn't, disappoint that face. Now, if he was in with us, boys, we couldn't possibly miss it to-morrow."

No man answered, but several crossed over to the other side of the fire to the boy, and Lazarus put out his hand to the sufferer, and said tenderly, as he took up the thin and helpless fingers:

"Shake, pardner, shake. You're one of us now."

Even the sour and silent man from Maine came up and shook the boy's hand; then, as he shuffled off to his own side of the fire, he said, half to himself:

"Well, if we do miss it neow, there's one good deed we git credit for, anyheow."

"Key-rect, boys," said the laconic Colonel, as he gave the hand of fellowship and walked off, feeling somehow broader in the chest and bigger about the heart than he had for a year. "But if God A'mighty goes

back on us now after what we've done—wa-al, I'll jist——" But the last of this speech was drowned in the roar of the Sacramento River as it rolled away in the darkness with its mighty secret that, on the morrow, should be torn from its very heart.

In the lull which followed, a voice was heard out in the dark in the direction toward which Nut Crackers had gone, stumbling and twisting his long, ungainly legs over the great boulders. And as one of the men spoke to the kid by the fire, of to-morrow, of the gold, the going home, the wife waiting at the door three thousand miles away, the old mother waiting with one foot in the grave, who could not go to rest till she said good-by to her boy, the moon seemed to come down out of heaven to see and the river to stop and listen.

This was the eve of battle. What victory or defeat for to-morrow! No coward had as yet ever set his face for the sierras. Each man here was a hero. And every one of these worn-out fellows had a heart like a girl. Even the laconic Colonel hooked his knuckles in his eyes and, turning away so as not to be seen, muttered:

"Blast me if Nut Crackers aint out there a-prayin'."

As the man came back out of the dark, a song burst out in the mountains by the camp-fire, such as the sierras had never heard before and will never hear again. It was not the words, not the air, not the singular occasion. But it was the heart, the hope—the extreme of hope which is despair. It was the old and simple song, lined by the man from Maine:

"From Greenland's icy meount'ins;
From Injy's coral stran';
Where Afric's sunny feount'ins
Roll down their golden san'."

Perhaps it was the "golden sand" that had so long filled their souls, sleeping and waking; may be it was the "icy mountains" about them that invoked the song. But whatever it was, the hymn broke out and rolled on to full completion as strong and as resolute as the river it outsang. The man from Maine sang loudest of all; it seemed that the power of the mountain pines was in his voice.

And the boys no longer looked down or turned aside now. They shook hands in hearty mountain fashion, and sang and sang together again. It seemed that they had never become acquainted through all that summer before.

When they had finished the hymn for the second time, the man from Maine grasped the hands of Lazarus and Nut Crackers and cried out:

"Once more, boys! Once more! And, boys, the p'int and main thing in the prayin' and the singin' is that the kid gits well, of course. But, boys, chip in a sort o' side prayer for the mine. Now, all together:

'From Greenland's icy meo-u-n-t'ins,—

Yes, boys, heave it in for the mine, on the sly, like. Keep her up, now!

'From Injy's coral str-a-n',
Where Afric's sunny feo-u-n-t'ins
Roll down their golden s-a-n'.'

Yes, boys, weather eye on the mine; don't cost a cent more, you know, to come right out flat-footed for the mine, so that she can't miss in the mornin' under no possible derved circumstances."

The song was finished, and with light hearts they laid down at midnight—soldiers in the trenches, waiting for the dawn.

The boy had heard and understood it all. He was not so ill now. Care, the thought of those at home, the hope deferred—these things had made the heart sick and the body sick. But now he should have gold! Gold! Gold! Not for himself had he come to the sierras. But there was a mother who had been tenderly reared, there was a father who had been a scholar in his day, then the little ones—all these had been pitched headlong into the wilderness, and were utterly out of place. How he pictured the return—the escape from the wilderness! It made the blood leap in his heart, and after a night of sleep he felt a new flush of strength with the first gray of dawn, when the men were on their knees before Fortune in the mine.

No man had tasted food. No man thought of that. And well enough, too. No! Their first meal should be down at the Flat. They would all take back their pistols, rifles, rings, and knives, and pay the men with gold ravished from the unwilling river.

The boy sat on the bank, wrapped in a blanket, just above the knot of eager, breathless men. The dull, blunt pickaxes were driven to the eyes at every blow. The worn-out shovels sent the gravel ringing to the rear. Only one foot now remained!

Was the gold hidden in the last little crevice in the river? Where was it? It *was* there! It *must* be there! But where?

At last the pickax struck through. The gravel shelved off and fell down with a dull thud, and a pan was washed in a trice.

Not a color!

And not an oath was heard! Draw a red line right here and remember it. Not a single oath

was heard. And these men were neither unskilled nor out of practice in that line.

Quietly and mechanically the boy went back and gathered up the few old blankets that would bear transportation. Joseph went up the river a little ways, opened the flood-gates, and as the last man climbed out of the pit, leaving the battered tools behind him, the waters came booming over like a mighty inflowing tide. The huge and weary old wheel ceased to creak, and the Sacramento swept on in its old swift fashion.

The group of men was not so depressed, not so miserable, after all, as you might think, as they hobbled back to camp and took up their blankets. True, they turned their heads for a last look as they climbed the hill away from the bar, but it was noticeable that they still did not swear. The man from Maine muttered something about yet making the river pay by rafting lumber down it, but that was all.

The boy's legs failed him at the first hill, and Nut Crackers took him upon his shoulders. Soon another took him, and so in a sort of glorious rivalry these vanquished Trojans reached Portuguese Flat. And as, tired and heartless, they stumbled into the town, they lustily sang a song with these words for the chorus:

"And we dammed the Sacramento
As it never was dammed before."

Joseph had the boy on his shoulders, while Nut Crackers followed close behind; and in this order they entered the only hotel, with the others stringing in after them.

"Barkeep," began Joseph, as he settled the load on his shoulders, "we wants to pawn this 'ere boy. Yes, we do. We wants to pawn this 'ere boy for one squar' meal to git away on, and we'll come back in the spring and redeem him. Yes, we will. If we don't, barkeep', may we never strike it—here, or up yonder."

And what a dinner it was!

But Joseph, Timothy, Samson, Lazarus, gentle Nut Crackers, where are you now? And what befell you, brave soldiers of fortune, after you came back in the spring and redeemed the pledge? Are you climbing the mountains still? Or have you left them forever and become merchant princes, railroad kings, and leaders of your fellow men? If there is one of you living anywhere, in whatever circumstances, answer one who loves you well, for he it was you pawned for your dinner when you dammed the Sacramento.

Joaquin Miller.

A GREAT CHARITY REFORM.

THE pedestrian making his way along the broad sidewalks of Fourteenth street between Broadway and Fifth avenue, in New York City, thronged with well-dressed women eagerly bent on shopping errands, would scarcely notice, in the midst of the Parisian glitter of gilt signs which cover the fronts of the buildings, a modest tablet with the inscription "State Charities Aid Association." If, however, it should strike his eye, and curiosity or a real interest in charitable work should lead him to climb two pairs of stairs in search of the offices of the Association, he would find two light, large, airy rooms, tenanted by two or three serious, kind-faced ladies busily engaged writing amid piles of books, pamphlets, and letters. These ladies look as if they had found a work in life worth doing, and were doing it with all their might. The visitor would not imagine, however, unless he were informed beforehand of the character of this work, that it is one of the most far-reaching, practical, and successful efforts of genuine benevolence to be found in the United States—an effort admirable in principle, method, and details, carried on persistently year after year, ever-widening in its scope, and throwing off from itself like planets from a central sun many independent forms of kindred philanthropy. These ladies represent an organization that is grappling with the whole vast problem of pauperism in the city and State of New York, that has branches in thirty-two of the counties of the State, and that sends its visiting committees into the poor-houses, almshouses, asylums, and hospitals to bring the eye and conscience of public opinion to bear to secure needed reforms, to elevate and moralize the whole system of relieving poverty, to send comfort to the bedsides of the destitute sick, and to instruct and interest all who have charge of sick or well in the best methods of preventing and curing the great social disease of pauperism. The underlying idea of this comprehensive scheme of charitable work is, that all public institutions are almost sure to generate abuses, or at least to fall into routine ways that become almost as bad as abuses, and that to keep them up to a high standard of efficiency and open to the reception of improved methods, the constant watchfulness of enthusiastic, zealous, voluntary supervision is needed. The labors of the sanitary and Christian commissions during the war enforced this lesson, and it was to some extent the example of their labors which led

to the establishment of the State Charities Aid Association.

What was the origin of this peculiar society, which has no prototype, but is evidently destined to serve as a model for like organizations in other States? Its plan grew out of the thoughts, experiences, and benevolent purpose of one woman. Earnest helpers, men and women, were found to aid in putting the plan in practice, but the conception of the scheme is due to Miss Louisa Lee Schuyler.

About ten years ago, Miss Schuyler visited the poor-house of Westchester County, not far from her home. She was shocked at the condition of the institution. Sick and well, sane and demented, adults and children, the vicious and the merely unfortunate were huddled together, without proper sanitary conditions, or decent separation of the sexes, or any reformatory opportunities. She took hold of the work of renovating this institution, associated with her a number of ladies living in the neighborhood, and in the course of a few months accomplished a remarkable reform. While engaged in this effort, she was impressed with the thought that, to have a permanent effect, the sort of work she was doing must not be casual and intermittent nor regular and systematic. If vigilance were relaxed, old abuses or new ones would be sure to gain a foothold. Here was struck the key-note of the great plan of benevolence which she subsequently founded. A permanent visiting committee was formed to keep a constant oversight on the Westchester poor-house, and this committee became the model for the committees afterward started in other counties by the central society, which was soon to come into being.

Early in 1872 the Central Society was established, and received the name of the State Charities Aid Association. Its objects, as set forth in its constitution, were: "1st. To promote an active interest in the New York State institutions of public charities, with a view to the physical, mental, and moral improvement of the pauper inmates; 2d. To make the present pauper system more efficient, and to bring about such reforms in it as may be in accordance with the most enlightened views of Christianity, science, and philanthropy." The first president was Professor Theodore W. Dwight; Miss Schuyler was vice-president, and Miss R. B. Long, secretary. Three committees—on children, on adult able-bodied paupers, and on hospitals—were formed, to

which was subsequently added a committee for the elevation of the poor in their homes. Leading clergymen, physicians, and ladies of high social standing, well known for their philanthropic labors, took an interest in the movement. The membership was enlarged from month to month, and before the end of the year the Association was fairly equipped to begin its arduous undertaking.

Practical wisdom was shown at the outset by not trying to do too much at once. A much-needed work of reform was found close at hand, and for a time the efforts of the Association were chiefly concentrated upon its accomplishment. The great Bellevue Hospital in the city of New York is the omnium-gatherum of the waifs and dregs of society. The tramp, the drunkard, the outcast, the wanderer, and the honest workman who has fallen into destitution, when stricken by disease or prostrated by accident, are carried to its wards. There are hospitals in the metropolis sustained by church organizations or endowed by private charity, and upon the islands in the East River there are public buildings for incurables, the insane, and the blind; but Bellevue is the general receptacle of all cases for which there is no better provision, and the sorting-place for patients on their way to other institutions. A committee of sixty ladies and gentlemen was organized by the Association to make weekly visits to all the wards of this vast hive of stricken humanity. The work was done patiently and systematically. A radical defect was discovered at the start in the system of nursing. The nurses were ignorant, illiterate women, often intemperate (though not criminals as formerly) and utterly untrustworthy. As a result the patients died from neglect, as well as from disease, and doctors were obliged to refrain from prescribing certain remedies and methods of treatment, because the nurses could not carry them out. It seems incredible that the lives of sick people could have been left in such care. There was no lack of medical skill, for the physicians felt the pride of their profession; but it was not supplemented by the good nursing which is as important as good medical treatment. How to provide efficient nurses for Bellevue and to break up the miserable system fastened upon it, was the first great problem that the Aid Association undertook to solve. One of its members, Doctor W. Gill Wylie, volunteered to go to Europe and study the methods of nursing employed in the public hospitals there. He visited London, Paris, and Vienna. It was in London that he found what he was seeking in the training-school for nurses established by Florence Nightingale. His report on that school,

and on the work its pupils do in the London Hospitals, was made the basis of immediate action by the Association. The result of this effort was the establishment of the Bellevue Hospital Training-school for Nurses. Space is lacking here to describe the growth and workings of this admirable institution. A separate article would be required to give anything like a fair presentation of its successful labors in revolutionizing the system of nursing in the city hospitals, in bringing comfort and restored health to thousands of sufferers, and in sending abroad into the community hundreds of skillful, patient, gentle women, ready to answer the calls of private families for aid in the care of the sick.

In the second year of its existence, the presidency of the Association was accepted by Miss Schuyler by the desire of all its members, and she has held the position ever since. The roll of city members was considerably enlarged, studies of the problems of pauperism diligently prosecuted, and the visiting work extended to nearly all the institutions under the charge of the New York Commissioners of Charities and Corrections, except the prisons, which are the special care of the Prison Association—a well managed society of kindred character that has done admirable service in its peculiar field. But the Aid Association was not content with what it was doing in the metropolis. Its original plan was to extend its watchful eyes and helping hands all over the State, and this plan it early began to put into effect. County after county was visited by officers of the Association, and branch local visiting committees were formed. Sometimes, the reports of the work in New York City and in Westchester County stimulated a voluntary local movement, to which the central organization gave form and direction; but oftener a local interest had to be created by the efforts of Miss Schuyler and her associates. With rare exceptions, the county poor-houses were found in a wretched condition—buildings were not adapted for the purpose, there was no proper separation of inmates, children were contaminated by the vicious conversation of hardened reprobates, scanty provision was made for labor, miserable conditions for health existed, and no reformatory influences were at work, except an occasional sermon by some self-sacrificing clergyman. The people living in the vicinity of a poor-house were usually in total ignorance of what went on within its walls. They seemed to regard it as a sort of lazaretto to be avoided. The common opinion was that the place ought not to be made too comfortable, lest paupers should prefer to live in it to shifting for themselves. The Aid Association

held a different theory. They believed in providing for paupers every necessary condition of healthful, moral living; but they had an infallible safeguard against overcrowded poor-houses, and that was hard work. "Provide work for every one who is able to work," was the lesson they taught. Wherever it was heeded, the poor-house flock was speedily thinned of its black sheep, for the lazy and shiftless preferred to earn wages elsewhere for work no harder than that which in the county institution only got them board and clothes.

In the formation of local visiting committees, the officers of the State Charities Aid Association follow a method which rarely fails of success. They invite a number of influential people of high standing to meet and talk the matter over. Thus an interest is aroused, other gatherings follow, the best plans of visiting work, the cure of the destitute sick, the character and management of the local poor-house, methods of out-door relief, the tramp nuisance, what can be done for pauper children, etc., are discussed, and soon an active, zealous local committee is created, strong enough to bring the public opinion of the community to bear in support of its plans for reform. The aim is always to get the best people into the movement, so as to give it character and force, and enable it to overcome official opposition.

As early in its career as 1873, the Association found the need of State authority to open the doors of the public institutions to its visitors. In a few cases admission was refused, and in others it was granted in a grudging, unfriendly way. The Association consulted with the State Board of Charities, and a bill was prepared under which the two bodies could act harmoniously together. The bill, which was passed at the session of 1873, provided that visitors named by the State Board should at all times have the right to enter and inspect any of the State institutions. It was agreed between the Board and the Aid Association that the latter should nominate visitors, and that the former should give them the official authorization provided for by the new law. During seven years of coöperation between the two organizations, a great work was accomplished for the reform and elevation of the pauper institutions of the State. Fruitful of wise plans of improvement, and tireless in their efforts to remedy defects and vices, the zealous members of the Association accomplished far more than any official body could possibly have effected by itself. Indeed, their achievements were mainly quite out of the line of regular official effort.

One of the first great evils with which they

grappled was the rearing of pauper children in poor-houses. They asserted that, in the interest of the State as well as of humanity, the children of paupers should not be allowed to grow up in the atmosphere of pauperism, to follow in the footsteps of their parents. Even with the best management, a poor-house, they said, is no fit place for a child. In some of these institutions the visitors found three generations of the same pauper families. The taint of shiftlessness and dependence was no doubt in the blood, but society had done nothing to counteract it by proper education and surroundings. No self-respect nor ambition could be expected of a poor-house child, reared among outcasts and the wrecks of dissipation and misfortune, and despised by all the children of the neighborhood. The efforts of the State Board and of the Association, procured in 1875 the passage of an act which struck a great blow at the old poor-house system. This act, with some subsequent amendments, removed all children over two years of age from poor-houses and alms-houses, and forbade such institutions to receive them. Some were sent to reformatories, industrial homes, and asylums; but the effort of the Association was to have them, as far as possible, placed in families. Institution life in its best phases, the Society holds, cannot equip a child for independence and an honorable career nearly so well as the training of an orderly household. In their efforts to provide homes for pauper children, the Association has received valuable assistance from the Children's Aid Society of the City of New York—one of the noblest and most efficient of the great charities of the metropolis. The law does not execute itself, however, and the Association finds a great deal of work necessary to see that it is put in operation and kept in operation.

At one of the meetings of the Association, when the subject of preventing pauperism by giving a proper training to the children of paupers was under consideration, Dr. Elisha Harris related the terrible story of "Margaret, the Mother of Criminals." It has been published in the newspapers, but can profitably be read again to illustrate the great importance of one branch of the Association's work. Margaret was a pauper child left adrift in one of the villages on the upper Hudson, about ninety years ago. There was no alms-house in the place, and she was made a subject of out-door relief, receiving occasionally food and clothing from the town officials, but was never educated nor sheltered in a proper home. She became the mother of a long race of criminals and paupers, which has cursed the county ever since. The county records show two hundred of her descendants who have been

criminals. In one generation of her unhappy line there were twenty children, of whom seventeen lived to maturity. Nine served terms aggregating fifty years in the State Prison for high crimes, and all the others were frequent inmates of jails and almshouses. It is said, that of the six hundred and twenty-three descendants of this outcast girl, two hundred committed crimes which brought them upon the court records, and most of the others were idiots, drunkards, lunatics, paupers, or prostitutes. The cost to the county of this race of criminals and paupers is estimated as at least one hundred thousand dollars, taking no account of the damage they inflicted upon property and the suffering and degradation they caused in others. Who can say that all this loss and wretchedness might not have been spared the community if the poor pauper girl Margaret had been provided with a good moral home life while she was growing up to womanhood?

One of the most active and faithful of the Association's force of visitors engaged in the work of regular inspection of the public charitable institutions of New York City was asked recently to give an account of a day's visiting on the Islands. She said, in reply: "We leave home about nine in the morning, land at the upper dock on Blackwell's Island, and go first to the almshouse. Here are in round numbers one thousand inmates. The aged, infirm, epileptic and disabled fill the wards. Do not suppose that we merely pass through the wards. We must look into everything—see how the food is cooked, look at the supplies, examine the laundry, peer into nooks and corners, and talk with the officers about needed improvements. The sick of the almshouse are now cared for in pavilions a short distance from the main building, and thither we next bend our steps. Two of the long, low pavilions are for incurables, and in them there are usually about one hundred patients,—men and women in about equal numbers,—most of them old and suffering from diseases accompanying old age. For these poor creatures there is no real relief until death comes.

"Next in our tour comes the Insane Asylum for women. This week there are 1,270 inmates. A careful observer would notice at once the cheerless, dreary look of the corridors where the patients pass their time, the white walls, the utter absence of any bright colors, the lack of pleasant occupation. One might readily think the asylum a prison and the inmates prisoners. When they go out for an airing they go in groups, all clad alike, and move along at an even pace like so many

automatons. The dull, monotonous, hum-drum existence must have a depressing effect.

"The Retreat is a most melancholy place. The violent insane are kept here like so many animals behind bolts and bars.

"The next institution we visit is the Work-house. This is another massive structure, very like a prison. The building is of stone and was built by convict labor. The cells open out on the balconies. In each cell there are two bunks—iron frames with canvass laced upon them. A single blanket is allowed to each bunk. In 1879 there were 16,408 commitments to this institution—most of them for drunkenness and disorderly conduct. A large proportion of the inmates belong to the army of 'repeaters,' or 'revolvers,' as the persons are called, who revolve back and forth between the work-house and their haunts in the city. Some have been here thirty or forty times. These people perform most of the hard work of the institutions as 'helpers.' The women are scrubbers, etc. The men have a tailor-shop, shoe-shop, carpenter and blacksmith shops. They also make brooms, chairs, and scrub-brushes. Much of the clothing and bedding is also made in the work-house. The name of this institution is no misnomer; the inmates certainly work, but none too hard; the self-commitments prove this. The glaring fault here is the lack of proper classification. The hardened and vicious are in the constant companionship of those who come for the first time. Neither is there any system of rewards of merit to encourage good behavior. One great need, apparent to every woman who visits the institution, is a temporary home for friendless young girls to which they could go when discharged from the work-house. For the want of such a home, they drift back into their old vicious associations, and finally become hardened criminals. If they could be brought under good influences, in a temporary home from whence they could be sent to some employment, a large number of them would be saved.

"The work-house has its own hospitals, which we must inspect. Then we go to the great Charity hospital—a large stone building, five stories high, on the southern end of Blackwell's Island. The separate wooden pavilions are now used as lying-in wards. But the structure on the extreme point of the island we are not allowed to enter, for there are the small-pox cases.

"The day is not yet gone, and we take a boat for Randall's Island, where there is a frightful aggregate of human suffering. Not only the insane and the idiots are there, but the insane idiots—perfect monstrosities of men-

tal deformity. But strange to say, even these distressed creatures have a spark of harmony in their warped beings. Last Sunday they tried to sing and appeared to enjoy it when the missionary sang some hymns to them. They know enough to dress themselves and take their own seats at table, and to notice strangers. The brightest of the idiots go to school, and some of them are docile and behave themselves very well.

"A visit to the hundreds of poor sick and deformed children is touching enough. These suffering waifs appeal strongly to our sympathy. The one redeeming feature is that those who are able, go to school. The buildings for the children ought to be enlarged, and everywhere better nurses are needed.

"The Branch Charity Hospital on Randall's Island receives the surplus of the other Institutions, which are generally incurable cases. The sun is getting low now, but we have still another institution to visit—the Infants' Hospital for orphan babes and for mothers from the work-house with young infants. In a recent year one hundred and eighty of these women were sent here by the Superintendent of the Out-Door Poor, and seven hundred and eighty children were admitted, of whom three hundred and sixty-two were orphans and one hundred and thirteen foundlings. You may imagine that we find enough to do in looking after the welfare of all these poor waifs. Hart's and Ward's Islands are also under the supervision of our Association, but they do not come within my visiting range. I have sought only to give you a sketch of a day's tour of a member of one of our visiting committees. It is dark when we return to the city, tired out in mind and body, but comforted for all the dreadful sights of misery, suffering, and vice we have seen with the thought that we are doing something, however little, to lessen the appalling sum of human wretchedness."

How great the field of labor is in which the State Charities Aid Association engages in the single direction of poor-house and alms-house inspection and reform, will be understood by a few figures from the official statistics. In 1880 there were relieved in these institutions 137,777 persons, including more than 5,000 insane. The estimated value of the aggregate property was \$6,000,000, and the expenditures for the year \$2,300,000. There is another wide field in which the Association engages with intelligence and zeal—that of curing the tramp evil and improving local methods of out-door relief. Some startling exposures were made a few years ago by the committee of the Association on adult able-bodied paupers, of which Mr. George H. Forster was chair-

man. The reports of the visiting committees in many of the rural and suburban counties showed that the overseers of the poor were interested in entertaining as large a number of tramps as possible, as they made a profit on their board and lodging. Some of these overseers were paid at the rate of one dollar for two meals and a lodging for each tramp accommodated over night. Others were paid twenty-five cents a meal, on which they probably made a profit of ten or fifteen cents. Each overseer's house became a center of pauperism and vagrancy, and it was natural that the overseer should treat his boarders well so that they would stop at his place again. In short, he was a tramp's landlord, keeping a free hotel for vagrants at the expense of the county. The community, under this system, said in effect to the idle and vicious: "We will board you free of cost if you will only come and stay among us." As a result of these exposures, the Tramp Act of 1880, drafted by the Association, was passed by the Legislature, which punishes "tramping" with imprisonment at hard labor. Its effects have thus far been excellent. The leading idea of the Association in all its plans for dealing with able-bodied pauperism is to make the paupers work for their victuals and lodging. The same method that empties the poor-houses of half their inmates clears the roads of the stout and impudent beggars who start out to force society to give them an unearned living. "Make them work, insists the Association, even if their labor is unprofitable to the town. Set them to breaking stone or carting dirt on the highways—anything that will show them they cannot subsist upon the community without giving some equivalent in muscular exertion." Towns and counties that strictly follow this plan are soon shunned by the tramps, and enjoy a delightful immunity from this pest developed by careless habits of indiscriminate charity.

The conclusions reached by the Association on the subject of out-door relief, after years of study and investigation, will perhaps surprise those who think that generous giving is genuine charity. The members of the Association believe that there is too much, instead of too little, of this form of benevolence—that a vast amount of money is wasted, and a deal of evil done, by undermining the self-respect of recipients, fostering a spirit of dependence opposed to self-support, and interfering with the laws which govern wages and labor. In New York City there are more than sixty societies engaged in giving out-door relief to the poor, and besides almost every church goes to some extent into the same work. In a great city, a considerable amount of such relief must be

given to keep the unfortunate from suffering and death; but the Association urges that it should be given systematically and carefully, and only after a special investigation of the circumstances of each case. The motive, after relieving the most pressing necessity, should always be to help the poor to help themselves, and they should not be allowed to get into the way of thinking that whenever their affairs come to a tight pinch there is always a charitable society to fall back upon. A large number of families are kept constantly in the border-land between self-support and pauperism, passing frequently from one region to the other, by the ease with which they can obtain money, clothes, and food from charitable societies when they are in a strait; whereas, if aid were not so convenient to obtain, they would outgrow their shiftless habits and become permanently self-sustaining. Good results are anticipated through the recent establishment of the Charity Organization Society of New York. Coöperation of all the organized charities of the city and central supervision is the plan of this society, and it is already realized to an important extent.

About four years ago an active member of the Association, Miss Sarah T. Sands, basing her work upon one of the publications of the Association, formed the Loan Relief Association, of the Sixteenth Ward, the object of which is to lend to the worthy poor small sums of money to meet pressing temporary needs, and articles required in the care of the sick—money and articles to be promptly returned at the times agreed upon. The success of this modest little work of benevolence has been very gratifying. The Society provides medical treatment for the sick, and legal assistance to people who do not know their rights or cannot hire a lawyer to lay their grievances before a court. It has a small circulating library, and a system of giving out sewing to poor women to enable them to repay with work the money they borrow. Its work has shown that as keen a sense of honor may be found in the tenement house as in the Fifth avenue mansion. The care taken of borrowed articles, and the effort made to return money loans on the day promised, shows an integrity of character too often wanting in the rich. One of the admirable features of the Loan Relief Society is the small expense attending it. The office of the Society is in the basement of the manager's house, so no rent is paid; nor are there any salaries to officers.

The efforts of the Committee on the Elevation of the Poor in their Homes, which has in charge one of the most important branches of the permanent work of the State Charities

Aid Association, deserves special notice. The chairman is Miss Grace H. Dodge. A movement in favor of tenement house reform was started by this Committee in 1879. Important amendments to the Tenement-House Act were, in consequence, passed by the Legislature, which have brought about great improvements in the sanitary condition of the homes of the poor in the metropolis. Increased power and additional funds were given the Board of Health as a result, in part, of the agitation set on foot by the Committee. A pamphlet was printed for the use of the visitors of the Association, to enable them to instruct the dwellers in tenements as to their rights under the law in the matter of sanitary appliances required to be provided by landlords. Out of the general movement initiated by the Association and the wide-spread interest excited by several public meetings, grew the Improved Dwellings Association, of which Mr. W. Bayard Cutting is president—a commercial enterprise based on a humanitarian motive—and the Sanitary Reform Society, Mr. James Gallatin, president, which co-operates with the Health Department in securing the enforcement of the Health Laws. "One good turn deserves another," says the old proverb. One good effort stimulates another, is the experience of the Association. In the broad field of the humanities there is always enough to do, and every good work undertaken seems to open the way to others that are only waiting for earnest hands.

In 1880 the Aid Association was, by the unexpected action of the State Board of Charities, placed in a position where its usefulness would have been seriously crippled, if not destroyed, had it not speedily found a way of extricating itself. The two bodies, the official and the volunteer, had been working in harmony, as we have seen, the Association furnishing and instructing committees of visitors to the public institutions, and the Board arming them with its mandate for admission. The system was not a good one, but its defect was not strikingly manifested until it had existed for nearly seven years, when the essential differences between the methods of volunteer workers and those of officials, was brought home to the Board by the publications in the newspapers by members of the Association of facts relating to the management of public institutions of charity.

Thereupon the Board adopted rules for visitors receiving its legal appointments, which made all information obtained by the visitors the exclusive property of the Board, and not to be submitted elsewhere without its consent. This was in effect to tell the committees formed by the faithful and intelligent efforts of the Aid

Association that they could not report directly to the body to which they belonged, nor act under its guidance. Thus the whole system of volunteer inspection was threatened with destruction. The Association went to the Legislature for relief, but could accomplish nothing the first winter, the State Board of Charities being opposed to their bill. During the session of 1881 the effort was renewed. Devoted members of the central organization and of the local visiting committees went to Albany; a leading lawyer of New York, Mr. Joseph H. Choate, gave his services, and made a convincing argument before the committee having the subject in charge; the powerful city newspapers took up the cause of the volunteers, and finally, after a great deal of effort a bill was passed authorizing judges of the Supreme Court, on the application of the managers of the State Charities Aid Association, to give authority to such persons as might be designated in such applications to visit and inspect the poor-houses and alms-houses in the counties where the visitors were residing.

It was a great victory for the principles upon which volunteer inspection is based. It gave the Association an independent legal standing, greatly encouraged its members, by removing what seemed to be an insuperable obstacle from its path, and placed its future growth and usefulness beyond peril. It should be said here that the Association fully appreciates the great value of the labors of the State Board of Charities. It insists, however, that official work in the institutions of charity needs to be supplemented by untiring volunteer effort.

An excellent result of the joint efforts of the State Board and the Aid Association may properly be mentioned here. The law of last winter establishing a State reformatory for women was urged upon the Legislature by a member of the Board, and supported by petitions circulated for signatures by the local visiting committees of the Association. This measure is exactly in line with the Association's ideas. Society, it holds, should counteract the first open signs of a tendency toward crime and degradation. Prisons too often confirm criminal instincts; "reformatories," "refuges," and "homes," may eradicate them. Now that the Association has its own legal rights, and its own definite field of labor, it is believed a more cordial coöperation than ever will exist between its managers and the members of the State Board of Charities.

There are other interesting features of the Association's work which can only be briefly mentioned here. Who has not noticed, on coming to New York by rail or ferry, the capacious boxes in the depots and ferry-houses,

bearing a modest request for old newspapers and magazines for the use of the sick in the hospitals; and who has not felt, as he emptied his pockets of half-read dailies and periodicals, a thrill of pleasure in the thought that he was giving some poor patient, prostrated by cruel accident or lingering disease, an hour's respite from the sense of his misfortune. Every day the boxes are emptied by paid agents, who distribute their contents in the hospitals. This admirable little philanthropic plan, which does its good work as steadily and regularly as a clock, was devised by an invalid lady, and superintended by her from her sick room; at her death a fund was contributed by her friends to perpetuate the work in her memory. Books sent to the "Committee on Books and Papers" are distributed to public institutions through the Express Companies, free of charge. The Hospital Committees, of which Dr. Stephen Smith is chairman, and Mr. F. R. Jones is secretary, issues instructions to hospital visitors, and studies plans for hospital construction and systems of nursing and diet. The Bellevue Training-School for Nurses, as we have already seen, grew out of its efforts. It also accomplished the important reform of removing the maternity service from the old hospital wards of Bellevue. It is consulted about the erection of new hospitals in this and other States. In regard to hospital buildings, it insists on the separate pavilion plan, believing that large, permanent structures become lurking-places for the germs of disease. Its efforts have already largely influenced public opinion in this direction.

The Association has a valuable library of American and foreign books bearing upon its various lines of work, which are loaned to its members, and to the officers of charitable institutions. Any member of a local visiting committee, or any hospital physician, can procure books by paying the postage for sending and returning. A number of pamphlets have been published by the Association to meet special needs for information. The annual reports of the Association are also a mine of good and suggestive material, available to all who desire to engage intelligently in charitable work among the poor.

The future career of the State Charities Aid Association may be outlined from its past. It proposes to maintain and strengthen its central organization, for the study of the problems of pauperism, and as a focus of thought and practical effort for the improvement of the charitable institutions and the elevation of the poorer classes, and at the same time to extend its visiting system until it embraces all the counties in the State, and brings under its inspection all the county poor-

houses, city almshouses, public hospitals, and asylums. It hopes that its success in New York will tend to the early establishment of kindred societies in other States, and is ready to assist in the organization of such societies, and give them the advantage of its experience. Its plan of uniting the student element and the practical element in philanthropic work, by a double organization of central committees of research and visiting committees for diligent systematic work, is unique. Nothing like it is to be found in this or any other country, and it is attracting much attention from philanthropists in England. Its managers attribute its success to the excellence of this plan, to the association of ladies and gentlemen upon all the committees, to the classification of work,—not by institutions, but by persons,—and to the high character and genuine benevolent spirit of those who have formed the central and local committees.

In conclusion, it should be said that the managers of the Association believe that the most urgent reform now needed in all the charitable institutions is a civil-service system, to secure a permanent tenure to meritorious

officers and employes and put a stop to the vicious custom of appointments as a reward for political service. Nowhere else is there more need of experience, and of special natural fitness of character and mind, in those occupying public positions. Yet physicians, superintendents, nurses, and assistants, as a rule owe their places to their party services, or to the efforts of influential politicians, rather than to their own merit. This wretched system is not peculiar to New York. In Ohio, not many years ago, when supremacy passed for a time from the hands of one party to that of its rival, the entire personnel of the State benevolent institutions, from superintendents down to scrubbers, was ruthlessly changed, with brutal disregard of the welfare of the unfortunate inmates. Indeed, there are few States where the offices in such institutions are not treated as the legitimate spoils of the successful party. The State Charities Aid Association, through its corps of visitors, is constantly brought in contact with the evils that grow out of this system, and will spare no effort to develop such an enlightened public opinion as will reform it altogether.

E. V. Smalley.

AFTER THE RAIN.

In mist yon summer range of hills is drowned;

Lost are the meadows and the feeding herds;

From cottage eaves the slow drops slip to ground;

The smoke quits languidly the chimney's throat,

Incurious of the sky as new-fledged birds

That only of the cozy nest take note.

Cooling her rose-red cheek against the pane,

My neighbor's child laughs at the weeping world.

The draggled rooster, strutting down the lane,

Is jester at her baby court; and though

The splendors of Queen Juno's bird are furled,

My lady laughs, as at a merry show;

For little knows her soul of woe or fears

Behind its tender shield of babyhood.

To me, whose shield is lost, the earth appears

A tear-stained face, its brightness overcast.

The mist is thinning from the highest wood,

And fir and hemlock stand, half-cloaked and vast,

Like errant spirits of the tombless Greeks,

That from some lonely rampart of the skies

Look on the busy plain and happy freaks

Of flesh-clad men; or are they exiled Moors,

Defiling through the mountain pass, whose eyes

The Vega's loveliness in vain allures?

Ah, baby neighbor at the pane, whose glee

Might rout the mists that muffle hill and field,

And coax sad Nature to be gay with thee,

The world's woe pierceth me,—lend me thy shield!

Annie R. Annan.

A MODERN INSTANCE.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "The Undiscovered Country," etc.

XXIII.

WHEN the spring opened, Bartley pushed Flavia about the sunny pavements in a baby-carriage, while Marcia paced alongside, looking in under the calash top from time to time, arranging the bright afghan, and twitching the little one's lace hood into place. They never noticed that other perambulators were pushed by Irish nurse-girls, or French *bonnes*; they had paid somewhat more than they ought for theirs, and they were proud of it merely as a piece of property. It was rather Bartley's ideal, as it is that of most young American fathers, to go out with his wife and baby in that way; he liked to have his friends see him; and he went out every afternoon he could spare. When he could not go, Marcia went alone. Mrs. Halleck had given her a key to the garden, and on pleasant mornings she always found some of the family there, when she pushed the perambulator up the path, to let the baby sleep in the warmth and silence of the sheltered place. She chatted with Olive or the elder sisters, while Mrs. Halleck drove Cyrus on to the work of tying up the vines and trimming the shrubs, with the pitiless rigor of women when they get a man about some outdoor labor. Sometimes, Ben Halleck was briefly of the party; and one morning when Marcia opened the gate, she found him there alone with Cyrus, who was busy at some belated tasks of horticulture. The young man turned at the unlocking of the gate, and saw Marcia lifting the front wheels of the perambulator to get it over the steps of the pavement outside. He limped hastily down the walk to help her, but she had the carriage in the path before he could reach her, and he had nothing to do but to walk back at its side, as she propelled it toward the house. "You see what a useless creature a cripple is," he said.

Marcia did not seem to have heard him. "Is your mother at home?" she asked.

"I think she is," said Halleck. "Cyrus, go in and tell mother that Mrs. Hubbard is here, wont you?"

Cyrus went, after a moment of self-respectful delay, and Marcia sat down on a bench

under a pear-tree beside the walk. Its narrow young leaves and blossoms sprinkled her with shade shot with vivid sunshine, and in her light dress, she looked like a bright, fresh figure from some painter's study of spring. She breathed quickly from her exertion, and her cheeks had a rich, dewy bloom. She had pulled the perambulator round so that she might see her baby while she waited, and she looked at the baby now, and not at Halleck, as she said:

"It is quite hot in the sun to-day."

She had a way of closing her lips, after speaking, in that sweet smile of hers, and then of glancing sidelong at the person to whom she spoke.

"I suppose it is," said Halleck, who remained on foot. "But I haven't been out yet. I gave myself a day off from the law-school, and I hadn't quite decided what to do with it."

Marcia leaned forward, and brushed a tendril of the baby's hair out of its eye.

"She's the greatest little sleeper that ever was when she gets into her carriage," she half mused, leaning back with her hands folded in her lap, and setting her head on one side for the effect of the baby without the stray ringlet. "She's getting so fat," she said, proudly.

Halleck smiled.

"Do you find it makes a difference in pushing her carriage, from day to day?"

Marcia took his question in earnest, as she must take anything but the most obvious pleasantry concerning her baby.

"The carriage runs very easily; we picked out the lightest one we could, and I never have any trouble with it, except getting up curb-stones and crossing Cambridge street. I don't like to cross Cambridge street; there are always so many horse-cars. But it's all down-hill coming here; that's one good thing."

"That makes it a very bad thing going home, though," said Halleck.

"Oh, I go round by Charles street and come up the hill from the other side; it isn't so steep there."

There was no more to be said upon this

point, and in the lapse of their talk, Halleck broke off some boughs of the blooming pear, and dropped them on the baby's afghan.

"Your mother won't like your spoiling her pear-tree," said Marcia, seriously.

"She will when she knows that I did it for Miss Hubbard."

"Miss Hubbard!" repeated the young mother, and she laughed in fond derision. "How funny to hear *you* saying that! I thought you hated babies."

Halleck looked at her with strong self-disgust, and he dropped the bough which he had in his hand upon the ground. There is something in a young man's ideal of women, at once passionate and ascetic, so fine that any words are too gross for it. The event which intensified the interest of his mother and sisters in Marcia, had abashed Halleck; when she came so proudly to show her baby to them all, it seemed to him like a mockery of his pity for her captivity to the love that profaned her. He went out of the room in angry impatience, which he could hardly hide when one of his sisters tried to make him take the baby. Little by little his compassion adjusted itself to the new conditions; it accepted the child as an element of her misery in the future, when she must realize the hideous deformity of her marriage. His prophetic sense of this, and of her inaccessibility to human help here and hereafter, made him sometimes afraid of her; but all the more severely he exacted of his ideal of her that she should not fall beneath the tragic dignity of her fate through any levity of her own. Now, at her innocent laugh, a subtle irreverence, which he was not able to exorcise, infused itself into his sense of her.

He stood looking at her, after he dropped the pear-bough, and seeing her mere beauty as he had never seen it before. The bees hummed in the blossoms, which gave out a dull, sweet smell; the sunshine had the luxurious, enervating warmth of spring. He started suddenly from his reverie: Marcia had said something.

"I beg your pardon?" he queried.

"Oh, nothing. I asked if you knew where I went to church yesterday?"

Halleck flushed, ashamed of the wrong his thoughts, or rather his emotions, had done.

"No, I don't," he answered.

"I was at your church."

"I ought to have been there myself," he returned, gravely, "and then I should have known."

She took his self-reproach literally.

"You couldn't have seen me. I was sitting pretty far back, and I went out before any

of your family saw me. Don't you go there?"

"Not always, I'm sorry to say. Or, rather, I'm sorry not to be sorry. What church do you generally go to?"

"Oh, I don't know. Sometimes to one, and sometimes to another. Bartley used to report the sermons and we went round to all the churches then. That is the way I did at home, and it came natural to me. But I don't like it very well. I want Flavia should belong to some particular church."

"There are enough to choose from," said Halleck, with pensive sarcasm.

"Yes, that's the difficulty. But I shall make up my mind to one of them, and then I shall always keep to it. What I mean is that I should like to find out where most of the good people belong, and then have her be with them," pursued Marcia. "I think it's best to belong to some church, don't you?"

There was something so bare, so spiritually poverty-stricken in these confessions and questions, that Halleck found nothing to say to them.

He was troubled, moreover, as to what the truth was in his own mind. He answered, with a sort of mechanical adhesion to the teachings of his youth: "I should be a recreant not to think so. But I'm not sure that I know what you mean by belonging to some church," he added. "I suppose you would want to believe in the creed of the church, whichever it was."

"I don't know that I should be particular," said Marcia, with perfect honesty.

Halleck laughed sadly.

"I'm afraid *they* would, then, unless you joined the Broad Church."

"What is that?"

He explained as well as he could. At the end she repeated, as if she had not followed him very closely:

"I should like her to belong to the church where most of the good people go. I think that would be the right one, if you could only find which it is."

Halleck laughed again.

"I suppose what I say must sound very queer to you; but I've been thinking a good deal about this lately."

"I beg your pardon," said Halleck. "I had no reason to laugh, either on your account or my own. It's a serious subject."

She did not reply, and he asked, as if she had left the subject:

"Do you intend to pass the summer in Boston?"

"No; I'm going down home pretty early, and I wanted to ask your mother what is the best way to put away my winter things."

"You'll find my mother very good authority on such matters," said Halleck. Through an obscure association with moths that corrupt, he added: "She's a good authority on church matters, too."

"I guess I shall talk with her about Flavia," said Marcia.

Cyrus came out of the house.

"Mis' Halleck will be here in a minute. She's got to get red of a lady that's calling, first," he explained.

"I will leave you, then," said Halleck, abruptly.

"Good-by," answered Marcia, tranquilly. The baby stirred; she pushed the carriage to and fro, without glancing after him as he walked away.

His mother came down the steps from the house, and kissed Marcia for welcome, and looked under the carriage-top at the sleeping baby.

"How she *does* sleep!" she whispered.

"Yes," said Marcia, with the proud humility of a mother who cannot deny the merit of her child, "and she sleeps the whole night through. I'm *never* up with her. Bartley says she's a perfect Seven Sleeper. It's a regular joke with him—her sleeping."

"Ben was a good baby for sleeping, too," said Mrs. Halleck, retrospectively emulous. "It's one of the best signs. It shows that the child is strong and healthy."

They went on to talk of their children, and in their community of motherhood, they spoke of the young man as if he were still an infant.

"He has never been a moment's care to me," said Mrs. Halleck. "A well baby will be well even in teething."

"And I had somehow thought of him as sickly!" said Marcia, in self-derision.

Tears of instant intelligence sprang into his mother's eyes.

"And did you suppose he was *always* lame?" she demanded with gentle indignation.

"He was the brightest and strongest boy that ever was, till he was twelve years old. That's what makes it so hard to bear; that's what makes me wonder at the way the child bears it! Did you never hear how it happened? One of the big boys, as he called him, tripped him up at school, and he fell on his hip. It kept him in bed for a year, and he's never been the same since; he will always be a cripple," grieved the mother. She wiped her eyes; she never could think of her boy's infirmity without weeping. "And what seemed the worst of all," she continued, "was that the boy who did it, never expressed any regret for it, or acknowledged it by word or deed, though he must

have known that Ben knew who hurt him. He's a man, here, now; and sometimes Ben meets him. But Ben always says that he can stand it if the other one can. He was always just so from the first! He wouldn't let us blame the boy; he said that he didn't mean any harm, and that all was fair in play. And now he says he knows the man is sorry, and would own to what he did, if he didn't have to own to what came of it. Ben says that very few of us have the courage to face the consequences of the injuries we do, and that's what makes people seem hard and indifferent when they are really not so. There!" cried Mrs. Halleck. "I don't know as I ought to have told you about it; I know Ben wouldn't like it. But I can't bear to have any one think he was always lame, though I don't know why I shouldn't: I'm prouder of him since it happened than ever I was before. I thought he was here with you," she added.

"He went out just before you came," said Marcia, nodding toward the gate. She sat listening to Mrs. Halleck's talk about Ben; Mrs. Halleck took herself to task from time to time, but only to go on talking about him again. Sometimes Marcia commented on his characteristics, and compared them with Bartley's, or with Flavia's, according to the period of Ben's life under consideration. At the end Mrs. Halleck said: "I haven't let you get in a word! Now you must talk about *your* baby. Dear little thing! I feel that she's been neglected. But I'm always just so selfish when I get to running on about Ben. They all laugh at me."

"Oh, I like to hear about other children," said Marcia, turning the perambulator round. "I don't think any one can know too much that has the care of children of their own." She added, as if it followed from something they had been saying of vaccination: "Mrs. Halleck, I want to talk with you about getting Flavia christened. You know I never was christened."

"Weren't you?" said Mrs. Halleck, with a dismay which she struggled to conceal.

"No," said Marcia, "father doesn't believe in any of those things, and mother had got to letting them go, because he didn't take any interest in them. They did have the first children christened, but I was the last."

"I didn't speak with your father on the subject," faltered Mrs. Halleck. "I didn't know what his persuasion was."

"Why, father doesn't belong to *any* church! He believes in a God, but he doesn't believe in the Bible." Mrs. Halleck sank down on the garden-seat too much shocked to speak, and Marcia continued: "I don't know whether the Bible is true or not; but I've often wished that I belonged to church."

"You couldn't, unless you believed in the Bible," said Mrs. Halleck.

"Yes, I know that. Perhaps I should, if anybody proved it to me. I presume it could be explained. I never talked much with any one about it. There must be a good many people who don't belong to church, although they believe in the Bible. I should be perfectly willing to try, if I only knew how to begin."

In view of this ruinous open-mindedness, Mrs. Halleck could only say,

"The way to begin is to read it."

"Well, I will try. How do you know, after you've become so that you believe the Bible, whether you're fit to join the church?"

"It's hard to tell you, my dear. You have to feel first that you have a Saviour,—that you've given your whole heart to him,—that he can save you, and that no one else can; that all you can do yourself won't help you. It's an experience."

Marcia looked at her attentively, as if this were all a very hard saying.

"Yes, I've heard of that. Some of the girls had it at school. But I never did. Well," she said at last, "I don't feel so anxious about myself, just at present, as I do about Flavia. I want to do everything I can for Flavia, Mrs. Halleck. I want her to be christened,—I want her to be baptized into some church. I think a good deal about it. I think sometimes, what if she should die, and I hadn't done that for her, when may be it was one of the most important things"—Her voice shook, and she pressed her lips together.

"Of course," said Mrs. Halleck, tenderly. "I think it is the *most* important thing."

"But there are so many churches," Marcia resumed. "And I don't know about any of them. I told Mr. Halleck, just now, that I should like her to belong to the church where the best people go, if I could find it out. Of course, it was a ridiculous way to talk; I knew he thought so. But what I meant was that I wanted she should be with good people all her life; and I didn't care what she believed."

"It's very important to believe the truth, my dear," said Mrs. Halleck.

"But the truth is so hard to be certain of, and you know goodness as soon as you see it. Mrs. Halleck, I'll tell you what I want: I want Flavia should be baptized into your church. Will you let her?"

"Let her? Oh, my dear child, we shall be humbly thankful that it has been put into your heart to choose for her what *we* think is the true church," said Mrs. Halleck, fervently.

"I don't know about that," returned Marcia. "I can't tell whether it's the true church or not, and I don't know that I ever could;

but I shall be satisfied, if it's made you what you are," she added simply.

Mrs. Halleck did not try to turn away her praise with vain affectations of humility. "We try to do right, Marcia," she said. "Whenever we do it, we must be helped to it by some power outside of ourselves. I can't tell you whether it's our church; I'm not so sure of that as I used to be. I once thought that there could be no real good out of it; but I *can't* think that, any more: Olive and Ben are as good children as ever lived; I *know* they won't be lost; but neither of them belongs to our church."

"Why, what church does he belong to?"

"He doesn't belong to any, my dear," said Mrs. Halleck, sorrowfully.

Marcia looked at her absently.

"I knew Olive was a Unitarian; but I thought—I thought he —"

"No, he doesn't," returned Mrs. Halleck. "It has been a great cross to his father and me. He is a good boy; but we think the *truth* is in our church!"

Marcia was silent a moment. Then she said, decisively:

"Well, I should like Flavia to belong to your church."

"She couldn't belong to it now," Mrs. Halleck explained. "That would have to come later, when she could understand. But she could be christened in it—dear little thing!"

"Well, christened, then. It must be the training he got in it. I've thought a great deal about it, and I think my worst trouble is that I've been left too free in everything. One mustn't be left too free. I've never had any one to control me, and now I can't control myself at the very times when I need to do it the most, with—with—when I'm in danger of vexing—when Bartley and I —"

"Yes," said Mrs. Halleck, sympathetically.

"And Bartley is just so, too. He's always been left to himself. And Flavia will need all the control we can give her—I know she will. And I shall have her christened in your church, and I shall teach her all about it. She shall go to the Sunday-school, and I will go to church, so that she can have an example. I told father I should do it when he was up here, and he said there couldn't be any harm in it. And I've told Bartley, and *he* doesn't care."

They were both far too single-minded and too serious to find anything droll in the terms of the adhesion of Marcia's family to her plan, and Mrs. Halleck entered into its execution with affectionate zeal.

"Ben, dear," she said, tenderly, that evening, when they were all talking it over in family council, "I hope you didn't drop anything,

when that poor creature spoke to you about it this morning, that could unsettle her mind in any way?"

"No, mother," said Halleck, gently.

"I was sure you didn't," returned his mother, repentantly.

They had been talking a long time of the matter, and Halleck now left the room.

"Mother! How could you say such a thing to Ben?" cried Olive, in a quiver of indignant sympathy. "Ben say anything to unsettle anybody's religious purposes! He's got more religion now than all the rest of the family put together!"

"Speak for yourself, Olive," said one of the intermediary sisters.

"Why, Olive, I spoke because I thought she seemed to place more importance on Ben's belonging to the church than anything else, and she seemed so surprised when I told her he didn't belong to any."

"I dare say she thinks Ben is good when she compares him with that mass of selfishness of a husband of hers," said Olive. "But I will thank her," she added, hotly, "not to compare Ben with Bartley Hubbard, even to Bartley Hubbard's disadvantage. I don't feel flattered by it."

"Of course, she thinks all the world of her husband," said Mrs. Halleck. "And I know Ben is good; and as you say, he is religious; I feel that, though I don't understand how, exactly. I wouldn't hurt his feelings for the world, Olive, you know well enough. But it was a stumbling-block when I had to tell that poor, pretty young thing that Ben didn't belong to church; and I could see that it puzzled her. I couldn't have believed," continued Mrs. Halleck, "that there was any person in a Christian land, except among the very lowest, that seemed to understand so little about the Christian religion, or any scheme of salvation. Really, she talked to me like a pagan. She sat there much better dressed and better educated than I was; but I felt like a missionary talking to a South Sea Islander."

"I wonder the old Bartlett pear didn't burst into a palm-tree over your heads," said Olive. Mrs. Halleck looked grieved at her levity, and she hastened to add:

"Don't put up your lip, mother. I understood just what you meant, and I can imagine just how shocking Mrs. Hubbard's heathen remarks must have been. We should all be shocked if we knew how many people there are just like her, and we should all try to deny it, and so would they. I guess Christianity is about as uncommon as civilization—and that's *very* uncommon. If her poor, feeble mind was such a chaos, what do you suppose her husband's is?"

This would certainly not have been easy for Mrs. Halleck to say, then, or to say afterward, when Bartley walked up to the font in her church, with Marcia at his side, and Flavia in his arms, and a faintly ironical smile on his face, as if he had never expected to be got in for this, but was going to see it through now. He had, in fact, said, "Well, let's go the whole figure," when Marcia had expressed a preference for having the rite performed in church, instead of in their own house.

He was unquestionably growing stout, and even Mrs. Halleck noticed that his blonde face was unpleasantly red that day. He was, of course, not intemperate. He always had beer with his lunch, which he had begun to take down town, since the warm weather had come on and made the walk up the hill to Clover street irksome: and he drank beer at his dinner—he liked a late dinner, and they dined at six, now—because it washed away the fatigues of the day and freshened you up. He was rather particular about his beer, which he had sent in by the gross—it came cheaper that way; after trying both the Cincinnati and the Milwaukee lagers, and making a cursory test of the Boston brand, he had settled down upon the American Tivoli; it was cheap, and you could drink a couple of bottles without feeling it. Freshened up by his two bottles, he was apt to spend the evening in an amiable drowse and get early to bed, when he did not go out on newspaper duty. He joked about the three fingers of fat on his ribs, and frankly guessed it was the beer that did it; at such times he said that perhaps he should have to cut down on his Tivoli.

Marcia and he had not so much time together as they used to have; she was a great deal taken up with the baby, and he found it dull at home, not doing anything or saying anything; and, when he did not feel sleepy, he sometimes invented work that took him out at night. But he always came upstairs after putting his hat on, and asked Marcia if he could help her about anything.

He usually met other newspaper men on these excursions, and talked newspaper with them, airing his favorite theories. He liked to wander about with reporters who were working up cases; to look in at the police stations, and go to the fires; and he was often able to give the "Events" men points that had escaped the other reporters. If asked to drink, he always said, "Thanks, no; I don't do anything in that way. But if you'll make it beer, I don't mind." He took nothing but beer when he hurried out of the theater into one of the neighboring resorts, just as the great platters of stewed kidneys and *lyonnaise* potatoes came steaming up out of the kitchen, prompt

to the drop of the curtain on the last act. Here, sometimes, he met a friend, and shared with him his dish of kidneys and his schooner of beer; and he once suffered himself to be lured by the click of the balls into the back room. He believed that he played a very good game of billiards; but he was badly beaten that night. He came home at daylight fifty dollars out. But he had lost like a gentleman in a game with gentlemen; and he never played again.

By day he worked hard, and since his expenses had been increased by Flavia's coming, he had undertaken more work for more pay. He still performed all the routine labor of a managing editor, and he now wrote the literary notices of "The Events," and sometimes, especially if there was anything new, the dramatic criticisms; he brought to the latter task all the freshness of a man who, till the year before, had not been half a dozen times inside a theater.

He attributed the fat on his ribs to the Tivoli; perhaps it was also owing in some degree to a good conscience, which is a much easier thing to keep than people imagine. At any rate, he now led a tranquil, industrious, and regular life, and a life which suited him so well that he was reluctant to interrupt it by the visit to Equity which he and Marcia had talked of in the early spring. He put it off from time to time, and one day, when she was pressing him to fix some date for it, he said:

"Why can't you go, Marcia?"

"Alone?" she faltered.

"Well, no; take the baby, of course. And I'll run down for a day or two when I get a chance."

Marcia seemed in these days to be schooling herself against the impulses that once brought on her quarrels with Bartley.

"A day or two ——" she began, and then stopped and added gravely, "I thought you said you were going to have several weeks' vacation."

"Oh, don't tell me what I *said*!" cried Bartley. "That was before I undertook this extra work, or before I knew what a grind it was going to be. Equity is a good deal of a dose for me, anyway. It's all well enough for you, and I guess the change from Boston will do you good, and do the baby good, but I shouldn't look forward to three weeks in Equity with unmitigated hilarity."

"I know it will be stupid for you. But you need the rest. And the Hallecks are going to be at North Conway; and they said they would come over," urged Marcia. "I know we should have a good time."

Bartley grinned.

"Is that your idea of a good time, Marsh? Three weeks of Equity, relieved by a visit from such heavy weights as Ben Halleck and his sisters? Not any in mine, thank you."

"How can you—how *dare* you speak so of them!" cried Marcia, lightening upon him. "Such good friends of yours—such good people ——"

Her voice shook with indignation and wounded feeling.

Bartley rose and took a turn about the room, pulling down his waistcoat and contemplating its outward slope with a smile.

"Oh, I've got more friends than I can shake a stick at. And with pleasure at the helm, goodness is a drug in the market—if you'll excuse the mixed metaphor. Look here, Marcia," he added, severely. "If you like the Hallecks, all well and good; I sha'n't interfere with you; but they bore me. I outgrew Ben Halleck years ago. He's duller than death. As for the old people, there's no harm in them,—though *they're* bores, too,—nor in the old girls; but Olive Halleck doesn't treat me decently. I suppose that just suits you: I've noticed that you never like the women that *do* treat me decently."

"They don't treat me decently!" retorted Marcia.

"Oh, Miss Kingsbury treated you very well that night. She couldn't imagine your being jealous of her politeness to me."

Marcia's temper fired at his treacherous recurrence to a grievance which he had once so sacredly and sweetly ignored.

"If you wish to take up by-gones, why don't you go back to Sally Morrison at once? She treated you even better than Miss Kingsbury."

"I should have been very willing to do that," said Bartley, "but I thought it might remind you of a disagreeable little episode in your own life, when you flung me away, and had to go down on your knees to pick me up again."

These thrusts which they dealt each other in their quarrels, however blind and misdirected, always reached their hearts: it was the wicked will that hurt, rather than the words. Marcia rose, bleeding inwardly, and her husband felt the remorse of a man who gets the best of it in such an encounter.

"Oh, I'm sorry I said that, Marcia! I didn't mean it; indeed I!"—She disdained to heed him as she swept out of the room and up the stairs; and his anger flamed out again.

"I give you fair warning," he called after her, "not to try that trick of locking the door, or I will smash it in."

Her answer was to turn the key in the door with a click which he could not fail to hear.

The peace in which they had been living of late was very comfortable to Bartley; he liked it; he hated to have it broken; he was willing to do what he could to restore it at once. If he had no better motive than this,

he still had this motive; and he choked down his wrath, and followed Marcia softly upstairs. He intended to reason with her, and he began, "I say, Marsh," as he turned the door-knob. But you cannot reason through a keyhole, and before he knew he found himself saying, "Will you open this?" in a tone whose quiet was deadly. She did not answer; he heard her stop in her movements about the room, and wait, as if she expected him to ask again. He hesitated a moment whether to keep his threat of breaking the door in; but he turned away and went down-stairs, and so into the street. Once outside, he experienced the sense of release that comes to a man from the violation of his better impulses; but he did not know what to do or where to go. He walked rapidly away; but Marcia's eyes and voice seemed to follow him, and plead with him for his forbearance. He answered his conscience, as if it had been some such presence, that he had forborne too much already, and that now he should not humble himself: that he was right and should stand upon his right. There was not much comfort in it, and he had to brace himself again and again with vindictive resolution.

XXIV.

BARTLEY walked about the streets for a long time, without purpose or direction, brooding fiercely on his wrongs, and reminding himself how Marcia had determined to have him, and had indeed flung herself upon his mercy, with all sorts of good promises; and had then at once taken the whiphand, and goaded and tormented him ever since. All the kindness of their common life counted for nothing in this furious reverie, or rather it was never once thought of; he cursed himself for a fool that he had ever asked her to marry him, and for doubly a fool that he had married her when she had as good as asked him. He was glad, now, that he had taunted her with that; he only regretted that he had told her he was sorry. He was presently aware of being so tired that he could scarcely pull one leg after another; and yet he felt hopelessly wide awake. It was in simple despair of anything else to do that he climbed the stairs to Ricker's lofty perch in the "Chronicle-Abstract" office. Ricker turned about as he entered, and stared up at him from beneath the green pasteboard visor with which he was shielding his eyes from the gas; his hair, which was of the harshness and color of hay, was stiffly poked up and strewn about on his skull, as if it were some foreign product.

"Hello!" he said. "Going to issue a morning edition of the 'Events'?"

"What makes you think so?"

"Oh, I supposed you evening paper gents went to bed with the hens. What has kept you up, esteemed contemporary?"

He went on working over some dispatches which lay upon his table.

"Don't you want to come out and have some oysters?" asked Bartley.

"Why this princely hospitality? I'll come with you in half a minute," Ricker said, going to the slide that carried up the copy to the composing-room, and thrusting his manuscript into the box.

"Where are you going?" he asked, when they found themselves out in the soft starlit autumnal air; and Bartley answered with the name of an oyster-house, obscure, but of singular excellence.

"Yes, that's the best place," Ricker commented. "What I continually wonder at in you is the rapidity with which you've taken on the city. You were quite in the green wood when you came here, and now you know your Boston like a little man. I suppose it's your newspaper work that's familiarized you with the place. Well, how do you like friend Witherby, as far as you've gone?"

"Oh, we shall get along, I guess," said Bartley. "He still keeps me in the background, and plays at being editor himself, but he pays me pretty well."

"Not too well, I hope."

"I should like to see him try it."

"I shouldn't," said Ricker. "He'd expect certain things of you, if he did. You'll have to look out for Witherby."

"You mean that he's a scamp?"

"No; there isn't a better conscience than Witherby carries in the whole city. He's perfectly honest. He not only believes that he has a right to run the 'Events' in his way, but he sincerely believes that he is right in doing it. There's where he has the advantage of you, if you doubt him. I don't suppose he ever did a wrong thing in his life; he'd persuade himself that the thing was right before he did it."

"That's a common phenomenon, isn't it?" sneered Bartley. "Nobody sins."

"You're right, partly. But some of us sinners have our misgivings, and Witherby never has. You know he offered me your place?"

"No, I didn't," said Bartley, astonished and not pleased.

"I thought he might have told you. He made me inducements; but I was afraid of him: Witherby is the counting-room incarnate. I talked you into him for some place or other; but he didn't seem to wake up to the value of my advice at once. Then I couldn't tell what he was going to offer you."

"Thank you for letting me in for a thing you were afraid of!"

"I didn't believe he would get you under his thumb, as he would me. You've got more backbone than I have. I have to keep out of temptation; you have noticed that I never drink, and I would rather not look upon Witherby when he is red and giveth his color in the cup. I'm sorry if I've let you in for anything that you regret. But Witherby's sincerity makes him dangerous—I own that."

"I think he has some very good ideas about newspapers," said Bartley, rather sulkily.

"Oh, very," assented Ricker. "Some of the very best going. He believes that the press is a great moral engine, and that it ought to be run in the interest of the engineer."

"And I suppose you believe that it ought to be run in the interest of the public?"

"Exactly—after the public has paid."

"Well, I don't; and I never did. A newspaper is a private enterprise."

"It's private property, but it isn't a private enterprise, and in its very nature it can't be. You know I never talk 'journalism' and stuff; it amuses me to hear the young fellows at it, though I think they might be doing something worse than magnifying their office; they might be decrying it. But I've got a few ideas and principles of my own in my back pantaloons-pocket."

"Haul them out," said Bartley.

"I don't know that they're very well formulated," returned Ricker, "and I don't contend that they're very new. But I consider a newspaper a public enterprise, with certain distinct duties to the public. It's sacredly bound not to do anything to deprave or debase its readers; and it's sacredly bound not to mislead or betray them, not merely as to questions of morals and politics, but as to questions of what we may lump as 'advertising.' Has friend Witherby developed his great ideas of advertisers' rights to you?" Bartley did not answer, and Ricker went on: "Well, then, you can understand my position, when I say it's exactly the contrary."

"You ought to be on a religious newspaper, Ricker," said Bartley, with a scornful laugh.

"Thank you, a secular paper is bad enough for me."

"Well, I don't pretend that I make the 'Events' just what I want," said Bartley. "At present the most I can do is to indulge in a few cheap dreams of what I should do, if I had a paper of my own."

"What are your dreams? Haul out, as you say."

"I should make it pay, to begin with; and I should make it pay by making it such a thorough newspaper, that every class of people *must* have it. I should cater to the lowest class first, and as long as I was poor, I would have the fullest and best reports of every local accident and crime; that would take *all* the rabble. Then, as I could afford it, I'd rise a little, and give first-class non-partisan reports of local political affairs; that would fetch the next largest class, the ward politicians of all parties. I'd lay for the local religious world, after that—religion comes right after politics in the popular mind, and it interests the women like murder: I'd give the minutest religious intelligence, and not only that, but the religious gossip, and the religious scandal. Then I'd go in for fashion and society—that comes next. I'd have the most reliable and thorough-going financial reports that money could buy. When I'd got my local ground perfectly covered, I'd begin to ramify. Every fellow that could spell, in any part of the country, should understand that if he sent me an account of a suicide, or an elopement, or a murder, or an accident, he should be well paid for it; and I'd rise on the same scale through all the departments. I'd add art criticisms, dramatic and sporting news, and book-reviews, more for the looks of the thing than for anything else; they don't any of 'em appeal to a large class. I'd get my paper into such a shape that people of every kind and degree would have to say, no matter what particular objection was made to it, "Yes, that's so; but it's the best newspaper in the world, *and we can't get along without it*."

"And then," said Ricker, "you'd begin to clean up, little by little—let up on your murders and scandals, and purge and live cleanly like a gentleman? The trick's been tried before."

They had arrived at the oyster-house, and were sitting at their table, waiting for the oysters to be brought to them. Bartley tilted his chair back. "I don't know about the cleaning up. I should want to keep all my audience. If I cleaned up, the dirty fellows would go off to some one else; and the fellows that pretended to be clean would be disappointed."

"Why don't you get Witherby to put your ideas in force?" asked Ricker, dryly.

Bartley dropped his chair to all fours, and said with a smile, "He belongs to church."

"Ah, he has his limitations. What a pity! He has the money to establish this great moral engine of yours, and you haven't. It's a loss to civilization."

"One thing, I know," said Bartley, with a certain effect of virtue, "nobody should buy or sell me; and the advertising element shouldn't spread beyond the advertising page."

"Isn't that rather high ground?" inquired Ricker.

Bartley did not think it worth while to answer. "I don't believe that a newspaper is obliged to be superior in tone to the community," he said.

"I quite agree with you."

"And if the community is full of vice and crime, a newspaper can't do better than reflect its condition."

"Ah, there I should distinguish, esteemed contemporary. There are several tones in every community, and it will keep any newspaper scratching to rise above the highest. But if it keeps out of the mud at all it can't help rising above the lowest. And no community is full of vice and crime any more than it is full of virtue and good works. Why not let your model newspaper mirror these?"

"They're not snappy."

"No, that's true."

"You must give the people what they want."

"Are you sure of that?"

"Yes, I am."

"Well, it's a beautiful dream," said Ricker, "nourished on a youth sublime. Why do not these lofty imaginings visit us later in life? You make me quite ashamed of my own ideal newspaper. Before you began to talk I had been fancying that the vice of our journalism was its intense localism. I have doubted a good while whether a drunken Irishman who breaks his wife's head, or a child who falls into a tub of hot water, has really established a claim on the public interest. Why should I be told by telegraph how three negroes died on the gallows in North Carolina? Why should an accurate correspondent inform me of the elopement of a married man with his maid-servant in East Machias? Why should I sup on all the horrors of a railroad accident, and have the bleeding fragments hashed up for me at breakfast? Why should my newspaper give a succession of shocks to my nervous system, as I pass from column to column, and poultice me between shocks with the nastiness of a distant or local scandal? You reply, because I like spice. But I don't. I am sick of spice; and I believe that most of our readers are."

"Cater to them with milk-toast, then," said Bartley.

Ricker laughed with him, and they fell to upon their oysters.

When they parted, Bartley still found himself wakeful. He knew that he should not sleep if he went home, and he said to himself that he could not walk about all night. He turned into a gayly lighted basement, and asked for something in the way of a night-cap.

The bar-keeper said there was nothing like a hot-schotch to make you sleep; and a small man, with his hat on, who had been talking with the bar-keeper, and coming up to the counter occasionally to eat a bit of cracker or a bit of cheese out of the two bowls full of such fragments that stood at the end of the counter, said that this was so.

It was very cheerful in the bar-room, with the light glittering on the rows of decanters behind the bar-keeper, a large, stout, clean, pale man in his shirt-sleeves, after the manner of his kind; and Bartley made up his mind to stay there till he was drowsy, and to drink as many hot-schotches as were necessary to the result. He had his drink put on a little table and sat down to it easily, stirring it to cool it a little, and feeling its flattery in his brain from the first sip.

The man who was munching cheese and crackers wore a hat rather large for him, pulled down over his eyes. He now said that he did not care if he took a gin-sling, and the bar-keeper promptly set it before him on the counter, and saluted with "Good evening, Colonel," a large man who came in, carrying a small dog in his arms. Bartley recognized him as the manager of a variety combination playing at one of the theaters, and the manager recognized the little man with the gin-sling as Tommy. He did not return the bar-keeper's salutation, but he asked, as he sat down at a table:

"What do I want for supper, Charley?"

The bar-keeper said, oracularly, as he leaned forward to wipe his counter with a napkin:

"Fricasee chicken."

"Fricassee devil," returned the manager. "Get me a Welsh rabbit."

The bar-keeper, unperturbed by this rejection, called into the tube behind him:

"One Welsh rabbit!"

"I want some cold chicken for my dog," said the manager.

"One cold chicken," repeated the bar-keeper, in his tube.

"White meat," said the manager.

"White meat," repeated the bar-keeper.

"I went into the Parker House one night about midnight, and I saw four doctors there eating lobster salad, and deviled crab, and washing it down with champagne; and I made up my mind that the doctors needn't talk to me any more about what was wholesome. I was going in for what was good. And there aint anything better for supper than Welsh rabbit in *this* world."

As the manager addressed this philosophy to the company at large, no one commented upon it, which seemed quite the same to the manager, who hitched one elbow over the

back of his chair, and caressed with the other hand the dog lying in his lap.

The little man in the large hat continued to walk up and down, leaving his gin-sling on the counter, and drinking it between his visits to the cracker and cheese.

"What's that new piece of yours, Colonel?" he asked, after awhile. "I aint seen it yet."

"Legs, principally," sighed the manager. "That's what the public wants. I give the public what it wants. I don't pretend to be any better than the public. Nor any worse," he added, stroking his dog.

These ideas struck Bartley in their accordance with his own ideas of journalism as he had propounded them to Ricker. He had drunk half of his hot-scotch.

"That's what I say," assented the little man. "All that a theater has got to do is to keep even with the public."

"That's so, Tommy," said the manager of a school of morals, with wisdom that impressed more and more the manager of a great moral engine.

"The same principle runs through everything," observed Bartley, speaking for the first time.

The drink had stiffened his tongue somewhat, but it did not incommode his utterance; it rather gave dignity to it, and his head was singularly clear. He lifted his empty glass from the table, and, catching the bar-keeper's eye, said, "Do it again." The man brought it back full.

"It runs through the churches as well as the theaters. As long as the public wanted hell-fire, the ministers gave them hell-fire. But you couldn't get hell-fire—not the pure, old-fashioned brimstone article—out of a popular preacher now, for love or money."

The little man said, "I guess you've got about the size of it there;" and the manager laughed.

"It's just so with the newspapers, too," said Bartley. "Some newspapers used to stand out against publishing murders, and personal gossip, and divorce trials. There aint a newspaper that pretends to keep anyways up with the times, now, that don't do it! The public want spice, and they will have it!"

"Well, sir," said the manager, "that's my way of looking at it. I say if the public don't want Shakspeare, give 'em burlesque till they're sick of it. I believe in what Grant said: 'The quickest way to get rid of a bad law is to enforce it.'"

"That's so," said the little man, "every time."

He added to the bar-keeper that he guessed he would have some brandy and soda, and Bartley found himself at the bottom of his second tumbler. He ordered it replenished.

The little man seemed to be getting further away. He said, from the distance to which he had withdrawn:

"You want to go to bed with three night-caps on, like an old-clothes-man."

Bartley felt like resenting the freedom, but he was anxious to pour his ideas of journalism into the manager's sympathetic ear, and he began to talk, with an impression that it behooved him to talk fast. His brain was still very clear, but his tongue was getting stiffer. The manager now had his Welsh rabbit before him; but Bartley could not make out how it had got there, nor when. He was talking fast, and he knew by the way everybody was listening, that he was talking well. Sometimes he left his table, glass in hand, and went and laid down the law to the manager, who smilingly assented to all he said. Once he heard a low growling at his feet, and looking down, he saw the dog with his plate of cold chicken, that had also been conjured into the room somehow.

"Look out," said the manager, "he'll nip you in the leg."

"Curse the dog! he seems to be on all sides of you," said Bartley. "I can't stand anywhere."

"Better sit down then," suggested the manager.

"Good idea," said the little man, who was still walking up and down. It appeared as if he had not spoken for several hours; his hat was further over his eyes. Bartley had thought he was gone.

"What business is it of yours?" he demanded fiercely, moving toward the little man.

"Come, none of that," said the bar-keeper, steadily.

Bartley looked at him in amazement.

"Where's your hat?" he asked.

The others laughed; the bar-keeper smiled.

"Are you a married man?"

"Never mind!" said the bar-keeper, severely.

Bartley turned to the little man:

"You married?"

"Not *much*," replied the other. He was now topping off with a whisky-straight.

Bartley referred himself to the manager:

"You?"

"*Pas si bête*," said the manager, who did his own adapting from the French.

"Well, you're scholar, and you're gentleman," said Bartley. The indefinite articles would drop out, in spite of all his efforts to keep them in. "N' I want ask you what you do—to—ask—you—what—would—you—do," he repeated with painful exactness, but he failed to make the rest of the sentence perfect, and he pronounced it all in a word, "fyourwifelockyouout."

"I'd take a walk," said the manager.

"I'd bu'st the door in," said the little man.

Bartley turned and gazed at him as if the little man were a much more estimable person than he had supposed. He passed his arm through the little man's, which the other had just crooked to lift his whisky to his mouth.

"Look here," said Bartley, "tha's jus' what I told her. I want you to go home 'th me; I want t' introduce you to my wife."

"All right," answered the little man. "Don't care if I do." He dropped his tumbler to the floor. "Hang it up, Charley, glass and all. Hang up this gentleman's night-caps—my account. Gentleman asks me home to his house, I'll hang him—I'll get him hung—well, fix it to suit yourself—every time!"

They got themselves out of the door, and the manager said to the bar-keeper, who came round to gather up the fragments of the broken tumbler,

"Think his wife will be glad to see 'em, Charley?"

"Oh, they'll be taken care of before they reach his house."

XXV.

WHEN they were once out under the stars, Bartley, who still felt his brain clear, said that he would not take his friend home at once, but would show him where he visited when he first came to Boston. The other agreed to the indulgence of this sentiment, and they set out to find Rumford street together.

"You've heard of old man Halleck—Lessor Neather Interest? Tha's place—there's where I staid. His son's my frien'—damn stuck-up supercilious beast he is, too. I do' care f'r him! I'll show you place, so's't you'll know it when you come to it,—'f I can ever find it."

They walked up and down the street, looking, while Bartley poured his sorrows into the ear of his friend, who grew less and less responsive, and at last ceased from his side altogether. Bartley then dimly perceived that he was himself sitting on a doorstep, and that his head was hanging far down between his knees, as if he had been sleeping in that posture.

"Locked out—locked out of my own door, and by my own wife!" He shed tears, and fell asleep again. From time to time he woke, and bewailed himself to Ricker as a poor boy who had fought his own way; he owned that he had made mistakes, as who had not? Again he was trying to convince Squire Gaylord that they ought to issue a daily edition of the "Equity Free Press," and at the same time persuading Mr. Halleck to buy the "Events" for him, and let him put it on a paying basis. He shivered, sighed, hiccapped,

and was dozing off again, when Henry Bird knocked him down, and he fell with a cry, which at last brought to the door the uneasy sleeper who had been listening to him within, and trying to realize his presence, catching his voice in waking intervals, doubting it, drowsing when it ceased, and then catching it and losing it again.

"Hallo, here! What do you want? Hubbard! Is it you? What in the world are you doing here?"

"Halleck," said Bartley, who was unsteadily straightening himself upon his feet, "glad to find you at home. Been looking for your house all night. Want to introduce you to partic-ic-ular friend of mine. Mr. Halleck, Mr. —. Curse me if I know your name —"

"Hold on a minute," said Halleck.

He ran into the house for his hat and coat, and came out again, closing the door softly after him. He found Bartley in the grip of a policeman, whom he was asking his name that he might introduce him to his friend Halleck.

"Do you know this man, Mr. Halleck?" asked the policeman.

"Yes—yes, I know him," said Ben, in a low voice. "Let's get him away quietly, please. He's all right. It's the first time I ever saw him so. Will you help me with him up to Johnson's stable? I'll get a carriage there and take him home."

They had begun walking Bartley along between them; he dozed and paid no attention to their talk.

The policeman laughed.

"I was just going to run him in, when you came out. You didn't come a minute too soon."

They got Bartley to the stable, and he slept heavily in one of the chairs in the office, while the hostlers were putting the horses to the carriage. The policeman remained at the office-door, looking in at Bartley, and philosophizing the situation to Halleck.

"Your speakin' about it's bein' the first time you ever saw him so made me think 't I rather help take home a regular habitual drunk to his family, any day, than a case like this. They always seem to take it so much harder the first time. Boards with his mother, I presume?"

"He's married," said Halleck, sadly. "He has a house of his own."

"Well!" said the policeman.

Bartley slept all the way to Clover street, and when the carriage stopped at his door, they had difficulty in waking him sufficiently to get him out.

"Don't come in, please," said Halleck, to the policeman, when this was done. "The

man will carry you back to your beat. Thank you, ever so much!"

"All right, Mr. Halleck. Don't mention it," said the policeman, and he leaned back in the hack with an air of luxury, as it rumbled softly away.

Halleck remained on the pavement with Bartley falling limply against him in the dim light of the dawn.

"What you want? What you doing with me?" he demanded with sullen stupidity.

"I've got you home, Hubbard. Here we are at your house."

He pulled him across the pavement, to the threshold, and put his hand on the bell, but the door was thrown open before he could ring, and Marcia stood there, with her face white, and her eyes red with watching and crying.

"Oh, Bartley, oh, Bartley!" she sobbed. "Oh, Mr. Halleck, what is it? Is he hurt? I did it—yes, I did it! It's my fault! Oh, will he die? Is he sick?"

"He isn't very well. He'd better go to bed," said Halleck.

"Yes, yes! I will help you upstairs with him."

"Do' need any help," said Bartley, sulkily. "Go upstairs myself."

He actually did so, with the help of the hand-rail, Marcia running before, to open the door, and smooth the pillows which her head had not touched, and Halleck following him to catch him if he should fall. She unlaced his shoes and got them off, while Halleck removed his coat.

"Oh, Bartley, where do you feel badly, dear? Oh, what shall I do?" she moaned, as he tumbled himself on the bed, and lapsed into a drunken stupor.

"Better—better come out, Mrs. Hubbard," said Halleck. "Better let him alone, now. You only make him worse, talking to him."

Quelled by the mystery of his manner, she followed him out and down the stairs.

"Oh, *do* tell me what it is," she implored, in a low voice, "or I shall go wild! But tell me and I can bear it! I can bear anything if I know what it is!" She came close to him in her entreaty, and fixed her eyes beseechingly on his, while she caught his hand in both of hers. "Is he—is he insane?"

"He isn't quite in his right mind, Mrs. Hubbard," Halleck began, softly releasing himself, and retreating a little from her, but she pursued him, and put her hand on his arm.

"Oh, then go for the doctor—go instantly! Don't lose a minute! I shall not be afraid to stay alone. Or if you think I'd better not, I will go for the doctor myself."

"No, no," said Halleck, smiling, sadly: the case certainly had its ludicrous side. "He doesn't need a doctor. You mustn't think of

calling a doctor. Indeed you mustn't. He'll come out all right of himself. If you sent for a doctor, it would make him very angry."

She burst into tears. "Well, I will do what you say," she cried. "It would never have happened, if it hadn't been for me. I want to tell you what I did," she went on wildly. "I want to tell —"

"Please don't tell me anything, Mrs. Hubbard! It will all come right—and very soon. It isn't anything to be alarmed about. He'll be well in a few hours. I—ah—Good-by!" He had found his cane, and he made a limp toward the door, but she swiftly interposed herself.

"Why," she panted in mixed reproach and terror, "you're not going away? You're not going to leave me before Bartley is well? He may get worse—he may die! You mustn't go, Mr. Halleck!"

"Yes, I must,—I can't stay,—I oughtn't to stay—it won't do! He won't get worse, he won't die—" The perspiration broke out on Halleck's face, which he lifted to hers with a distress as great as her own.

She only answered, "I can't let you go. It would kill me. I wonder at your wanting to go."

There was something ghastly comical in it all, and Halleck stood in fear of its absurdity hardly less than of its tragedy. He rapidly revolved in his mind the possibilities of the case. He thought at first that it might be well to call a doctor, and having explained the situation to him, pay him to remain in charge; but he reflected that it would be insulting to ask a doctor to see a man in Hubbard's condition. He took out his watch, and saw that it was six o'clock; and he said desperately: "You can send for me, if you get anxious —"

"I can't let you go!"

"I must really get my breakfast —"

"The girl will get something for you here. Oh, *don't* go away!" Her lip began to quiver again, and her bosom to rise.

He could not bear it. "Mrs. Hubbard, will you believe what I say?"

"Yes," she faltered, reluctantly.

"Well, I tell you that Mr. Hubbard is in no sort of danger; and I know that it would be extremely offensive to him if I staid."

"Then you must go," she answered promptly, and opened the door, which she had closed for fear he might escape. "I will send for a doctor."

"No, *don't* send for a doctor, don't send for anybody; don't speak of the matter to any one: it would be very mortifying to him. It's merely a—a—kind of—seizure, that a great many people—men—are subject to; but he wouldn't like to have it known." He saw that his words were making an impression

upon her; perhaps her innocence was beginning to divine the truth. "Will you do what I say?"

"Yes," she murmured.

Her head began to droop, and her face to turn away in a dawning shame too cruel for him to see.

"I—I will come back as soon as I get my breakfast, to make sure that everything is right."

She let him find his own way out, and Halleck issued upon the street, as miserable as if the disgrace were his own. It was easy enough for him to get back into his own room without alarming the family. He ate his breakfast absently, and then went out while the others were still at table.

"I don't think Ben seems very well," said his mother, anxiously, and she looked to her husband for the denial he always gave.

"Oh, I guess he's all right. What's the matter with him?"

"It's nothing but his ridiculous, romantic way of taking the world to heart," Olive interposed. "You may be sure he's troubled about something that doesn't concern him in the least. It's what comes of the life-long conscientiousness of his parents. If Ben doesn't turn out a philanthropist of the deepest dye yet, you'll have me to thank for it. I see more and more every day that I was providentially born wicked, so as to keep this besottedly righteous family's head above water."

She feigned an angry impatience with the condition of things; but, when her father went out, she joined her mother in earnest conjectures as to what Ben had on his mind.

Halleck wandered about till nearly ten o'clock, and then he went to the little house on Clover street. The servant-girl answered his ring, and when he asked for Mrs. Hubbard, she said that Mr. Hubbard wished to see him, and please would he step upstairs.

He found Bartley seated at the window, with a wet towel round his head and his face pale with headache.

"Well, old man," he said, with an assumption of comradery that was nauseous to Halleck, "you've done the handsome thing by me. I know all about it. I knew something about it all the time." He held out his hand, without rising, and Halleck forced himself to touch it. "I appreciate your delicacy in not telling my wife. Of course you *couldn't* tell," he said, with depraved enjoyment of what he conceived of Halleck's embarrassment. "But I guess she must have smelt a rat. As the fellows say," he added, seeing the disgust that Halleck could not keep out of his face, "I shall make a clean breast of it, as soon as she can bear it. She's pretty high-strung.

Lying down, now," he explained. "You see I went out to get something to make me sleep, and the first thing I knew I had got too much. Good thing I turned up on your door-step; might have been waltzing into the police-court about now. How did you happen to hear me?"

Halleck briefly explained, with an air of abhorrence for the facts.

"Yes, I remember most of it," said Bartley.

"Well, I want to thank you, Halleck. You've saved me from disgrace—from ruin, for all I know. Whew, how my head aches!" he said, making an appeal to Halleck's pity, with closed eyes. "Halleck," he murmured, feebly, "I wish you would do me a favor."

"Yes? What is it?" asked Halleck, dryly.

"Go round to the 'Events' office and tell old Witherby that I sha'n't be able to put in an appearance to-day. I'm not up to writing a note, even, and he'd feel flattered at your coming personally. It would make it all right for me."

"Of course, I will go," said Halleck.

"Thanks," returned Bartley plaintively, with his eyes closed.

XXVI.

BARTLEY would willingly have passed this affair over with Marcia, like some of their quarrels, and allowed a reconciliation to effect itself through mere lapse of time and daily custom. But there were difficulties in the way to such an end; his shameful escapade had given the quarrel a character of its own, which could not be ignored. He must keep his word about making a clean breast of it to Marcia, whether he liked or not; but she facilitated his confession by the meek and dependent fashion in which she hovered about, anxious to do something or anything for him. If, as he suggested to Halleck, she had divined the truth, she evidently did not hold him wholly to blame for what had happened, and he was not without a self-righteous sense of having given her a useful and necessary lesson. He was inclined to a severity to which his rasped and shaken nerves contributed, when he spoke to her that night, as they sat together after tea; she had some sewing in her lap, little mysteries of soft muslin for the baby, which she was edging with lace, and her head drooped over her work, as if she could not confront him with her swollen eyes.

"Look here, Marcia," he said, "do you know what was the matter with me this morning?"

She did not answer in words; her hands quivered a moment; then she caught up

the things out of her lap, and sobbed into them. The sight unmanned Bartley; he hated to see any one cry, even his wife, to whose tears he was accustomed. He dropped down beside her on the sofa, and pulled her head over on his shoulder.

"It was my fault, it was my fault, Bartley!" she sobbed. "Oh, how can I ever get over it?"

"Well, don't cry, don't cry! It wasn't altogether your fault," returned Bartley. "We were both to blame."

"No! I began it. If I hadn't broken my promise about speaking of Sally Morrison, it never would have happened." This was so true that Bartley could not gainsay it. "But I couldn't seem to help it; and you were—you were—so quick with me; you didn't give me time to think; you—— But I was the one to blame, I was to blame!"

"Oh, well, never mind about it; don't take on so," coaxed Bartley. "It's all over now, and can't be helped. And I can promise you," he added, "that it shall never happen again, no matter what you do," and in making this promise, he felt the glow of virtuous performance. "I think we've both had a lesson. I suppose," he continued sadly, as one might from impersonal reflection upon the temptations and depravity of large cities, "that it's *common* enough. I dare say it isn't the first time Ben Halleck has taken a fellow home in a hack." Bartley got so much comfort from the conjecture he had thrown out for Marcia's advantage, that he felt a sort of self-approval in the fact with which he followed it up. "And there's this consolation about it, if there isn't any other: that it wouldn't have happened now, if it had ever happened before."

Marcia lifted her head and looked into his face:

"What—what do you mean, Bartley?"

"I mean that I never was overcome before in my life by—wine." He delicately avoided saying *whisky*.

"Well?" she demanded.

"Why, don't you see? If I'd had the habit of drinking, I shouldn't have been affected by it."

"I don't understand," she said, anxiously.

"Why, I knew I shouldn't be able to sleep, I was so mad at you——"

"Oh!"

"And I dropped into the hotel bar-room for a night-cap—for something to make me sleep."

"Yes, yes!" she urged, eagerly.

"I took what wouldn't have touched a man that was in the habit of it."

"Poor Bartley!"

"And the first thing I knew I had got too much. I was drunk—wild drunk," he said, with magnanimous frankness.

She had been listening intensely, exculpating him at every point, and now his innocence all flashed upon her.

"I see—I see!" she cried. "And it was because you had never tasted it before——"

"Well, I had tasted it once or twice," interrupted Bartley, with heroic veracity.

"No matter! It was because you had never more than hardly tasted it that a very little overcame you in an instant. I see!" she repeated, contemplating him, in her ecstasy, as the one habitually sober man in a Boston full of inebriates. "And now I shall never regret it; I shall never care for it; I never shall think about it again! Or, yes! I shall always remember it, because it shows—because it *proves*—that you are always strictly temperance. It was worth happening for that. I am *glad* it happened!"

She rose from his side, and took her sewing nearer the lamp, and resumed her work upon it with shining eyes.

Bartley remained in his place on the sofa, feeling, and perhaps looking, rather sheepish. He had made a clean breast of it, and the confession had redounded only too much to his credit. To do him justice, he had not intended to bring the affair to quite such a triumphant conclusion; and perhaps something better than his sense of humor was also touched when he found himself not only exonerated but transformed into an exemplar of abstinence.

"Well," he said, "it isn't exactly a thing to be glad of, but it certainly isn't a thing to worry yourself about. You know the worst of it, and you know the best of it. It never happened before, and it never shall happen again; that's all. Don't lament over it, don't accuse yourself; just let it go, and we'll both see what we can do after this in the way of behaving better."

He rose from the sofa, and began to walk about the room.

"Does your head still ache?" she asked, fondly. "I *wish* I could do something for it!"

"Oh, I shall sleep it off," returned Bartley. She followed him with her eyes.

"Bartley!"

"Well?"

"Do you suppose—do you believe—that Mr. Halleck—that he was ever——"

"No, Marcia, I don't," said Bartley, stopping. "I *know* he never was. Ben Halleck is slow; but he's good. I couldn't imagine his being drunk any more than I could imagine your being so. I'd willingly sacrifice his reputation to console you," added Bartley, with a comical sense of his own regret that Halleck was not, for the occasion, an habitual drunkard, "but I cannot tell a lie."

He looked at her with a smile, and broke into a sudden laugh.

"No, my dear, the only person I think of just now, as having suffered similarly with myself, is the great and good Andrew Johnson. Did you ever hear of him?"

"Was he the one they impeached?" she faltered, not knowing what Bartley would be at, but smiling faintly in sympathy with his mirth.

"He was the one they impeached. He was the one who was overcome by wine on his inauguration day, because he had never been overcome before. It's a parallel case!"

Bartley got a great deal more enjoyment out of the parallel case than Marcia. The smile faded from her face, and, "Come, come," he coaxed, "be satisfied with Andrew Johnson, and let Halleck go. Ah, Marcia!" he added, seriously, "Ben Halleck is the kind of man you ought to have married! Don't you suppose that I know I'm not good enough for you? I'm pretty good by fits and starts; but he would have been good right straight along. I should never have had to bring *him* home in a hack to you!"

His generous admission had the just effect. "Hush, Bartley! Don't talk so! You know that you're better for me than the best man in the world, dear, and even if you were not, I should love you the best. Don't talk, please, that way, of any one else, or it will make me hate you!"

He liked that; and after all he was not without an obscure pride in his last night's adventure as a somewhat hazardous but decided assertion of manly supremacy. It was not a thing to be repeated; but for once in a way it was not wholly to be regretted, especially as he was so well out of it.

He pulled up a chair in front of her, and began to joke about the things she had in her lap; and the shameful and sorrowful day ended in the bliss of a more perfect peace between them than they had known since the troubles of their married life began.

"I tell you," said Bartley, "I shall stick to Tivoli after this, religiously."

It was several weeks later that Halleck limped into Atherton's lodgings, and dropped into one of his friend's easy chairs. The room had a bachelor comfort of aspect, and the shaded lamp on the table shed a mellow light on the green leather-covered furniture, wrinkled and creased, and worn full of such hospitable hollows as that which welcomed Halleck. Some packages of law papers were scattered about on the table; but the hour of the night had come when a lawyer permits himself a novel. Atherton looked up from his as Halleck entered, and stretched out a

hand, which the latter took on his way to the easy chair across the table.

"How do you do?" said Atherton, after allowing him to sit for a certain time in the frank silence which expressed better than words the familiarity that existed between them in spite of the lawyer's six or seven years of seniority.

Halleck leaned forward and tapped the floor with his stick; then he fell back again, and laid his cane across the arms of his chair, and drew a long breath.

"Atherton," he said, "if you had found a blackguard of your acquaintance drunk on your doorstep early one morning, and had taken him home to his wife, how would you have expected her to treat you the next time you saw her?"

The lawyer was too much used to the statement, direct and hypothetical, of all sorts of cases, to be startled at this. He smiled slightly, and said:

"That would depend a good deal upon the lady."

"Oh, but generalize! From what you know of women as Woman, what should you expect? Shouldn't you expect her to make you pay somehow for your privacy to her disgrace, to revenge her misery upon you? Isn't there a theory that women forgive injuries, but never ignominies?"

"That's what the novelists teach, and we bachelors get most of our doctrine about women from them."

He closed his novel on the paper-cutter, and laying the book upon the table, clasped his hands together at the back of his head.

"We don't go to nature for our impressions; but neither do the novelists, for that matter. Now and then, however, in the way of business, I get a glimpse of realities that make me doubt my prophets. Who had this experience?"

"I did."

"I'm sorry for that," said Atherton.

"Yes," returned Halleck, with whimsical melancholy; "I'm not particularly adapted for it. But I don't know that it would be a very pleasant experience for anybody."

He paused dearly, and Atherton said:

"And how did she actually treat you?"

"I hardly know. I hadn't been at the pains to look them up since the thing happened, and I had been carrying their squalid secret round for a fortnight, and suffering from it as if it were all my own."

Atherton smiled at the touch of self-characterization.

"When I met her and her husband and her baby to-day—a family party—well, she made me ashamed of the melodramatic compassion I had been feeling for her: It seemed that I

had been going about unnecessarily, not to say impertinently, haggard with the recollection of her face as I saw it when she opened the door for her blackguard and me that morning. She looked as if nothing unusual had happened at our last meeting: I couldn't brace up all at once: I behaved like a sneak, in view of her serenity."

"Perhaps nothing unusual had happened," suggested Atherton.

"No, that theory isn't tenable," said Halleck. "It was the one fact in the blackguard's favor that she had evidently never seen him in that state before, and didn't know what was the matter. She was wild at first; she wanted to send for a doctor. I think towards the last she began to suspect. But I don't know how she looked *then*: I couldn't look at her."

He stopped, as if still in the presence of the pathetic figure, with its sidelong, drooping head.

Atherton respected his silence a moment before he again suggested, as lightly as before:

"Perhaps she is magnanimous."

"No," said Halleck, with the effort of having also given that theory consideration. "She's not magnanimous, poor soul. I fancy she is rather a narrow-minded person, with strict limitations in regard to people who think ill—or too well—of her husband."

"Then perhaps," said Atherton, with the air of having exhausted conjecture, "she's obtuse."

"I have tried to think that too," replied Halleck, "but I can't manage it. No, there are only two ways out of it: the fellow has abused her innocence and made her believe it's a common and venial affair to be brought home in that state, or else she's playing a part. He's capable of telling her that neither you nor I, for example, ever go to bed sober. But she isn't obtuse: I fancy she's only too keen in all the sensibilities that women suffer through; and I'd rather think that he had deluded her in that way than that she was masquerading about it, for she strikes me as an uncommonly truthful person. I suppose you know whom I'm talking about, Atherton?" he said, with a sudden look at his friend's face, across the table.

"Yes, I know," said the lawyer. "I'm sorry it's come to this already. Though I suppose you're not altogether surprised."

"No, something of the kind was to be expected," Halleck sighed, and rolled his cane up and down on the arms of his chair. "I hope we know the worst."

"Perhaps we do. But I recollect a wise remark you made the first time we talked of these people," said Atherton, replying to the mood rather than the speech of his friend.

"You suggested that we rather liked to grieve over the pretty girls that other fellows marry, and that we never thought of the plain ones as suffering."

"Oh, I hadn't any data for my pity in this case, then," replied Halleck. "I'm willing to allow that a plain woman would suffer under the same circumstances; and I think I should be capable of pitying her. But I'll confess that the notion of a pretty woman's sorrow is more intolerable; there's no use denying a fact so universally recognized by the male consciousness. I take my share of shame for it. I wonder why it is? Pretty women always seem to appeal to us as more dependent and child-like. I dare say they're not."

"Some of them are quite able to take care of themselves," said Atherton. "I've known striking instances of the kind. How do you know but the object of your superfluous pity was cheerful because fate had delivered her husband, bound forever, into her hand, through this little escapade of his?"

"Isn't that rather a coarse suggestion?" asked Halleck.

"Very likely. I suggest it; I don't assert it. But I fancy that wives sometimes like a permanent grievance that is always at hand, no matter what the mere passing occasion of the particular disagreement is. It seems to me that I have detected obscure appeals to such a weapon in domestic interviews at which I've assisted in the way of business."

"Don't, Atherton!" cried Halleck.

"Don't, how? In this particular case, or in regard to wives generally? We can't do women a greater injustice than not to account for a vast deal of human nature in them. You may be sure that things haven't come to the present pass with those people, without blame on both sides."

"Oh, do you defend a man for such beastliness by that stale old plea of blame on both sides?" demanded Halleck, indignantly.

"No; but I should like to know what she had said or done to provoke it before I excused her altogether."

"You would! Imagine the case reversed!"

"It isn't imaginable."

"You think there is a special code of morals for women; sins and shames for them that are no sins and shames for us!"

"No, I don't think that. I merely suggest that you don't idealize the victim in this instance. I dare say she hasn't suffered half as much as you have. Remember that she's a person of commonplace traditions, and probably took a simple view of the matter, and let it go as something that could not be helped."

"No, that would not do either," said Halleck.

"You're hard to please. Suppose we imagine her proud enough to face you down on the fact for his sake; too proud to revenge her disgrace on you —"

"Oh, you come back to your old plea of magnanimity! Atherton, it makes me sick at heart to think of that poor creature. That look of hers haunts me! I can't get rid of it!"

Atherton sat considering his friend with a curious smile.

"Well, I'm sorry this has happened to you, Halleck."

"Oh, why do you say that to me?" demanded Halleck, impatiently. "Am I a nervous woman, that I must be kept from unpleasant sights and disagreeable experiences? If there's anything of the man about me, you insult it! Why not be a little sorry for her?"

"I'm sorry enough for her; but I suspect that so far you have been the principal sufferer. She's simply accepted the fact and survived it."

"So much the worse, so much the worse!" groaned Halleck. "She'd better have died!"

"Well, perhaps. I dare say she thinks it will never happen again, and has dismissed the subject; while you've had it happening ever since, whenever you've thought of her."

Halleck struck the arms of his chair with his clenched hands.

"Confound the fellow! What business has he to come back into my way, and make me think about his wife? Oh, very likely, it's quite as you say! I dare say she's stupidly content with him; that she's forgiven it and forgotten all about it. Probably she's told him how I behaved, and they've laughed over me together. But does that make it any easier to bear?"

"It ought," said Atherton. "What did the husband do when you met them?"

"Everything but tip me the wink—everything but say in so many words: 'You see I've made it all right with her. Don't you wish you knew how?'"

Halleck dropped his head, with a wrathful groan.

"I fancy," said Atherton, thoughtfully, "that if we really knew how, it would surprise us. Married life is as much a mystery to us outsiders as the life to come, almost. The ordinary motives don't seem to count; it's the realm of unreason. If a man only makes his wife suffer enough, she finds out that she loves him so much she *must* forgive him. And then, there's a great deal in their being bound. They can't live together in enmity, and they must live together. I dare say

the offense had merely worn itself out between them."

"Oh, I dare say," Halleck assented, wearily. "That isn't my idea of marriage though."

"It's not mine, either," returned Atherton. "The question is whether it isn't often the fact in regard to such people's marriages."

"Then, they are so many hells," cried Halleck, "where self-respect perishes with resentment, and the husband and wife are enslaved to each other. They ought to be broken up!"

"I don't think so," said Atherton, soberly. "The sort of men and women that marriage enslaves would be vastly more wretched and mischievous, if they were set free. I believe that the hell people make for themselves isn't at all a bad place for them. It's the best place for them."

"Oh, I know your doctrine," said Halleck, rising. "It's horrible. How a man with any kindness in his heart can harbor such a cold-blooded philosophy, I don't understand. I wish you joy of it. Good-night," he added, gloomily, taking his hat from the table. "It serves me right for coming to you with a matter that I ought to have been man enough to keep to myself."

Atherton followed him toward the door.

"It won't do you any harm to consider your perplexity in the light of my philosophy. An unhappy marriage isn't the only hell, nor the worst."

Halleck turned.

"What could be a worse hell than marriage without love?" he demanded, fiercely.

"Love without marriage," said Atherton.

Halleck looked sharply at his friend. Then he shrugged his shoulders as he turned again and swung out of the door.

"You're too esoteric for me. It's quite time I was gone."

The way through Clover street was not the shortest way home; but he climbed the hill and passed the little house. He wished to rehabilitate in its pathetic beauty the image which his friend's conjectures had jarred, distorted, insulted; and he lingered for a moment before the door where this vision had claimed his pity for anguish that no after serenity could repudiate. The silence in which the house was wrapt was like another fold of the mystery which involved him. The night wind rose in a sudden gust, and made the neighboring lamp flare, and his shadow wavered across the pavement like the figure of a drunken man. This and not that other was the image which he saw.

(To be continued.)

CARLYLE IN IRELAND.

REMINISCENCES OF MY IRISH JOURNEY. III.

Thursday 26 July.—Spent the morning, which was damp yet with sunshine, in lounging about the shrubberies and wooded alleys; expected Bourke would have been ready to set out before noon, instead of not till 2 p.m. or thereabouts, as it proved. Group of ragged solicitants, this morning and the last, hung about the front door, in silence for many hours, waiting “a word with his Honour”; tattered women, young and old; one ragged able man; his honor safe within doors, they silent sitting or standing without, waiting his Honor’s time, tacit bargain that no servant was to take notice of them, they not of him; that was the appearance of it. Sad enough to look upon; for the answer, at last, was sure to be “can’t; have no work, no &c. for you: sorry, but have *none!*” Similar expectants in small numbers I had seen about Sir W. Beecher’s: probably they wait about most gentlemen’s houses in Ireland in this sad time. Glanced over newspapers; at length out with young Bourke (who is taking the “management,” I find, his father surrendering as “too old”); went with him to the scene of Scotchman Meall’s operations; scouring a big ditch, several men up to the knees throwing out duckweed, and bog mud,—once a year. Wood around, and good crops, provided you *keep* the ditch scoured; all this region, by nature, execrable, drowned bog: let the cutting of turf by measure; turf once all cut away, attack the bottom with subsoil and other ploughs,—water carried off, prospers admirably. Meall a good solid Angus man; heavy Scotch qualities; getting excellent farm-house and offices set up. Infested by *rabbits*, which eat young green-crop, young hedges (?); must have ferrets or weasels, and how?, Meall’s labourers “do very well *if* there is one set to look at them;” Hasn’t yet got them trained to work faithfully alone, tho’ making progress in that direction. Home in haste from Meall’s farm and nice new gooseberry garden;—off actually at last, Limerick car long waiting.

Up the river; hills of Clare, hills in Limerick county; wide expanse, not without some savage beauty, far too *bare*, and too little of it absolutely green. Talk of Browne and his “blind farmers.” Assassination of a poor old soldier he had sent to watch a certain farm; ominous menace before hand, then deed done, “done with an axe,” no culprit discoverable. Killaloe, Bourke’s house across the river

among rather ragged woods. “City” (I think with some high old church towers) standing high at the other end of the bridge, in dry trim country, at the foot of the long lough, was pleasant enough from the *outside*,—one small skirt of it was all we travelled over. Lough now, with complex wooden and other apparatus for dispersing water; part of the questionable “Navigation of the Shannon.” Questionable; indeed everywhere in Ireland one finds that the “Government,” far from stinginess in public money towards Ireland, has erred rather on the other side; making, in all seasons, extensive *hives* for which the *bees* are not yet found. West side of Lough Derg: pleasant smooth-dry winding road. Clare hills stretching up, black-fretted, and with spots of culture, all treeless to perhaps 1500 or 2000 feet gradually enough, on the left. Greener high hills on the other side of lake with extensive slate quarries, *chief* trade hereabouts. One *Spaight* of Limerick, able active man heard of before, works them; resides here. “St. Patrick’s purgatory!” said Bourke, pointing out a flat island, with black tower and architectural ruins:—not *so*, (as I found afterwards: the Lough Derg of purgatory (still a place of pilgrimage, where Duffy with his mother had *been*) is in Donegal; smallish lough, some miles to right as we went from Sligo to town of Donegal. Hail shower, two policemen, on the terrace of the stony hills. A country that *might* all be very beautiful, but is not so, is bare, gnarled, craggy, and speaks to you of sloth and insolvency. “When every place was no place, and Dublin was a shaking bog;” Irish phrase for the beginning of time. “Sitting under de ditch, taking a *blast* of de pipe;” Scotch this too, all but *ditch*, which doesn’t as here mean *wall*-fence but *trench* for fence or drain.

Scariffe; straggling muddy avenues of wood begin to appear; woman in workhouse yard, fever-patient we suppose; had come flat, seemingly without pillow, on the bottom of a stone-cart; was lying now under blue cloaks and tatters, her long black hair streaming out beyond her—motionless, outcast, till they found some place for her in this hospital. Grimmiest of sights, with the long tattered cloud of black hair.—Procession next of workhouse young girls; healthy, clean in whole coarse clothes; the *only* well-guided group of children visible to us in these parts,

—which indeed is a general fact. Scariffe itself, dim, extinct-looking hungry village (I should guess 1,000 inhabitants) on the top and steep sides of a rocky height. Houses seemed deserted, nothing doing, considerable idle groups on the upper part (hill top) of the street, which after its maximum of elevation spreads out into an irregular wide triangular space,—two main roads going out from it, I suppose, towards Gort and towards Portumna.—Little *ferrety* shopkeeper, in whole clothes, seemingly chief man of the place, knows Bourke by often passing this way; “Well, Mr. (O’Flanahan, say, tho’ that was not it), do you think we can get a car to Gort?”—“Not a car here, sir, to be had for love or money; people all gone to adjourned assizes at Tulla, nayther horse nor car left in the place! Here was a precious outlook: Bourke however did not seem to lay it much to heart. “Well Mr. O. Flanahan, then you must try to do something for us!”, “I will,” I cried the little stumpy ferret of a man; and instantly despatched one from the group, to go somewhither and work miracles on our behalf. Miracle-worker returns with notice that a horse and car can (by miracle) be achieved, but horse will require some rest first. Well, well; we go to walk; *see* a car standing; our own old driver comes to tell us that *he* has discovered an excellent horse and car *waiting* for hire just next door to Mr. O’Flanahan’s. And so it proved; and so, in five minutes, was the new arrangement made; O’Flanahan acquiescing without any blush or other appearance of emotion. Merely a human ferret, clutching at game, hadn’t caught it. Purchased a thimbleful of bad whisky to mix in water in a very smoky room, from him; “odd copper, yours.” “Why sir?” and sent ardently for “change”;—got none, however, nor spoke more of getting. Poor O’Flan, he had got his house new floored; was prospering, I suppose, by work-house grocery-and-meal trade, by secret pawnbroking,—by *eating* the slain. Our new car whisked us out of Skariffe, where the only human souls I notice at any industry whatever, were two, in a hungry-looking silent back-corner languidly engaged in sawing a butt of extremely hard Scotch fir.

Road hilly but smooth, country bare but not boggy; deepish narrow stream indenting meadows to our left just after starting,—(mountain stream has made ruinous inundation since),—solitary cottages, in dry nooks of the hills: girl *dripping* at the door of one a potful of boiled reeking greens, has picked one out as we pass, and is zealously eating it; bad food, great appetite, extremity of hunger, likely, not unknown here! Brisk evening be-

comes cloudier; top of the country,—wide waste of dim hill country, far and wide, to the left: “Mountains of Clare.” Bog round us now; pools and crags: Lord Gort’s Park wall, furze, pool, and peatpot desolation just outside; strong contrast within. Drive long, after a turn, close by this park: poor Lord has now a “receiver” on him; lies out of human vision now! Approach to Gort: Lord Something-else (extinct now, after begetting many bastards), it was he that planted these ragged avenues of wood,—not quite so ugly still as nothing;—troublesome huggermugger aspect, of stony fields and frequent, nearly all, bad houses, on both sides of the way. Haggard eyes at any rate. Barrack big gloomy dirty; enter Gort at last. Wide street sloping swiftly; the Lord Something-else’s house—quaintish architecture, is now some poor-house, subsidiary or principal; Bourke, on the outlook, sees lady friend or cousin at window, looking for him too, and eager salutations pass. Deposits me in dim big greasy-looking hôtel at the bottom of the street; and goes, —I am to join him (positively!) at tea.

Dim enough tea, lady is poor-law inspector’s sister wife or something. Poor-law Inspector himself is Bishop Horsely’s son (or else grandson?); Dundee man, well enough and very hospitable, not a man to set the Thames on fire. Horrible account of chief inn at Galway; no good water attainable in Galway, no nothing almost! “Military ball *has* lately been at Gort; Gort too, in spite of pauperism’s self, is alive;—“surgeon of the Regiment a Dumfries man?” well and good, *ach Gott!* Home to bed; snoring monster in some other room; little sleep; glad that it was not wholly none. [Be quick!]

Friday 27 July.—Up early enough, breakfast do.; wait for Limerick-&-Galway Coach, due about 8 a.m. (or 9?)—Confused ragged aspect of the market-place, on which (a second long street here, falling into the main one from westward, but *not* crossing it) my windows look, my bedroom window *has* looked. Sour milk firkins, sordid garbage of vegetables; old blue cloaks on women, greasy-looking rags on most of the men, defacing the summer sun, this fine morning! Troop of cavalry in undress file in from an easterly entrance,—exercising their horses; very trim and regular they. Good woman in silent tobacco-shop; what strange unvisited islands do, not uninhabited, lie in the big ocean of things! Chapel; people praying in it, poor wretches! Coach at last: amid tumult of porters, suddenly calling me, luggage *already* hoisted in, this man to pay and then that; Horsley too out saluting me, I do get aloft, and roll gladly away.

Some green fields, even parks and trees, tho' rather roughish, and with barren hills beyond, this lasts for a mile or two: then fifteen miles of the stoniest barest barrenness I have ever yet seen. Pretty youth mounts beside, polite enough in his air and ways, not without some wild sense; "Connaught young gentleman", he too is something: on the box sits a fat Irish tourist in oilskin, beyond my own age; eager to talk, has squireen tendencies; no sense or too little, don't. "Connaught rangers 88th: memorable to me for repute of blackguardism in Dumfries: natives proud of them for prowess here. Big simple driver, do. do. guard: I think we had no further company, and in the inside there was none. Stone cottages, stone hamlets, not nearly so ugly as you might have looked for in such a country,—stony, bare, and desolate beyond expression. Almost interesting as the breezy sunshine lay on it: wide stony expanse, in some places almost like a continuous flagged floor of grey—white stone; pick the stone up, build it into innumerable little fences, or otherwise shove it aside, the soil, when free, or freed of water, seems sharp and good. Parks here and there; where wood has thriven: greenest islets in the sea of stone. Martin of Galway's representative, in one; Browne or Black (Blake); plenteous names these. English-Irish air in all *our* company, Redington's (secretary) draining, trenching goes on here; our stage, and I see that my writing case *is* inside, beneath a big corn-bag. Galway bay, and promontory, where Galway city is. Stones, stones,—with greenest islets here and there. Oh for men, pickmen, spademen, and masters to guide them! "Oranmore," with grey masses of old monastic architecture. (Clanricarde's *Castle* this!). Silent as a tomb otherwise: not a hammer stirring in it, or a bootfall heard, stagnant at the head of its sleeping tide-water: how on earth do the people live? Barrest of roads towards Galway; dusty, lonely, flanked by ill-built dry stone walls, poor bare fields beyond. Pauper figures, and only a few, the women all with some red petticoat or something very red, plodding languidly here and there under the bright noon, tatterdemalion phantasm, "piece of *real* Connaught," with some ragged walletkins on him; at a turn under some trees. *Parklets*, as if of Galway merchants; very green indeed, and wood growing bravely when once tried. Galway suburbs; long row of huts mostly or all thatched,—true Irish houses, "Erasmus Smith's school;" young gentleman knows of it; to the right; a big gaping house;—in vacation just now. Road always mounting, has now mounted, got into *streets*; gets into

a kind of central square;—Duffy visible; Hô-tel (all full of assize people); and here are letters for me, a Galway editor for guide, with car ready for yoking,—and we must be in Tuam *this* evening.

Letters read, we mount our car: straight steep streets, remarkable old city; how in such a stony country it exists! Port wine and Spanish and French articles inwards, cattle outwards, and scantlings of corn; no *other* port for so many miles of country; *enough* of stony country, even that will make a kind of feast. Inlet of river from Lough Corrib the Connemara country: extensive government works here too. "Godless College," turreted grey edifice, just becoming ready; editor warmly approves of it,—Maynooth pupil this editor, a burly thick-necked, sharp-eyed man;—couldn't *be* a priest; in secret counterworks M'Hale, as I can see, and despises and dislikes his courses and him. "Give them light:" no more *Protestant* act than that "Maynooth grant."

If the devil were passing through my country and he applied to me for instruction on any truth or fact of this universe, I should wish to give it him. He is *less* a devil, knowing that 3 and 3 are 6, than if he didn't know it; a light-spark tho' of the faintest is in this fact; if he knew *facts enough*, continuous light would dawn on him, he would (to his amazement) understand what this universe *is*, on what principles it conducts itself, and would *cease* to be a devil!—Workhouse, well enough for *it*,—"human swinery;" can't be bothered looking much at any more of them. Model-farm or husbandry school; can't find time for it,—sorry "Piscatory school," means only school for fishermen's children: in the Claddagh,—whither now, past old sloop lying rotting in the river, along granite quays, government works, (hives *without* bees); and enter the school at last, and there abide mostly. Good school really, as any I saw, all catholics,—can't speak English *at first*," "Dean Burke" not there, over in England; substitute, with undermaster and do. mistress, handy Irish people, man and wife if I remember; geography &c., finally singing: and substitute goes out with us, "show you the 'Claddagh.'" Complexity of silent narrow lanes, quite at the corner of the town, and clear of it, being over the river too; kind of wild Irish community; or savage poor republic trying still to subsist on fishing here. Dark, deep-sunk people, but not naturally bad. We look into many huts; priestly schoolmaster, a brisk frank clever kind of man, knows Irish, seems to be free of them all. Petticoats, as usual, high-dyed, however dirty; lilac, azure, especially red. Old woman at a live coal of

languid turf; likes "tay;" net-weaving (tho' not entirely) is going on too: husbands all out at the fishing. The herrings are still here? "Yes, your reverence."—Hope they *stay* till you get *ready* to catch them!" he answered. Claddagh as like Madagascar as England. A kind of charm in that poor savage freedom; had lately a revd. senior they called their "admiral" (a kind of real *king* among them), and priests and reverence for priests abound.—Home to our editor's lodgings now (inn uninhabitable for assize tumult): one "Councillor Walker" has been inquiring twice for me (editr. has told me); I cannot yet recollect him for *Petrie's*, and A. Sterling's "Chambers Walker" near Sligo, nor try much to make him out at all.

Hospitable luncheon from this good editor. Duffy's *sub*-editor now, I think;—in great tumult, about 3½ p.m. in blazing dusty sun, we do get seated in the "Tuam Car," quite full and,—Walker recognising me, inviting warmly both Duffy and me to his house at Sligo, and mounting up beside me, also for Tuam this night,—roll prosperously away, Duffy had almost rubbed shoulders with Attorney General Monahan; a rather sinister polite gentleman in very clean linen, who strove hard to have got him hanged lately, but couldn't, such was the *bottomless* condition of the thing called "Law" in Ireland. Long suburb again, mostly thatched, kind of resemblance to "the Trench" near Dumfries. Bad seat mine, quite *under* driver's, wont admit my *hat*, or hardly even my head; Walker politely insists on exchanging when the horses change. Talk, talk from W. very polite, conciliatory, rational too, not very deep. Bare country; not quite so stony as the morning's, not quite so barren either. Romantic anecdote (murder,? ghost,? or what) of a family that lived in some bare mansion visible to the left,—totally forgotten now. Country flattens, gets still more featureless; "John of Chume's" Cathedral tower; "little influence John of Chume;" anecdotes of some Roman-Irish Bishop and him;—Tuam itself, happily, and dismount, about 7 p.m.; reverence of landlady to Duffy; tea, Walker joining us; walk out, McHale's big not beautiful Cathedral (towers like *pots* with many *ladles*); back of McHale premises, "College" or whatever he calls it, outer staircase wants parapet; ruinous enough,—this is St. Jarlath's, then,? If we go into the street the protestant bishop's house stands right opposite too. Across then to protestant cathedral; old, very good,—don't go in. Ancient Cross, half of it, is *here*, other half (root or basis of it) is at McHale's standing on the open circuit there: "Judgment of Solomon

has not answered for *these* two mothers!" On emerging, a crowd has gathered for Duffy's sake; audible murmur of old woman there, "Yer hanar's wilcome to Chume!" Brass band threatening to get up, simmering crowd in the street; a letter or so written; get off to bed,—high up mine, and not one of the *best* in nature!

Saturday 28 July.—Ostlers, horses, two rattling windows, finally cocks and geese; these were one's lullabies in "Chume;" outlook on the ugly McHale Cathedral, and intervening lime-patched roofs, at present moist with windy rain:—poor Duffy in his front "best bedroom," hadn't slept at all. Hurried breakfast in the grey morning 7 a.m., Bill—n. b. Bill came to us at *Sligo*, unsettled still the inn-keeper said,—and Duffy with surprise paid it there too, uncertain whether not a second time! Walker is out, bound for Sligo at an after hour; appoints us thither for Monday evening. Squabbling of lady passenger about being cheated of change by some porter or boots:—confused misarrangement, and noise more or less on all hands, as usual; windy scotch-mist, coming down occasionally in shower; off at length, thank Heaven, towards Castlebar and Westport, *taliter qualiter*. Watery fields, ill-fenced, rushes, rubbish; country bare and *dirty*-looking; weather rather darkening than improving. Simple big Irishman on coach-roof beside me; all in *grey-blanket*, over all; some kind of corn or butter trader, I suppose; as well-dressed kind of natives are very apt to be. "Father has *taken* the Ballina workhouse contract" said one, (who got up, farther forward on the road): "taken it," Indian-meal at so-and-so. There is something entertaining too in a region of *unadulterated* professed ugliness? Ride by no means uncomfortable in the scotch-mist (wind to *left* and *rear*), with outlook over ill-tilled bare and ragged expanses, road flanked sometimes with beggarly scotch-firs.

Man holding up a fiery peat in a pair of tongs; stop to change horses; fiery peat is for the guard, who leans forward with (dodeen) pipe, *good-natured* gorgon-face, weighed down with laziness, age and fat: smack, smack! intense sucking, 'bacco being wet, and the saliva came in dew-drops on the big outcurled lips; poor old fellow, he got his pipe to go at last, and returned the tongs and peat by flinging them away. What a pre-established harmony, this of the fiery peat and the gorgon guard! Bright thro' the scotch-mist of the future, this fiery peat gleams beacon-like on his soul, there burns for him a little light of hope. Duffy is inside, lady passenger (of the cheating boots), and some poor young gentleman with the bones of his leg broken. Per-

haps we didn't change horses at the fiery peat; but only delivered and received parcels there? Next halt, there was a change; a great begging too by old sybil woman, a mounting of one or more (grain-dealing?) passengers, with fine dresses, with bad broken umbrellas. The morning is getting wetter; stormful, dashes of heavy showers as we approach Castlebar, road running, and red streamlets in the ditches on either side. Duffy has proposed that we shall stop at Castlebar, and give up Westport; overruled. "Hollymount," pleasant-looking mansion, with lawns and groves on the left; letter to the owner, but didn't think of delivering it. Lord Lucan's close by Castlebar and on the other side of it too: has cleared his ground (cruel monster! cry all people); but is draining, building, harrowing and leasing; has decided to make this ugly land *avail*, after clearing it. Candour must admit that *here* is a second most weighty consideration in his favour, in reference to those "evictions." First-rate new farmstead of his, Scotch tenant (I think), for peasants that will work there is employment here; Lord Lucan *is* moving, at least, if all others lie motionless rotting; Castlebar in heavyish rain; town-green; confusion of confusions, at the edge of that, and looking down the main street, while they tumble the luggage, re-arrange themselves, put out the poor broken-legged gentleman at the hospital—(rain now battering and pouring), and do at last dash forth towards Westport.

Wind and rain now right ahead, prefer this to stew of inside; Lord Lucan's husbandry seen to each side from under umbrella,—with satisfaction, tho' not unmixed. Gigantic drain; torn thro' a blue *whinstone* range of knolls, and neatly fenced with stone and mortar; drippings of the abominable bog (which is all round, far and wide, ugly as chaos), run now thro' it as a brown *brook*. Abominable bog, thou shalt cease to be abominable, and become subject to man! Nothing else worth looking at; dirty hungry cottages, in groups or single; bog generally, or low-lying rushy wet ground, with a storm of heavy rain beating it,—till certain heights, which over look Westport. Gorgon guard's face pours water from every angle,—careless he, as if it had been an old stone face:—talks busily, nonsense, what I heard of it, with some foolish passenger the only one now. Distressed gigs; one distressed gig; riders and it running *clear* with wet. Tobacco remains to one! Heights at last; Westport big substantial-looking (*Fronti nulla fides!*); "Croagh Patrick" big mountain bone amid tumbling cloud masses, glimpses too of the bay, all close at hand now; and

swiftly down hill we arrive, get to our inn (flaring *hôte*, fit for Burlington Street by *look*), and, in about $\frac{3}{4}$ of an hour of confused waiting and vicissitude, get our luggage, and begin to think of *seeing* the people I had letters for. Waiter despatched accordingly; people gone, people &c.—One little captain Something, an intelligent commonplace little Englishman (just about to *quit* this horrid place, and here for the second time) does attend us, take us to Westport workhouse, the wonder of the universe at present.

Human swinery has here reached its *acme*, happily: 30,000 paupers in this union, population supposed to be about 60,000. Workhouse proper (I suppose) cannot hold above 3 or 4000 of them, subsidiary workhouses, and outdoor relief the others. Abomination of desolation; what *can* you make of it! Outdoor quasi-work: 3 or 400 big hulks of fellows tumbling about with shares, picks and barrows, "levelling" the end of their workhouse hill; at first glance you would think them all working; look nearer, in each shovel there is some ounce or two of mould, and it is all make-believe; 5 or 600 boys and lads, pretending to break stones. Can it be a *charity* to keep men alive on these terms? In face of all the twaddle of the earth, shoot a man rather than train him (with heavy expense to his neighbours) to be a deceptive human *swine*. Fifty-four wretched mothers sat rocking young offspring in one room: *vogue la galère*. "Dean Bourke" (Catholic Priest, to whom also we had a letter) turns up here: middle-aged middle-sized figure, rustyish black coat, hessian boots, white stockings, good humoured, loud speaking face, frequent Lundy-foot snuff;—a mad pauper woman shrieks to be towards him, keepers seize her, bear her off shrieking: Dean poor fellow, has to take it "asy," I find,—how otherwise? Issuing from the workhouse, ragged cohorts are in waiting for him, persecute him with their begging: Get along wid ye"! cries he impatiently, yet without ferocity: "Doun't ye see I'm speaking wi' the gentlemen! Arrah, thin! I don't care if ye were dead! Nothing remained but patience and Lundy-Foot snuff for a poor man in these circumstances. Wherever he shews face, some scores, soon waxing to be hundreds, of wretches beset him; he confesses he dare not stir out except on horseback, or with some fenced park to take refuge in: poor Dean Bourke! Lord Sligo's park, in this instance. But beggars still, one or two,—have climbed the railings, got in by the drains? Heavy square mansion, ("1770" architecture): Lord Sligo going to the Killeries, a small lodge he has to the south—no rents at

all: I hear since "he has nothing to live upon but an opera-box;" literally so (says Milnes),—which he bought in happier days, and now lets.—"Croagh Patrick, won't ye go to it?" Bay.—Clew Bay, has a dim and shallow look, hereabouts; "beautiful prospects,"—yes Mr. Dean; but alas, alas! Duffy and I privately decide that we will have some luncheon at our inn, and quit this citadel of mendicancy intolerable to gods and man, back to Castlebar *this* evening. Brilliant *rose-pink* landlady, reverent of Duffy, (proves to be a sister, daughter perhaps, of the "Chume" one) is very sorry; but—&c. No *bells* in your room; bell often enough broken in these sublime establishments of the west of Ireland. Bouquet to Duffy;—mysteriously handed from unknown young lady, with verse or prose note; humph! humph!—and so without accident in now bright hot afternoon, we take leave of Croagh Patrick—(devils and serpents all collected there—Oh why isn't there some Patrick to do it now again!) and, babbling of "literature" (not by *my* will), perhaps about 5 p.m. arrive at Castlebar again, and (for D's sake) are reverently welcomed.

Tea. Irish country priest,—very soft youth, wonderfully like one of our own green parsons fresh from college, the only one I saw of that sort. Out to the Inspector's Capt'n. Something, for whom I have a letter: Strelzki there, whom we had seen at Westport too, talk-talking with his bell-voice, and unimportant semi-humbbug meaning, "Strelzki is coming!" all the natives, with inconceivable interest, seemed whispering to one another; a man with something *to give* is coming!—This Capt'n., in his dim lodging, a considerably more intelligent young man (30 or so); talk—to breakfast with him to-morrow.

Westport Union has £1100 a-week from Government (proportion rate-in-aid), Castlebar has £800, some other has £1300 &c. &c., it is so they live from week to week. Poor-rates, collectible, as good as *none*. (£28.14 say the books); a peasant will keep his cow for years against all manner of cess-collection; spy-children, tidings run as by electric wires, that a cess-collector is out, and all cows are huddled under lock and key.—*unattainable* for years. No rents; little or no *stock* left, little cultivation, docks, thistles; landlord sits in his mansion, for reasons, except on *Sunday*: we hear of them "living on the rabbits of their own park." Society is at an *end* here, with the land uncultivated, and every second soul a pauper.—"Society" *here* would have to eat itself, and end by cannibalism in a week, if it were not held up by the rest of our empire still standing

afoot! Home thro' the damp streets (not bad streets at all, and a population still partly *clothed*, making its Saturday markets); thimbleful of punch over peat fire or ashes, whiff of tobacco, and bed.

Sunday 29 July.—Breakfast with Capt'n. *Farrar* (that was the name) sharp, distinct, decisive young soldier; manfully or patient and active in his hopeless position here. On my return Duffy has been at *mass* and sermon. Priest reproving practices on "patron days" (pilgrimages &c. which issue now in *whisky* mainly), with much good sense, says Duffy. Car to Ballina—(*Bally* is place, *val-lum*); drivers, boots &c. busy packing. Tuam coach, (ours of yesterday) comes in; there rushes from it, *shot* as if by cannon from Yorkshire or Morpeth without stopping,—W. E. Forster! very blue-nosed, but with news from my wife, and with inextinguishable good-humour; he mounts with us almost without refecation, and we start for Ballina; public car all to ourselves; gloomy hulks of mountains on the left; country ill-tilled, some *untilled*, vacant, and we get upon wide stony moorland, and come in sight of the desolate expanses of "Lough Con."

Police-barrack, excise-barrack, in a loop of the mountain washed by the lake. Picturesque sites, in nooks and on knolls; one ruined cottage in a *nook* (belongs to Lord Lucan), treeless yet screened from winds, nestled among the rocks, and big lake close by: why couldn't *I* get it for a hermitage! Bridge (I think there must have been), and *two* Loughs. Inexpressible solitude, unexampled desolation; bare grey continent of crags, clear sea of fresh-water,—some farms and tufts of wood (one mournful ruined-looking place, which was said to be a burying-ground and monastic ruin) visible far off, and *across* the lake always. Clear blue sky, black showery tempests brewing occasionally among the hills. Brother car meets us, brief dialogue, among the crags; little pug-nosed Irish figure in Sunday clothes, had been escorting a comrade, mounts now beside Duffy,—proves to be a tailor, I think. Account by him, inexpressibly vague, of certain neighbouring localities. "Archb. Mc Hale," John of "Chume" was born hereabouts; peasant-farmer's son. Given a vivacious greedy soul, with this grim outlook vacant of all but the eternal crags and skies, and for reading of life's huge riddle, an Irish Mass-Book only,—one had a kind of glimpse of "John of Chume;"—poor devil, after all! Ballina; immense suburb of thatched huts again; solid, broad, unexpectedly handsome main-street; corn-factors, bacon-factors, land-agents, (attorneys, in their good days must have done it); halt at the farther end, close

by a post-office, and a huge hungry-looking hôtel, or perhaps two hôtels; into one of which, the wrong one surely if there was a choice, we are ushered, and in the big greasy public room find a lieutenant of foot busy smoking.

"Private room" very attainable, but except for absence of tobacco not much more exquisite; in fact this poor hôtel was the *dirtiest* in our Irish experience; clearly about *bankrupt*; as one would see; but the poor waiters, the poor people all, were civil; their poverty gave them even a kind of dignity,—the grey-bearded head waiter's final *bow* next day (disinterested bow) is still pathetic for me. Certain Hamiltons, inspectors; the Captain H. an Ulster man; big cheeks and black bead-eyes; Calvinist-philanthropist; a really good, but also really stupid man. Write in my back bed-room; annoyed by gusts of *bravura singing* (Sunday not the less) from the Lieutenant of Foot; sorrow on him, and yet pity on him! To workhouse, to workhouses, with Bead-eye; *Subsidiary* workhouses these; boys *drilling*,—discharged soldier: one of the drill-serjts., begs for something of the nature of "shoes" when it is done. "There is Cobden, you see!" said poor bead-eyed Hamilton; "discharged that man, and now he comes upon us!" Kindness *à la* Exeter Hall; this, with strict Calvinism for life-theory is H's style. A *thatched* subsidiary workhouse this; all for the children:—really good, had the children been getting bred towards anything but *pauperism*! pauperism in geometrical progression. Dinner of perhaps 500 of them, girls I think. "Och, Sur, its *four years* I've been here, and this little girl isn't well, yet!" Four years: what a kindness to us, to stay so long! What she now wanted with this girl? "To get her taken to the salt water,"—a small allowance for that. Brutallest stupidity can hardly be more brutal than these human swineries had now grown to seem to me. Dormitories &c.,—a street nearly all in ruins beside this admirable place; population of it gone to workhouse, to England, to the grave.—Other subsidiary workhouse; *confinements* of young women; really whole big roomfuls of them (for it was now raining) waiting for dinner.—Home with disgust; to have tea with Hamilton in the evening at his house.

After dinner, walk towards his house; moist windy evening, rain has ceased. Correct little house, good and hospitable man,—tries to convince me of philanthropy;—pauses horror-struck:—I decide (in my own mind) that the *less* of this the better; he (I found afterwards) asks Duffy privately—"if I am an atheist or what?" Hospitable promise to go and show us a "country of evictions" on the morrow;

we shall see! and so home to bed. It was going towards his house that a man (Sunday workman) caught Duffy's hand, and reverently shook it with apologies.

Monday 30 July.—Worst of Irish beds, worst of Irish nights, (noise &c.) does finally end. At breakfast Hamilton is punctual and appears: "not me, thank you kindly" and the rest also didn't go,—or only Forster of the rest, and at some other hour. 'Thro' the streets with my two inspectors (Hamilton and his cousin the "Belmullet" inspector, a simple watery man with one arm, Mrs. Dr. Evory Kennedy's brother), towards the workhouse. "The Scotch Shop," so called; a Glasgow thing, has propagated itself hither from Sligo; dull Scotchman, "never so bad a trade as *now*;" building, furnishing of workhouses, always some money going till now; his brother has taken a farm hereabouts, (rent seemed *high* with such pauperism);—his shag tobacco (nearly unknown in Ireland) is very dear and very bad; adieu to the Scotch shop, and him! Dulse in Ballina street market;—comes from Belmullet, I hear; gathered there, carted hither, 42 miles, sold for 21 here! wretched huckster, who has no better industry, subsists his garron upon the way side, lodges with some fellow-poor man,—goes his 84 miles, on these terms, and takes to gathering new *dulse*. Was such industry ever heard of before in this world? Not this poor huckster is to blame for it, first of all; not he first;—Oh Heavens, innumerable mortals are to blame for it; which quack of us is *not* to blame for it?—Look into the *areas* of the workhouse with bead-eyed friend; then, for his sake and for my own, I decline to go farther; return to inn,—where at least is a sofa, where tobacco and solitude are possible. Car is to go about two o'clock, and I am due at Sligo to-night. Duffy, finding certain "Dillons" here, decides finally to stay; Forster too stays, flying about in an uncertain way. Col. Something, a great "exterminator" hereabouts, and a great improver also; that is he, riding into town: stubborn, uncultivated big redhaired face, and solid military figure, from 50 to 60;—not the worst of Ballina men he. Glimpse of Bourke, with note from somebody. (from the Tralee gentleman it was, who had been "absent at Valentia").—glimpse of Duffy and Dillons; away, then, away!

First part of our route, moory, at first some symptoms of plantation and improvement, by and bye none: Col. Something (Gort's?) evictions, long ghastly series of roofless cottages visible enough;—big drain, internal, was not visible: poor groom sitting by me on the car was eloquent as to Col. "cruelty;" Col.

himself, I understand, asserts that his people went away voluntarily, money and resource being wholly run out. Beggar cottagers need to be supported by public rate; whether the rate is paid them in cottages or in workhouse is really not so material as the second question "what becomes of their land, they having *ceased* to cultivate it? Gort and Lucan answer? Their land becomes *arable*, will be ploughed in all coming years! Not so bad, surely—My groom gets off; *his* master most humane thrice-excellent old Dublin gentleman, driving up now with son-in-law, daughter &c. in gig; "no evictions" there, no, no! Son-in-law, fat young gentleman, had a dish-hat as usual,—dish-hats drab-colored, black, brown, and even green, universal wear of young gentlemen here, and indeed in all country parts (Scotland and England too) at present. Flat, flat, waste of moor; patches of wretched oats—then peat bogs, black pools; the roofless cottages not far off at any time. Potatoes,—poor cottier digging his little plot of them, three or four little children eagerly "gathering" for him: pathetic to look upon. From one cottage on the way side, issue two children *naked* to beg; boy about 13, girl about 12, "naked" literally, some sash of rag round middle, oblique-sash over shoulder to support that, stark-naked would have been as decent (if you had to jump and run as these creatures did) and much cleaner. *Dramatic*, I take it, or partly so, *this* form of begging: "*strip* for your parts, there is the car coming!" Gave them nothing.

Stage: "Dromore" (?) little hamlet; country alters here, sun too is out, beautiful view of the sea, of Sligo bay with notable mountains beyond, and high (limestone) dry hills on our right too; much indented coast, circuitous road for Sligo; but decidedly a pleasant region, with marks of successful cultivation everywhere, tho' still too *treeless*, (and full of *beggary* below board, as we afterwards found). Small young lady from Dromore going on visit to Sligo, her parasol a little interrupts my view, "bay of" something ("Ballisadare" it would seem) on this side of Sligo Bay: high fine hill between the two,—north side of that, it turns out, is Walker's house. Sligo at last; beautiful descent into it, beautiful town and region altogether. Down, down, to the river-bank then halt a little to right; Mr. Walker, with servant and nice neat car is waiting: how charitable to the dusty heart-broken soul of a pilgrim from his car! No host can do a kinder thing, than *deliver* a poor wretch in these circumstances, save him from porters, inn-waiters, and the fatal predatory brotherhood!—up, some three miles; then on a pleasant shelf of the big hill or mountain

"Knocknarea" dividing Sligo from the other bay, a trim fertile little estate, beautifully screened and ornamented (or soon about to be so), a neat little country house, and elegant welcome: thanks, thanks! Elaborate dinner, however, *no* dish of which *dare* I eat; salmon, veal, lamb, and that is *all*! Cold beef supplies every want. Excellent quiet bedroom; to bed utterly done, almost sleeping for an hour before I got away.

Friday 31 July.—Fine morning, fine outlook over Sligo, bay, city, mountain; around *us* pretty walks and garden, with farm improvements fast progressing, behind us the mountain rises trim and green, on the top of it an ancient *cairn*, conspicuous from afar,—which Petrie asserts gravely to be the "Grave of Queen MAB,"—some real old Irish "queen" who had grown in the popular fancy to be this! Good Petrie, he is much loved here, but there was no chance of warning him of *me* in time.—Drive to Sligo now, find Duffy and Forster just arrived, and eating luncheon at their inn, go along to visit workhouse, to visit Lough Gill; they two to dine with us at night.—Whether Duffy went with us to Lough Gill ("Wynne" of Hazlewood) I don't recollect; rather think yes; but if so he staid behind us, and came up with Forster? [Important indeed!]
—Dinner was altogether polite and pleasant; Forster went about 11; then bed, and hospitable Walker will have us in town before six to-morrow, on our road towards Donegal, where these tourings are to end.

Beauties of "Hazelwood" (where Forster *meets* us in a car of his own) are very considerable; really fine lake (the Lough Gill itself), wide undulating park, umbrageous green-swarded, silent big house, pleasure boats on lower *arm* of Lough, and queer little wind-mill pump; very good indeed. "Wynne Esq"; who has this day been stirring up a row among the butter merchants, breaking *their* monopoly, and stirring up their noise. His tenants complained, "6d per lb. a dreadful price:" get your firkins ready, full of *good* butter and *I* will give you real Liverpool prices: *hinc lachryma*, what the issue was, I never heard.—Of workhouse, 1800 strong, say nothing: heavy fat-flabby but solid English ex-military man for manager; wide (idle-looking) school: group of wandering gentlemen; one (of Rathmullen on Lough Swilly to whom we had a letter, a dark-yellow, lean long figure; "most anxious" &c. *if* we will come; but till Saturday he cannot be at home, and none knows whether that will answer.—Sligo and cholera? *Telluric* or atmospheric the influence; by no means a *dirty* town; the reverse *in comparison*. Talk of the "Cevigna mines" rich in coal and iron,

say *richest*; not worked, company once, 1st manager,—*shot*; second manager sent to Chancery; mines sleep till “Government” make some canal or do something. Relief works in Sligo; steep street a little levelled; what to do with the *mould*? Throw it into the river! “Upon *my* salmon?” eagerly objects one. It is at last *carted* far away.—Elder Walker one of the Presentment justices in relief time; we voted away £28000 *one* morning (“English have plenty of money”); terribly indignant now that they should demand payment of *one half* of it; “had we known that!”—a miserable business this of the famine works and relief works altogether;—sad proof that in Ireland is *no* organic government, and in England *no articulate* do.: a do. presided over by Lord John Russell only and the element of parliamentary palaver!—Part of Sligo belongs to Lord Palmerston; I didn’t learn, or ask which part.

Wednesday 1 August.—Up at five, forwarded in all ways by kind hospitable Walker, (to whom, farewell kindly), car at the car-stand in Sligo, before six of the sunny morning.—“Gavogne” (dammed up here?) gurgling past as a considerable stream, and breweries &c. on the other side. Beggars, beggars; only industry *really* followed by the Irish people. “For the love of God, yer hanar!” &c. &c. “Wouldn’t it be worth your consideration, whether you hadn’t better drown or hang yourselves, than live a dog’s life in this way?” They withdrew from me in horror; did at least withdraw! Judicious confusion of loading luggage; Car full to overflowing: Sligo wit—“Go home, and shave yourself!” “Sure, I’m not so ugly as you, shaved or not!” (Fat gross fellow,—some bacon-dealer, I suppose, got this wit-arrow, ohone! away at last; all jammed together;—steep ups and downs; horses hardly *can*, won’t at one place, and we have to dismount. Bacon-dealer next me, Duffy on my right, tall old cleanly peasant jammed under Forster and driver beyond; Sligo bay, and bright sea, with moory mountainous capes in front of *us*. Lord Palmerston’s country; *some* draining visible; *much* had been heard of; ugly, bare, moory country; would one were out of it all, as we now soon shall be! Donegal mountains blue-black over Donegal bay far westward to Teelin head. Dingy desolate looking country, in spite of the fine, calm morning. “Killibegs,” and some coastguard station, the only sign of inhabitancy. Cleanly peasant, at sight of some new locality “breaks out into narrative; is, at least was, a coastguard,—had *once* a notable adventure, seizing or trying to seize some smuggler there,—minute particulars of it,—for 30 years

seem to have done nothing else but merely “look out”, the one peopled point in his old memory. Particulars from him of coastguard discipline and ways; well-done excise; when a thing is to *be* done, it can be done.—Bathing lodgings, getting ruinous many of them, (potatoe-failure has stopped supplies), good shore for bathing, and individuals, (to one’s envy) are now seen swashing about in the act; blue brine and sandy shore, &c: in Leitrim county; said once, for a moment, to be “in Fermanagh” (mistake probably?). Ruined Castle (where?) “Four Masters” did their compilation there; recollect the old black hulk of ruins,—think it might be in Donegal county further on. Bathing hamlets, do. houses, lodges (*once* ornamental); lime and whitewash, very abundant, cannot hide ruin. “Bundoran” cleanish high-lying village, headquarters of bathing; bacon-dealer—runs to see a sick friend, Car waits for him; drink of water? *Effort*, by shopkeeper or car clerk,—think I got it, tho’ after despairing. Sea and Donegal and Killibegs abroad, moory raggedness with green patches near, all treeless,—nothing distinct till steep narrow street of “Ballyshannon;” mills, breweries, considerable, confused, much white-washed country town. Breakfast, as if for the King’s hundred, near the higher end. Tourists, quasi-English, busy at our table already: silent exct. waiter, doing his swiftest in imperturbable patience and silence. Car gone; we have to climb the steep, at the top it will wait for us. And so to the road again, quitting Ballyshannon; only Duffy, Forster, and I, of our car, did breakfast there.

Day now growing hotter, road dustier; remember nothing or little till Donegal: a Mr. Hamilton (?) has embanked some lagoon, saved many acres, gives real symptoms of being busy as a king of tillers in that quarter. Country improving; hedges even, and some incipencies of wood shelter and ornament. Donegal a dingy little town; *triangular* market place; run across to see O’Neill’s old mansion; skeleton of really sumptuous old castle,—*Spanish* gold, in Queen Elizabeth’s time, had helped: by one of the three *angles* (there is a road by each) we got away again; dropping Forster who will see the lagoon-embanker (didn’t find him), will then by Glenties to Gweedore, and meet *me* there; Duffy is for Derry, and we part at Stranorlar; I, by appointment, am for Lord George Hill’s, and have a plan of route from Plattenauer.—Bare miserable country; dingy Donegal has *workhouses* building, *pitch* employed there, no other masonry; *sleepy* valley with some trees and green patches spreading up into the sleepy mountains; high ground

towards Gap of Barnesmore becomes utter peat. Barnesmore I remember well; nothing of a "Gap" to speak of; Dalveen Pass, and several unheeded Scotch ones, far surpass it in "impressiveness:" important military pass, no doubt. Moor, moor, brown heather, and peat-pots, here and there a speck reclaimed into bright green,—and the poor cottier oftenest gone. Ragged sprawling bare farmstead, bright green and black alternating abruptly on the grounds and no hedge or tree; ugly enough,—and now from the moor-edge one sees "Stranorlar" several miles off, and a valley mostly green, not exemplary for culture, but most welcome here. Down towards it,—Duffy earnestly talking, consulting, questioning; pathetic, as looking to the speedy end now. Down into the valley; fat heavy figure, in grey coarse woollen, suddenly running with us, sees me, says "all r-right!" It is poor Plattnauer, who has come thus far to meet me! we get him up; enter through the long outskirts of "Stranorlar," up its long idle-looking street, to coach-stand;—and there Duffy stretching out his hand, with silent sorrowful face, I say Farewell and am off to Plattnauer's little inn; and consider my tour as almost ended. After an hour, of not very necessary waiting, (lunch smoking &c. provided by the kind Plattnauer) we get the car he has hired for me from Letterkenny, and proceed thither.

Fourteen miles; a tilled country mostly, not deficient here and there in wood; ragged still, tho' greatly superior to late wont; recognize the *Ulster* dialect of carman, Ulster practice of the population generally. Talk,—burdensome, had there been much of it? Mountains about Gweedore, details (eulogistic, enthusiastic) of Lord George Hill; three men (officialities, of some kind,—excise or other with dish-hats, before us in their car; road now rapidly winding downwards: pass them at last; can bethink of no other road-fellow whatever. Country greenish for most part, with gnarled crags; I should have expected ferns in the ditches, but don't remember them. Millpond at the bottom of our descent, then long slow ascent up Letterkenny Street, broad, sometimes rather ragged-looking, always idle-looking,—busy only on market days, with corn and cattle, I suppose. Hôtel at last; and carman satisfied, a grateful change into Lord George's car. To Ballyarr then! Now towards 6 or 7 o'clock. Long, mile—long straight steep ascent; then complex cross roads "to Rathmelton," to &c.; country commonplace, hill-and-dale, not quite bare; at length Ballyarr clump of wood; high rough hedges, gates, farm-looking place; and round the corner of

some offices we come to an open smooth kind of back court, with low piazza at the further side: from below piazza,—then at the back entrance, (the only handy one to his mansion) Lord George himself politely steps out to welcome us. Handsome, grave-smiling man of 50 or more; thick grizzled hair, elegant club nose, low cooing voice, military composure and absence of loquacity; a man you love at first sight. Glimpse of Lady (Georgina?) Hill, a nunlike elderly lady, and of one or two nice silent children; silent small elegant drawing room; a singular silent politeness of element reigns; at length refectory in a little dining room, (*tea*, I suppose?)—and, in a bare but clean and comfortable room, presided over by the Great Silences, one sinks gratefully asleep. Gweedore on the morrow like an unopened scroll lying before—I bethink me, we walked out too, that evening, Lord George Plattnauer and I, with pleasant familiar talk; and for supper after our return, he ordered me Irish stir-about, a frightful parody of "Scotch porridge," (like hot *dough*), which I would not eat and even durst not except in *semblance*. Deep ditches, *gross* kind of crop;—potatoes, turnips, "Egyptian wheat," (so called, grown from wheat found in *mummy*); land has originally been, much of it even lately, flat bog.

Monday 2 August.—Dim moist morning, pleasant breakfast (Lady Augusta (?) who has a baby, not there), paternal *wit* of Lord G. with his nice little modest boys and girls in English, German, French; Platt. to go with us to Gweedore. Big new mill; big peat stacks; carriage house, some 3 nice sleek wiry horses, "all kept at *work*," and able for it. Air of gentleman farmer's place and something more; car about 11 and swift firm horse, rain threatening,—which came only to a heavy Scotch-mist now and then, with brief showers. Tattery untrimmed fields, too small, ill-fenced, not right in any way. Wretched puddly village, "Kilmacrennan," like an inverted saddle in site, brook running through the heart of it (?) miserable rare "caravan" stationed there, amid the dirt, poverty and incipient ruin. Road heavy and wet, past many ill-regulated little farms. Dunhill of one, "I have admonished him *not* to let it run to waste so,"—but he doesn't mind! Road (is all very obscure to me; cardinal-points, at the time, not well made out, which is always fatal to one's recollection!)—road, leading N.-westward, begins mounting, is still a little cultivated, very *steep* side road to north, Letterkenny to Glen and Carrickart I suppose!; mounts, mounts, occasional mist-rain a little heavier, day calm, and silvery, bleared glimpses had of the moor.—

"National School" high up. I descend and enter, Lord George waits cheerfully, but won't; the worst of all conceivable "national schools"; poor dreary frozen-alive school-master, and 10 or 12 ragged children,—“parents take them all away in turf time;” they learn *nothing* at any time. Wrote in this book a *disapproval*. Protest against these schools; Catholics can do so little, don't always do it; a difficult affair for McDonnell and Whately! Ghastly staring “new catholic chapel,” true Irish “Joss-house” on the moor to left; the image of ennui, sore-throat, and hungry vain hope of dinner! Peat farther on; foolish old farmer and his forces at work in peat-stack, *pack horses* instead of carts; a scandal to behold. Moor mounting ever higher, getting very black and dreary; cannot much *remember* the coming of Letterkenny and Dunfanachy road; do remember scandalous black muddy moors, all gleaming wet as a sponge, with grey rugged mountains (*close* to us on the left), with crags, rain and silent black desolation everywhere; the worst of it however I think was further on.

“Glenbeagh Bridge;” turning round a sharp corner of a muddy peat-hill, we are upon it, and see Lough Beagh, “the prettiest of all the Donegal lakes”—no great shakes, no great shakes! Hungry improved “farmstead” (some glimpse of slate and stone I do remember in it) with drowned meadows by the lakeside, to left. Lake narrow (outlet of it, “Owencarrow,” running from left to right of us); high stony steep of mountains beyond it; far up to the left, bright green spaces, (or stripes and patches) with woods, appearance of an interesting *pass* thro’ the mountains; more Highland-looking than anything I saw elsewhere; one “Forster” owns it.—At the beginning of our journey, and almost up to this point, there were large effectual long *main-drains* visible, just cut; a young Lord something's property,—sorry I cannot recollect his name; he, and his “Government money” and beneficent extensive work were the most *human* thing I saw. Begins at Kilmacrenan, perhaps earlier. Here at Glenbeagh Bridge was a “relief convnc. road” (very conspicuous intended-improvement, on our left), but lying as usual with a wall at each end of it. Mount again; black rocky “Dooish” (where are eagles, *seen* as we *returned* this way) on our left, and road rough, wet and uneven. “Calabber” stream (not do. “bridge”) I have a distinct recollectn. of that; cutting down thro’ the *shoulder* (you would have said), of a considerable hill; “Halfway House,” and the still heathery glen that led towards it (Calabber stream *this*, at a higher point of it, running towards Owencarrow? Alas! I had no

map of any value; I had no time, no patience or *strength* of any kind left!) all at the half-way house, which is a coarse dark weather-tight cottage, a *rebuilding* I imagine; drink for the horse; good-humoured poor woman *will* have “a drop of potheen” when you return. Lord George knows all these people; speaks kindly, some words in Irish or otherwise, to every one of them. Excellent, polite, pious-hearted, healthy man; talk plentiful, sympathy with all good in this Lord G., candid openness to it; fine voice, excellent little *whistle* through his teeth as he drove us,—horse performing admirably. After Halfway-House, view of some wretched quagmire, with a lakelet by it, and spongy black bog and crag all round, which some Irish “Dublin Lawyer” has purchased, and is improving: Lord pity him, send *more* power to his elbow! I never drove, or walked, or rode, in any region such a black dismal 22 miles of road. *This* is the road Lord George drives every week these 17 years, drives or rides, thro’ these dismal moors,—strong in the faith of something higher than the “picturesque”—Mount Arriagal, a *white*-peaked very sandy mountain, *roof*-shaped and therefore conical from some points of view, beautiful and conspicuous from all (2462 feet, map says),—lay a little *west* of this Irish lawyer: we cross by the southern side of it,—and suddenly out of the black moor into view of a lake “Lough-Na-Cung”) stretching northwestward round *that* side of Arriagal; and at the head of this Lough-Na-cung, come the prettiest patch of “improvement” I have ever in my travels beheld. Bright as sapphire, both grass and woods, all beatifully laid out in garden-walks, shrubbery-walks &c. and all shrunk for us to a tidy fairy-garden, fine trim little house in it too with incipient *farms* and square fields adjoining; to our eye and imagination drowned in black desolation for 15 miles past, nothing could be lovelier. A Mr. Something's, lately deceased (to Lord George's deep regret); I think, a Liverpool Merchant (?): Widow lives here, and Lord George's doctor at Gweedore (I learn on the morrow) is to marry one of the young ladies: very well! “Lough-Na-Cung” (I *heard* no name to it, but take this from the map) stretched away northward bending to west, a narrow *crescent* Lough, of no farther beauty; and from the *Clady* river, which traverses Gweedore and comes out at Bunbeg; here now is Lord George's domain, and swiftly descending (by the *back* of Arriagal, which hangs white-sandy very steep over us) for about a mile we are *in* said domain. “Hundred thousand welcomes!” (Irish phrase for that) said Lord George with a smile. Plattnauer and I *had* smoked our third pipe or

cigar; "you can do it in 3 pipes"—*Head* of Lough-Na-Cung I remember too; stony dell amid the high mountains, mounting in terraces of visible rock; like some *Cumberland* pass, new to me in Ireland.

The back of the Claddy, stretching out from this Lough 5 or 6 miles, and flattening itself wide towards the sea, is Lord George Hill's domain. Black, dim, lonely valley: hills all peat, wet and craggy heather, on each side; hills to right are quite vacant wet moor (tho' less craggy in appearance and lower); river-side, mostly waste quagmire of rushes, can become fat meadow and has here and there: river sluggish brown-coloured; hills to left (as *we* enter; hills to north, that is); are of gentlish acclivity, but stony beyond measure; sprinkled in ragged clusters here are the huts of the inhabitants, wretchedest "farmers" that the sun now looks upon, I do believe. Lord George's improvements are manifold; for instance, each man has his "farm" now all in *one*, not in 20 as heretofore, one long stripe of enclosure (dry-stone wretched wall, or attempt at wall, and cottage in or near it,) each cottage too, has now some *road*; but "improvements" all are swallowed in the chaos, chaos remains chaotic still. Hill road from "Dunfanahy," descending on the right,—not yet quite travellable, I think. New farm of Lough-Na-cung (Liverpool widow) "Improvements;" Ulster peasant in it; has really been endeavouring; house is built, slated, stones, like a quarry, torn out everywhere, trenchings, feeblest symptoms of turnips springing, potato plot (ruined *now* alas!) is really growing; grey bony man stands looking, with what hope he can. Cottages now of Lord George's; dry-stone fence half-done along the road; has hung so for years in spite of his encouragements to get it *whole* done. Black huts, bewildered rickety fences of crag: crag and heath, *unsubduable* by *this* population, damp peat, black heather, grey stones, and ragged desolation of men and things! Boat is on the river, fishy but *unfished* till now; "Gweedore inn," two-storied white *human* house with offices in square behind, at the foot of hills on right, near the river: this is the only *quite* civilized-looking thing; we enter there, thro' gateway, into the clean little sheltered court, and then under the piazza at the back of the inn, Forster waits for us, and is kindly received.

Rain has ceased, 2pm or 3; but the air is damp, bleared, cold. Mount along the hill side; certain fields already saved out of it, not bad fields, but a *continent* of haggard crag-and-heather desolation, with its swamps and rivulets still remaining. Over the Clady something like an incipency of a modern

hamlet, and patches of incipient green; bridge thither, too far to go; chapel and school (Protestant Orange, no doubt) on this side the river; signal-staff flag now *mounted*, his Lordship being *here*, and accessible to all creatures. Dinner in our little inn. Lord George's *surgeon* (from Bunbeg; of whom mention was already) joined us, I think, in the evening. Manager of inn (for Lord George I think) an Ulster man, solid clever man of 45. Aberdeen-awa' man, chief-manager, a hook-nosed, lean slow-spoken man of like age: what do you think of these people? "Oah-h! a whean *deluidit* craiturs, Sir: but just ye-see—!" Walk, with this man in company in the evening, to the new farmhouse he is getting built for himself, and new fields he is *really* subduing from the moor; pure peat all; but lime is abundant everywhere, and he does not doubt, and will certainly prevail, he. Some 5 or 6 Aberdeen and Ulster men; nothing else that one can see of human that has the smallest real promise here; "*deluidit* craiturs," lazy, superstitious, poor and hungry. 7/6 no uncommon *rent*, 30/ about the highest ditto:—listening to Lord George I said and again said, "No hope for the men as *masters*; their one *true* station in the universe is *servants*," "slaves" if you will; and never can they know a right day till they attain that." Valley, if it were cultivated, might really be beautiful. Some air of stir and population and habitability already on it; huts, ragged potato patches, nearer there by the river side oat-patches, (lean cows, I suppose, are on the hills); *south*-side of river is as before nearly or altogether vacant of huts. Return to our inn, after arrangements for the morrow. How these people conspired to throw down Lord George's fences, how they threatened to pay no rent, at first, but to *shoot* agent if compelled, and got their priest to say so; how they had no notion of work by the day, (*came* from 8 to 11 a.m.) and shrieked over hook-nosed Aberdeen when on Saturday night he produced his book and insisted on paying them by the *hour*;—how they are in brief, dark barbarians not intrinsically of ill dispositions—talk and commentaries on all this; small close room, with the damp wind and wide moorland outside, polite "stirabout" again, to me useless: finally to bed, with pathetic feelings, gratitude, sorrow, *love* for this noble man, and *hope* as if *beyond* the grave!

Friday 3rd August.—We drive to Bunbeg (must be far briefer to day!) Valley spreads out into flat undulations; still crags and moor everywhere: blue sea with islands and much *sand* ahead; brisk, sunny forenoon. Visit new parsonage (Oh Orange-protestantism!); Par-

son, young fat Dublin Protestant, enters; has a drawing-room with "scrapbooks" and *wife-gear* (wife doesn't appear:) not a beautiful big fat young Protestant; but alas what better can be had? To Bunbeg; village (of perhaps 300 or more) scattered distractedly among the crags, sprinkled along, *thickening* a little towards Clady mouth, where are the storehouse, mill, harbour, all amid crags forevermore! Crag has been blasted away for *sites*; rises yet abrupt behind the walls in that quarter, paths climbing over it. Big excellent mill,—proved most useful in famine time:—silent at present, till harvest come. do. do. storehouse, or "shop" of innumerable wares; nearly *empty* now, waiting for a "practical shopkeeper" that would undertake it. Harbour landing-place built by Ulster-man of the inn,—"well-done" as I tell him. Big rings for warping in ships,—the General Commissioners of lighthouses (?) did that, after entreaty—Aberdeen fisherman; excellent clear-eyed brown-skinned diligent-sagacious fellow, excellent wife of his (*before*, in a house that wouldn't "turn rain," but was all whitened, &c. and clean & hearty-looking), from whom a drink of buttermilk for me.—Fisherman went with us to the *old* mill and its cascade (queer old ruin, and gushing loud waterfall), when some of his men try the net to no purpose.—Ancient Irish *squire* actually "begging" here; follows about in blue camlet cloak, with always some new cock-and-bull story, which Lord George, when unable to escape by artifice, coldly declares in words that he can't listen to. Strange old squire; whiskey all along and late failure of potatoes have done it; gets no rent, won't sell, "a perfect pest," the fisher calls him. School, (Prot't) better or worse,—children all *clean* at least; some 20 or more of them, boys and girls.—Sun now is *high*; we mount, turn into Bloody-Foreland road; boy on our left hand, blue water, and immensities of sand, *blown* hereabouts in great lengths over the land (as I can see from the distance,—remind me of the mansion and park *sanded*, (name?) and nothing but the *chimney tops* left, on these coasts); straggling wretched hamlet, when a fair is (monthly or annually?) go into the baker's shop (Aberdeen, he too), into a kind of tavern now under the carpenter's, where Lord George at first lodged on undertaking this affair; bare craggy moor still, still; desolate savagery; Lord George and his Aberdeens *versus* Celtic nature and Celtic art. Call on the Catholic priest; poor fellow, he looked suspicious, embarrassed, a thick heavy vulgar man of 45; *half* a peasant still, yet on the *way* towards better,—good growth of turnips round his cottage, cottage some approach to civi-

lization: a book or two,—unfortunately only mass-books, directories or the like: we evidently lifted a mountain from his heart when we took ourselves away. "One man of these natives that doesn't lie." Send for him; rides with me a bit,—rough, clayey, bearded, old man, clothes dirty and bad but still whole; can't well understand him, or make myself intelligible (for he neither reads or writes) so send him away with good wishes. We are now driving, by a *back* road, towards the inn; Farm Cottage, with potato-and-corn patches as we go. "Rent," none in famine year: uncertain ever since; trifling when it does come, for nobody's rent has been raised at all: Aberdeen fisherman only clear immediate source of revenue. (*Ice-house* for him; prices now being bad *here*). People won't fish, or can't: lobster-pots given, and method shewn,—avails not. Have had to *buy* out innumerable rights, "right of fishing" "right of keeping an inn," right of &c. &c. £500. £300 &c.: to keep peace, and do indubitable justice,—*after* purchasing the property. People won't work, in all or I fear the majority of cases, day's work for hire, if they have *potatoes* or other means of existing. Winged scarecrow, breaking stones (on the other road) this morning, with his scandalous ragged farm close by, is an instance: wouldn't 3 months ago; went, to some island of Gola, where was a cousin with potatoes and good heart; ate the potatoes out,—and *now* he works; his dress gone to the "tulip" farm. May the devil pity him!—On the whole, I had to repeat often to Lord G. what I said yesterday; to which he could not refuse essential consent. His is the largest attempt at benevolence and beneficence on the *modern* system (the emancipation, all-for-liberty, abolition of capital punishment, roast-geese-at-Christmas system) ever seen by me, or like to be seen: alas, how *can* it prosper; except to the soul of the noble man himself who earnestly tries it, and works at it, making himself a "slave" to it these 17 years!?

Lunch at the hotel; inscribe in the "book;" with difficulty get packed,—roll away (Forster and all) in the sunny fresh afternoon: road seen a *second* time, not lovely still; half-way house potheen (didn't taste it, I?)—Kilma-crenan again, and fields more and more with hedges; we leaping down, had *walked* a great deal; house was excellent; but dark twilight, very cold to *us*, had now settled down; and all were glad enough to get within doors, to a late cup of Christian tea. Lord G. lights fire too, by a match; very welcome blaze: presents me two pairs of his Gweedore socks. Bed soon and sleep.

Saturday 4th August.—After breakfast, to

visit a certain rough peasant farmer of the neighborhood distinguished as being "rich." Rough as hemp, in all respects, he proved. *Sluttish*, sluttish, anxious too for "improvements," good terms to be given for reclaiming bog, &c.—This was a *brother* of the peasant who had "made the money;" the latter was now dead: made by "thrift," not industry; worth little when made? A civil-natured man too; and with the kind of appetite for something cleanlier and more manful than this scene of dungheaps; poor old fellow; towards sixty, and had "tended the cows," till this *throne* became vacant for him. Home by the offices again; Lady A. with the children in the garden: a delicate, pious, high and simple lady; *sister* of Lord G.'s former wife. White sand (like pounded sugar) from *Muckish* mountain (I forget if this is the name that signifies "Pig" mountain—which animal one mountain does really resemble?) Proprietor wouldn't, at a *fair* rate, allow the Belfast glasshouses to help themselves to this sand; therefore they at no rate meddle with it.—Coach yoked; hasty kind farewell, and go, Lord George driving, I on the box beside him; one of the finest of days. By pleasant fields, shady or otherwise agreeable roads to Ra' Melton, or rather past the one side of Ra' Melton.—Town lying over the river, (river "Lannan," it seems); chiefly a substantial white *row* along the quay (with respectable show of ships). *Our* road (on the *west* side) being up a steep hill; wood abundant, really a pleasant active little town. Barilla manufactory (*kelp* carts passing in met us) near it; small, but precious the like of it, and rare in Ireland.

By pleasant roads still, of the same sort to Rathmullen. Old Abbey (or Castle?) there, close by the sea; quite at the end of the white, quiet, rather steep-lying village; view across Lough Swilly properly a *frith* not bad tho' too bare. To Mr. Something, a retired merchant of full purse, our intended host's father-in-law. Showy, newish house and grounds, overhanging the sea near by; retired merchant not at home, his wife (poor Mrs. Sterling's dialect and manner were recalled to me) greatly flattered by Lord G.'s call, will give lunch, &c. will do all things but *speak* a little less:—we withdrew to her daughter's, to see our adventure, which doesn't look too well, to the *end*. End is: intended host has not *come*, or given any notice; will "probably" be here to-night; help-mate, a thick, stubborn-looking lady of 40, childless, and most likely wearing the breeches, (to judge by appearances): she invites &c.; but there is clearly only one thing, to be gone,—get across to Derry, and take one's ease at one's

inn. Conveyed by Lord George; meet "retired merchant" and his son; use him for getting Ferry boat secured (Ferry is *his* by county law) off, in the bright windy afternoon; a really pathetic and polite farewell from his Lordship and poor Plattnr. In all Ireland, lately in any other land, I saw no such beautiful soul.

Red haired ferrymen, effectual looking fellows; forts, on Irish Island &c., 5 or 6 artillerymen in each: (on Derry side); Innishowen hills on other; *bare* country as before, as *always* in this island, but with a Scotch aspect rather than Irish, beggary and rags having now become quite subordinate. Across soon; to Derry soon, by a high-lying bare, "too populous," country. Many hungry-looking clusters of cottages (slated here, but visibly *hungry*); a ruin or two; several attorneys' country-seats; (prosperous attorneys), of which the architecture was not admirable. Seven miles:—at length turning suddenly a corner, Derry is there to the south of us, close at hand; rising *red* and beautiful on elevated hill or "bluff" (it must have been once).—Foyle moderately supplied with ships, running broad and clear past the farther side of it. The prettiest-looking town I have seen in Ireland. The free school; a big old building in fields, to right of us before we enter. Two or three *mill* chimnies (*not* corn-mills all of them, a linen-mill or flax-mill one at least visible); coal-yards, appearance of real shipping trade; suburbs, gate; and steep climb by the back of the old walls; Imperial hotel in fine—"one of the best in Ireland," says report; one of the dearest, and not the best, says experience. Very indifferent bed there (wretched French bed, which species may the devil fly away with out of this British country!); and for lullaby the common sounds of an inn, agumented by a very powerful *cock* towards morning.

A Dr. Mc. Knight (editor, pamphleteer &c.) warned by Duffy, came to night; led us thro' the city wonders, the old cannon &c.; gave us, unconsciously, a glimpse into the raging *animosities* (London companies *versus* Derry town was the chief, but there were many) which reign here as in all parts of Ireland, and alas, of most lands;—invites us to breakfast for monday; an honest kind of man, tho' loud-toned and with wild eyes, this Mc. Knight; has tobacco too, and a kind little orderly polite wife (a "poverty honourable and beautiful.") Surely we will go. Steamer is to sail on monday at 1 p.m. for Glasgow; Scotland ho!

Sunday 5th August.—Hot bright day; letter to Lord Clarendon (farewell, I don't *come* by Dublin), Captain Something, a chief

of Engineers (surveyors, map-makers in these parts) comes to take us out to "Temple Moyle" an agricultural school, and to show us about. A clean, intelligent *thin* little soul; of Twistleton's introducing? long wooden bridge, rather disappoints not *better* than Waterford: viewed from the other shore (height to the south, which our Captain makes us ascend) is very pretty in the sunshine. "*Grianan of Aileach*" (old Irish King's *Palace*, talked of by Mc.Knight last evening), *site* of it is visible 6 miles off to north. Good enough country, *part* well cultivated, *part* ill;—to London agent of Fishmongers' (? Mercers?) Company a brisk impetuous managing little fellow,—who escorts us to Temple Moyle,—"Mr. Campbell" the Scotch manager, is overtaken by us on the road. Temple Moyle very good indeed, so far as *cultivation of the ground goes*; questionable perhaps, on its *human side*? A dozen of the boys, Catholics, and very ugly, were at dinner. The "teaching," our brisk Londoner indicated was rather in a staggering way. "Acre of turnips *better* than one of potatoes," testifies Campbell "and *easier* to cultivate if you do both *well*." Londoner's sad experience of Ireland; tries to promote emigrating, to buy tenants out, very sad work. "The Company's rents £4000, don't get £1500 net. If I had an Irish estate, I would sell it; if I couldn't I would give it away." Look, in returning, at the attempted futility of an "Embankment of the Foyle;" Railway to Newtown Limavaddy was to embank Foyle; £80,000 (?) spent; no railway done, none was or is *needed*; no embankment, only heaps of barrows, waste flat diggings, and some small patch of ground (inconceivably small) saved out of the wreck till *new* money be subscribed. Very ugly distracted-looking flat: Home. Oh let us home; for the evening too is getting grey and cold! Captain to dine with us; a weary evening,—sofa, back-garden, smoke;—walk in the Diamond by moonlight; respectable old city. Walker's Memorial; Prison Gates, Bishop's House. Trade terribly gone, all say, much poverty; Eheu! to bed, and leave it to the gods!

Monday 6th August.—Breakfast at Mc. Knights: sunny hot morning,—small room full (got up the window of it, with effort!): big Derry Protestant clergyman, Ex-mayor "Haslett;" weighty set of men. Emphatic talk to them: far too emphatic, the human nerves being worn out with exasperation! "Remedy for Ireland? To cease generally from following the devil: no other remedy that I know of; one general life-element of humbug these two centuries, it has fallen *bankrupt*: this universe, my worthy brothers,

has its laws terrible as death and judgment if we "cant" ourselves away from following them. Land tenure? What *is* a land-lord, at this moment, in any country, if Rhadamanthus looked at him? What is an Archbishop; alas, what is a Queen,—what is a British specimen of the Genus *Homo* in these generations? A bundle of *hearsays* and authentic appetites; a *canaille* whom the gods are about to chastise, and to extinguish if he cannot alter himself! &c. &c." Derry Aristocrats behaved *well* under all this. Not a pleasant breakfast; but oh it is the last! Off to pack, and get on board.—Shameless tumult on the quays, which continued long; cattle loading, and 300 finest peasantry; McKnight to take leave, and another and another; and the roar of wild men and cattle, and the general turmoil of (Irish) nature not yet ended! Yo heave ho! at last; and with many heelings and edgings (water *scant* in some places of this Frith of Foyle) we quit Innishowen Head, Malin Head, and the rest, and issue hopefully into the open sea. Bare not uninteresting coast; Glasgow Steamer going bravely, afternoon bright. Port Rush, our mooring there; last Irish crowd; Adieu, my friends, a happy evening to you. Port Rathlin Island, with many intervening rocky islets, grim basaltic.—Robert Bruce, Esq. once in Rathlin. Giant's Causeway, tourists dabbling up and down about in boats; Heaven be their comforter! We seem to be quite near it here, and it isn't worth a mile to travel to see. Poor old woman, who *has* no money for fare, shall be set out on the beach: "my son in Glasgow Hospital!" probably enough a fib; but the cabin people club, and pay her fare. Beautiful boat, but not interesting passengers,—the reverse of that. "Fair Head" (or I forget which); combination of crags on it which they call "the Giant;" other more distant cape growing ever dimmer; and shortly, on our right, looms out high and grim the "Mull of Cantire," and we are on the *Scotch* coast! Much improved prospects, directly on opening the west side of the Mull; comfortable fenced crop-fields; comfortable *human* farms. Isle of Arran; Sandy Island? (? Beautiful blazing lights, beaming in the red of twilight); Ailsa Craig; Campbell-town bay; and now unhappily the daylight is quite gone, and the night breeze is cold; sofa in little cabin, and stony fragments of sleep. Awake, still and confused; on quarter deck are finest peasantry (hitched forward out of their place); but on the left, two cotton-mill chimnies, and Glasgow is close by. Euge! Dark City of Glasgow, pulses of some huge iron-furnace ("Dickson's Blast," so named by mate) fitfully from moment to moment illuminating it; excellent skipper, terribly strait-

ened to land; do at last (2 a.m.) and with difficulty get into a big dark nautical Inn; no noddy, barrow or other vehicle to convey us to a hotel. Sleep in spite of all; huge mill roaring in at my open window, on the morrow at 8. Remove after breakfast; look at Glasgow (under David Hope's escort); Commercial Capital of Britain, *this*; thank Heaven for the sight of real human industry, with human fruits from it, once more! On the morrow, home by rail to Scotsbrig. The sight of fenced fields, weeded crops, and human creatures with whole clothes on their backs,—

it was as if one had got into spring water out of dunghill-puddles; the feeling lasted with me for several days. *Finis* now.

This is my whole remembrance, or nearly so, of the *Irish Tour*; plucked up, a good deal of it, from the throat of fast-advancing oblivion (as I went along), but quite certain to me once it is recalled. Done now, mainly because I had beforehand bound myself to do it;—worth nothing that I know of, otherwise;—*ended*, at any rate, this Wednesday 16th October 1849. And now to-morrow?

THE END.

Thomas Carlyle.

FORTY.

IN the heyday of my years, when I thought the world was young,
And believed that I was old—at the very gates of Life—
It seemed in every song the birds of heaven sung
That I heard the sweet injunction: "Go and get to thee a wife!"

And within the breast of youth woke a secret sweet desire;
For Love spoke in that carol his first mysterious word,
That to-day through ashen years kindles memory into fire,
Though the birds are dead that sang it, and the heart is old that heard.

I have watched my youth's blue heavens flush to angry, brooding red,
And again the crimson palsied in a dull unpregnant gloom;
I am older than some sorrows; I have watched by Pleasure dead;
I have seen Hope grow immortal at the threshold of the tomb.

Through the years by turns that gave me now curses, now caresses,
I have fought a fight with Fortune wherein Love hath had no part;
To-day, when peace hard-conquered riper years and weary blesses,
Will my fortieth summer pardon twenty winters to my heart?

When the spring-tide's verdure darkens to the summer's deeper glories,
And in the thickening foliage doth the year its life renew,
Will to me the forests whisper once more their wind-learnt stories?
Will the birds their message bring me from out the heaven of blue?

Will the wakened world for me sing the old enchanted song—
Touch the underflow of love that, through all the toil and strife,
Has only grown the stronger as the years passed lone and long?
Shall I learn the will of Heaven is to get for me a wife?

The boy's heart yearns for freedom, he walks hand-in-hand with pleasure;
Made bright with wine and kisses he sees the face of Life;
He would make the world a pleasance for a love that knows not measure;
But the man seeks Heaven, and finds it in the bosom of his wife.

THROUGH ONE ADMINISTRATION.*

BY FRANCES HODGSON BURNETT,

Author of "That Lass o' Lowrie's," "Haworth's," "Louisiana," "A Fair Barbarian," etc., etc.

CHAPTER XVIII.

It was New Year's day, and his Excellency, the President, had had several months in which to endeavor to adjust himself to the exigencies of his position, though whether he had accomplished this with a result of entire satisfaction to himself and all parties concerned and unconcerned had, perhaps unfortunately, not been a matter of record. According to a time-honored custom, he had been placed at the slight disadvantage of being called upon to receive from time to time the opinions of the nation concerning himself without the opportunity of expressing, with any degree of publicity, his own opinions regarding the nation, no bold spirit having as yet suggested that such a line of procedure might at least be embellished with the advantage of entire novelty, apart from the possibility of its calling forth such originality and force of statement as would present to the national mind questions never before discussed, and perhaps not wholly unimportant. All had, however, been done which could be done by a nation justly distinguished for its patriotic consideration for, and courtesy toward, the fortunate persons elevated to the position of representing its dignity at home and abroad. Nothing which could add to that dignity had been neglected—no effort which could place it in its proper light, and remove all difficulty from the pathway of the figure endeavoring creditably to support it, had been spared. The character of the successful candidate for presidential office having been, during the campaign, effectually disposed of,—his morals having been impugned, his honor rent to tatters, his intellectual capacity pronounced far below the lowest average,—united good feeling was the result, and there seemed little more to attain. His past had been exhausted. Every event of his political career and domestic life had been held up to public derision, laudation, and criticism. It had been successfully proved that his education had been entirely neglected, and that his advantages had been marvelous; that he had read Greek at the tender age of four years, and that he had not

learned to read at all until he attained his majority; that his wife had taught him his letters, and that he had taught his wife to spell; that he was a liar, a forger, and a thief; that he was a model of virtue, probity, and honor—each and all of which incontrovertible facts had been public property and a source of national pride and delight.

After the election, however, the fact that he had had a past at all had ceased to be of any moment whatever. A future—of four years—lay before him, and must be utilized: after that, the Deluge. The opposing party sneered, vilified, and vaunted themselves in the truth of their predictions concerning his incapacity; the non-opposing party advised, lauded, cautioned, mildly discouraged, and in a most human revulsion of feeling showed their unprejudiced frankness by openly condemning on frequent occasions. The head of the nation having appointed an official from among his immediate supporters, there arose a clamor of adverse criticism upon a course which lowered the gifts of his sacred office to the grade of mere payment for value received. Having made a choice from without the circle, he called down upon himself frantic accusations of ingratitude to those to whom he owed all. There lay before him the agreeable alternatives of being a renegade or a monument of bribery and corruption, and if occasionally these alternatives lost for a moment their attractiveness, and the head of the nation gave way to a sense of perplexity, and was guilty of forming in secret a vague wish that the head of the nation was on some other individual's shoulders, or even went to the length of wishing that the head upon his own shoulders was his own property, and not a foot-ball for the vivacious strength of the nation to expend itself upon—if this occurred—though it is by no means likely—it certainly revealed a weakness of character and inadequacy to the situation which the nation could not have failed to condemn. The very reasonable prophecy—made by the party whose candidate had not been elected—that the Government must inevitably go to destruction and the country to perdition had, through some singular over-

sight on the part of the powers threatened, not been fulfilled. After waiting in breathless suspense for the occurrence of these catastrophes, and finding that they had apparently been postponed until the next election, the Government had drawn a sigh of relief, and the country had gained courage to bestir itself cheerfully, with a view to such perquisites as might be obtained by active effort and a strong sense of general personal worthiness and fitness for any position.

There had descended upon the newly elected ruler an avalanche of seekers for office, a respectable number of whom laid in his hands the future salvation of their souls and bodies and generously left to him the result. He found himself suddenly established as the guardian of the widow, the orphan, and the friendless, and required to repair fortunes or provide them, as the case might be, at a moment's notice; his sympathies were appealed to, his interests, his generosity as an altogether omnipotent power in whose hands all things lay, and whose word was naturally law upon all occasions, great or small; and any failure on his part to respond to the entirely reasonable requests preferred was very properly laid to a tendency to abandoned scheming or to the heartless indifference of the great—which decision disposed of all difficulties in the argument, apart from such trivial ones as were left to the portion of the delinquent and were not referred to. Being called upon in his selection of his cabinet to display the judgment of Solomon, the diplomacy of Talleyrand, and the daring of Napoleon, and above all to combine like powers in each official chosen, he might have faltered but for the assistance proffered him from all sides. This, and the fact that there was no lack of the qualifications required, supported him. Each day some monument of said qualifications, and others too numerous to mention, was presented to his notice. To propitiate the South it was suggested that he should appoint A—; to secure the North, B—; to control the East, C—; to sweep the West, D—; and to unite the country, E—. Circumstances having finally led him to decide upon G—, the Government appeared to be in jeopardy again, but—possibly through having made use of its numerous opportunities of indulging in acrobatic efforts in the direction of losing its balance and regaining it again in an almost incredible manner—it recovered from the shock and even retained its equilibrium upon finding itself in the end saddled with a cabinet whose selection was universally acknowledged to be a failure when it was not denounced as a crime.

On this particular New Year's day, there

were few traces on the social surface of the disasters which so short a time before had threatened to engulf all. Washington wore an aspect even gayer than usual. The presidential reception began the day in its most imposing manner. Lines of carriages thronged the drive before the White House, and the diplomatists, statesmen, officials, and glittering beings in naval and military uniform who descended from them were possibly cheered and encouraged by the comments of the lookers-on, who knew them and their glories and their short-comings by heart. The comments were not specially loud, however. That which in an English crowd takes the form of amiable or unamiable clamor, in an American gathering of a like order resolves itself into a serene readiness of remark, which exalts or disposes of a dignitary with equal impartiality, and an ingenuous fearlessness of any consequence whatever, which would seem to argue that all men are born free and some equal, though the last depends entirely upon circumstances. Each vehicle, having drawn up, deposited upon the stone steps of the broad portico a more or less picturesque or interesting personage. Now it was the starred and ribboned representative of some European court; again, a calm-visaged Japanese or Chinese official, in all the splendor of flowing robes and brilliant color; and again a man in citizen's clothes, whose unimposing figure represented such political eminence as to create more stir among the lookers-on than all the rest. Among equipages, there drove up at length a rather elegant little *coupé*, from which, when its door was opened, there sprang lightly to the stone steps the graceful figure of a young man, followed by an elder one. The young fellow, who was talking with much animation, turned an exhilaratingly bright face upon the crowd about him.

"On the whole, I rather like it," he said.

"Oh!" responded his companion, "as to that, you like everything. I never saw such a fellow."

The younger man laughed quite joyously.

"There is a great deal of truth in that," he said, "and I don't suppose you will deny that it is an advantage."

"An advantage!" repeated the other. "By Jupiter, I should think it was an advantage! Now, how long do you think this fellow will keep us waiting when we want him?"

"Oh," was the answer, "he is Mrs. Amory's coachman, you know, and there isn't a doubt that he has had excellent training. She isn't fond of waiting."

"No," said the other, with a peculiar smile.

"I should fancy she wasn't. Well, I guess we'll go in."

They turned to do so, and found themselves near a tall man in uniform, who almost immediately turned also and revealed the soldierly visage of Colonel Tredennis.

He made a quick movement forward, which seemed to express some surprise.

"What, Amory!" he exclaimed. "You here, too? I was not at all sure that you had returned."

"I am scarcely sure myself yet," answered Richard, as he shook hands. "It only happened last night, but Bertha has been home a week. Is it possible you haven't seen her?"

"I have not seen anybody lately," said Tredennis, "and I did not know that she had returned until I read her name in the list of those who would receive."

"Oh, of course she will receive," said Richard. "And Planefteld and I—you have met Senator Planefteld?"

"How do you do?" said Senator Planefteld, without any special manifestation of delight.

Tredennis bowed, and Richard went on airily, as they made their way in:

"Planefteld and I have been sent out to do duty, and our list extends from Capitol Hill to Georgetown Heights."

"And he," said Senator Planefteld, "professes to enjoy the prospect."

"Why not?" said Richard. "It is a bright, bracing day, and there is something exhilarating in driving from house to house, to find oneself greeted at each by a roomful of charming women—most of them pretty, some of them brilliant, all of them well dressed and in holiday spirits. It is delightful."

"Do *you* find it delightful?" inquired Planefteld, turning with some abruptness to Tredennis.

"I am obliged to own that I don't shine in society," answered Tredennis.

He knew there was nothing to resent in the question, but he was conscious of resenting something in the man himself. His big, prosperous-looking body and darkly florid face, with its heavy, handsome outlines and keen, bold eyes, had impressed him unpleasantly from the first, and on each occasion of their meeting the impression seemed to deepen.

"Well, Amory shines," was his response, "and so does Mrs. Amory. We are to drop in and see her shine, as often as we happen to be in the neighborhood through the day."

They had reached the threshold of the reception-room by this time, and Richard, catching the last words, turned and spoke.

"Of course you will be there yourself in the course of the day," he said. "We shall possibly meet you—and, by the bye, you will see Mrs. Sylvestre. She arrived two days ago."

When they came out again, Richard was in

more buoyant spirits than before. The lighted rooms, the brilliant dresses, the many faces he knew or did not know, the very crush itself, had acted upon him like a fine wine. He issued forth into the light of day again, girded and eager for his day's work.

"There is nothing like Washington," he announced, "and especially nothing like Washington at the beginning of the season. Just at the outset, when one is meeting people for the first time since their return, they actually have the air of being glad to see one, and a man has a delightful evanescent sense of being somehow positively popular."

"Does it make *you* feel popular?" demanded Planefteld of Tredennis, in his uncere- monious fashion.

Tredennis presented to him an entirely im- movable front.

"How do *you* find it?" he inquired.

The man laughed.

"Not as Amory does," he answered.

When the *coupé* appeared and he took his place at Richard's side, he bent forward to bestow on Tredennis, as they drove away, a glance expressive of but little favor.

"I don't like that fellow," he said. "Confound him!"

Richard settled himself in his corner of the carriage, folding his fur-trimmed coat about him quite luxuriously.

"Oh, no. Not confound him," he replied. "He is a delightful fellow—in his way."

"Confound his way, then," responded Planefteld. "There's too much of it."

Richard leaned slightly forward to look at the tall, motionless figure himself, and the faintest possible change passed over his face as he did so.

"He is not exactly a malleable sort of fellow," he remarked, "and I suppose there might arise occasions when he would be a little in the way—but there is no denying that he is picturesque."

"Oh!" exclaimed his companion, with more fervor than grace. "The devil take his picturesqueness!"

In the meantime Colonel Tredennis awaited the arrival of his own carriage, which had fallen back in the line. The surging of the crowd about him, the shouts of the policemen as they called up the vehicles, the rolling of vehicles and opening and shutting of doors, united themselves in an uproar which seemed to afford him a kind of seclusion. The subject of his thoughts as he stood in the midst of the throng was not a new one; it was one from whose presence he had ceased to expect to free himself; but as the information in the morning paper had accelerated the pulse of emotion in him,

so his brief interview with Richard Amory had quickened it again. Since the day when he had left her in Virginia, five months before, he had not seen Bertha at all, and had only heard from her directly once. She had been at Long Branch, Saratoga, Newport, and afterward visiting friends in the Northern cities. After his return from the West, Richard had frequently been with her, and their letters to the professor had informed him that they were well and were involved in a round of gayeties.

How the time had passed for Tredennis he could not himself have told. When he had returned to Washington, he had lived and moved as a man in a dream. The familiar streets and buildings wore an unfamiliar look. It was a relief to find the places more deserted than before; his chief desire was to be, if possible, entirely alone. In the first vivid freshness of his impressions it seemed incredible that the days he had been living through had come to an end, and that absolutely nothing remained but the strange memory of them. At times it appeared that something must happen—some impossible thing which would give reality to the past and motive to the future. If in any of his nightly walks before the closed and silent house he had suddenly seen that the shutters were opened and lights were shining within—if Bertha herself had, without warning, stood at the window and smiled upon him, he would have felt it at first only natural, even though he knew she was hundreds of miles away.

This for a few weeks, and then his exaltation died a gradual death for want of sustenance, and there remained only the long, sultry days to be lived through and their work to be done. They were lived through and their work was not neglected, but there was no one of them which dragged its slow length by without leaving marks upon him which, neither time nor change could erase in any future that might come.

"Five months," he said, as he waited with the clamor about him, "is longer than it seems—it is longer."

And Miss Jessup, passing him at the moment and looking up, found herself so utterly at a loss for an adjective adequate to the description of his expression, that her own bright and alert little countenance fell, and existence temporarily palled upon her.

It was late in the day when he reached the Amorys. When he drove up several carriages stood before the door, one of them Bertha's own, from which Richard and Planefield had just descended. Two or three men were going into the house, and one or two were leaving it. Through the open door was to be seen the lighted hall and glimpses of bright

rooms beyond, from which came the sound of voices, laughter, and the clink of glass.

Richard entered the house with Tredennis, and flung off his rather sumptuous outer garment with a laugh of relief.

"We have made fifty calls so far," he said, "and have enjoyed them enormously. What have you accomplished?"

"Not fifty, by any means," Tredennis answered, and then the man-servant took his coat, and they went into the parlors.

They seemed to be full of men—young men, middle-aged men, old men; even a half-grown boy or two had timorously presented themselves, with large hopes of finding dazzling entertainment in the convivialities of the day. The shutters were closed and the rooms brilliantly alight; there were flowers in every available corner, and three or four charmingly dressed women, each forming a bright central figure in a group of black coats, gave themselves to their task of entertainment with delightful animation.

For a moment Tredennis stood still. He did not see Bertha at once, though he fancied he heard her voice in the room adjoining, where through the half-drawn *portières* were to be seen men standing, with coffee-cups, wine-glasses, or little plates in their hands, about a table bright with flowers, fruits, and all the usual glittering appurtenances. The next instant, amid a fresh burst of laughter, which she seemed to leave behind her, she appeared upon the threshold.

As she paused a second between the heavy curtains, Tredennis thought suddenly of a brilliant tropical bird he had once seen somewhere, and the fancy had scarcely formed itself in his mind before she recognized him and came forward.

He had never seen her so brilliantly dressed before. The wonderful combination of rich and soft reds in her costume, the flash of the little jeweled bands clasped close about her bare throat and arms, their pendants trembling and glowing in the light, the color on her cheeks, the look in her eyes, had a curiously bewildering effect upon him. When she gave him her hand he scarcely knew what to do with it, and could only wait for her to speak. And she spoke as if they had parted only an hour ago.

"At last," she said. "And it was very nice in you to leave me until the last, because now I know you will not feel obliged to go away so soon." And she withdrew her hand and opened her fan, and stood smiling up at him over its plumy border. "You see," she said, "that we have returned to our native atmosphere and may begin to breathe freely. Now we are real creatures again."

"Are we?" he answered. "Is that it?" and he glanced over the crowd, and then came back to her and looked her over from the glittering buckle on her slipper to the scintillating arrow in her hair. "I suppose we have," he added. "I begin to realize it."

"If you need anything to assist you to realize it," she said, "cast your eye upon Mr. Arbuthnot and I think you will find him sufficient; for me, everything crystallized itself and all my doubts disappeared the moment I saw his opera hat, and heard his first remark about the weather. It is a very fine day," she added, with a serene air of originality, "a little cold, but fine and clear. Delightful weather for those of you who are making calls. It has often struck me that it must be unpleasant to undertake so much when the weather is against you. It is colder to-day than it was yesterday, but it will be likely to be warmer to-morrow. It is to be hoped that we shall have an agreeable winter."

"You might," he said, looking at her over the top of her fan, "induce them to mention it in the churches."

"That," she answered, "is the inspiration of true genius, and it shall be attended to at once, or—here is Senator Plane-field: perhaps he might accomplish something by means of a bill?"

The Senator joined them in his usual manner, which was not always an engaging manner, and was at times a little suggestive of a disposition to appropriate the community, and was also a somewhat loud-voiced manner, and florid in its decorative style. It was, on the whole, less engaging than usual upon the present occasion. The fact that he was for some reason not entirely at ease expressed itself in his appearing to be very wonderfully at ease; indeed, metaphorically speaking, he appeared to have his hands in his pockets.

"A bill!" he said. "You have the floor, and I stand ready to second any motion you choose to make. I think we might put it through together. What can we do for you?"

"We want an appropriation," Bertha answered, "an appropriation of fine weather, which will enable Colonel Tredennis to be as giddy a butterfly of fashion as his natural inclination would lead him to desire to be."

Plane-field glanced at Tredennis with a suggestion of grudging the momentary attention.

"Is *he* a butterfly of fashion?" he asked.

"What!" exclaimed Bertha, "is it possible that you have not detected it? It is the fatal flaw upon his almost perfect character. Can

it be that you have been taking him seriously, and mistakenly imagining that it was Mr. Arbuthnot who was frivolous?"

"Arbuthnot!" repeated the Senator. "Which is Arbuthnot? How is a man to tell one from the other? There are too many of them!"

"What an agreeable way of saying that Colonel Tredennis is a host in himself!" said Bertha. "But I have certainly not found that there were too many of him, and I assure you that you would know Mr. Arbuthnot from the other after you had exchanged remarks with him. He has just been beguiled into the next room by Mrs. Sylvestre, who is going to give him some coffee."

"Mrs. Sylvestre," said Tredennis. "Richard told me she was with you, and I was wondering why I did not see her."

"You did not see her," said Bertha, "because I wished her to dawn upon you slowly, and having that end in view, I arranged that Mr. Arbuthnot should occupy her attention when I saw you enter."

"He couldn't stand it all at once, could he?" remarked Plane-field, whose manner of giving *her* his attention was certainly not grudging. He kept his eyes fixed on her face, and apparently found entertainment in her most trivial speech.

"It was not that, exactly," she answered. Then she spoke to Tredennis.

"She is ten times as beautiful as she was," she said, "and it would not be possible to calculate how many times more charming."

"That was not necessary," responded Tredennis.

He could not remove his own eyes from her face, even while he was resenting the fact that Plane-field looked at her; he himself watched her every movement and change of expression.

"It was entirely unnecessary," she returned, "but it is the truth."

"You are trying to prejudice him against her," said Plane-field.

"She is my ideal of all that a beautiful woman ought to be," she replied, "and I should like to form myself upon her."

"Oh, we don't want any of that," put in Plane-field. "You are good enough for us."

She turned her attention to him. Her eyes met his with the most ingenuous candor, and yet the little smile in them was too steady not to carry suggestion with it.

"Quite?" she said.

"Yes, quite," he answered—not so entirely at ease as before.

Her little smile did not waver in the least.

"Do you know," she said, "it seems almost incredible, but I will try to believe it.

Now," she said to Tredennis, "if Senator Planeffield will excuse me for a moment, I will take you into the other room. You shall speak to Mrs. Sylvestre. He has already seen her. Will you come?"

"I shall be very glad," he answered. He followed as she led him to the adjoining room. On its threshold she paused an instant.

"Exactly as I expected," she said. "She is listening to Mr. Arbuthnot."

Mr. Arbuthnot was standing at the end of the low mantel. He held a cup of coffee in his hand, but had apparently forgotten it in giving his attention to his very charming companion. This companion was of course Mrs. Sylvestre herself. Tredennis recognized her clear, faintly tinted face and light, willowy figure at once. She wore a dress of black lace with purple passion-flowers, and she was looking at Arbuthnot with reflective eyes almost the color of the flowers. She did not seem to be talking herself, but she was listening beautifully with a graceful receptive attention. Arbuthnot evidently felt it, and was improving his shining hour with a sense of enjoyment tempered by no lack of ability to avail himself of its fleeting pleasure.

It is possible, however, that his rapture at seeing Tredennis may have been tempered by the natural weakness of man, but he bore himself with his usual unperturbed equanimity.

"There," he remarked to Mrs. Sylvestre, "is the most objectionable creature in Washington."

"Objectionable!" Mrs. Sylvestre repeated. "Bertha is bringing him here."

"Yes," responded Arbuthnot, "that is the objection to him, and it leaves him without a redeeming quality."

Mrs. Sylvestre gave him a charmingly interested glance and the next instant made a slight movement forward.

"Ah!" she exclaimed, "it is Colonel Tredennis!" and she held out her hand with the most graceful gesture of welcome imaginable.

"It is very good of you to remember me," Tredennis said.

"It was not difficult," she answered, with a smile. And they fell, in the most natural manner, a step apart from the others, and she stood and looked at him as he spoke just as she had looked at Arbuthnot a moment before. Arbuthnot began to give mild attention to his coffee.

"It is quite cold," he said to Bertha. "Will you give me another cup?"

"Yes," she answered, and took it from his hand to carry it to the table. He followed her, and stood at her side as she poured the fresh cup out.

"It is my impression," he said, with serene illiberality, "that she did not remember him at all."

"Yes, she did," Bertha replied. "She remembers everybody. That is one of her gifts. She has a great many gifts."

"I did not place implicit confidence in her intimation that she remembered me," he proceeded, still serenely. "I liked the statement, and saw the good taste of it, and the excellent reasons for its being true, but I managed to restrain the naive impulses of a trusting nature. And it doesn't strike me as being so entirely plausible that she should have remembered Tredennis."

He paused suddenly and looked at Bertha's hand, in which she held the sugar-tongs and a lump of sugar.

"Will you have one lump or two?" she asked.

Then he looked from her hand to her face. Her hand was trembling and her face was entirely without color. The look of strained steadiness in her uplifted eyes was a shock to him. It seemed to him that any one who chanced to glance at her must see it.

"You have been standing too long," he said. "You have tired yourself out again."

He took the cup of coffee from her.

"It is too late for you to expect many calls now," he said, "and if any one comes you can easily be found in the conservatory. I am going to take you there, and let you sit down for a few seconds at least."

He gave her his arm and carried the cup of coffee with him.

"You will have to drink this yourself," he said. "Have you eaten anything to-day?"

"No," she replied.

"I thought not. And then you are surprised to find your hand trembling. Don't you see what utter nonsense it is?"

"Yes."

He stepped with her into the tiny conservatory at the end of the room, and gave her a seat behind a substantial palm on a red stand. His eyes never left her face, though he went on talking in the most matter-of-fact tone.

"Drink that coffee," he said, "and then I will bring you a glass of wine and a sandwich."

She put out her hand as if to take the cup, but it fell shaking upon her lap.

"I can't," she said.

"You must," he replied.

The inflexibility of his manner affected her, as he had known it would. When he sat down in the low seat at her side and held out the cup, she took it.

"Go and get the wine," she said, without looking at him.

He went at once, neither speaking nor glancing back at her. He was glad of the opportunity of turning his face away from her, since he felt that, in spite of his determination, it was losing something of its expressionless calm.

When he entered the room Mrs. Sylvestre still stood where he had left her. It was she who was speaking now, and Tredennis who was listening, looking down upon her with an expression of much interest.

When he had procured a glass of wine and a sandwich, Arbuthnot went to her.

"I have secreted Mrs. Amory in the conservatory," he said, "with a view of inducing her to take something in the form of sustenance. I can produce her at a moment's notice if she is needed."

"That was consideration," she replied.

"It was humanity," he answered, and went away.

Bertha had finished the coffee when he returned to her. The blanched look had left her, and her voice, when she spoke, sounded more natural and steady.

"It did me good," she said, and this time she looked at him, and there was something in her uplifted eyes which touched him.

"I knew it would," he answered.

"You always know," she said. "There is no one who knows so well what is good for me," and she said it with great gentleness.

He took refuge from himself, as he sometimes found it discreet to do, in his usual airy lightness.

"I am all soul myself," he remarked, "as you may have observed, and I understand the temptation to scorn earthly food and endeavor to subsist wholly upon the plaudits of the multitude. You will, perhaps, permit me to remark that though the new gown"—with an approving glance at it—"is an immense and unqualified success, I doubt its power to sustain nature during the six or eight hours of a New Year's reception."

Bertha glanced down at it herself.

"Do you think it is pretty?" she asked.

"I shouldn't call it pretty," he replied. "I should call it something more impressive."

She still looked at it.

"It is a flaring thing," she said.

"No, it isn't," he returned, promptly. "Not in the least. You might call it brilliant—if you insist on an adjective. It is a brilliant thing, and it is not like you in the least."

She turned toward him.

"No," she said, "it isn't like me in the least."

"It looks," remarked Arbuthnot, giving it some lightly critical attention, "as if you had taken a new departure."

"That is it exactly," she returned. "You always say the right thing. I have taken a new departure."

"Might I ask in what direction?" he inquired.

"Yes," she responded. "I will tell you, as a fair warning. I am going to be a dazzling and worldly creature."

"You are?" he said. "Now that is entirely sensible, though I should scarcely call it a new departure. You know you tried it last winter, with the most satisfying results. When Lent came on you had lost several pounds in weight and all your color, you had refined existence until neither rest nor food appeared necessary to you, and the future was naturally full of promise. Be gay by all means; you'll find it pay, I assure you. Go to a lunch-party at one, and a reception at four, a dinner in the evening, and drop in at a German or so on your way home, taking precautions at the same time against neglecting your calling list in the intervals these slight recreations allow you. Oh, I should certainly advise you to be gay."

"Laurence," she said, "do you think that if one should do that *every* day, *every* day, and give oneself no rest, that after a while it would *kill* one?"

He regarded her fixedly for an instant.

"Do you want to die?" he said at last.

She sat perfectly still, and something terribly like and yet terribly unlike a smile crept slowly into her eyes as they met his. Then she replied, without flinching in the least or moving her gaze:

"No."

He held up a long, slender forefinger, and shook it at her, slowly, in his favorite gesture of warning.
